17	NIC, WHOIS, WWW	Top IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist.
18	NIC, WHOIS, WWW	Second and Third* ASCII	The following names must be reserved for use in connection with the operation of the registry for the Registry TLD: nic, whois, www Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the Registry TLD, they shall be transferred as specified by ICANN. (*Third level only applies in cases where a registry offers registrations at the third level)
19	NIC, WHOIS, WWW	Second and Third* IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist, except on a case by case basis as proposed by given registries. (*Third level only applies in cases where a registry offers registrations at the third level)
20	Geographic and geopolitical	Top Level ASCII and IDN	<p>There should be no geographical reserved names (i.e., no exclusionary list, no presumptive right of registration, no separate administrative procedure, etc.). The proposed challenge mechanisms currently being proposed in the draft new gTLD process would allow national or local governments to initiate a challenge, therefore no additional protection mechanisms are needed. Potential applicants for a new TLD need to represent that the use of the proposed string is not in violation of the national laws in which the applicant is incorporated.</p> <p>However, new TLD applicants interested in applying for a TLD that incorporates a country, territory, or place name should be advised of the GAC Principles, and the advisory role vested to it under the ICANN Bylaws. Additionally, a summary overview of the obstacles encountered by previous applicants involving similar TLDs should be provided to allow an applicant to make an informed decision. Potential applicants should also be advised that the failure of the GAC, or an individual GAC member, to file a challenge during the TLD application process, does not constitute a waiver of the authority vested to the GAC under the ICANN Bylaws.</p> <p><i>Note New gTLD Recommendation 20</i></p>
21	Geographic and geopolitical	All Levels ASCII and IDN	<p>The term 'geopolitical names' should be avoided until such time that a useful definition can be adopted. The basis for this recommendation is founded on the potential ambiguity regarding the definition of the term, and the lack of any specific definition of it in the WIPO Second Report on Domain Names or GAC recommendations.</p> <p><i>Note New gTLD Recommendation 20</i></p>
22	Geographic and geopolitical	Second Level & Third Level if applicable, ASCII & IDN	The consensus view of the working group is given the lack of any established international law on the subject, conflicting legal opinions, and conflicting recommendations emerging from various governmental fora, the current geographical reservation provision contained in the sTLD contracts during the 2004 Round should be removed, and harmonized with the more recently executed .COM, .NET, .ORG, .BIZ and .INFO registry contracts. The only exception to this consensus recommendation is those registries incorporated/organized under countries that require additional protection for geographical identifiers. In this instance, the registry would have to incorporate appropriate mechanisms to comply with their national/local laws.

	Reserved Name Category	Domain Name Level(s)	Recommendation
			<p>For those registries incorporated/organized under the laws of those countries that have expressly supported the guidelines of the WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications as adopted by the WIPO General Assembly, it is strongly recommended (but not mandated) that these registries take appropriate action to promptly implement protections that are in line with these WIPO guidelines and are in accordance with the relevant national laws of the applicable Member State.</p> <p><i>Note New gTLD Recommendation 20</i></p>
23	gTLD Reserved Names	Second & Third Level ASCII and IDN (when applicable)	<p>Absent justification for user confusion[65], the recommendation is that gTLD strings should no longer be reserved from registration for new gTLDs at the second or when applicable at the third level. Applicants for new gTLDs should take into consideration possible abusive or confusing uses of existing gTLD strings at the second level of their corresponding gTLD, based on the nature of their gTLD, when developing the startup process for their gTLD.</p>
24	Controversial Names	All Levels, ASCII & IDN	<p>There should not be a new reserved names category for Controversial Names.</p>
25	Controversial Names	Top Level, ASCII & IDN	<p>There should be a list of disputed names created as a result of the dispute process to be created by the new gTLD process.</p> <p><i>Note New gTLD Recommendation 6</i></p>
26	Controversial Names	Top Level, ASCII & IDN	<p>In the event of the initiation of a CN-DRP process, applications for that label will be placed in a HOLD status that would allow for the dispute to be further examined. If the dispute is dismissed or otherwise resolved favorably, the applications will reenter the processing queue. The period of time allowed for dispute should be finite and should be relegated to the CN-DRP process. The external dispute process should be defined to be objective, neutral, and transparent. The outcome of any dispute shall not result in the development of new categories of Reserved Names.[66]</p> <p><i>Note New gTLD Recommendation 6</i></p>
27	Controversial Names	Top Level, ASCII & IDN	<p>The new gTLD Controversial Names Dispute Resolution Panel should be established as a standing mechanism that is convened at the time a dispute is initiated. Preliminary elements of that process are provided in this report but further work is needed in this area.</p> <p><i>Note New gTLD Recommendation 6</i></p>
28	Controversial Names	Top Level, ASCII & IDN	<p>Within the dispute process, disputes would be initiated by the ICANN Advisory Committees (e.g. ALAC or GAC) or supporting organizations (e.g. GNSO or ccNSO). As these organizations do not currently have formal processes for receiving, and deciding on such activities, these processes would need to be defined:</p> <ul style="list-style-type: none"> o The Advisory Groups and the Supporting Organizations, using their own processes and consistent with their organizational structure, will need to define procedures for deciding on any requests for dispute initiation. o Any consensus or other formally supported position from an ICANN Advisory Committee or ICANN Supporting Organization must document the position of each member within that committee or organization (i.e., support, opposition, abstention) in compliance with both the spirit and letter of the ICANN bylaws regarding openness and transparency. <p><i>Note New gTLD Recommendation 6</i></p>
29	Controversial Names	Top Level, ASCII & IDN	<p>Further work is needed to develop predictable and transparent criteria that can be used by the Controversial Resolution Panel. These criteria must take into account the need to:</p> <ul style="list-style-type: none"> § Protect freedom of expression § Affirm the fundamental human rights, in the dignity and worth of the human person and the equal rights of men and women § Take into account sensitivities regarding terms with cultural and religious significance <p><i>Note New gTLD Recommendation 6</i></p>
30	Controversial Names	Top Level, ASCII & IDN	<p>In any dispute resolution process, or sequence of issue resolution processes, the Controversial name category should be the last category considered.</p>

	Reserved Name Category	Domain Name Level(s)	Recommendation
			Note New gTLD Recommendation 6

- v. With respect to geographic terms, the NCUC's CIS stated that "...We oppose any attempts to create lists of reserved names. Even examples are to be avoided as they can only become prescriptive. We are concerned that geographic names should not be fenced off from the commons of language and rather should be free for the use of all.. Moreover, the proposed recommendation does not make allowance for the duplication of geographic names outside the ccTLDs – where the real issues arise and the means of resolving competing use and fair and nominative use."
- vi. The GAC's Public Policy Principle 2.2 states that "ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant government or public authorities."
- vii. The Implementation Team has developed some suggestions about how this recommendation may be implemented. Those suggestions and the process flow were incorporated into the Version 2 of the ICANN Staff Discussion Points document for consideration by the Committee.

5. Recommendation 6 Discussion -- Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.
Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention of the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).

- i. This Recommendation is supported by all GNSO Constituencies except the NCUC. The NCUC has submitted a Minority Statement which is found in full in Annex A. The NCUC's earlier Constituency Impact Statement is found, along with all the GNSO Constituency Impact Statements, in Part B of this report. Ms Doria has submitted individual comments[67]. The Committee has discussed this recommendation in great detail and has attempted to address the experiences of the 2003-2004 sTLD round and the complex issues surrounding the xxx application. The Committee has also recognised the GAC's Public Policy Principles, most notably Principle 2.1 a) and b) which refer to both freedom of expression and terms with significance in a variety of contexts. In addition, the Committee recognises the tension respecting freedom of expression and being sensitive to the legitimate concerns others have about offensive terms. The NCUC's earlier CIS says "...we oppose any string criteria based on morality and public order".
- ii. Other Constituencies did not address this recommendation in their CISs. The Implementation Team has tried to balance these views by establishing an Implementation Plan that recognises the practical effect of opening a new top-level domain application system that will attract applications that some members of the community do not agree with. Whilst ICANN does have a technical co-ordination remit, it must also put in place a system of handling objections to strings or to applicants, using pre-published criteria, that is fair and predictable for applicants. It is also necessary to develop guidance for independent evaluators tasked with making decisions about objections.
- iii. In its consideration of public policy aspects of new top-level domains the Committee examined the approach taken in a wide variety of jurisdictions to issues of morality and public order. This was done not to make decisions about acceptable strings but to provide a series of potential tests for independent evaluators to use should an objection be raised to an application. The use of the phrase "morality and public order" within the recommendation was done to set some guidelines for potential applicants about areas that may raise objections. The phrasing was also intended to set parameters for potential objectors so that any objection to an application could be analysed within the framework of broadly accepted legal norms that independent evaluators could use across a broad spectrum of possible objections. The Committee also sought to ensure that the objections process would have parameters set for who could object. Those suggested parameters are found within the Implementation Guidelines.
- iv. In reaching its decision about the recommendation, the Committee sought to be consistent with, for example, Article 3 (1) (f) of the 1988 European Union Trade Mark Directive 89/104/EEC and within Article 7 (1) (f) of the 1993 European Union Trade Mark Regulation 40/94. In addition, the phrasing "contrary to morality or public order and in particular of such a nature as to deceive the public" comes from Article 6quinques (B)(3) of the 1883 Paris Convention. The reference to the Paris Convention remains relevant to domain names even though, when it was drafted, domain names were completely unheard of.
- v. The concept of "morality" is captured in Article 19 United Nations Convention on Human Rights (<http://www.unhcr.ch/udhr/lang/eng.htm>) says "...Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers." Article 29 continues by saying that "...In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society".
- vi. The EU Trade Mark Office's Examiner's guidelines provides assistance on how to interpret morality and deceit. "...Contrary to morality or public order. Words or images which are offensive, such as swear words or racially derogatory images, or which are blasphemous are not acceptable. There is a dividing line between this and words which might be considered in poor taste. The latter do not offend against this provision." The further element is deception of the public which is treated in the following way. "...Deceive the public. To deceive the public, is for

instance as to the nature, quality or geographical origin. For example, a word may give rise to a real expectation of a particular locality which is untrue." For more information, see Sections 8.7 and 8.8 at <http://oami.europa.eu/en/mark/marque/direc.htm>

- vii. The UK Trade Mark office provides similar guidance in its Examiner's Guidance Manual. "Marks which offend fall broadly into three types: those with criminal connotations, those with religious connotations and explicit/taboo signs. Marks offending public policy are likely to offend accepted principles of morality, e.g. illegal drug terminology, although the question of public policy may not arise against marks offending accepted principles of morality, for example, taboo swear words. If a mark is merely distasteful, an objection is unlikely to be justified, whereas if it would cause outrage or would be likely significantly to undermine religious, family or social values, then an objection will be appropriate. Offence may be caused on matters of race, sex, religious belief or general matters of taste and decency. Care should be taken when words have a religious significance and which may provoke greater offence than mere distaste, or even outrage, if used to parody a religion or its values. Where a sign has a very sacred status to members of a religion, mere use may be enough to cause outrage." For more information, see <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>
- viii. This recommendation has been the subject of detailed Committee and small group work in an attempt to reach consensus about both the text of the recommendation and the examples included as guidance about generally accepted legal norms. The work has been informed by detailed discussion within the GAC and through interactions between the GNSO Committee and the GAC.

6. Recommendation 7 Discussion -- Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The Committee agreed that the technical requirements for applicants would include compliance with a minimum set of technical standards and that this requirement would be part of the new registry operator's contractual conditions included in the proposed base contract. The more detailed discussion about technical requirements has been moved to the contractual conditions section.
- iii. Reference was made to numerous Requests for Comment (RFCs) and other technical standards which apply to existing registry operators. For example, Appendix 7 of the June 2005 .net agreement^[68] provides a comprehensive listing of technical requirements in addition to other technical specifications in other parts of the agreement. These requirements are consistent with that which is expected of all current registry operators. These standards would form the basis of any new top-level domain operator requirements.
- iv. This recommendation is referred to in two CISs. "The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organisational and operational capabilities of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The NCUC submitted "...we record that this must be limited to transparent, predictable and minimum technical requirements only. These must be published. They must then be adhered to neutrally, fairly and without discrimination."
- v. The GAC supported this direction in its Public Policy Principles 2.6, 2.10 and 2.11.

7. Recommendation 8 Discussion -- Applicants must be able to demonstrate their financial and organisational operational capability.

- i. This recommendation is supported by all GNSO Constituencies and accepted with concern by Ms Doria^[69].
- ii. The Committee discussed this requirement in detail and determined that it was reasonable to request this information from potential applicants. It was also consistent with past practices including the prior new TLD rounds in 2000 and 2003-2004; the .net and .org rebids and the conditions associated with ICANN registrar accreditation.
- iii. This is also consistent with best practice procurement guidelines recommended by the World Bank (www.worldbank.org), the OECD (www.oecd.org) and the Asian Development Bank (www.adb.org) as well as a range of federal procurement agencies such as the UK telecommunications regulator, Ofcom; the US Federal Communications Commission and major public companies.
- iv. The challenging aspect of this recommendation is to develop robust and objective criteria against which applicants can be measured, recognising a vast array of business conditions and models. This will be an important element of the ongoing development of the Implementation Plan.
- v. The ISPCP discussed the importance of this recommendation in its CIS, as found in Recommendation 7 above.
- vi. The NCUC's CIS addressed this recommendation by saying "...we support this recommendation to the extent that the criteria is truly limited to minimum financial and organizational operational capability...All criteria must be transparent, predictable and minimum. They must be published. They must then be adhered to neutrally, fairly and without discrimination."
- vii. The GAC echoed these views in its Public Policy Principle 2.5 that said "...the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process."

8. Recommendation 9 Discussion -- There must be a clear and pre-published process using objective and measurable criteria.

- i. This recommendation is supported by all GNSO Constituencies and by Ms Doria. It is consistent with ICANN's previous TLD rounds in 2000 and 2003-2004 and with its re-bid of both the .net and .org registry contracts.
- ii. It is also consistent with ICANN's Mission and Core Values especially 7, 8 and 9 which address openness in decision-making processes and the timeliness of those processes.

- iii. The Committee decided that the "process" criteria for introducing new top-level domains would follow a pre-published application system including the levying of an application fee to recover the costs of the application process. This is consistent with ICANN's approach to the introduction of new TLDs in the previous 2000 and 2004 round for new top-level domains.
- iv. The RyC reiterated its support for this recommendation in its CIS. It said that "...this Recommendation is of major importance to the RyC because the majority of constituency members incurred unnecessarily high costs in previous rounds of new gTLD introductions as a result of excessively long time periods from application submittal until they were able to start their business. We believe that a significant part of the delays were related to selection criteria and processes that were too subjective and not very measurable. It is critical in our opinion that the process for the introduction of new gTLDs be predictable in terms of evaluation requirements and timeframes so that new applicants can properly scope their costs and develop reliable implementation plans." The NCUC said that "...we strongly support this recommendation and again stress the need for all criteria to be limited to minimum operational, financial, and technical considerations. We all stress the need that all evaluation criteria be objective and measurable."

9. Recommendation 10 Discussion -- There must be a base contract provided to applicants at the beginning of the process.

- i. This recommendation is supported by all GNSO Constituencies and by Ms Doria.
- ii. The General Counsel's office has been involved in discussions about the provision of a base contract which would assist applicants both during the application process and in any subsequent contract negotiations.
- iii. A framework for the base contract was developed for discussion at the June 2007 ICANN meeting in Puerto Rico. The base contract will not be completed until the policy recommendations are in place. Completion of the policy recommendations will enable the completion of a draft base contract that would be available to applicants prior to the start of the new gTLD process, that is, prior to the beginning of the four-month window preceding the application submittal period.
- iv. The RyC, in its CIS, said, "...like the comments for Recommendation 9, we believe that this recommendation will facilitate a more cost-effective and timely application process and thereby minimize the negative impacts of a process that is less well-defined and objective. Having a clear understanding of base contractual requirements is essential for a new gTLD applicant in developing a complete business plan."

10. Recommendation 11 Discussion -- (This recommendation has been removed and is left intentionally blank. Note Recommendation 20 and its Implementation Guidelines).

11. Recommendation 12 Discussion -- Dispute resolution and challenge processes must be established prior to the start of the process.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The Committee has provided clear direction on its expectations that all the dispute resolution and challenge processes would be established prior to the opening of the application round. The full system will be published prior to an application round starting. However, the finalisation of this process is contingent upon a completed set of recommendations being agreed; a public comment period and the final agreement of the ICANN Board.
- iii. The draft Implementation Plan in the Implementation Team *Discussion Points* document sets out the way in which the ICANN Staff proposes that disputes between applicants and challenge processes may be handled. Expert legal and other professional advice from, for example, auctions experts is being sought to augment the Implementation Plan.

TERM OF REFERENCE THREE -- ALLOCATION METHODS

12. Recommendation 13 Discussion -- Applications must initially be assessed in rounds until the scale of demand is clear.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation sets out the principal allocation methods for TLD applications. The narrative here should be read in conjunction with the draft flowcharts and the draft Request for Proposals.
- iii. An application round would be opened on Day 1 and closed on an agreed date in the future with an unspecified number of applications to be processed within that round.
- iv. This recommendation may be amended, after an evaluation period and report that may suggest modifications to the system. The development of objective "success metrics" is a necessary part of the evaluation process that could take place within the new TLDs Project Office.
- v. The ISPCP expressed its support for this recommendation. Its CIS said that "...this is an essential element in the deployment of new gTLDs, as it enables any technical difficulties to be quickly identified and sorted out, working with reduced numbers of new strings at a time, rather than many all at once. Recommendation 18 on the use of IDNs is also important in preventing any negative impact on network operators and ISPs."

13. Recommendation 20 Discussion -- An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.

- i. This recommendation is supported by the majority of GNSO Constituencies. Ms Doria supports the recommendation but has concerns about its implementation^[70]. The NCUC has submitted a Minority Statement which is found in full in Annex C about the recommendation and its associated Implementation Guidelines F, H and P.
- ii. This recommendation was developed during the preparations for the Committee's 7 June 2007 conference call and during subsequent Committee deliberations. The intention was to factor into the process the very likely possibility of objections to applications from a wide variety of stakeholders.
- iii. The language used here is relatively broad and the implementation impact of the proposed recommendation is discussed in

detail in the Implementation Team's *Discussion Points* document.

- iv. The NCUC's response to this recommendation in its earlier CIS says, in part, "...recommendation 20 swallows up any attempt to narrow the string criteria to technical, operational and financial evaluations. It asks for objections based on entirely subjective and unknowable criteria and for unlimited reasons and by unlimited parties." This view has, in part, been addressed in the Implementation Team's proposed plan but this requires further discussion and agreement by the Committee.

TERM OF REFERENCE FOUR -- CONTRACTUAL CONDITIONS**14. Recommendation 14 Discussion -- The initial registry agreement term must be of a commercially reasonable length.**

- i. The remainder of the recommendations address Term of Reference Four on policies for contractual conditions and should be read in conjunction with Recommendation 10 on the provision of a base contract prior to the opening of an application round. The recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements.
- iii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iv. The RyC commented on this recommendation in its CIS saying that "...the members of the RyC have learned first hand that operating a registry in a secure and stable manner is a capital intensive venture. Extensive infrastructure is needed both for redundant registration systems and global domain name constellations. Even the most successful registries have taken many years to recoup their initial investment costs. The RyC is convinced that these two recommendations [14 & 15] will make it easier for new applicants to raise the initial capital necessary and to continue to make investments needed to ensure the level of service expected by registrants and users of their TLDs. These two recommendations will have a very positive impact on new gTLD registries and in turn on the quality of the service they will be able to provide to the Internet community."

15. Recommendation 15 -- There must be renewal expectancy.

- i. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements and is supported by all Constituencies. Ms Doria supported the recommendation and provided the comments found in the footnote below [71]
- ii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iii. See the CIS comments from the RyC in the previous section.

16. Recommendation 16 -- Registries must apply existing Consensus Policies[72] and adopt new Consensus Policies as they are approved.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The full set of existing ICANN registry contracts can be found here <http://www.icann.org/registries/agreements.htm> and ICANN's seven current Consensus Policies are found at <http://www.icann.org/general/consensus-policies.htm>.
- iii. ICANN develops binding Consensus Policies through its policy development processes, in this case, through the GNSO[73].

17. Recommendation 17 -- A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. Referring to the recommendations on contractual conditions above, this section sets out the discussion of the policies for contractual conditions for new top-level domain registry operators. The recommendations are consistent with the existing provisions for registry operators which were the subject of detailed community input throughout 2006[74].
- iii. The Committee developed its recommendations during the Brussels and Amsterdam face-to-face consultations, with assistance from the ICANN General Counsel's office. The General Counsel's office has also provided a draft base contract which will be completed once the policy recommendations are agreed. Reference should also be made to Recommendation 5 on reserved words as some of the findings could be part of the base contract.
- iv. The Committee has focused on the key principles of consistency, openness and transparency. It was also determined that a scalable and predictable process is consistent with industry best practice standards for services procurement. The Committee referred in particular to standards within the broadcasting, telecommunications and Internet services industries to examine how regulatory agencies in those environments conducted, for example, spectrum auctions, broadcasting licence distribution and media ownership frameworks.
- v. Since then ICANN has developed and published a new approach to its compliance activities. These are found on ICANN's website at <http://www.icann.org/compliance/> and will be part of the development of base contract materials.
- vi. The Committee found a number of expert reports[75] beneficial. In particular, the World Bank report on mobile licensing conditions provides some guidance on best practice principles for considering broader market investment conditions. "...A major challenge facing regulators in developed and developing countries alike is the need to strike the right balance between ensuring certainty for market players and preserving flexibility of the regulatory process to accommodate the rapidly changing market, technological and policy conditions. As much as possible, policy makers and regulators should strive to promote investors' confidence and give incentives for long-term investment. They can do this by favouring the principle of 'renewal expectancy', but also by promoting regulatory certainty and predictability through a fair, transparent and participatory renewal process. For example, by providing details for license renewal or reissue, clearly establishing what is the discretion offered to the licensing body, or ensuring sufficient lead-times and transitional arrangements in the event of non-renewal or changes in licensing conditions. Public consultation procedures and guaranteeing the right to appeal regulatory decisions maximizes the prospects for a successful renewal process. As technological changes and convergence and technologically neutral approaches gain importance, regulators and policy makers need to be ready to adapt and evolve licensing procedures and practices to the new environment."
- vii. The Recommendations which the Committee has developed with respect to the introduction of new TLDs are consistent

with the World Bank principles.

18. Recommendation 18 Discussion -- If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria. The introduction of internationalised domain names at the root presents ICANN with a series of implementation challenges. This recommendation would apply to any new gTLD (IDN or ASCII TLD) offering IDN services. The initial technical testing^[76] has been completed and a series of live root tests will take place during the remainder of 2007.
- ii. The Committee recognises that there is ongoing work in other parts of the ICANN organisation that needs to be factored into the application process that will apply to IDN applications. The work includes the President's Committee on IDNs and the GAC and ccNSO joint working group on IDNs.

19. Recommendation 19 Discussion -- Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. There is a long history associated with the separation of registry and registrar operations for top-level domains. The structural separation of VeriSign's registry operations from Network Solutions registrar operations explains much of the ongoing policy to require the use of ICANN accredited registrars.
- iii. In order to facilitate the stable and secure operation of the DNS, the Committee agreed that it was prudent to continue the current requirement that registry operators be obliged to use ICANN accredited registrars.
- iv. ICANN's Registrar Accreditation Agreement has been in place since 2001^[77]. Detailed information about the accreditation of registrars can be found on the ICANN website^[78]. The accreditation process is under active discussion but the critical element of requiring the use of ICANN accredited registrars remains constant.
- v. In its CIS, the RyC noted that "...the RyC has no problem with his recommendation for larger gTLDs; the requirement to use accredited registrars has worked well for them. But it has not always worked as well for very small, specialized gTLDs. The possible impact on the latter is that they can be at the mercy of registrars for whom there is no good business reason to devote resources. In the New gTLD PDP, it was noted that this requirement would be less of a problem if the impacted registry would become a registrar for its own TLD, with appropriate controls in place. The RyC agrees with this line of reasoning but current registry agreements forbid registries from doing this. Dialog with the Registrars Constituency on this topic was initiated and is ongoing, the goal being to mutually agree on terms that could be presented for consideration and might provide a workable solution."

NEXT STEPS

1. Under the GNSO's Policy Development Process, the production of this *Final Report* completes Stage 9. The next steps are to conduct a twenty-day public comment period running from 10 August to 30 August 2007. The GNSO Council is due to meet on 6 September 2007 to vote on the package of principles, policy recommendations and implementation guidelines.
2. After the GNSO Council have voted the Council Report to the Board is prepared. The GNSO's PDP guidelines stipulate that "the Staff Manager will be present at the final meeting of the Council, and will have five (5) calendar days after the meeting to incorporate the views of the Council into a report to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:
 - a. A clear statement of any Supermajority Vote recommendation of the Council;
 - b. If a Supermajority Vote was not reached, a clear statement of all positions held by Council members. Each statement should clearly indicate (i) the reasons underlying each position and (ii) the constituency(ies) that held the position;
 - c. An analysis of how the issue would affect each constituency, including any financial impact on the constituency;
 - d. An analysis of the period of time that would likely be necessary to implement the policy;
 - e. The advice of any outside advisors relied upon, which should be accompanied by a detailed statement of the advisor's (i) qualifications and relevant experience; and (ii) potential conflicts of interest;
 - f. The Final Report submitted to the Council; and
 - g. A copy of the minutes of the Council deliberation on the policy issue, including the all opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.
3. It is expected that, according to the Bylaws, "...The Board will meet to discuss the GNSO Council recommendation as soon as feasible after receipt of the Board Report from the Staff Manager. In the event that the Council reached a Supermajority Vote, the Board shall adopt the policy according to the Council Supermajority Vote recommendation unless by a vote of more than sixty-six (66%) percent of the Board determines that such policy is not in the best interests of the ICANN community or ICANN. In the event that the Board determines not to act in accordance with the Council Supermajority Vote recommendation, the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council. The Council shall review the Board Statement for discussion with the Board within twenty (20) calendar days after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for its current recommendation. In the event that the Council is able to reach a Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than sixty-six (66%) percent of the Board determines that such policy is not in the interests of the ICANN community or ICANN. In any case in which the Council is not able to reach Supermajority, a majority vote of the Board will be sufficient to act. When a final decision on a GNSO Council Recommendation or Supplemental Recommendation is timely, the Board shall take a preliminary vote and, where practicable, will publish a tentative decision that allows for a ten (10) day period of public comment prior to a final decision by the Board."
4. The final stage in the PDP is the implementation of the policy which is also governed by the Bylaws as follows, "...Upon a final decision of the Board, the Board shall, as appropriate, give authorization or direction to the ICANN staff to take all necessary steps to implement the policy."

Annex A – NCUC Minority Statement: Recommendation 6

STATEMENT OF DISSENT ON RECOMMENDATION #6 OF

GNSO's NEW GTLD REPORT FROM

the Non-Commercial Users Constituency (NCUC)

20 July 2007

NCUC supports most of the recommendations in the GNSO's Final Report, but Recommendation #6 is one we cannot support.[79]

We oppose Recommendation #6 for the following reasons:

- 1) It will completely undermine ICANN's efforts to make the gTLD application process predictable, and instead make the evaluation process arbitrary, subjective and political;
- 2) It will have the effect of suppressing free and diverse expression;
- 3) It exposes ICANN to litigation risks;
- 4) It takes ICANN too far away from its technical coordination mission and into areas of legislating morality and public order.

We also believe that the objective of Recommendation #6 is unclear, in that much of its desirable substance is already covered by Recommendation #3. At a minimum, we believe that the words "relating to morality and public order" must be struck from the recommendation.

1) Predictability, Transparency and Objectivity

Recommendation #6 poses severe implementation problems. It makes it impossible to achieve the GNSO's goals of predictable and transparent evaluation criteria for new gTLDs.

Principle 1 of the New gTLD Report states that the evaluation process must be "predictable," and Recommendation #1 states that the evaluation criteria must be transparent, predictable, and fully available to applicants prior to their application.

NCUC strongly supports these guidelines. But no gTLD applicant can possibly know in advance what people or governments in a far away land will object to as "immoral" or contrary to "public order." When applications are challenged on these grounds, applicants cannot possibly know what decision an expert panel – which will be assembled on an ad hoc basis with no precedent to draw on – will make about it.

Decisions by expert panels on "morality and public order" must be subjective and arbitrary, because there is no settled and well-established international law regarding the relationship between TLD strings and morality and public order. There is no single "community standard" of morality that ICANN can apply to all applicants in every corner of the globe. What is considered "immoral" in Teheran may be easily accepted in Los Angeles or Stockholm; what is considered a threat to "public order" in China and Russia may not be in Brazil and Qatar.

2) Suppression of expression of controversial views

gTLD applicants will respond to the uncertainty inherent in a vague "morality and public order" standard and lack of clear standards by suppressing and avoiding any ideas that might generate controversy. Applicants will have to invest sizable sums of money to develop a gTLD application and see it through the ICANN process. Most of them will avoid risking a challenge under Recommendation #6. In other words, the presence of Recommendation #6 will result in self-censorship by most applicants.

That policy would strip citizens everywhere of their rights to express controversial ideas because someone else finds them offensive. This policy recommendation ignores international and national laws, in particular freedom of expression guarantees that permit the expression of "immoral" or otherwise controversial speech on the Internet.

3) Risk of litigation

Some people in the ICANN community are under the mistaken impression that suppressing controversial gTLDs will protect it from litigation. Nothing could be further from the truth. By introducing subjective and culturally divisive standards into the evaluation process Recommendation #6 will increase the likelihood of litigation.

ICANN operates under authority from the US Commerce Department. It is undisputed that the US Commerce Department is prohibited from censoring the expression of US citizens in the manner proposed by Recommendation #6. The US Government cannot "contract away" the constitutional protections of its citizens to ICANN any more than it can engage in the censorship itself.

Adoption of Recommendation #6 invites litigation against ICANN to determine whether its censorship policy is compatible with the US First Amendment. An ICANN decision to suppress a gTLD string that would be permitted under US law could and probably would lead to legal challenges to the decision as a form of US Government action.

If ICANN left the adjudication of legal rights up to courts, it could avoid the legal risk and legal liability that this policy of censorship brings upon it.

4) ICANN's mission and core values

Recommendation #6 exceeds the scope of ICANN's technical mission. It asks ICANN to create rules and adjudicate disputes about what is permissible expression. It enables it to censor expression in domain names that would be lawful in some countries. It would require ICANN and "expert panels" to make decisions about permitting top-level domain names based on arbitrary "morality" judgments and other subjective criteria. Under Recommendation #6, ICANN will evaluate domain names based on ideas about "morality and public order" -- concepts for which there are varying interpretations, in both law and culture, in various parts of the world. Recommendation #6 risks turning ICANN into the arbiter of "morality" and "appropriate" public policy through global rules.

This new role for ICANN conflicts with its intended narrow technical mission, as embodied in its mission and core values.

ICANN holds no legitimate authority to regulate in this entirely non-technical area and adjudicate the legal rights of others. This recommendation takes the adjudication of people's rights to use domain names out of the hands of democratically elected representatives and into the hands of "expert panels" or ICANN staff and board with no public accountability.

Besides exceeding the scope of ICANN's authority, Recommendation #6 seems unsure of its objective. It mandates "morality and public order" in domain names, but then lists, as examples of the type of rights to protect, the WTO TRIPS Agreement and all 24 World Intellectual Property (WIPO) Treaties, which deal with economic and trade rights, and have little to do with "morality and public order". Protection for intellectual property rights was fully covered in Recommendation #3, and no explanation has been provided as to why intellectual property rights would be listed again in a recommendation on "morality and public order", an entirely separate concept.

In conclusion Recommendation #6 exceeds ICANN's authority, ignores Internet users' free expression rights, and its adoption would impose an enormous burden on and liability for ICANN. It should not be adopted by the Board of Directors in the final policy decision for new gtlds.

Annex B – Nominating Committee Appointee Avri Doria[80]: Individual Comments

Comments from Avri Doria

The "Personal level of support" indications fall into 3 categories:

I Support: these are principles, recommendations or guidelines that are compatible with my personal opinions

I Support with concerns: While these principles, recommendations and guidelines are not incompatible with my personal opinions, I have some concerns about them.

I Accept with concern: these recommendations and guidelines do not necessarily correspond to my personal opinions, but I am able to accept them in that they have the broad support of the committee. I do, however, have concerns with these recommendations and guideline.

I believe these comments are consistent with comments I have made throughout the process and do not constitute new input.

Principles

#	Personal level of support	Explanation
A	Support	
B	Support with concerns	While I strongly support the introduction of IDN TLDs, I am concerned that the unresolved issues with IDN ccTLD equivalents may interfere with the introduction of IDN TLDs. I am also concerned that some of these issues could impede the introduction of some new ASCII TLDs dealing with geographically related identifiers.
C	Support	
D	Support with concerns	While I favor the establishment of a minimum set of necessary technical criteria, I am concerned that this set actually be the basic minimum set necessary to protect the stability, security and global interoperability.
E-G	Support	

Recommendations

#	Level of support	Explanation
1	Support	
2	Accept with concern	<p>My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.</p> <p>I In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, or hographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.</p> <p>I By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.</p> <p>I As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages.</p>
3	Support with concerns	<p>My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice.</p> <p>I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system.</p>
4	Support	
5	Support with concerns	<p>Until such time as the technical work on IDNabis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNabis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration.</p>

#	Level of support	Explanation
6	Accept with concern	<p>My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order.</p> <p>This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g., a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality.</p>
7	Support	
8	Accept with concern	<p>While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E.g., in the case of a less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.</p> <p>Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels.</p>
9,10, 12-14	Support	
15	Support with concerns	<p>In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should be an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal.</p>
16-19	Support	
20	Support with concerns	<p>In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)</p>

Implementation Guidelines

#	Level of support	Explanation
A-E	Support	
F	Accept with concern	<p>In designing a New gTLD process, one of the original design goals had been to design a predictable and timely process that did not include the involvement of the Board of Directors except for very rare and exceptional cases and perhaps in the due diligence check of a final approval. My concern is that the use of Board in step (iii) may make them a regular part of many of the application procedure and may overload both the Board and the process. If every dispute can fall through to Board consideration in the process sieve, then the incentive to resolve the dispute earlier will be lessened.</p>
G-M	Support	
N	Support with concerns	<p>I strongly support the idea of financial assistance programs and fee reduction for less developed communities. I am concerned that not providing pricing that enables applications from less developed countries and communities may serve to increase the divide between the haves and the have-nots in the Internet and may lead to a foreign 'land grab' of choice TLD names, especially IDN TLD names in a new form of resource colonialism because only those with well developed funding capability will be able to participate in the process as currently planned.</p>
O	Support	

#	Level of support	Explanation
P	Support with concerns	<p>While I essentially agree with the policy recommendation and its implementation guideline, its social justice and fairness depends heavily on the implementation issues. While the implementation details are not yet settled, I have serious concerns about the published draft plans of the ICANN staff in this regard. The current proposal involves using fees to prevent vexatious or unreasonable objections. In my personal opinion this would be a cause of social injustice in the application of the policy as it would prejudice the objection policy in favor of the rich. I also believe that an objection policy based on financial means would allow for well endowed entities to object to any term they found objectionable, hence enabling them to be as vexatious as they wish to be.</p> <p>In order for an objection system to work properly, it must be fair and it must allow for any applicant to understand the basis on which they might have to answer an objection. If the policy and implementation are clear about objections only being considered when they can be shown to cause irreparable harm to a community then it may be possible to build a just process. In addition to the necessity for there to be strict filters on which potential objections are actually processed for further review by an objections review process, it is essential that an external and impartial professional review panel have a clear basis for judging any objections.</p> <p>I do not believe that the ability to pay for a review will provide a reasonable criteria, nor do I believe that financial barriers are an adequate filter for stopping vexatious or unreasonable objections though they are a sufficient barrier for the poor.</p> <p>I believe that ICANN should investigate other methods for balancing the need to allow even the poorest to raise an issue of irreparable harm while filtering out unreasonable disputes. I believe, as recommend in the Reserved Names Working group report, that the ALAC and GAC may be an important part of the solution. IG (P) currently includes support for treating ALAC and GAC as established institutions in regard to raising objections to TLD concerns. I believe this is an important part of the policy recommendation and should be retained in the implementation. I believe that it should be possible for the ALAC or GAC, through some internal procedure that they define, to take up the cause of the individual complainant and to request a review by the external expert review panel. Some have argued that this is unacceptable because it operationalizes these Advisory Committees. I believe we do have precedence for such an operational role for volunteers within ICANN and that it is in keeping with their respective roles and responsibilities as representatives of the user community and of the international community of nations. I strongly recommend that such a solution be included in the Implementation of the New gTLD process.</p>

Annex C – NCUC Minority Statement: Recommendation 20 and Implementation Guidelines F, H & P

STATEMENT OF DISSENT ON RECOMMENDATION #20 &
IMPLEMENTATION GUIDELINES F, H, & P IN THE
GNSO NEW GTLD COMMITTEE'S FINAL REPORT
FROM THE
NON-COMMERCIAL USERS CONSTITUENCY (NCUC)

RE: DOMAIN NAME OBJECTION AND REJECTION PROCESS
25 July 2007

Text of Recommendation #20:

"An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted."

Text of Implementation Guideline F:

If there is contention for strings, applicants may:

- i) resolve contention between them within a pre-established timeframe
- ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;
- iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.

Text of Implementation Guideline H:

External dispute providers will give decisions on complaints.

Text of Implementation Guideline P:

The following process, definitions, and guidelines refer to Recommendation 20.

Process

Opposition must be objection based.

Determination will be made by a dispute resolution panel constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

a) substantial

In determining substantial the panel will assess the following: significant portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment.

b) significant portion:

In determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.

c) community

Community should be interpreted broadly and will include for example an economic sector, a cultural community, or a linguistic community. It may also be a closely related community which believes it is impacted.

d) explicitly targeting

Explicitly targeting means there is a description of the intended use of the TLD in the application.

e) implicitly targeting

Implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.

f) established institution

An institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an

institution that has been in existence for fewer than 5 years. Exceptional circumstances include but are not limited to reorganization, merger, or an inherently younger community. The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.

g) formal existence

Formal existence may be demonstrated by: appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar.

h) detriment

<< A >> Evidence of detriment to the community or to users more widely must be provided.

<< B >> [A likelihood of detriment to the community or to users more widely must be provided.]

Recommendation #20

The Non-Commercial Users Constituency (NCUC) Dissenting Statement on Recommendation #20 of the New GTLD Committee's Final Report[81] should be read in combination with Implementation Guidelines F, H & P, which detail the implementation of Recommendation #20. This statement should also be read in conjunction with its statement[82] of 13 June 2007 on the committee's draft report.

NCUC cannot support the committee's proposal for ICANN to establish a broad objection and rejection process for domain names that empowers ICANN and its "experts" to adjudicate the legal rights of domain name applicants (and objectors). The proposal would also empower ICANN and its "experts" to invent entirely new rights to domain names that do not exist in law and that will compete with existing legal rights to domains.

However "good-intentioned", the proposal would inevitably set up a system that decides legal rights based on subjective beliefs of "expert panels" and the amount of insider lobbying. The proposal would give "established institutions" veto power over applications for domain names to the detriment of innovators and start-ups. The proposal is further flawed because it makes no allowances for generic words to which no community claims exclusive "ownership" of. Instead, it wants to assign rights to use language based on subjective standards and will over-regulate to the detriment of competition, innovation, and free expression.

There is no limitation on the type of objections that can be raised to kill a domain name, no requirement that actual harm be shown to deny an application, and no recourse for the wrongful denial of legal rights by ICANN and its experts under this proposal. An applicant must be able to appeal decisions of ICANN and its experts to courts, who have more competence and authority to decide the applicant's legal rights. Legal due process requires maintaining a right to appeal these decisions to real courts.

The proposal is hopelessly flawed and will result in the improper rejection of many legitimate domain names. The reasons permitted to object to a domain are infinite in number. Anyone may make an objection; and an application will automatically be rejected upon a very low threshold of "detriment" or an even lower standard of "a likelihood of detriment" to anyone. Not a difficult bar to meet.

If ICANN attempted to put this policy proposal into practice it would intertwine itself in general policy debates, cultural clashes, business feuds, religious wars, and national politics, among a few of the disputes ICANN would have to rule on through this domain name policy.

The proposal operates under false assumptions of "communities" that can be defined, and that parties can be rightfully appointed representatives of "the community" by ICANN. The proposal gives preference to "established institutions" for domain names, and leaves applicants' without the backing of "established institutions" with little right to a top-level domain. The proposal operates to the detriment of small-scale start-ups and innovators who are clever enough to come up with an idea for a domain first, but lack the insider-connections and financial resources necessary to convince an ICANN panel of their worthiness.

It will be excessively expensive to apply for either a controversial or a popular domain name, so only well-financed "established institutions" will have both the standing and financial wherewithal to be awarded a top-level domain. The proposal privileges who is awarded a top-level domain, and thus discourages diversity of thought and the free flow of information by making it more difficult to obtain information on controversial ideas or from innovative new-comers.

Implementation Guideline F

NCUC does not agree with the part of Implementation Guideline F that empowers ICANN identified "communities" to support or oppose applications. Why should all "communities" agree before a domain name can be issued? How to decide who speaks for a "community"?

NCUC also notes that ICANN's Board of Directors would make the final decisions on applications and thus the legal rights of applicants under proposed IG-F. ICANN Board Members are not democratically elected, accountable to the public in any meaningful way, or trained in the adjudication of legal rights. Final decisions regarding legal rights should come from legitimate law-making processes, such as courts.

"Expert panels" or corporate officers are not obligated to respect an applicant's free expression rights and there is no recourse for a decision by the panel or ICANN for rights wrongfully denied. None of the "expert" panelists are democratically elected, nor accountable to the public for their decisions. Yet they will take decisions on the boundaries between free expression and trademark rights in domain names; and "experts" will decide what ideas are too controversial to be permitted in a domain name under this process.

Implementation Guideline H

Implementation Guideline H recommends a system to adjudicate legal rights that exists entirely outside of legitimate democratic law-making processes. The process sets up a system of unaccountable "private law" where "experts" are free to pick and choose favored laws, such as trademark rights, and ignore disfavored laws, such as free expression guarantees.

IG-H operates under the false premise that external dispute providers are authorized to adjudicate the legal rights of domain name applicants and objectors. It further presumes that such expert panels will be qualified to adjudicate the legal rights of

applicants and others. But undertaking the creation of an entirely new international dispute resolution process for the adjudication of legal rights and the creation of new rights is not something that can be delegated to a team of experts. Existing international law that takes into account conflict of laws, choice of laws, jurisdiction, standing, and due process must be part of any legitimate process; and the applicant's legal rights including freedom of expression rights must be respected in the process.

Implementation Guideline P

"The devil is in the details" of Implementation Guideline P as it describes in greater detail the proposed adversarial dispute process to adjudicate legal rights to top-level domain names in Recommendation #20. IG-P mandates the rejection of an application if there is "substantial opposition" to it according to ICANN's expert panel. But "substantial" is defined in such a way so as to actually mean "insubstantial" and as a result many legitimate domain names would be rejected by such an extremely low standard for killing an application.

Under IG-P, opposition against and support for an application must be made by an "established institution" for it to count as "significant", again favoring major industry players and mainstream cultural institutions over cultural diversity, innovative individuals, small niche, and medium-sized Internet businesses.

IG-P states that "community" should be interpreted broadly, which will allow for the maximum number of objections to a domain name to count against an application. It includes examples of "the economic sector, cultural community or linguistic community" as those who have a right to complain about an application. It also includes any "related community which believes it is impacted." So anyone who claims to represent a community and believes to be impacted by a domain name can file a complaint and have standing to object to another's application.

There is no requirement that the objection be based on legal rights or the operational capacity of the applicant. There is no requirement that the objection be reasonable or the belief about impact to be reasonable. There is no requirement that the harm be actual or verifiable. The standard for "community" is entirely subjective and based on the personal beliefs of the objector.

The definition of "implicitly targeting" further confirms this subjective standard by inviting objections where "the objector makes the assumption of targeting" and also where "the objector believes there may be confusion by users". Such a subjective process will inevitably result in the rejection of many legitimate domain names.

Picking such a subjective standard conflicts with Principle A in the Final Report that states domain names must be introduced in a "predictable way", and also with Recommendation 1 that states "All applicants for a new gTLD registry should be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process." The subjectivity and unpredictability invited into the process by Recommendation #20 turn Principle A and Recommendation 1 from the same report upside down.

Besides the inherent subjectivity, the standard for killing applications is remarkably low. An application need not be intended to serve a particular community for "community-based" objections to kill the application under the proposal. Anyone who believed that he or she was part of the targeted community or who believes others face "detriment" have standing to object to a domain name, and the objection weighs in favor of "significant opposition". This standard is even lower than the "reasonable person" standard, which would at least require that the belief be "reasonable" for it to count against an applicant. The proposed standard for rejecting domains is so low it even permits unreasonable beliefs about a domain name to weigh against an applicant.

If a domain name does cause confusion, existing trademark law and unfair competition law have dealt with it for years and already balanced intellectual property rights against free expression rights in domain names. There is neither reason nor authority for ICANN processes to overtake the adjudication of legal rights and invite unreasonable and illegitimate objections to domain names.

IG-P falsely assumes that the number of years in operation is indicative of one's right to use language. It privileges entities over 5 years old with objection rights that will effectively veto innovative start-ups who cannot afford the dispute resolution process and will be forced to abandon their application to the incumbents.

IG-P sets the threshold for harm that must be shown to kill an application for a domain name remarkably low. Indeed harm need not be actual or verified for an application to be killed based on "substantial opposition" from a single objector.

Whether the committee selects the unbounded definition for "detriment" that includes a "likelihood of detriment" or the narrower definition of "evidence of detriment" as the standard for killing an application for a domain name is largely irrelevant. The difference is akin to re-arranging the deck chairs on the Titanic. ICANN will become bogged down with the approval of domain names either way, although it is worth noting that "likelihood of detriment" is a very long way from "substantial harm" and an easy standard to meet, so will result in many more domain names being rejected.

The definitions and guidelines detailed in IG-P invite a lobby-fest between competing businesses, instill the "heckler's veto" into domain name policy, privilege incumbents, price out of the market non-commercial applicants, and give third-parties who have no legal rights to domain names the power to block applications for those domains. A better standard for killing an application for non-technical reasons would be for a domain name to be shown to be illegal in the applicant's jurisdiction before it can be rejected.

In conclusion, the committee's recommendation for domain name objection and rejection processes are far too broad and unwieldy to be put into practice. They would stifle freedom of expression, innovation, cultural diversity, and market competition. Rather than follow existing law, the proposal would set up an illegitimate process that usurps jurisdiction to adjudicate peoples' legal rights (and create new rights) in a process designed to favor incumbents. The adoption of this "free-for-all" objection and rejection process will further call into question ICANN's legitimacy to govern and its ability to serve the global public interest that respects the rights of all citizens.

NCUC respectfully submits that ICANN will best serve the global public interest by resisting the temptation to stray from its technical mandate and meddle in international lawmaking as proposed by Rec. #20 and IG-F, IG-H, and IG-P of the New GTLD Committee Final Report.

REFERENCE MATERIAL -- GLOSSARY[83]

TERM	ACRONYM & EXPLANATION
------	-----------------------

A-label	The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible (ACE) form of an IDNA string; for example "xn--11b5bs1di".
ASCII Compatible Encoding	ACE ACE is a system for encoding Unicode so each character can be transmitted using only the letters a-z, 0-9 and hyphens. Refer also to http://www.ietf.org/rfc/rfc3467.txt?number=3467
American Standard Code for Information Exchange	ASCII ASCII is a common numerical code for computers and other devices that work with text. Computers can only understand numbers, so an ASCII code is the numerical representation of a character such as 'a' or '@'. See above referenced RFC for more information.
Advanced Research Projects Agency	ARPA http://www.darpa.mil/body/arpa_darpa.html
Commercial & Business Users Constituency	CBUC http://www.bizconst.org/
Consensus Policy	A defined term in all ICANN registry contracts usually found in Article 3 (Covenants). See, for example, http://www.icann.org/tlds/agreements/biz/registry-agmt-08dec06.htm
Country Code Names Supporting Organization	ccNSO http://ccnso.icann.org/
Country Code Top Level Domain	ccTLD Two letter domains, such as .uk (United Kingdom), .de (Germany) and .jp (Japan) (for example), are called country code top level domains (ccTLDs) and correspond to a country, territory, or other geographic location. The rules and policies for registering domain names in the ccTLDs vary significantly and ccTLD registries limit use of the ccTLD to citizens of the corresponding country. Some ICANN-accredited registrars provide registration services in the ccTLDs in addition to registering names in .biz, .com, .info, .name, net and .org, however, ICANN does not specifically accredit registrars to provide ccTLD registration services. For more information regarding registering names in ccTLDs, including a complete database of designated ccTLDs and managers, please refer to http://www.iana.org/cctld/ccld.htm .
Domain Names	The term domain name has multiple related meanings: A name that identifies a computer or computers on the internet. These names appear as a component of a Web site's URL , e.g. www.wikipedia.org . This type of domain name is also called a hostname . The product that Domain name registrars provide to their customers. These names are often called registered domain names . Names used for other purposes in the Domain Name System (DNS) , for example the special name which follows the @ sign in an email address, or the Top-level domains like .com, or the names used by the Session Initiation Protocol (VoIP) , or DomainKeys . http://en.wikipedia.org/wiki/Domain_names
Domain Name System	The Domain Name System (DNS) helps users to find their way around the Internet. Every computer on the Internet has a unique address - just like a telephone number - which is a rather complicated string of numbers. It is called its "IP address" (IP stands for "Internet Protocol"). IP Addresses are hard to remember. The DNS makes using the Internet easier by allowing a familiar string of letters (the "domain name") to be used instead of the arcane IP address. So instead of typing 207.151.159.3, you can type www.internic.net . It is a "mnemonic" device that makes addresses easier to remember.
Generic Top Level Domain	gTLD Most TLDs with three or more characters are referred to as "generic" TLDs, or "gTLDs". They can be subdivided into two types, "sponsored" TLDs (sTLDs) and "unsponsored TLDs (uTLDs), as described in more detail below. In the 1980s, seven gTLDs (.com, .edu, gov, .int, .mil, .net, and .org) were created. Domain names may be registered in three of these (.com, .net, and .org) without restriction; the other four have limited purposes. In 2001 & 2002 four new unsponsored TLDs (.biz, .info, .name, and .pro) were introduced. The other three new TLDs (.aero, .coop, and .museum) were

	<p>sponsored.</p> <p>Generally speaking, an unsponsored TLD operates under policies established by the global Internet community directly through the ICANN process, while a sponsored TLD is a specialized TLD that has a sponsor representing the narrower community that is most affected by the TLD. The sponsor thus carries out delegated policy-formulation responsibilities over many matters concerning the TLD.</p>
Governmental Advisory Committee	<p>GAC</p> <p>http://gac.icann.org/web/index.shtml</p>
Intellectual Property Constituency	<p>IPC</p> <p>http://www.ipconstituency.org/</p>
Internet Service & Connection Providers Constituency	ISPCP
Internationalized Domain Names	<p>IDNs</p> <p>IDNs are domain names represented by local language characters. These domain names may contain characters with diacritical marks (required by many European languages) or characters from non-Latin scripts like Arabic or Chinese.</p>
Internationalized Domain Names in Application	<p>IDNA</p> <p>IDNA is a protocol that makes it possible for applications to handle domain names with non-ASCII characters. IDNA converts domain names with non-ASCII characters to ASCII labels that the DNS can accurately understand. These standards are developed within the IETF (http://www.ietf.org)</p>
Internationalized Domain Names – Labels	<p>IDN A Label</p> <p>The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible ACE form of an IDN A string. For example "xn-11q90l".</p> <p>IDN U Label</p> <p>The U-label is what should be displayed to the user and is the representation of the IDN in Unicode. For example "北京" ("Beijing" in Chinese).</p> <p>LDH Label</p> <p>The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org"</p>
Internationalized Domain Names Working Group	<p>IDN-WG</p> <p>http://forum.icann.org/lists/gnso-idn-wg/</p>
Letter Digit Hyphen	<p>LDH</p> <p>The hostname convention used by domain names before internationalization. This meant that domain names could only practically contain the letters a-z, digits 0-9 and the hyphen "-". The term "LDH code points" refers to this subset. With the introduction of IDNs this rule is no longer relevant for all domain names.</p> <p>The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org".</p>
Nominating Committee	<p>NomCom</p> <p>http://nomcom.icann.org/</p>
Non-Commercial Users Constituency	<p>NCUC</p> <p>http://www.ncdnhc.org/</p>
Policy Development Process	<p>PDP</p> <p>See http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA</p>
Protecting the Rights of Others Working Group	<p>PRO-WG</p> <p>See the mailing list archive at http://forum.icann.org/lists/gnso-pro-wg/</p>
Punycode	<p>Punycode is the ASCII-compatible encoding algorithm described in Internet standard [RFC3492]. This is the method that will encode IDNs into sequences of ASCII characters in order for the Domain Name System (DNS) to understand and manage the names. The intention is that domain name registrants and users will never see this encoded form of a domain name. The sole purpose is for the DNS to be able to resolve for example a web-address containing local characters.</p>

Registrar	<p>Domain names ending with .aero, .biz, .com, .coop, info, .museum, .name, net, .org, and .pro can be registered through many different companies (known as "registrars") that compete with one another. A listing of these companies appears in the Accredited Registrar Directory.</p> <p>The registrar asks registrants to provide various contact and technical information that makes up the domain name registration. The registrar keeps records of the contact information and submits the technical information to a central directory known as the "registry."</p>
Registrar Constituency	<p>RC</p> <p>http://www.icann-registrars.org/</p>
Registry	<p>A registry is the authoritative, master database of all domain names registered in each Top Level Domain. The registry operator keeps the master database and also generates the "zone file" which allows computers to route Internet traffic to and from top-level domains anywhere in the world. Internet users don't interact directly with the registry operator. Users can register names in TLDs including .biz, .com, .info, .net, .name, .org by using an ICANN-Accredited Registrar.</p>
Registry Constituency	<p>RyC</p> <p>http://www.gtldregistries.org/</p>
Request for Comment	<p>RFC</p> <p>A full list of all Requests for Comment http://www.rfc-editor.org/rfcxx00.html</p> <p>Specific references used in this report are shown in the next column.</p> <p>This document uses language, for example, "should", "must" and "may", consistent with RFC2119.</p> <p>ftp://ftp.rfc-editor.org/in-notes/rfc1591.txt</p> <p>ftp://ftp.rfc-editor.org/in-notes/rfc2119.txt</p> <p>ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt</p>
Reserved Names Working Group	<p>RN-WG</p> <p>See the mailing list archive at http://forum.icann.org/lists/gnso-rn-wg/</p>
Root server	<p>A root nameserver is a DNS server that answers requests for the root namespace domain, and redirects requests for a particular top-level domain to that TLD's nameservers. Although any local implementation of DNS can implement its own private root nameservers, the term "root nameserver" is generally used to describe the thirteen well-known root nameservers that implement the root namespace domain for the Internet's official global implementation of the Domain Name System.</p> <p>All domain names on the Internet can be regarded as ending in a full stop character e.g. "en.wikipedia.org.". This final dot is generally implied rather than explicit, as modern DNS software does not actually require that the final dot be included when attempting to translate a domain name to an IP address. The empty string after the final dot is called the root domain, and all other domains (i.e. .com, .org, .net, etc.) are contained within the root domain.</p> <p>http://en.wikipedia.org/wiki/Root_server</p>
Sponsored Top Level Domain	<p>sTLD</p> <p>A Sponsor is an organization to which some policy making is delegated from ICANN. The sponsored TLD has a Charter, which defines the purpose for which the sponsored TLD has been created and will be operated. The Sponsor is responsible for developing policies on the delegated topics so that the TLD is operated for the benefit of a defined group of stakeholders, known as the Sponsored TLD Community, that are most directly interested in the operation of the TLD. The Sponsor also is responsible for selecting the registry operator and to varying degrees for establishing the roles played by registrars and their relationship with the registry operator. The Sponsor must exercise its delegated authority according to fairness standards and in a manner that is representative of the Sponsored TLD Community.</p>
U-label	<p>The U-label is what should be displayed to the user and is the representation of the Internationalized Domain Name (IDN) in Unicode.</p>
Unicode Consortium	<p>A not-for-profit organization found to develop, extend and promote use of the Unicode standard. See http://www.unicode.org</p>
Unicode	<p>Unicode is a commonly used single encoding scheme that provides a unique number for each character across a wide variety of languages and scripts. The Unicode standard contains tables that list the code points for each local character identified. These tables continue to expand as more characters are digitalized.</p>

[38] Business Constituency <http://forum.icann.org/lists/gtld-council/msg00501.html>, Intellectual Property Constituency <http://forum.icann.org/lists/gtld-council/msg00514.html>, Internet Service Providers <http://forum.icann.org/lists/gtld-council/msg00500.html>, NCUC <http://forum.icann.org/lists/gtld-council/msg00530.html>, Registry Constituency <http://forum.icann.org/lists/gtld-council/msg00494.html>

[39] "My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.

In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.

By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.

As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages."

[40] <http://data.iana.org/TLD/tlds-alpha-by-domain.txt>

[41] See section 4A -- <http://www.icann.org/udrp/udrp-policy-24oct99.htm>.

[42] In addition to the expertise within the Committee, the NCUC provided, as part of its Constituency Impact Statement expert outside advice from Professor Christine Haight Farley which said, in part, "...A determination about whether use of a mark by another is "confusingly similar" is simply a first step in the analysis of infringement. As the committee correctly notes, account will be taken of visual, phonetic and conceptual similarity. But this determination does not end the analysis. Delta Dental and Delta Airlines are confusingly similar, but are not like to cause confusion, and therefore do not infringe. ... In trademark law, where there is confusing similarity and the mark is used on similar goods or services, a likelihood of confusion will usually be found. European trademark law recognizes this point perhaps more readily than U.S. trademark law. As a result, sometimes "confusingly similar" is used as shorthand for "likelihood of confusion". However, these concepts must remain distinct in domain name policy where there is no opportunity to consider how the mark is being used."

[43] In addition, advice was sought from experts within WIPO who continue to provide guidance on this and other elements of dispute resolution procedures.

[44] Kristina Rosette provided the reference to the *Agreement on Trade-Related Aspects of Intellectual Property Rights* which is found online at http://www.wto.org/english/tratop_e/trips_e/t_agm1_e.htm

".. *Article 16 Rights Conferred* 1. The owner of a registered trademark shall have the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion. In case of the use of an identical sign for identical goods or services, a likelihood of confusion shall be presumed. The rights described above shall not prejudice any existing prior rights, nor shall they affect the possibility of Members making rights available on the basis of use...."

[45] <http://www.ohchr.org/english/bodies/hrc/comments.htm>

[46] <http://gns0.icann.org/drafts/GNSO-PRO-WG-final-01Jun07.pdf>

[47] Charles Sha'ban provided a range of examples from Arabic speaking countries. For example, in Jordan, Article 7 Trademarks eligible for registration are 1- A trademark shall be registered if it is distinctive, as to words, letters, numbers, figures, colors, or other signs or any combination thereof and visually perceptible. 2- For the purposes of this Article, "distinctive" shall mean applied in a manner which secures distinguishing the goods of the proprietor of the trademark from those of other persons. Article 8 Marks which may not be registered as trademarks. The following may not be registered as trademarks: 10- A mark identical with one belonging to a different proprietor which is already entered in the register in respect of the same goods or class of goods for which the mark is intended to be registered, or so closely resembling such trademark to the extent that it may lead to deceiving third parties.

12- The trademark which is identical or similar to, or constitutes a translation of, a well-known trademark for use on similar or identical goods to those for which that one is well-known for and whose use would cause confusion with the well-known mark, or for use of different goods in such a way as to prejudice the interests of the owner of the well-known mark and leads to believing that there is a connection between its owner and those goods as well as the marks which are similar or identical to the honorary badges, flags, and other insignia as well as the names and abbreviations relating to international or regional organizations or those that offend our Arab and Islamic age-old values.

In Oman for example, Article 2 of the Sultan Decree No. 38/2000 states:

"The following shall not be considered as trademarks and shall not be registered as such: If the mark is identical, similar to a degree which causes confusion, or a translation of a trademark or a commercial name known in the Sultanate of Oman with respect to identical or similar goods or services belonging to another business, or if it is known and registered in the Sultanate of Oman on goods and service which are neither identical nor similar to those for which the mark is sought to be registered provided that the usage of the mark on those goods or services in this last case will suggest a connection between those goods or services and the owner of the known trademark and such use will cause damage to the interests of the owner of the known trademark."

Although the laws in Egypt do not have specific provisions regarding confusion they stress in great detail the importance of distinctiveness of a trade mark.

Article 63 in the IP Law of Egypt No.82 for the year 2002 states:

"A trademark is any sign distinguishing goods, whether products or services, and include is particular names represented in a distinctive manner, signatures, words, letters, numerals, design, symbols, signposts, stamps, seal, drawings, engravings, a

combination of distinctly formed colors and any other combination of these elements if used, or meant to be used, to distinguish the precedents of a particular industry, agriculture, forest or mining venture or any goods, or to indicate the origin of products or goods or their quality, category, guarantee, preparation process, or to indicate the provision of any service. In all cases, a trademark shall be a sign that is recognizable by sight."

[48] Found at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.htm with 171 contracting parties.

[49] Further information can be found at the US Patent and Trademark Office's website <http://www.uspto.gov/>

[50] Found at <http://www.icann.org/registrars/ra-agreement-17may01.htm#3>

[51] Found at <http://gnso.icann.org/drafts/idn-wg-fr-22mar07.htm>.

[52] The 2003 correspondence between ICANN's then General Counsel and the then GAC Chairman is also useful <http://www.icann.org/correspondence/touton-letter-to-tarmizi-10feb03.htm>.

[53] "My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice. I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system."

[54] For example, David Maher, Jon Bing, Steve Metalitz, Philip Sheppard and Michael Palage.

[55] Reserved Word has a specific meaning in the ICANN context and includes, for example, the reserved word provisions in ICANN's existing registry contracts. See <http://www.icann.org/registries/agreements.htm>.

[56] "Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration."

[57] Found online at <http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm> and in full in Part B of the *Report*.

[58] The Committee are aware that the terminology used here for the purposes of policy recommendations requires further refinement and may be at odds with similar terminology developed in other context. The terminology may be imprecise in other contexts than the general discussion about reserved words found here.

[59] The subgroup was encouraged by the ccNSO not to consider removing the restriction on two-letter names at the top level. IANA has based its allocation of two-letter names at the top level on the ISO 3166 list. There is a risk of collisions between any interim allocations, and ISO 3166 assignments which may be desired in the future.

[60] The existing gTLD registry agreements provide for a method of potential release of two-character LDH names at the second level. In addition, two character LDH strings at the second level may be released through the process for new registry services, which process involves analysis of any technical or security concerns and provides opportunity for public input. Technical issues related to the release of two-letter and/or number strings have been addressed by the RSTEP Report on GNR's proposed registry service. The GAC has previously noted the WIPO II Report statement that "If ISO 3166 alpha-2 country code elements are to be registered as domain names in the gTLDs, it is recommended that this be done in a manner that minimises the potential for confusion with the ccTLDs."

[61] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[62] Internet Draft IDNAbis Issues: <http://www.ietf.org/internet-drafts/draft-klensin-idnabis-issues-01.txt> (J. Klensin), Section 3.1.1.1

[63] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[64] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[65] With its recommendation, the sub-group takes into consideration that justification for potential user confusion (i.e., the minority view) as a result of removing the contractual condition to reserve gTLD strings for new TLDs may surface during one or more public comment periods.

[66] Note that his recommendation is a continuation of the recommendation in the original RN-WG report, modified to synchronize with the additional work done in the 30-day extension period.

[67] Ms Doria said "...My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order. This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g., a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's definition, I do not believe it includes the definition of a system of morality."

[68] <http://www.icann.org/tlds/agreements/net/appendix7.html>

[69] While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not

be demonstrable in a financial statement or traditional business plan. E.g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.

Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels."

[70] "In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)".

[71] "In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should be an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal."

[72] Consensus Policies has a particular meaning within the ICANN environment. Refer to <http://www.icann.org/general/consensus-policies.htm> for the full list of ICANN's Consensus Policies.

Cybersquatting Cases Up in 2015, Driven by New gTLDs

Geneva, March 18, 2016

PR/2016/789

Amid the roll-out of hundreds of new generic Top-Level Domains (gTLDs) such as .GURU, .NINJA and .NYC, trademark owners filed 2,754 cases under the Uniform Domain Name Dispute Resolution Policy (UDRP) with WIPO in 2015, an increase of 4.6 % over the previous year.

Videos: Highlights [■/YouTube](#) | Press Conference [■/YouTube](#)

Cybersquatting disputes relating to new gTLDs accounted for 10.5% of WIPO's UDRP caseload in 2015, which covered a total of 4,364 domain names. Among these names, .XYZ, .CLUB and .EMAIL were the most common new gTLDs (Annex 1 [PDF](#)).

Infographic: Who filed the most domain name cases in 2015? [PDF](#)

WIPO Director General Francis Gurry said: “As brand owners face the possibility of further abuse of their trademarks in domains - both old and new - they continue to rely on WIPO's cybersquatting dispute resolution procedures. By combating opportunistic domain name registration practices, WIPO's services help consumers to find authentic web content and enhance the reliability of the Domain Name System.”

Country code Top-Level Domains (ccTLDs) accounted for 13.7% of all filings with WIPO in 2015, with 71 national domain registries designating this WIPO dispute resolution service.

WIPO UDRP cases in 2015 involved parties from 113 countries. The U.S., with 847 cases filed, was the first-ranked WIPO filing country, followed by France (337), Germany (272), the U.K. (229) and Switzerland (169). (Annex 2 [PDF](#)) Among the top five users, Germany (+48.6%) saw the highest growth in cases filed.

The top three sectors of complainant activity were fashion (10% of all cases), banking and finance (9%), and Internet and IT (9%). (Annex 3 [PDF](#)) Hugo Boss leads the list of filers – 62 cases – followed by Philip Morris (60) and AB Electrolux (48). (Annex 4 [PDF](#)) 313 WIPO panelists from 45 countries were appointed in 2015, and proceedings were administered in 15 different languages.

WIPO Director General Francis Gurry and Director of WIPO Arbitration and Mediation Center Erik Wilbers present the Organization's 2015 arbitration and mediation activities at a press conference at the United Nations Office in Geneva (photo: WIPO).

The increase in new gTLD registrations in WIPO's caseload is anticipated to continue, in particular as new gTLDs contested at Internet Corporation for Assigned Names and Numbers (ICANN) auction, such as ".SHOP", are yet to launch. Meanwhile, calls are being made for a next round of new gTLDs, particularly by brand owners, such as Twitter. At the same time, ICANN has commenced a process to review Rights Protection Mechanisms such as the URS (Uniform Rapid Suspension system) and the UDRP. As the UDRP initiator and leading administrator, WIPO takes a strong interest in these ICANN processes.

Since the WIPO Arbitration and Mediation Center administered the first UDRP case in 1999, total WIPO case filings passed the 33,000 mark in 2015, encompassing over 61,000 domain names (Annex 5 [PDF](#)).

Intellectual Property Disputes

For intellectual property disputes more broadly, the WIPO Center has updated the [WIPO Mediation Rules](#) to facilitate submission of a dispute to mediation in cases where there is no prior mediation agreement between the parties. Effective as of January 1, 2016, these provisions may be particularly suitable for cases in which a court encourages mediation.

Also in 2015, the WIPO Center published the WIPO Guide on Alternative Dispute Resolution Options for Intellectual Property Offices and Courts [PDF](#). Informed by WIPO Center experience in this area, this Guide provides a broad overview of ADR for intellectual property disputes and presents options for interested Intellectual Property Offices (IPOs), courts and other bodies (before which intellectual property disputes are adjudicated) to integrate ADR processes into their existing services.

In 2015, the United States Patent and Trademark Office (USPTO) included the WIPO Center among listed ADR providers available at the option of parties to administer disputes before the Trademark Trial and Appeal Board (TTAB) and the Patent Trial and Appeal Board (PTAB).

Background

WIPO Arbitration and Mediation Center

Based in Geneva, Switzerland, with an office in Singapore, the [WIPO Arbitration and Mediation Center](#) offers Alternative Dispute Resolution options for the resolution of international commercial disputes between private parties. The arbitration, mediation and expert determination procedures provided by the

WIPO Center are recognized as particularly appropriate for technology, entertainment and other disputes involving IP. The WIPO Center is also the global leader in the provision of domain name dispute resolution services under the WIPO-designed UDRP, receiving cases from trademark owners from around the world.

About WIPO

The World Intellectual Property Organization (WIPO) is the global forum for intellectual property policy, services, information and cooperation. A specialized agency of the United Nations, WIPO assists its 188 member states in developing a balanced international IP legal framework to meet society's evolving needs. It provides business services for obtaining IP rights in multiple countries and resolving disputes. It delivers capacity-building programs to help developing countries benefit from using IP. And it provides free access to unique knowledge banks of IP information.

Older News Articles:

▶ [Spamhaus News INDEX](#)

The Spamhaus Project has added a new list to its Top-10 Worst pages, this time for [Top Level Domains \(TLDs\)](#). This domain data is designed to complement the recent additions to our IP address data announced in a [previous news blog](#).

One must note that this list does not provide the worst TLDs in absolute quantity, other TLDs may have far more abusive domains, but they also have vastly more non-abusive domains. Instead, the list shows the ratio of all domains seen by the systems at Spamhaus versus the domains our systems profile as spamming or being used for botnet or malware abuse. In the last 18-years, Spamhaus has built its data gathering systems to have a view of most of the world's domain traffic. We feel the numbers shown on this list are representative of the actual full totals.

Spam and other types of abuse continue to plague the internet because bad actors find it very cheap and very easy to obtain thousands of domain names from the Top Level Domain registries and their resellers, the registrars. A few registrars knowingly sell high volumes of domains to professional spammers for profit, or do not do enough to stop or limit spammers' access to this endless supply of domains. These registrars end up basing their entire business model on network abuse.

Unsurprisingly, most of the TLDs listed on this page are the "new gTLDs" recently introduced by ICANN; this is largely the result of a combination of factors:

- no body of legacy good reputation from old customers with legitimate domains long since registered
- anti-abuse mechanisms freshly deployed and still not up to the task
- promotional sales offering domains for very cheap prices, or even free, attracting bulk registrations of throw-away resources

In fact, we have observed it is usually quite easy to see which registrar/TLD combination is being promoted and sold cheapest that day by just looking at the bulk registrations created by known bad actors. Abuse of this type also ends up damaging the reputation of any legitimate users who have purchased domains on some of the affected TLDs, as the trust in resources hosted on these new TLDs ends up decreasing over time.

Nearly all TLD registries (including the Country-Code TLDs - "ccTLDs") claim to be against abuse of the resources they provide. However, some seem to only consider the revenue made by selling as many domains as possible as factors in their corporate policy decisions. The abuse of these domains matters not to their calculations. Some TLD registries also claim it is not up to them, but to their resellers (the registrars) to deal with any misuse, but if these registrars also do nothing nor are forced to do anything, the problems remain.

A good number of the TLDs succeed in keeping spammers off their domains and work to maintain a positive reputation; this shows that, if they wished to, any TLD registry can 'keep clean'.

For the purpose of seeing "who is doing well" in this regard, we plan to provide a view of the abuse trends we observe over time, integrating the snapshot provided by the statistics currently published with an historical view that should be able to show which TLDs are getting better at managing their resource space. We will also soon be publishing a Top-10 Worst registrar list, so keep an eye out for those.

Our hope is that this data can help the "Good" Powers That Be (starting with ICANN and its stakeholders) to better focus their attention on network abuse issues, aiming for a better tomorrow for our Internet.

-----------	-----------	----------	---------------	----------	----------	------

The World's Worst TLDs

TLD Check

TLD Result

This is not a list of the worst TLDs in quantity, several other TLDs have far more spam domains, but they also have vastly more non-spam domains. This list shows the ratio of domains seen by the systems at Spamhaus versus the domains our systems profile as spamming or being used for botnet or malware abuse. This is also not a list that retains a long history, it is a one-month "snapshot" of our current view.

Spam continues to plague the internet because spammers find it easy to obtain thousands of domain names from the Top Level Domain (TLD) registries and their resellers. Many knowingly sell masses of domains to professional spammers for profit, or do not do enough to stop or limit spammers' access to this endless supply of domains.

The TLDs listed on this page provide a needed service to spam gangs and in doing so are actually damaging the reputations of their domains and damaging the reputation of any legitimate non-spammers who have purchased a domain from them.

Although nearly all TLD registries (including the Country-Code TLDs, ccTLDs) claim to be anti-spam, some seem to only factor the revenue made by selling as many domains as possible into corporate policy decisions. The use of these domains (in this case abuse) matters not to their calculations. Some TLD registries will claim it is not up to them, but to their sales-agents (registrars) to deal with any misuse, but if these registrars also do nothing, the problems remain.

A good number of the TLDs succeed in keeping spammers off their domains and work to maintain a positive anti-spam reputation. This shows that if they wish, TLD registries can "keep clean" by keeping the spammers and other abusers away.

Source: Spamhaus ([DBL](#)) database. Data is compiled automatically from the DBL database using the percentage of DBL listed domains for each TLD.

The 10 Worst Top Level Domains

As of 31 March 2016 the TLDs with the worst reputations for spam operations are:

1	.work	67.1% bad domains
2	.review	58.8% bad domains
3	.date	57.0% bad domains
4	.click	55.2% bad domains
5	.tokyo	53.1% bad domains
6	.download	51.9% bad domains
7	.party	42.2% bad domains
8	.science	42.0% bad domains
9	.poker	38.0% bad domains
10	.racing	36.1% bad domains

NEWS

Abuse runs rampant on new generic top level domains

For some new gTLDs the ratio of malicious domains is almost 80 percent, Spamhaus says

By **Lucian Constantin** | [Follow](#)

IDG News Service | Mar 7, 2016 10:04 AM PT

Generic top-level domains (gTLDs) that have sprung up in recent years have become a magnet for cybercriminals, to the point where some of them host more malicious domains than legitimate ones.

Spamhaus, an organization that monitors spam, botnet and malware activity on the Internet, has [published a list](#) of the world's top 10 "worst TLDs" on Saturday. What's interesting is that the list is not based on the overall number of abusive domains hosted under a TLD, but on the TLD's ratio of abusive domains compared to legitimate ones.

[ALSO ON CSO: [The Web's 10 most shady neighborhoods](#)]

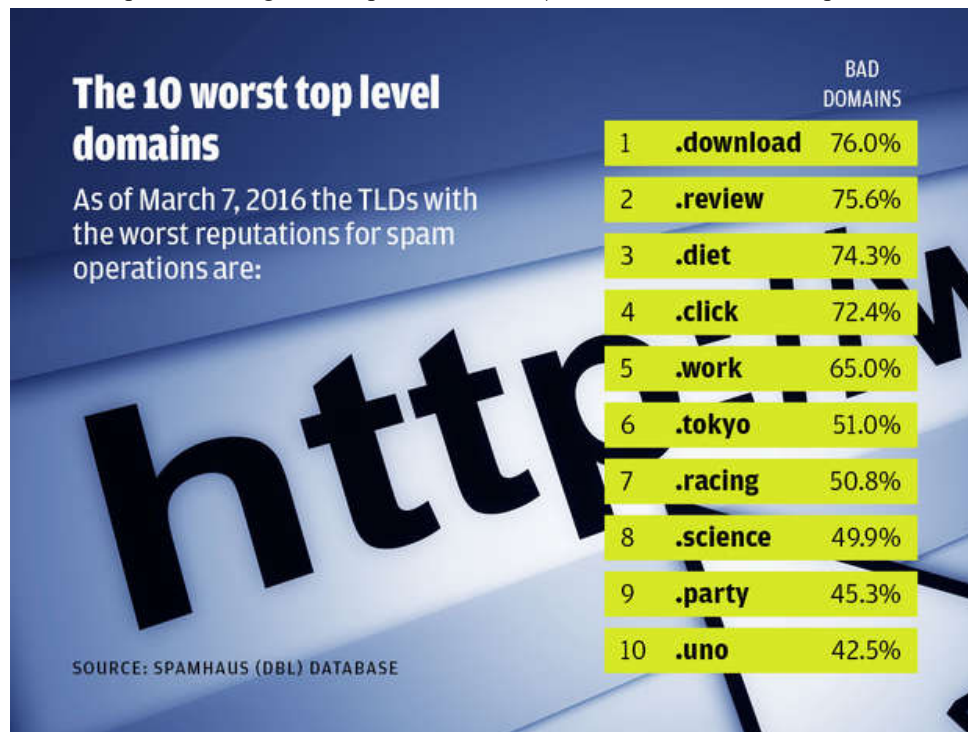

Compare: HP ArcSight vs Splunk

Over the years, lists of spam-friendly top level domains have typically had .com, .net and .org at the top. However, a TLD's trustworthiness ultimately relies on the ability of the organization that manages it -- known as the registry -- to police its name space and to enforce rules for its resellers, the registrars.

ADVERTISING

[Learn More](#)

inRead invented by Teads

If, for example, 1 percent of all .com domains were used for malicious activity, one could say that the .com registry, Verisign, is doing a relatively good job at keeping the abuse rate down. The problem is that because the .com TLD is so large, its 1 percent might represent more malicious domains than in a much smaller TLD where the rate of abusive domains is actually 50 percent.

Therefore, comparing good-vs-bad ratios is a better way to determine which registries care more about their TLDs' reputation, something that ultimately affects their legitimate customers.

"Spam and other types of abuse continue to plague the Internet because bad actors find it very cheap and very easy to obtain thousands of domain names from the Top Level Domain registries and their resellers, the registrars," Spamhaus said in a [blog post](#). "A few registrars knowingly sell high volumes of domains to professional spammers for profit, or do not do enough to stop or limit spammers' access to this endless supply of domains. These registrars end up basing their entire business model on network abuse."

Based on Spamhaus' data, some of the generic TLDs that have been created in recent years thanks to ICANN's relaxed policies are not doing enough to stop abuse. This could be either because they're inexperienced at tackling such issues or because they care more about revenue than a clean Internet.

SponsoredPost Sponsored by Microsoft Cloud
Insights You Weren't Expecting from Big Data

At this time, Spamhaus' 10 Worst Top Level Domains list looks like this: .download with 76 percent bad domains; .review with 75.6 percent bad domains; .diet with 74.3 percent bad domains; .click with 72.4 percent; .work with 65 percent; .tokyo with 51 percent; .racing with 50.8 percent; .science with 49.9 percent; .party with 45.3 percent and .uno with 42.5 percent.

Some TLD owners claim that it's up to resellers to deal with cases of domain misuse and policy violations, but if they don't force those resellers to take action, nothing will change, Spamhaus said. "A good number of the TLDs succeed in keeping spammers off their domains and work to maintain a positive reputation; this shows that, if they wished to, any TLD registry can 'keep clean'."

English

The Internet Corporation for Assigned Names and Numbers ([ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)) today published the findings from its [ICANN \(Internet Corporation for Assigned Names and Numbers\) Global Consumer Research Study, Phase One](#), conducted on its behalf by Nielsen, to measure aspects of consumer awareness, perceived consumer choice, experience and trust related to the current generic top-level domain ([gTLD \(generic Top Level Domain\)](#)) landscape and the domain name system ([DNS \(Domain Name System\)](#)). The global study surveyed 6,144 consumers aged 18+ representing Asia, Europe, Africa, North America and South America, and was administered in 18 languages and drawn from 24 countries. The research, conducted between February 2-19, 2015, was designed to create a meaningful baseline of data on consumer attitudes and will be followed by a second survey approximately one year later. This will also be a key input to a team set to be reviewing competition, consumer trust and consumer choice in the domain name system later this year.

To prepare for this review, [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s stakeholder community recommended a list of metrics and definitions to help inform consideration of these areas. [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) commissioned this survey in response to recommendations from the Implementation Advisory Group on Competition, Consumer Choice and Consumer Trust ([IAG-CCT \(Competition, Consumer Choice & Consumer Trust\)](#)). Among the 66 metrics recommended, a subset of 11 were identified as best being measured using a global survey of Internet users. [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) conducted [an open RFP \(/news/announcement-2-2014-07-16-en\)](#) and signed a contract with Nielsen to conduct the study in November 2014.

"This is the first time we've surveyed consumers directly about domain names and Internet use, and it provides an important benchmark as the new domains roll out," Akram Atallah, president of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s Global Domains Division. "As the community looks toward future rounds, the survey findings will help inform the best approach."

Growing awareness for new gTLDs

Since the first new [gTLD \(generic Top Level Domain\)](#) was delegated in

October 2013, more than 630 new gTLDs have been delegated. To gauge perceptions of the new gTLDs, the survey focused on the new gTLDs with the greatest number of registrations at the time the questions were developed in January 2015 – .EMAIL, .PHOTOGRAPHY, .LINK, .GURU, .REALTOR, .CLUB, .XYZ and a regionally relevant TLD (Top Level Domain), including internationalized domain names (IDNs (Internationalized Domain Names)).

Across all survey respondents, 46 percent reported awareness of at least one new gTLD (generic Top Level Domain), with 65 percent of those who are aware reporting they have also visited a new gTLD (generic Top Level Domain). Notably, .EMAIL and .LINK led in awareness and visitation of new gTLDs.

"The survey found that domains with an implied purpose and functional associations, such as .EMAIL, were most often recalled by Internet users," said Atallah. "While some of the drivers may be linked to familiarity and general association versus awareness of the extension, we believe it's a signal that people are receptive to the names."

Awareness continues to be high for well-known legacy TLDs

The survey also examined consumer attitudes toward a subset of legacy TLDs introduced before 2012 – .COM, .NET, .ORG, .INFO, .BIZ, .MOBI, .PRO, .TEL, .ASIA and .COOP. Among these legacy gTLDs, three extensions (.COM, .NET and .ORG) lead awareness, with nearly 8 in 10 (79 percent) respondents reporting knowledge of these domains, on average. These TLDs also had relatively high visitation, with an average of 71 percent of respondents reporting they have visited one of those domains.

Consumer trust in the Domain Name (Domain Name) Industry is high

Notably, Nielsen found that 72 percent of respondents reported high levels of trust with entities that offer domain names. These high trust levels were linked to a perception that the industry will take precautions, give consumers what they think they're getting, and screen companies or individuals who register for certain domain names.

Of those surveyed, an average of 90 percent claimed to trust the top three legacy TLDs (.COM, .NET, and .ORG), with the highest numbers found in North America, South America and Africa. Consistent with other study findings, the results show trust among new gTLDs is lower than legacy TLDs, but growing: nearly one person in two (49 percent) on average reports that they trusted the sample of new gTLDs provided in the survey.

Users aware and fearful of abusive Internet behavior, but taking precautions

Abusive Internet behavior, including spam, malware, phishing, and cybersquatting remain an issue for Internet users. At least three quarters of the respondents (74 percent) are familiar with malware, phishing or stolen credentials. Cybersquatting is the only bad behavior that the majority are unfamiliar with — just over 1 in 3 (37 percent) report awareness.

Regardless of their experience, most Internet users take some personal actions to improve their online security — most commonly installing anti-virus software and modifying their online behavior. There is a continuing need for education as consumers seek out resources to increase their sense of safety and to help resolve issues encountered online.

Additional Study highlights include:

- When asked to describe new gTLDs, the most common words included: useful, informative, helpful, practical, interesting and innovative.
- While people are increasingly using different devices to surf the web, 64 percent of respondents report using a search engine as their preferred way to find a website. This is only slightly lower than Internet users report they did two to three years ago.
- Registering a domain is not hard, but could be easier – fifty-three percent report that registering a domain is either "very easy" or "somewhat easy" and roughly half want the process of registering a website to be less complicated (50 percent), cheaper (55 percent) and quicker (49 percent).

ICANN (Internet Corporation for Assigned Names and Numbers) is also working with Nielsen to conduct a global survey of domain name registrants and their perceived sense of trust and choice in the domain name space. Results from that study will be available later in 2015.

About the Global Consumer Survey and Supporting Materials

The Global Consumer Survey was conducted by Nielsen on behalf of ICANN (Internet Corporation for Assigned Names and Numbers). The data collection and analysis phase of the survey took place in February 2-19, 2015, and the final report was delivered in April 2015. A total of 6,144 consumers aged 18+ representing Asia, Europe, Africa, North America and South America were selected based on the number of hours per week spent on the Internet. The survey was administered in 18 languages and drawn from 24 countries. In addition, significance testing was performed at a 95 percent confidence level throughout the survey. For a complete methodological summary, including weighting variables, please contact karen.lentz@icann.org (<mailto:karen.lentz@icann.org>).

ABSTRACT

The `com`, `net`, and `org` TLDs contain roughly 150 million registered domains, and domain registrants often have a difficult time finding a desirable and available name. In 2013, ICANN began delegation of a new wave of TLDs into the Domain Name System with the goal of improving meaningful name choice for registrants. The new rollout resulted in over 500 new TLDs in the first 18 months, nearly tripling the number of TLDs. Previous rollouts of small numbers of new TLDs have resulted in a burst of defensive registrations as companies aggressively defend their trademarks to avoid consumer confusion. This paper analyzes the types of domain registrations in the new TLDs to determine registrant behavior in the brave new world of naming abundance. We also examine the cost structures and monetization models for the new TLDs to identify which registries are profitable. We gather DNS, Web, and WHOIS data for each new domain, and combine this with cost structure data from ICANN, the registries, and domain registrars to estimate the total cost of the new TLD program. We find that only 15% of domains in the new TLDs show characteristics consistent with primary registrations, while the rest are promotional, speculative, or defensive in nature; indeed, 16% of domains with NS records do not even resolve yet, and 32% are parked. Our financial analysis suggests only half of the registries have earned enough to cover their application fees, and 10% of current registries likely never will solely from registration revenue.

1. INTRODUCTION

Nearly any successful company today needs a good Internet presence, and most see a memorable domain name as a key part of that presence. Though a nearly infinite set of possible domain names exist, any given name is unique, and memorable names often change hands for thousands or even millions of dollars. The Domain Name System (DNS) originally included only a small handful of top-level domains (TLDs), and ICANN has kept that number low until recent times. The benefits of a new TLD seem obvious at first glance: simple and memorable strings, long since taken in the older TLDs, become available again under a new namespace. However, many registrations in new TLDs go towards defensive registrations, brand or trademark owners trying to protect their names.

Starting in 2013, delegation began of a whole new wave of TLDs. Whereas ICANN debated the inclusion of previous TLDs independently and over the course of multiple ICANN board meetings, TLDs in the new program go through a standard application process which does not include ICANN-wide attention. The new expansion has resulted in a swift expansion of the TLD namespace: on October 1, 2013, shortly before the beginning of the program, the root zone contained 318 TLDs, mostly country code TLDs (ccTLDs). As of April 15, 2015, the root zone contained 897 TLDs, an expansion of 579 TLDs in less than two years.

This paper identifies the impact of the New gTLD Program on the domain name ecosystem. Previous TLD additions, such as `biz` [12] and `xxx` [11], caused widespread speculation and defensive registrations, but this larger expansion could discourage both. With hundreds of new TLDs, we expect many smaller companies to find it infeasible to defend their name in each. Additionally, such a sharp increase in simple-word second-level domains could make it difficult for speculators to resell even desirable names. The program's success also depends on how Internet users view the new domains. Do consumers see TLDs as interchangeable, or will new TLDs discourage users from visiting the associated domain? To answer these questions, we make the following contributions:

- We **classify registration intent** with a methodology derived from our work on `xxx` [11]. The application of the methodology to the New gTLD Program presented additional scaling difficulties, most notably requiring further automation of domain analysis. Our main contribution is the timely result of this methodology applied to the TLD landscape during its current period of swift expansion.

- We determine the program’s **impact on the old TLDs**, both on registration rates and on the types of registrations.
- We examine **registry profitability** to learn where the registration money goes and what kinds of TLDs get the most registrations.

Taken together, our findings suggest that the new gTLDs have yet to provide value to the Internet community in the same way as legacy TLDs. Although the new TLDs greatly expand the domain name space, overall we find that speculative and defensive registrations dominate the growth of registrations in new TLDs. For domains that resolve with some kind of content, over 45% are speculative in nature, nearly 40% are defensive, and less than 15% host primary Web content. Users also visit new domains in the new TLDs less frequently than in the old, and new TLD domains are more than twice as likely to appear on a blacklist within the first month of registration. Finally, we also find that the new TLDs have yet to have significant impact on the old TLDs. Registrations in the new TLDs generally increase the number of total registrations, and com continues to dominate Internet domain name registration activity overall.

2. BACKGROUND

The Domain Name System (DNS) is the Internet service that maps human-readable names to machine addresses. In the Internet today, the DNS is overseen by the Internet Corporation for Assigned Names and Numbers (ICANN), which holds the authority for establishing new top-level domains (TLDs). After a number of minor TLD additions in the decade previous (e.g., *biz*, *info*, *mobi*, *xxx*), ICANN initiated a new process in 2008 to normalize the policies for creating new gTLDs. In late 2013, the first new gTLD was delegated. The length of this process reflects the significant complexity involved, the range of stakeholders and the significant potential for conflict. In this section, we provide background on how the domain name ecosystem works, how companies apply for a TLD in the new program, and who the significant players are.

There are three key actors in the DNS ecosystem:

- Registries** operate TLDs and have a contract with ICANN for each one.
- Registrars** sell domain names, typically in many different TLDs, and also have an ICANN accreditation.
- Registrants** are entities that buy domain names.

and our goal in this paper is to explore how these actors have reacted to the rapid expansion of the DNS name space.

2.1 The Delegation Process

In preparation for the expansion, ICANN formalized a detailed application process for those seeking to sponsor new TLDs (well over 300 pages in English) [19]. Each applicant prepared an extensive submission covering business, technical and operational issues and paid a USD 185,000 evaluation fee for the initial evaluation. These applications in turn were open to public comment and for review by government interests and interested stakeholders. In such cases, the TLD might undergo extended evaluation, dispute resolution, or a contention period when multiple applications pursue the same TLD (and in such cases the fees could increase considerably). With the addition of legal fees, drafting fees, data escrow fees, auctions for contested names and operational costs, applications for a new gTLD require significant capital and thus favor those large organizations (e.g., Google, Amazon, Donuts) who would amortize these expenses across many such applications.

Those applicants whose submission survived evaluation transitioned to a phase called “delegation” (when the TLD is entered into the zones of the root DNS servers) subject to a series of contractual obligations (e.g., a registry agreement with ICANN covering dispute resolution, fees, technical standards, etc.) and technical tests. Delegation marks the time when end users can first resolve domains under the new TLD and is thus a major milestone for any registry. Due to capacity constraints inside ICANN and changes in applicant business goals, there can be considerable delay between evaluation and delegation.

2.2 TLD Rollout

After delegation, the TLD life cycle depends on the registry. TLDs intended for public use have a sunrise phase, a period of time during which only trademark holders may register. This phase gives brand holders a first chance to defend their names. Most TLDs follow with a “land rush” phase where registrants can get an earlier chance at any domain name for a price premium, usually on the order of a few hundred dollars. Finally, public TLDs will have a general availability phase, where registrations become first-come first-served, and registrants just pay the standard yearly registration rate for most names. Though ICANN has some minimum length standards for the sunrise phase, the registry chooses the exact length of sunrise, domain pricing and promotions, and all of the details about the other introductory phases.

A subset of TLDs are never made available for public registration. For these private TLDs, the only intended registrant is the registry itself, frequently to protect a brand mark. For example, the TLD *aramco* is closed to the public and only Saudi Aramco and its affiliates can operate domains under this TLD.

2.3 Examples

The data for this paper comes from hundreds of new TLDs, many of them managed by unique registries. We cannot describe all actors due to space limitations, but this section describes some of the larger registries and their TLDs.

2.3.1 Donuts

Though most registries run one or a small handful of new TLDs, Donuts Inc. is the largest and manages hundreds. Their TLDs largely consist of topical English words, such as “singles”, “digital”, and “coffee”. The company’s founders each have years of experience in the domain name industry, and the company secured over USD 100 million in venture capital [9]. Another large registry, Rightside, runs the technical infrastructure for Donuts TLDs. In return, Donuts gives some of its TLDs to Rightside after they reach delegation.

2.3.2 The xyz TLD

The xyz TLD is a generic alternative to com and is the largest in the new program. In the middle of 2014, Network Solutions, a large registrar, began offering xyz domains for free to some of their customers on an opt-out basis (e.g., the owner of *example.com* would find the domain *example.xyz* had appeared in their account). While registrants received these domains for free, Network Solutions still paid the registry full price for each domain [16, 26], although documents released as part of a lawsuit by Verisign suggest Network Solutions may have paid for these domains with advertising credit [8].

Due to this promotion, the number of registered domains in xyz rose by thousands per day in its earliest days until early August, when the number of registrations slowed to around 428,806 domains. Since then, xyz registrations appear at a much lower rate:

the number of domains finally doubled on April 13, 2015, taking over eight months to register a number of domains that originally took only two.

Registrants, however, appear to have only limited interest in these free domains. In our data set, 351,457 `xyz` domains (46% of `xyz`) remain unused and display a standard Network Solutions registration page when visited in a Web browser. Upon further analysis, we find that 351,440 of these domains appeared in the zone file in its first two months and still showed the unused Network Solutions template six months later. In fact, 82% of the 428,806 `xyz` domains in the August 2, 2014 zone file originated from this promotion and remained unclaimed as of early February 3, 2015. According to the monthly reports, Network Solutions had acted as registrar for only 360,683 `xyz` domains at the end of July, 2015, so registrants from this promotion claimed fewer than 10,000 free domains in the first six months.

2.3.3 *The science TLD*

The `science` TLD allows generic registrations, but targets the scientific community. Starting with general availability on February 24, 2015, the `AlpNames` registrar offered `science` TLDs for free. Similar to `xyz`, this promotion appears to have significantly impacted the number of `science` registrations: within only a few days, the TLD boasted 36,952 unique domains. The promotion has since ended, but the `AlpNames` registrar still sells `science` domains for \$0.50, making it one of the cheapest TLDs. Two months after the start of general availability it had 174,403 registrations. Even though general availability started after our cutoff date, `science` is already the third largest TLD.

2.3.4 *The realtor TLD*

The National Association of Realtors owns the `realtor` TLD and targets accredited realtors, but also requires all registrants to prove that they are members of their association [22]. The registry provides the first year of registration for free to anyone that provides their NAR membership information. The promotion only applies to a single domain per NAR membership number. 46,920 `realtor` domains (51%) still show the default Web template provided by the registrar.

3. DATA AND INFRASTRUCTURE

We use data from many sources in our analysis, including zone files and several reports from ICANN. We actively crawl Web and DNS for each domain, and compare our findings with Alexa rankings and various blacklists. In this section we describe our data sources and data collection infrastructure.

3.1 Zone Files

When a registrant purchases a new domain from a registrar, the registrar sends a request to the registry with the domain and name server information. Once the domain goes live, it will appear in that TLD's *zone file*. At a high level, a zone file reflects a snapshot of a DNS server's anticipated answers to DNS queries. For a domain to resolve, it must have name server information in the zone file.

ICANN requires most registries to provide zone file access for a variety of purposes, including research. Some registries, such as most ccTLDs, do not need to provide access. For zones delegated prior to 2013, we gained access to their zone files by signing and faxing a paper contract to the TLD's registry, each of which gave us FTP credentials. We originally used this method to gain access to `aero`, `biz`, `com`, `info`, `name`, `net`, `org`, `us`, and `xxx`.

In anticipation for the rapid TLD expansion, ICANN developed a more scalable solution to zone file access requests, known as the

Centralized Zone Data Service (CZDS). Registries and interested third parties can all apply for accounts on the service. After filling out their online profile with contact information and project details, requesting access to multiple zone files becomes straightforward. Registries still see multiple requests and can approve or deny them individually, but the process is much simpler. Once the registry provides access, the user can download the zone file through a simple API call up to once per day. Older TLDs can migrate to the new system for zone access, but progress has been slow; so far, only `museum`, `coop`, and `xxx` have migrated.

We have an account on CZDS, and manually refresh all new or expired approval requests almost once per day.¹ We have access to the zone files for hundreds of domains, most using the new CZDS system. We download a new snapshot of each daily, totaling 3.8 GB of gzipped text, more than half from `com`. For the analysis in this paper we simplify the zones and store all NS, A, and AAAA records on our HDFS cluster, and then store the raw zones on our archive server for future use.

3.2 ICANN Public Data

ICANN also requires each registry to provide a handful of summary reports. We have used most of them at some point in our methodology. The monthly transaction reports are particularly useful for our study. ICANN requires each registry to publish monthly summary statistics about the number of domains registered, transferred, expired, and renewed for each accredited registrar. We use the monthly summary reports to identify the number of registered domains that do not have any name server information and therefore do not appear in the zone file. We also use their breakdown of domains per registrar when estimating registration costs.

We also relied upon ICANN's New gTLD Current Application Status listing [20]. We used the data provided to determine TLD status and registry information as the new TLDs worked through the application system.

3.3 Our TLD Set

We include results for new TLDs that started general availability by the date of publication of ICANN's latest monthly registry reports on January 31, 2015, which altogether totals 502 new TLDs. Table 1 breaks down these new TLDs into various high-level categories, together with the total number of new domains registered in them at the time we crawled them.

We have focused our analysis on why registrants spend money on domains in the new TLD program. Some companies defensively register private TLDs, while others simply want a shorter domain name for their services. However, some companies in the latter category have not established their presence in their new TLDs yet, so we do not have a methodology to differentiate between these cases. Thus, we are more interested in public TLDs, where we can establish the registrant intent of individual domain names.

We differentiate public and private TLDs by checking public information about the start of general availability, as provided by several large domain registrars and `nTLDStats` [21], a Web site that tracks information on the new TLD program and is well-regarded in the domain community. Registries include their TLDs in these listings when they want public registrations, since the registrar collects this list in anticipation of selling domains in the TLD. This classification technique held up to the 15 randomly sampled private domains we verified manually. With this classification, 128 of the 502 new TLDs are private.

¹We considered scripting our requests, but CZDS blocked obvious scripting attempts, so we did not pursue this further.

	<i>TLDs</i>	<i>Registered Domains</i>
Private	128	—
IDN	44	533,249
Public, Pre-GA	40	—
Public, Post-GA	290	3,657,848
Generic	259	3,061,416
Geographic	27	494,824
Community	4	101,608
Total	502	4,191,097

Table 1: The number of new TLDs in each category on February 3, 2015, and their sizes. For the three TLDs for which we had pending access requests, we used the size of the closest zone file.

In addition to the above, we found it difficult to learn substantial information about the new internationalized TLDs. In many cases, registrants can only purchase domains for them from international registrars. They tend to have rules for sunrise and general availability that we found unclear even with the help of a native speaker. As a result, we also do not include these 44 new TLDs in our analysis. Additionally, we focus on domains that reached general availability (GA) before our February 3, 2015 Web crawl so the set of registrants can include all prospective domain owners.

After removing private and internationalized TLDs from those that had already began general availability, we end with a set of 290 new public TLDs. The total set of TLDs includes generic words like `bike` and `academy` and geographical regions like `berlin` and `london`, both represented in Table 1. Additionally, four TLDs gate registrations to members of a particular community, such as the `realtor` TLD for accredited realtors. To give a sense of how many common word TLDs exist, our data set contains four synonyms for “picture”: `photo` (12,933 domains), `photos` (17,500 domains), `pics` (6,506 domains), and `pictures` (4,633 domains). Table 2 gives an overview of the largest TLDs in our set, with some of the geographic TLDs featuring prominently. In the rest of this paper, we restrict our analyses to these 290 TLDs.

3.4 Active Web

For each domain in the zone file of a new gTLD, we visit the Web page hosted on port 80 of the domain with a crawler based on Firefox, an improved version of the crawler used in our previous study of xxx [11]. Our browser-based Web crawler executes JavaScript, loads Flash, and in general renders the page as close as possible to what an actual user would see. We also follow redirects of all kinds. After the browser loads all resources sent by the remote server, we capture the DOM and any JavaScript transformations it has made. We also fetch page headers, the response code, and the redirect chain.

Our primary data set for this paper is our Web crawl of all domains in the new TLDs on February 3, 2015. We chose this date due to its proximity to the timing of the latest ICANN reports, which reflect the number of registered domains in each TLD as of the end of January 2015.

3.5 Active DNS

Every time we Web crawl a domain, we also perform a DNS query using a DNS crawler developed for [15]. We follow CNAME and NS records and continue to query until we find an A or AAAA record, or determine that no such record exists. We save every record we find along the chain. We use DNS data to detect invalid NS records and to annotate each Web crawl with its CNAME chain.

<i>gTLD</i>	<i>Domains</i>	<i>Availability</i>
xyz	768,911	2014-06-02
club	166,072	2014-05-07
berlin	154,988	2014-03-18
wang	119,193	2014-06-29
realtor	91,372	2014-10-23
guru	79,892	2014-02-05
nyc	68,840	2014-10-08
ovh	57,349	2014-10-02
link	57,090	2014-04-15
london	54,144	2014-09-09

Table 2: The ten largest TLDs in our public set with their general availability dates.

3.6 Active WHOIS

Registry operators for most TLDs must publicly provide accurate domain ownership data using the WHOIS protocol. ICANN intends the use of WHOIS for “any lawful purpose except to enable marketing or spam, or to enable high volume, automated processes to query a registrar or registry’s systems” [14]. In particular, ICANN encourages its use by consumers, registrars, and law enforcement, and discourages its use by spammers [29].

WHOIS server operators have leeway in how they achieve these goals. They typically rate limit requests, and responses do not need to conform to any standard format, which causes parsing difficulty even once records are properly fetched. We only query WHOIS for a small percentage of domains in the new gTLD program as an investigative step towards understanding ownership and intent.

3.7 Pricing Data

One dimension of our analysis focuses on the economic impact of the new TLD program, a task that requires domain pricing information. Unfortunately for our data collection purposes, registries do not sell domain names directly, but instead sell them through ICANN-accredited registrars. A registry can sell their domain names through any registrars they choose, but each must get similar wholesale prices and promotions [5].

We gathered pricing data for domains in the new gTLDs from a wide range of registrars. First, we collected data from the most common registrars for as many TLDs as possible. In some cases the registrar included a pricing table with information for many TLDs and we were able to automate the data collection process. Other registrars only showed pricing information after querying a domain name’s availability, which required many separate queries. We made these queries manually. Some registrars made us solve a single captcha after five to ten requests.

Obtaining pricing information for the most common registrars simplifies the process and allows us to obtain a large number of (registrar, TLD) pairs in a short amount of time. However, we ultimately want to estimate pricing per TLD, so we would like to have registrar pricing data for many domain registrations in each TLD. Some TLDs do not sell well or are not available at the most common registrars (e.g., geographical TLDs for non-Western regions). We use the monthly registry reports to learn how many domains each registrar manages in each TLD, and we collect pricing information for the top five in each. Where possible, we also removed registry-owned domains from our analysis, since they did not cost anything. When registrars reported prices for non-standard time intervals or in foreign currencies, we used the current exchange rate to convert all prices to US dollars per year.

Figure 1: Number of new domains per day. Bars indicate the average rate for each week.

Registries reserve a set of strings which they sell for increased prices, known as *premium domain names*. For instance, GoDaddy sells normal `club` domains for \$10 USD, but `universities.club` costs \$5,000 USD, and this increase in price represents revenue to both the registry and registrar. These domains number in the thousands for any given TLD, and prices can vary per string. Our methodology treats premium domains as normal domains, thus underestimating registry and registrar revenue. Premium domain sales do not always correlate with wholesale revenue, and we do not see a scalable method to address this problem.

3.8 Alexa

We use the Alexa top million domains list to make an estimate of how often users visit domains in the new TLDs [1]. Alexa collects their data by allowing browser extensions to include their measurement code in exchange for providing domain analytics, and by allowing Web page operators to do the same. We use a domain’s presence in the list as an indication that users visit it, but do not place any emphasis on domain rankings.

3.9 Blacklists

We also compare new domain registrations with URIBL, a publicly available domain blacklist, to see how the blacklist rate compares between old and new TLDs [27]. We use their high-volume `rsync` instance to download a new copy of the blacklist every hour. Though they provide many types of blacklists, we only use the standard and highest-volume blacklist, labeled “black”, as the rest tend to be lower volume. This list represents the domains most likely to be malicious, while the other lists include domains detected through more experimental methodologies.

4. REGISTRATION VOLUME

We first look at the impact of the new TLDs on overall registration volume. The new TLDs represent new opportunities for registering domains. As registrants create new domains, one possibility is that they decide to create them in the new TLDs rather than the old, thereby displacing registration activity in the old TLDs (e.g., because names taken in `com` are available in the new TLDs). Another possibility is that the new opportunities motivate even more registrations, thereby growing total registration activity overall.

Figure 1 shows the number of new domain registrations per week broken down into various categories. Days for which we did not have access to the zone files resulted in slight drops in the graph.

Figure 2: Classifications for all domains in the new TLDs, a random sample of the old TLDs, and a month of new domain registrations in the old TLDs.

We show the most active old TLDs individually, the remaining old TLDs grouped into “Old”, and the new TLDs in “New”.

Overall, the introduction of the new TLDs had only minimal impact in the rate of registration of the old TLDs. The new TLDs generally increase the total number of registrations rather than shift focus from old to new TLDs. However, the new TLDs see far fewer registrations than the old TLDs, largely because `com` continues to dominate.

5. CONTENT CATEGORIES

As a first step towards learning the intent of each domain’s registrant, we classify the technical data each domain returns when queried by our DNS or HTTP infrastructure. We perform this classification with features of both crawls, including DNS CNAME records, Web headers, Web contents, and the NS records in the zone files.

Domains with invalid DNS or HTTP errors are straightforward to identify, but in many instances, we need to classify the domains based on the textual content they return to HTTP queries. We use a combination of automated machine learning techniques and manual inspection of Web pages hosted at these domains.

We assign each domain to one of the following seven categories:

No DNS domains do not successfully resolve DNS queries.

HTTP Error domains have valid DNS, but do not return an HTTP 200 when queried.

Parked domains are owned by an ad network or are for sale by their owners and typically return Web pages dominated by ads.

Unused domains return HTTP content that is not consumer-ready, including empty pages, default Web server templates, or PHP errors.

Free domains include domains given out as part of a promotion that still have the original template, as well as domains with registry-owned Web templates.

Defensive Redirect domains redirect through one of several technical mechanisms to a different domain name.

Content domains host valid Web content for users to visit.

We start by presenting high-level content categorizations, including domains in the older TLDs as a reference point. Then Section 5.2 provides more detail about our clustering methodology, and Section 5.3 describes the seven categories in more detail.

5.1 Content Summary

To place the new TLD results in context, we present domain classifications for three data sets. The first includes all domains in the new TLDs as of February 3, 2015. The second includes 3 mil-

Content Category	Results	
No DNS	567,390	15.6%
HTTP Error	362,727	10.0%
Parked	1,161,892	31.9%
Unused	504,928	13.9%
Free	432,323	11.9%
Defensive Redirect	236,380	6.5%
Content	372,569	10.2%
Total	3,638,209	100.0%

Table 3: Overall content classifications for all domains in the zone file for the new public TLDs.

lion domains from the old TLDs defined in Section 3.1 chosen uniformly at random. The third includes all domains in the same set of old TLDs that were newly registered during December 2014. (Delays in our com processing pipeline prevented us from using a more recent data set.) Figure 2 summarizes all three data sets. This paper focuses on the new TLDs, so we focus on those domains. Table 3 shows exact values for the 290 public English TLDs described in Section 3.3, minus `quebec`, `scot`, and `gal`, the TLDs for which we did not have zone file access at the time.

For most categories the classification breakdown is comparable among the three data sets: erroneous domains (No DNS and HTTP Error) account for about a quarter of all domains, another quarter utilizes domain parking, and roughly 20% of domains are either unused or redirect elsewhere. The old and new TLDs differ greatly in content and promotional domains: the new TLDs show a dearth of content, but make up for it with a high volume of free domains, which domain owners do not actively use yet.

Figure 3 shows our content classification for the 20 largest TLDs that allow public registrations. Most TLDs show a typical split between the major content categories, but other TLDs show very different registration types, especially those with free domains.

5.2 Content Clustering

Our goal is to cluster Web pages hosted at domains into one of the content categories. Two key challenges to classifying content are the sheer size of the data (millions of domains), and the lack of labeled data for training a classifier. With so many unlabeled Web pages, we must learn from scratch to classify the domains.

Our first step is to cluster Web pages with highly similar content. This procedure groups together duplicate and near-duplicate Web pages, which commonly arise when HTML is automatically generated using a fixed template. Prevalent examples include parked pages, and default placeholder pages served by a registrar before the registrant publishes any content.

To map Web pages to inputs for a clustering algorithm, we follow a conventional “bag-of-words” approach which extracts HTML features from the Web pages. In particular, we compose a dictionary of all terms that appear in the HTML source code, and for each Web page, we count the number of times that each term appears. In this way, each Web page is represented as a sparse, high-dimensional vector of feature counts. We implemented a custom bag-of-words feature extractor which forms tag-attribute-value triplets from HTML tags, as described in [7].

For reasons of computability and conciseness of results, we begin by clustering roughly one tenth of the crawled Web pages. We used the k -means clustering algorithm with $k = 400$ to organize these Web pages into groups of high similarity (based on the Euclidean distance between their feature vectors). We set k to be in-

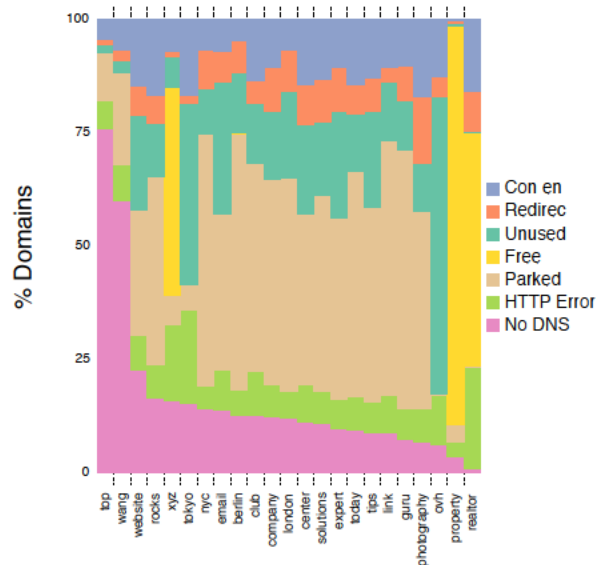

Figure 3: Domain classifications in individual TLDs for the 20 most common. We have sorted TLDs by fraction of “No DNS” to better highlight the category breakdowns of successful content.

tionally large because we wished to discover especially cohesive clusters of replicated Web pages.

Next we manually inspected the resulting clusters using a custom visualization tool. The tool displays screenshots of how the Web pages rendered in our crawler and provides a link to the HTML source next to each screenshot. To facilitate efficient manual review, the tool presents a condensed view of the clusters by showing only a sample of Web pages in each one. Specifically, it sorts the Web pages in each cluster by their distance to the cluster centroid, then displays the top and bottom-ranked pages as well as a random sample of pages in between. If all Web pages in this sample are visually nearly identical, we can conclude with confidence that the entirety of Web pages in the cluster have been appropriately grouped. Furthermore, we can classify Web pages in these perfectly homogenous clusters all together.

By examining the clusters, we placed domains into three broad categories according to their content: parked, content-free, and meaningful content. Our clustering approach was particularly effective at identifying large numbers of parked domains and content-free (or unused) domains that host a default registration page. The class of Web pages with meaningful content exhibits the most variety: Web content is highly diverse and unlikely to have the same degree of replication as the other two classes. Thus at this stage, we focused only on bulk labeling of clusters that clearly contained parked or content-free Web pages. If it was not visually obvious how to label a cluster in bulk, then its pages remained unclassified at this point. (In practice, though, we found that Web pages with content often were grouped together in clusters with wide diameters.)

After this phase of clustering, manual inspection, and labeling, we then aimed to classify domains that were not included in the initial subset. Now equipped with a large number of labeled examples, we used nearest neighbor classification to discover many more candidate Web pages which are likely parked or content-free. First, we extracted HTML features from the remaining Web pages, then mapped the pages into the same feature space as the original subset.

Then for each unlabeled Web page, we found its nearest neighbor by Euclidean distance in the labeled set and, if the distance was less than a strict threshold, we marked the page as a candidate for its neighbor’s class. This thresholding minimizes false positives. This step continues to focus only on parked and content-free pages; no content pages were classified in this way. We modified our visualization tool to display candidates next to their nearest neighbor; if the Web pages were visually nearly the same, then we were confident in assigning the appropriate label to the candidates.

In one round of this nearest neighbor method, we were able to label many of the remaining (non-content) Web pages in our data set with high confidence. However, since we only clustered about one tenth of the Web pages at the outset, we likely missed different templates that did not appear in the initial subset. Thus, we iterated this approach to achieve greater coverage. That is, we clustered the remaining unlabeled Web pages, manually inspected and labeled homogenous clusters, and performed thresholded nearest neighbor classification—now with a larger set of labeled examples. We iterated this process until there were no more obviously cohesive clusters. Finally, after identifying all parked and content-free domains, we manually inspected a random sample of the remaining unlabeled Web pages. The results gave us confidence to conclude that the remaining Web pages contain legitimate content.

5.3 Content Categories

We use this content clustering methodology to create a cluster label for each domain. Then, we took any page metadata (e.g., DNS errors, HTTP status code, the redirect chain, etc.) and combined these features together to make a final classification.

The rest of this subsection describes how we combined those features to determine a final content category. For domains that might fall into multiple categories, we prioritize categories in the order listed in Table 3. For example, for parked domains that redirect to a different domain, usually as part of the parking program, we only classify as “Parked” and not “Defensive Redirect”.

5.3.1 No DNS

Registrants purchase domain names from a registrar and pay a yearly fee to keep them, yet a large fraction of domains in the new gTLDs do not even resolve. Some of these registrants associate name server information with their domains, but these servers do not respond to DNS queries, or only respond with the DNS REFUSED error code. For instance, `adsense.xyz` has an NS record for `ns1.google.com`, but its name server returns REFUSED for all queries (which recursive resolvers usually report as SERVFAIL to the end user). Out of 3,638,209 domains in the new TLDs, we had 567,390 DNS failures with an associated NS record, or 15.6%.

Other registrants buy domains and then do not associate name server information with them. Since the zone files only contain associations between domain names and name servers, they contain no entries for this set of domains. We do not have a list of these domain names and do not have a clear mechanism to find them.

While we cannot enumerate these domains, we can infer their presence through the ICANN monthly reports. The monthly reports provide a summary of domain activity and transactions for all registered domains (i.e., domains with a yearly fee). We can use the difference between the number of domains in the ICANN reports and the number of domains in the zone file as an estimate for the number of domains with no name server information.

Our analysis shows that out of 3,754,141 total domains in the reports, 207,184 domains (5.5%) do not appear in their respective zone files. Registrants pay for these domains like any other, but they do not resolve.

<i>Error Type</i>	<i>Result</i>	
Connection Error	110,144	30.4%
HTTP 4xx	82,298	22.7%
HTTP 5xx	138,471	38.2%
Other	31,814	8.8%
Total	362,727	100.0%

Table 4: Breakdown of HTTP errors encountered when visiting Web pages.

5.3.2 HTTP Error

We next classify domains that resolve to an IP address, but return no result or an HTTP error code when queried on port 80. We suspect some of these error conditions are temporary. Others are likely longer-term misconfigurations by owners who do not care about the content hosted on the domains, making them likely brand defenders. Alternatively, these domains might serve a legitimate purpose that is motivated by content other than Web. Because we use the status code from the final landing page, even HTTP 3xx status codes indicate errors, typically a redirect loop.

We received 362,727 responses to that we classified as HTTP errors. Table 4 provides a breakdown. Notably, most domains in this category exhibit connection issues such as timeouts or return HTTP 5xx return codes, meant for internal server issues. The variety of errors is multifarious: overall we received responses with 43 unique HTTP status codes.²

5.3.3 Parked

Many domain registrants do not have a plan to monetize the content of their domain names. Most of them are speculating on the name itself, intending to sell it later for a profit. Some may have a plan to develop the site later in its lifetime, but have not put up any content yet. Still other owners initially created Web properties that turned out to be unsuccessful, and later parked them while waiting for expiration. Whatever the reason, domain parking is common in all TLDs. We discovered 1,161,892 parked domains in our data set, or 31.9% of all domains in the zone files.

Potential domain speculators have the choice of a large number of parking services. Some parking services also act as domain registrars (e.g., GoDaddy and Sedo), while others focus solely on parking. Registrants use their services by setting their name server (NS) record to the parking service’s DNS servers, redirecting their Web traffic to the parking service, or setting a CNAME. Parking services that also act as registrars may or may not use different name servers for parked domains compared to normal registrations.

Parked domains come in two main varieties [3]. Most domain parking monetization is through pay per click (PPC) advertising. These parked pages look much like search result pages with links pertaining to words in the domain name. Each link on this page is an advertisement. Other parked domains use pay per redirect (PPR). When the target domain’s owner purchases “direct navigation traffic” from an ad network used by the parking program, the parking service will redirect the user to a page run by an ad purchaser. Decisions to serve PPC or PPR to any particular visitor happen in real time based on characteristics provided by the traffic purchaser, including domain keywords or traffic from limited geographic regions.

²Six domains responded with the HTTP response code 418, an error code added as part of the Hyper Text Coffee Pot Control Protocol in a satirical RFC [13]. The return code means “I’m a teapot”.

<i>Feature</i>	<i>Domains</i>	<i>Coverage</i>	<i>Unique</i>
Content Cluster	1,080,283	92.3%	277,754
Parking Redirect	638,757	55.0%	81,468
Parking NS	279,903	24.1%	124
Total	1,161,892	—	

Table 5: Our capture methods for parking and how many domains each catches. We identify most parking domains with more than one classifier; column 2 shows how many domains each classifier identifies, while the last column shows how many are unique to that classifier.

As a starting point, two previous studies also needed to classify parked domains as part of their work. Alrwais et al. focus on how parking programs operate, and use domains from known parking name servers as their source [3]. Vissers et al. focus on classifying parked domains, but use parking pages from known parking name servers as their inputs [28]. However, our problem is slightly different since we want to identify random pages from the Internet as parked or not. Some parking programs host both legitimate and parked pages using the same name servers, including one of the largest parking services, GoDaddy. We need a different approach to identifying parking than either of these papers suggest.

We identify parked domains with three mechanisms. First, we use our k -means content classifier to identify PPC parking services. Often there are many of these pages for each parking service, with variations only in the displayed links; all layout and remote resources remain constant for any given parking service. As such, they tend to cluster well and are easy to identify with this method.

Second, we use the visit’s full redirect chain, acquired with the methodology described in Section 5.3.6, to identify PPR parking. These domains usually redirect through an ad network before landing at their final destination for accounting purposes. We manually inspected redirect chains for visits to known parking name servers to compile a set of URL features that indicate parking. For instance, if any URL contains “zeroredirect1.com” or both “domain” and “sale”, we classify the domain as parked.

Finally, we use known parking name servers, such as those for `sedoparking.com`. We use this method only for servers we are confident host solely parked domains. We start by taking the intersection of the different sets used by Alrwais et al. [3] and Vissers et al. [28]; the intersection includes all but one of the name servers from the latter set. For each name server in the set intersection, we use our k -means classifier to determine if domains using that name server are parked or not. For those we did not identify as parking (a very small set), we manually inspect a random selection of screenshots and their redirect chains. If we believe them all to be parking traffic missed by our classifier, then we assume all domains using the name server are parked. With this additional verification step, we concluded with high confidence that all 14 name servers in our set are used strictly for domain parking. Finally, we added one additional name server (`parklogic.com`) to our set, which we found to be dedicated to parking services through our classification experiments.

Table 5 shows how many parked domains we identify with each method. We identify most parking domains with more than one of our three methods. In particular, we identify all but 124 of nearly 280,000 domains on our set of parking name servers with another approach. This high detection accuracy provides validation of our other parking classifiers, and further increases our confidence that we have identified the prevalent parking behaviors.

<i>Mechanism</i>	<i>Domains</i>	<i>Coverage</i>	<i>Unique</i>
CNAME	2,020	0.9%	729
Browser	211,065	89.3%	203,941
Frame	30,437	12.9%	24,571
Total	236,380	—	

Table 6: The mechanisms domain owners use to redirect to a different domain. Most domain owners use only browser-level redirects, but frames are still very common. Very few content domains use multiple redirect methods.

5.3.4 Unused

In our analysis, we find many Web pages that fit in none of the above categories, but also do not provide meaningful content. Most of these are placeholder pages served by a large registry with instructions for the owner on how to develop their domain. Others are empty Web pages, or the default template provided by a software package. Whatever the reason, these pages do not provide meaningful content to end users and we refer to them as “Unused”.

Unused pages often appear in bulk, so we identify them using our k -means classifier. With this technique, we find 504,928 content-free domains in our data set, or 13.9% of domains in the new TLDs.

5.3.5 Free

Domains we identify as part of a promotion, such as those described in Section 2.3, get their own content classification. Most of these domains fall into the “Unused” category through a strict categorization, but the registrant plays a different role for these (which will be relevant when determining intent in Section 6).

Though not part of a promotion, the `property` TLD largely contains domains owned by Uniregistry, its registry. The TLD showed slow growth in all other time periods, but on February 1, 2015 it grew from 2,472 to 38,464 domains in a single day. Uniregistry owns all of these domains and hosts a standard sale page with the text “Make this name yours.” We place these registry-owned content placeholders into the “Free” category as well.³ In total, we find 432,323 free domains in the new TLD program (11.9%).

5.3.6 Defensive Redirects

Many domains in the new gTLDs have at least one redirect, and most of these point to a different domain. The role of the redirect depends on the type of content. Some parking programs redirect from the initial domain to a standard parking page, using the URL parameters to pass a domain identifier for revenue sharing purposes. Defensive registrations often redirect to the owner’s other domain names, typically in an older TLD. We check for three kinds of redirects: CNAMEs, browser-level redirects, and single large frames. Table 6 shows how many domains redirect with each mechanism.

A CNAME is a DNS record type that acts like a symbolic link between two domains. Any DNS query that results in a CNAME causes the resolver to perform the same query on the target. Sometimes the result is another CNAME, which our DNS crawler must follow before finally resulting in an answer to the original query. Most domains with a CNAME only have a single CNAME, but chains of up to four are not uncommon in CDNs. For example, in our February 3 data set, the domain `tangyao.xyz` has a CNAME to `scwcty.gotoip2.com`. This domain has its own CNAME to `hkvhost660.800cdn.com`.

³We do not classify them as “Parking” because they do not show ads and they are owned by the registry.

<i>Redirect To</i>	<i>Number</i>
Defensive	236,380
Same TLD	7,135
Different New TLD	5,843
Different Old TLD	98,923
com	124,479
Structural	75,073
Same Domain	74,379
To IP	694
Total	311,453

Table 7: Which locations our visits were ultimately redirected towards.

Browser-level redirects happen when DNS resolves to a host running an HTTP server, but a query to that server returns a redirect which our browser will follow automatically. For example, an HTTP request to `tucsonphotobooth.com` returns an HTTP 302 redirect to `bumblebeephotoobooth.com`, which modern browsers obey without user interaction. A domain owner can do this in a very large number of ways, such as with a 300–399 status code, an HTTP header, an HTML meta tag, or using JavaScript to set `window.location`. We find and store these redirects at crawl time, so we are robust to these and less common methods.

In practice, we find many pages that return valid HTML, do not redirect, and present only a single large frame to the end user, such that all visual content comes through the frame. Although it does not use an explicit redirection mechanism, this technique provides the same effect: a user visits one domain on their browser, and sees content from another. Since these frames serve the same purpose as a CNAME or an HTTP redirect, we consider these to be redirects as well.

To determine if a page contains only a single large frame, we first check how many frames the page contains. We do this in JavaScript in the browser, so we do not need to use textual analysis to find them. The remaining challenge is to differentiate between pages with a single large frame, and pages with real content that have a smaller frame, such as for page navigation or tracking purposes.

We differentiate between these classes using the DOM. First, we remove non-visible components from the page, as well as anything having to do with the frame itself: the `head` tag, `frameset` and `iframe` tags, and long URLs. These modifications are safe because we operate on the DOM, not the original HTML, so non-visible components that transform visual components (such as JavaScript) have already run. By examining the string length of the resulting DOM, the pages we crawl fall cleanly into two classes. Altogether, 49% of the filtered DOMs have a string length of less than 55 characters, but show variable behavior based on the few remaining tags. The remaining pages distribute mostly evenly with a few spikes corresponding to common page templates. A visual examination of the pages in these clusters shows that the short pages do show only a single large frame, while most of the large pages have other visual content.

The most important two pieces of the overall redirect chain are the starting domain and the final page that serves content. To determine the last, we check for a single large frame first, then a browser-level redirect, and finally a CNAME. A domain with all three behaviors serves its real content through the frame; the CNAME and browser-level redirects only point to the next resource. We classify redirects by the domain they point to: same-domain, same-TLD, “com”, new-TLD, old-TLD, or IP.

Table 7 shows which of these six location types domains in the new TLDs tend to point towards. Though each of these domains has some form of redirect when fetching Web content, redirects to a page under the same domain name are less interesting because they reflect aspects of the structure of the Web page itself. Similarly, we cannot make any strong claims about redirects to a hard-coded IP address.

Instead, we only consider redirects to a different domain to fall into our redirect category. We do include redirects to other domains within the same TLD because in this case, the registrant is only using the destination domain for primary purposes. We find 236,380 off-domain redirects in our data set, or 6.5% of all domains in the new TLD zone files. 94.5% of defensive redirects point to domains in the old TLDs, with over half of those to `com`. In short, defensive redirects are only a small fraction of the overall registration behavior in the new TLDs.

5.3.7 Content

We classify domains under “Content” when they do not fit into another of our content classifications. The other aspects of our categorization pull out common errors, interesting features like redirects, and Web responses that appear frequently. Domains that do not fit into any of those categories resolve in the DNS, return HTTP 200 status codes, and provide vaguely unique responses to Web queries. Only 372,569 domains (10.2%) fall into this category. By comparing this category with the previous, we find that 38.8% of the 608,949 domains with real content redirect to a different domain to serve it.

6. REGISTRATION INTENT

In the previous section, we focused on understanding the types of content that domains in the new gTLDs host. In this section we explore the high-level intent of the domain’s registrant. For each domain, we infer what motivated its registrant to spend money on the name. We classify registration intent into one of three broad categories:

- Defensive** registrants purchased a new domain to defend an existing Web presence.
- Primary** registrants own domains with the intent to establish a Web presence.
- Speculative** registrants intend to profit off of the name itself and never plan to develop a meaningful Web presence.

Before classifying domains by registration intent into one of the above categories, we must remove some types of domains. We ignore domains in the “Unused” and “HTTP Error” categories. We could guess that these domains tend to include more defensive than primary motivations since they are not user-ready and therefore the use of the name is the only relevant effect on the Internet. However, registrants likely buy domains they intend to develop all the time, and these domain names may transition to other categorizations given time or result in expirations.

We also ignore domains in the “Free” content category before deciding registration intent. In a typical domain registration scenario, we know registrants have expressed genuine interest in the domains they own because they paid money for them. Without ignoring the “Free” content category, we could not use the results of our registrant intent classifications to make any claims about why registrants purchase domain names.

Table 8 summarizes our results. In the following sections, we describe each registration intent category in more detail. We discuss what types of registrants we expect each category to cover and how we map content categories to registration intents for each domain.

<i>Intent</i>	<i>Results</i>	
Primary	372,569	14.6%
Defensive	1,010,954	39.7%
Speculative	1,161,892	45.6%
Total	2,545,415	100.0%

Table 8: Registration intent categorizations for the new public TLDs.

6.1 Defensive

Our defensive registration intent set begins with domains that redirect to a different domain name. Some off-domain redirects could reflect primary registrations: registrants could use their old name for technical or historical reasons but primarily use and market the new domain name. However, we find in practice that most are defensive, and many lead to sites whose branding and headers clearly advertise the landing domain.⁴

Additionally, we include domains that return invalid DNS results in this set. Owners of non-resolving domains could only use their names for private purposes, since traffic routed through the public Internet cannot correctly address a remote server. A more likely explanation is that the registrant only cares about the name. We include domains with invalid NS records as well as those that do not appear in the zone file (both described in Section 5.3.1), for a total of 774,574 non-resolving domains. Combined with the 236,380 defensive redirects, we find defensive registrations of 1,010,954 domains in the new TLDs.

6.2 Primary

Primary domains include all those purchased by a registrant with the intent to use that specific domain. Most primary registrants purchased their domain to establish a Web presence, but there are other kinds of primary registrants as well. We only classify domains in our “Content” category as primary registrations. Each of these domains resolves and could conceivably host content intended for end users. Our clustering technique did not find similar Web content for these domains, so registrants of those domains at a minimum host sufficiently unique content.

6.3 Speculative

Many registrants purchase domains to speculate on the domain itself with no intent to develop content. Most make use of the first-come first-served nature of domain registrations to grab domains they believe others will find desirable in the hope of selling them later for a profit. Others host parking-based advertising and pay-per-redirect services with the goal of monetizing through ad revenue, but still with no intent to develop unique content. In practice, most speculators in the first case also host parked content because it is essentially free (and often bundled with domain registration fees), and also serves as a signal to prospective buyers that the name is available.

From a content standpoint, the difference between a defensive and speculative registration is relatively narrow. Defensive registrants purchase domains to defend the string but with no intent to develop content, while speculative registrants purchase domains to resell later with no intent to develop content. However, speculative registrants are monetarily motivated on a per-domain margin, while defensive registrants have revenues outside the domain business. A

⁴Trademark holders make defensive registrations on their own brands. The same registration made by a different actor with malicious intent would instead qualify as cybersquatting.

Figure 4: New gTLD program revenue as a CCDF across all TLDs. The vertical line at \$185,000 USD corresponds to the minimum ICANN application fee, and the line at \$500,000 USD corresponds to a more realistic estimate of the cost of establishing a new TLD.

speculator must monetize the name, but a defender does not. Therefore, we classify parked domains as speculative and non-resolving domains as defensive based on this distinction.

7. REGISTRATION COSTS

Previously, we focused on the new TLD system from a registrant-centric perspective. In this section we look at the new TLD rollout from the point of view of the registries. We examine how registries make money and how they interact with registrars in practice.

7.1 Registry Financials

Using the methodology described in Section 3.7, we obtained pricing information for 2,006 (TLD, registrar) pairs, which account for 73.8% of all domain registrations. In only four TLDs do we record prices from fewer than three registrars; in each case, however, the one or two registrars we do record account for at least 97.5% of all domains. In the remaining 26.2% of domain registrations for which we do not have matching data, we use the median price for the TLD.

Figure 4 shows a complementary cumulative distribution function of the cost to registrants per TLD. A point on the line shows the ratio of new TLDs that have made at least the corresponding amount in registration costs. We included a vertical line at \$185,000 USD, the standard application fee for a new TLD [19]. At this cost, roughly half of all TLDs made this money back. We estimate the total cost to registrants for domains in the new TLDs at \$89 million USD through March 2015.

The application fee, however, only represents a lower bound on the amount each registry spent on their TLD. Additional costs to ICANN include a quarterly \$6,250 fee [5], a per-domain transaction fee for registries with more than 50,000 transactions per year (a threshold only 18 TLDs have met), and additional application fees for TLDs that must enter the contention process. While registries do not have many other explicit costs, the TLD application process ran for years before the first delegation; presumably registries built up legal or personnel costs in the meantime. Registries also need to connect with registrars, market and brand their TLDs, build a Web presence, and run or outsource technical operations.

As a result, we also include 500,000 USD as a more realistic estimate for the cost of establishing a new TLD. While it is conjecture, some TLDs have already gone up for auction, like `reise` [23] and

Figure 5: A histogram of renewal rates per TLD.

versicherung [4], which set reserve prices of 400,000 USD and 750,000 USD, respectively. Given the small number of registrations each had at the time, these TLDs were valuable because they had completed the delegation process, suggesting the sale price roughly reflects the cost of delegation. With these reserve prices, we chose 500,000 USD as a rounded estimate in this range. At this estimate, only about 10% of TLDs are profitable.

Revenue from domain registrations does not all go to the registry. Instead, registries and registrars split revenue based on a previously agreed upon model. For instance, Verisign makes \$7.85 USD per com registration [6] and \$6.79 per net registration [18]. During our pricing data collection, we found registration prices for both com and net names ranging from \$8 to \$13 USD, or markups ranging from \$0.15 to \$6.⁵

Unfortunately, the new registry agreements do not specify maximum wholesale prices, only fees the registry must pay to ICANN. For calibration, we can get a handful of prices through registry-reported earning data. Rightside, one of the largest back-end registry providers, is funded through private investors and has released some revenue statistics online in a presentation meant for investors and analysts [25]. They provide end-of-November wholesale and total revenue numbers for five TLDs, two of them aggregated. Our estimate is too low for reviews,⁶ but our other estimates overestimate the wholesale price by close to a factor of 1.4. Our model does not factor in premium domain name sales, a non-trivial revenue source that does not correlate well with wholesale price. As a result, Figure 4 represents a low estimate of domain name costs, and we discuss the limitations of our model further in Section 7.4.

7.2 Renewal Rates

All registries in the new gTLD program anticipated the one year and 45 day mark since the introduction of the earliest TLDs [2].⁷ This milestone provides the first chance for registrants in the new TLDs to renew their domain names, and hence reflects ongoing de-

⁵Registries can offer “bulk discounts and marketing support and incentive programs” but must offer similar terms to all registrars [6].

⁶The price we found for reviews domains through two registrars owned by the same company as Rightside is less than its wholesale price. We found pricing for November through archive.org [17] and found that the price to registrants of a review domain has halved. We do not know if this reflects a reduction in its wholesale price or a promotion.

⁷The extra 45 days is for the Auto-Renew Grace Period, which allows registrars to keep the registrations for free. Usually the registrar uses this time to offer the registrant one last chance for renewal, in case they let it expire accidentally.

Figure 6: Registry profitability over time under different revenue models. A point on a line indicates the fraction of TLDs that were profitable within the given time since general availability.

mand for domains in the new TLDs after one year’s actual, rather than anticipated, experience with the domains. Donuts, the largest registry with over a hundred new TLDs, published statistics on renewal rates for their earliest TLDs [10, 24], likely in an attempt to attract registrars and investors [30]. However, Donuts limited their analysis to their own TLDs, and also did not provide numbers past 26 days.

Figure 5 shows a histogram of renewal rates by TLD. We only performed our analysis on TLDs where at least a hundred domains completed a full year of registrations plus the 45-day Auto-Renew Grace Period. The Donuts TLDs in our data set show renewal rates within a few percentage points of the numbers Donuts reported in April. We calculate an overall renewal rate of 71%.

7.3 Future Profit Modeling

In this section, we take a look at registry profitability using a variety of parameters. In face of the limitations of our profit modeling discussed in Section 7.4, we acknowledge that drawing higher-order conclusions from such limited data could lead to models that are incorrect in unpredictable ways. However, we would still like to attempt to classify “successful” TLDs, and profitability is a strong indicator of the success of any company.

We start by graphing TLD profitability over time under four different models in Figure 6. A point on a line indicates the fraction of TLDs that were profitable within the given time since general availability. We show four curves that reflect different values for two parameters. Two of the models assume an initial cost to the registry of only 185,000 USD, or the amount of the ICANN application fee. This is the minimum amount we know all registries must pay. The other models assume an initial cost of 500,000 USD, which better reflects our understanding of the cost of creating a registry. The second parameter is renewal rates. We show models with renewal rates of 57% and 79%, which reflect lower and higher than average rates and show the sensitivity of the model to renewals.

For each TLD, we collect registration volume data from the reports provided via ICANN. We consider TLDs for which we have three monthly reports after general availability. The first month typically contains a burst of registrations, and then the second and third provide two data points at a more typical registration rate. We model future months based on new registrations at this rate, and renewals of domains registered or renewed 12 months prior at the indicated renewal rate. We estimate the wholesale price as 70% of the total price at the cheapest registrar.

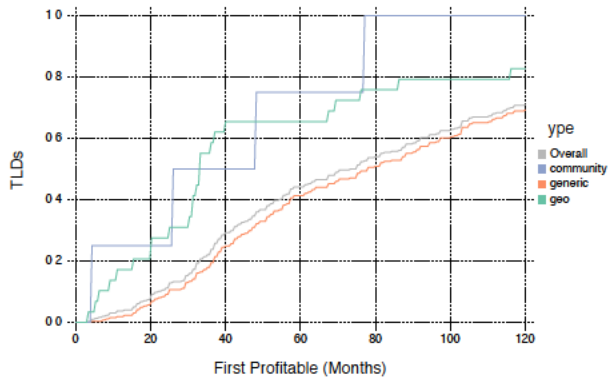

Figure 7: Modeling profitability by type of TLD. The gray line represents the aggregate, and the colored lines represent the set of TLDs of the indicated type.

Figure 6 shows that the initial cost plays a much larger role than the renewal rate in the short term, but that both parameters are important in the long term. We find that even under the most permissive model, with high renewal rates and no fees beyond those imposed by ICANN, 10% of TLDs still do not become profitable within the first 10 years.

Since there are a wide variety of registries operating new TLDs, and there is a wide variety of domain registration activity across the TLDs, we were interested to see if there were features that might separate profitable and unprofitable TLDs. To that end, we compared profitability based on four metrics:

- ◆ lexical string length;
- ◆ the registry for TLDs belonging to the top four registries, otherwise “Other”;
- ◆ the type of registry (“generic”, “community”, or “geographic”); and
- ◆ whether or not the most common registrars all sell domains in the TLD.

In practice, we only found minor variations in profitability based on these metrics. We present results for the most significant differentiators, type and registry, below.

Figure 7 shows variations in profitability by type of TLD. The gray line represents the overall profitability CDF. It is equivalent to the profitability CDFs in Figure 6 with an initial cost of 500,000 USD and an overall renewal rate of 71%. The remaining lines represent non-overlapping TLD subsets which combine to the same overall set. Though community and geographical TLDs become profitable much sooner than generic TLDs, there are so few of them in comparison that the profitability of generic TLDs still closely tracks the overall rate.

Similarly, Figure 8 shows variations in profitability by registry. Of the large registries, only Uniregistry TLDs become profitable sooner than the average. Instead, our data suggests owners of multiple TLDs mainly benefit by spreading the risk. Many registries only manage between one and three TLDs, and those strings tend to become profitable sooner than most of the large registries.

7.4 Limitations

We see profitability as an important metric with which to compare registries, but our methodology has some limitations. In this section, we describe the known limitations and their expected impact on the results.

Figure 8: Modeling profitability by registry for the registries with the most TLDs. The gray line represents the aggregate, with colored lines representing individual registries.

First, our pricing model does not include premium domain name sales, as described in Section 3.7. For the few TLDs for which we have seen premium domain revenue reports, these sales vary considerably. For different TLDs, we have seen the total revenue from premium domain sales range from \$0 to the same amount as the total revenue of wholesale domains. It is also plausible that some TLDs could get more total revenue from premium domain names than from standard registrations. As a result, this category represents the largest unknown in our model. Premium domain names renew for the normal registration cost, so this unknown only affects the initial upfront purchase of the name and not ongoing renewal revenue.

Second, for any given TLD/registrar pair, we only record a single price, when domain name prices could change over time. To date we find that, after the beginning of general availability, domain prices do not change very frequently. Future studies could address this assumption by periodically regathering pricing data. For practical reasons, doing so would require deploying a more automated method of gathering prices than we used in this paper.

Finally, we estimate wholesale prices as 70% of the lowest price for domains in the TLD. We leave a better estimation of this price to future work.

8. VISITS

As an alternative to our registrant-focused analysis, we also analyze the new TLD program from an end user perspective. In particular, we want to know whether actual users visit domains in the new TLDs, and how that compares to similar domains in the old TLDs. We use a domain’s presence or absence in the Alexa top million domains as a metric for whether or not users visit it. We do not consider the ranking order as we only care whether or not the domain gets traffic at all.

We begin by splitting new domain registrations from December 2014 into two sets, one for domains in the new TLDs and one for domains in the old TLDs. We find 326,974 registrations in December 2014 in the new TLDs, and 3,461,322 in the old TLDs. We compare these sets with the Alexa top million from April 13, 2014. We use a newer Alexa list to allow the new domain registrations time to develop their Web presence. Due to the order of magnitude size difference between our new registration sets, we report results per hundred thousand new registrations.

	<i>New</i> Per 100,000	<i>Old</i> Per 100,000
Alexa 1M	88.1	243
Alexa 10K	0.3	1.1
URIBL	703	331

Table 9: The rate at which new domains in the old and new TLDs appear in blacklists and Alexa. This table only includes domains registered within the same one-month time window to compare old and young TLDs on equal terms.

Table 9 summarizes our results. New domain registrations in the old TLDs are nearly three times more likely to appear in the Alexa top million when compared to registrations in the new TLDs. This ratio is also consistent with appearances on the Alexa top ten thousand. While this is a notable difference, it is also consistent with the proportion of primary registrations described in Section 5.1.

We use a similar method with the URIBL blacklist as an indicator of abusive behavior. We use the same sets of newly registered domains. We use a blacklist contemporaneous with our registration data because blacklist operators add abusive domains as soon as possible. Table 9 summarizes our results.

We find that domains in new TLDs are twice as likely to appear on the URIBL blacklist within the first month. Our data does not reveal why spammers find the new TLDs attractive. However, we can guess based on the registrar pricing data we collected as described in Section 3.7. Domains in new TLDs tended to cost more on average, but individual registrars sometimes sold them for significantly reduced prices. In the extreme we found xyz domains for less than \$1 USD per year at some registrars.

Table 10 shows the ten TLDs for which a new registration is most likely to appear on a blacklist. Domains registered in December 2014 in most TLDs had less than a 1% chance of appearing on a blacklist in the same month, but the link, red, and rocks TLDs showed significantly higher rates of blacklisting. We found link domains for as cheap as \$1.50 USD, but rocks domains cost at least \$7.99 USD. The characteristics of these domains that consistently contribute towards higher rates of abusive behavior remains an open question.

9. CONCLUSION

ICANN greatly expanded the TLD name space to increase consumer choice and to allow more domain registrants to get short and memorable domain names. As we have found in previous TLD expansions [11, 12], new TLDs can increase primary domain registrations but can also lead to speculation and defensive registrations. ICANN’s new rapid expansion of the available TLDs gives primary registrants a lot more choice, but also increases the demands on defensive registrants seeking to protect their marks.

We take a comprehensive approach to understanding how registrants use domain names in ICANN’s new TLD program. We used data from many sources, including zone file data available to researchers, extensive crawls of Web and DNS information, and public data from ICANN, registries and registrars. We determined that only 15% of domains purchased by a registrant show behavior consistent with primary registrations and that domain parking drives over 30% of registrations in the new gTLD zone files. We use domain pricing information to estimate that only half of all registries have recouped their application fee in wholesale revenue. Similarly, we conservatively estimate that registrants have spent roughly \$89 million USD on domain registrations in the new TLDs. Finally,

TLD	New Domains	Blacklisted	Percent
link	4,087	917	22.4%
red	7,599	614	8.1%
rocks	7,191	360	5.0%
tokyo	3,252	40	1.2%
black	919	10	1.1%
club	16,490	173	1.0%
blue	4,971	41	0.8%
support	435	3	0.7%
website	7,876	49	0.6%
country	1,154	7	0.6%

Table 10: The ten most commonly blacklisted TLDs.

we validate the expectation that users visit fewer new domains in new gTLDs than those in old, and that new domains are more than twice as likely to appear on a commonly available blacklist within the first month of registration. Taken together, our findings suggest that new gTLDs, while accruing significant revenue for registrars, have yet to provide value to the Internet community in the same way as legacy TLDs.

Acknowledgments

We would like to thank He Liu for providing the use of his active DNS crawler, and Brian Kantor and Cindy Moore for managing our hardware. Thank you as well to our reviewers for their feedback. This work was supported by National Science Foundation grant NSF-1237264 and by generous research, operational and/or in-kind support from Google, Microsoft, Yahoo, and the UCSD Center for Networked Systems (CNS).

Introduction

In accordance with section 9.3 of ICANN's [Affirmation of Commitments](#) (AoC) to promote competition, consumer choice, and consumer trust in the Domain Name System (DNS), this report is intended to aid the work of the review team on Competition, Consumer Choice, and Consumer Trust (CCT-RT). It will do so by:

- Providing an overview of the state of DNS abuse following the roll-out of the New Generic Top-Level Domain (gTLD) Program in January 2012
- Discussing options for measuring the effectiveness of the nine safeguards put in place to mitigate DNS abuse in new gTLDs
- Proposing a research model to help assess the effectiveness of the nine safeguards in mitigating DNS abuse in new gTLDs

The [AoC](#) states:

ICANN will organize a review that will examine the extent to which the... expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of...**safeguards put in place to mitigate issues involved in the...expansion...**[emphasis added]. The reviews will be performed by volunteer community members and the review team will be constituted and published for public comment...Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations

In preparation for the potential expansion of the DNS, ICANN solicited advice from its expert constituencies to examine the potential for increases in abusive, malicious, and criminal activity in an expanded DNS and to make recommendations to **pre-emptively mitigate** those activities through a number of **safeguards**.¹ The effort to identify steps for mitigating potential abuse began with posing four questions to experts in a diverse array of groups including the Anti-Phishing Working Group (APWG), the Registry Internet Safety Group (RISG), the Security and Stability Advisory Committee (SSAC), Computer Emergency Response Teams (CERTs) and members from the banking, financial, and Internet security communities. Those questions were:

- 1) How do we ensure that bad actors do not run registries?
- 2) How do we ensure integrity and utility of registry information?
- 3) How do we ensure more focused efforts on combating identified abuse?

¹ "Mitigating Malicious Conduct," ICANN, New gTLD Program Explanatory Memorandum, 3 October 2009, <https://archive.icann.org/en/topics/new-gtlds/mitigating-malicious-conduct-04oct09-en.pdf>

- 4) How do we provide an enhanced control framework for TLDs with intrinsic potential for malicious conduct?

After extensive consultations, the expert groups arrived at the following **recommendations** to address each issue area:

Question	Recommendation(s)
1) How do we ensure that bad actors do not run registries?	1) Vet registry operators through background checks to reduce the risk that a potential registry operator has been party to criminal, malicious, and/or bad faith behavior.
2) How do we ensure integrity and utility of registry information?	2) Require Domain Name System Security Extension (DNSSEC) deployment on the part of all new registries to minimize the potential for spoofed DNS records. 3) Prohibit “wildcarding” to prevent DNS redirection and synthesized DNS responses that may result in arrival at malicious sites. 4) Encourage removal of “orphan glue” records to minimize use of these remnants of domains previously removed from registry records as “safe haven” name server entries in the TLD’s zone file that malicious actors can exploit.
3) How do we ensure more focused efforts on combating identified abuse?	5) Require “Thick” WHOIS records to encourage availability and completeness of WHOIS data. 6) Centralize Zone File access to create a more efficient means of obtaining updates on new domains as they are created within each TLD zone. 7) Document registry- and registrar-level abuse contacts and policies to provide a single point of contact to address abuse complaints. 8) Provide an expedited registry security request process to address security threats that require immediate action by the registry and an expedited response from ICANN.

4) How do we provide an enhanced control framework for TLDs with intrinsic potential for malicious conduct?

9) **Create a draft framework for a high security zone verification program** to establish a set of criteria to assure trust in TLDs with higher risk of targeting by malicious actors—e.g. banking and pharmaceutical TLDs—through enhanced operational and security controls.

Measuring the effectiveness of these safeguards is a central aim of the work of the CCT-RT. To aid that work, this report will present an in-depth examination of each of these safeguards, propose potential means to measure their effectiveness where possible, and put forward a research model to analyze their effectiveness in a rigorous and comprehensive manner. Note that this report is meant as an *aid* to the CCT-RT. It is meant to offer *possible* methods and to provoke discussion within the team about how best to approach their study of DNS abuse and the safeguards put in place to mitigate it in the context of the New gTLD Program.

DNS Abuse: Key Terminology

“DNS abuse” covers a wide range of activities. While no globally accepted definition exists, definitional variants can include “cyber-crime,” “hacking,” and, as ICANN has used in the past, “malicious conduct”. Researchers from the University of Rome and the Global Cyber Security Center classify such threats to the DNS as falling under three categories: data corruption, denial of service, and privacy.²

“DNS abuse” is the term used in this report, and refers to intentionally deceptive, conniving, or unsolicited activities that actively make use of the the DNS and/or the procedures used to register domain names. This is a working definition based on review of which activities are generally explored in the literature as malicious or abusive, and is intended to provide a point of departure for the CCT-RT to refine their own definition of DNS abuse in their work. As explored below, some activities tend to fall under “bad faith”—but not necessarily illegal—commercial practices while others are outright scams that are likely to be illegal in most jurisdictions around the world. The extent to which each abusive activity (described below) falls under this definition and can be analyzed from the standpoint of the nine safeguards to mitigate DNS abuse in the New gTLD Program will remain open for consideration by the CCT-RT. The goal is to provide a working definitional structure to frame additional discussion around which activities should be included in their work.

² Casalicchio, Caselli, and Coletta, “Measuring the Global Domain Name System,” IEEE Network 27, no. 1, (2013) 25-31. doi: 10.1109/MNET.2013.6423188

DNS Abuse: Tactics and Instruments

Malicious actors typically carry out their schemes via the following avenues:³

- **Compromised domains:** domains in which a malicious actor has broken in to the web hosting of a registrant.
- **Malicious registrations:** domains registered by malicious actors for the express purpose of engaging in DNS abuse.
- **Subdomain resellers:** services—many of which are free and offer anonymous registration outside of a WHOIS service—that allow people to create registrations at the third level beneath a second-level domain that the service provider owns. These resellers often do not maintain any registration or point of contact data beyond user account names.⁴
- **IP addresses:** phishing attacks sometimes use IP addresses in their URLs rather than domain names.
- **Shortened URLs:** a technique to compact lengthy domain addresses that can be used by malicious actors to obfuscate a domain name and thus redirect unsuspecting users to malicious sites⁵

While DNS abuse can take a number of forms, its typical aim is to distribute **malware**—short for “malicious software”—which is used to disrupt computer operations, gather sensitive information, or gain access to private computer systems.⁶ Malware itself can carry out a number of harmful activities and take a number of forms. The most commonly distributed programs include:

- **Viruses:** Malicious programs that carry out a number of unwanted activities and cause computers not to function properly, including creating, moving,

³ Note the first two listed tend to be the primary avenues used by malicious actors. See Illumintel, “Potential for Phishing in Sensitive-String Top-Level Domains,” study for the ICANN Board of Directors New gTLD Program Committee, 21 May 2015, <https://www.icann.org/resources/pages/new-gtld-program-committee-2014-03-21-en>

⁵ See StopTheHacker.com, “The Curse of the URL Shorteners: How Safe Are They?” accessed 26 February 2016, <https://www.stopthehacker.com/2010/02/19/analyzing-url-shorteners/>

⁶ “Implementation Advisory Group for Competition, Consumer Choice, and Consumer Trust (IAG-CCT): Final Recommendations on Metrics for CCT Review,” 26 September 2014, <https://newgtlds.icann.org/en/reviews/cct/iag-metrics-final-recs-26sep14-en.pdf>

and/or erasing files, and/or consuming computer memory. Often they duplicate themselves and travel across networks via infected emails. Examples include “worms” and “trojan horses”.⁷

- **Spyware:** Malware that can capture information such as usernames, passwords, credit card info, web browsing habits, and e-mails.⁸

Malware is often distributed through the use of **bots**, which are automated programs that are coded to operate continuously to perform malicious or abusive functions.⁹ **Botnets** are networks of these bots that utilize infected computers to distribute malware.¹⁰ Those who are infected do not know their devices are being used for such purposes.

The Registration Abuse Policies Working Group

In 2010, the GNSO’s Registration Abuse Policies Working Group (RAPWG) produced a report that explored abuse provisions in registry-registrar agreements. In it, the group developed a consensus definition of abuse, which reads:

Abuse is an action that: a) causes actual and substantial harm, or is a material predicate of harm, and b) Is illegal or illegitimate, or is otherwise contrary to the intention and design of a stated legitimate purpose, if such purpose is disclosed.¹¹

They went further to distinguish between “**registration**” and “**use**” abuse, with the former referring to issues that arise during the registration of domains, while the latter refers to how the domains are used post-registration. Their definitional framework is as follows:

Registration issues are related to the core domain name-related activities performed by registrars and registries. These generally include (but are not limited to) the allocation of registered names; the maintenance of and access

⁷ Kaspersky Lab, “What is a Computer Virus or a Computer Worm?” accessed 26 February 2016, <http://www.kaspersky.com/internet-security-center/threats/viruses-worms>

⁸ Kaspersky Lab, “What is Spyware?” accessed 26 February 2016, <http://usa.kaspersky.com/internet-security-center/threats/spyware#.VtCsAJMrJTY>

⁹ Bots are often not malicious and carry out any number of legitimate functions. However, this report refers only to their malicious form. See Gabada, Usman, and Sharma, “Techniques to Break the Botnet Attack,” International Journal for Research in Emerging Science and Technology 2, no. 1 (March 2015), <http://ijrest.net/downloads/volume-2/special-issue-1/pid-m15ug638.pdf>

¹⁰ Ibid.

¹¹ “Registration Abuse Policies Working Group Final Report,” May 2010, <http://gns0.icann.org/en/issues/rap/rap-wg-final-report-29may10-en.pdf>

to registration (WHOIS) information; the transfer, deletion, and reallocation of domain names; and similar areas discussed in more detail below. These are generally within the scope of GNSO policy-making. Many of these are specifically listed in registration agreements as being subject to Consensus Policies, and the extant Consensus Policies have to do with these kinds of topics.

The group discussed the following activities as potential forms of registration abuse:

- **Cybersquatting** - the deliberate and bad-faith registration and use of a name that is a registered brand or mark of an unrelated entity, often for the purpose of profiting (typically, though not exclusively, through pay-per-click advertisements).
- **Front-running** – when a party obtains some form of insider information regarding an Internet user’s preference for registering a domain name and uses this opportunity to pre-emptively register that domain name.
- **Gripe sites** – websites that complain about a company’s or entity’s products or services and uses a company’s trademark in the domain name (e.g. companysucks.example). The concern expressed within the group was that these types of sites have the potential to infringe on trademark owners’ rights. But the group also noted that in many cases such sites are avenues for legitimate complaints and are protected under free speech laws in many jurisdictions.
- **Deceptive and/or offensive domain names** – registration of domain names that direct unsuspecting consumers to obscenity or direct minors to harmful content—sometimes referred to as a form of “mousetrapping.”
- **Fake renewal notices** – misleading correspondence sent to registrants from an individual or organization claiming to be or to represent the current registrar. These are sent for a variety of deceptive purposes.
- **Name spinning** – using automated tools used to create permutations of a given domain name string. While registrars regularly use such tools legitimately to suggest alternate strings to potential registrants when the string that registrant queries is not available, the group’s concern here was that such tools could produce results that infringed upon trademarked strings.
- **Pay-per-click** – an Internet advertising model used on websites, in which the advertiser pays the host only when their ad is clicked. The concern raised was use of a trademark in a domain name to draw traffic to a site containing paid placement advertising.
- **Traffic diversion** – use of brand names in HTML visible text, hidden text, meta tags, or web page title to manipulate search engine rankings and divert traffic.
- **False affiliation** – falsely purporting to be an affiliate of a brand owner.
- **Cross-TLD registration scam** – a deceptive sales practice where an existing

registrant is sent a notice that another party is interested in or is attempting to register the registrant's domain string in another TLD. The registrant is therefore pushed to make additional registrations via the party who sent the notice – often a reseller who would profit from the additional registrations, and is offering the new domain creates at a higher-than-average market price.

- **Domain kiting/tasting** – when registrants abuse the “Add Grace Period” through continual registration, deletion, and re- registration of the same names in order to avoid paying registration fees.

In contrast, the RAPWG defined “use” issues as follows:

Domain name use issues concern what a registrant does with his or her domain name after the domain is created—the purpose the registrant puts the domain to, and/or the services that the registrant operates on it. These use issues are often independent of or do not involve any registration issues...[D]omain name use is an area in which ICANN's and the GNSO's policy-making authority is more limited.

The group discussed the following activities as potential forms of use abuse:

- **Phishing** – a website fraudulently presenting itself as a trusted site (often a bank) in order to deceive Internet users into divulging sensitive information (e.g. online banking credentials, email passwords). The goal of phishing is usually the theft of funds or other valuable assets.
- **Spam** – bulk unsolicited e-mail sent from domains, and used to advertise websites.
- **Malware/Botnet Command-and-Control** –using domain names as a way to control and update botnets, which are networks of thousands to millions of infected computers under the common control of a criminal. Botnets can be used to perpetrate many kinds of malicious activity, including **distributed denial-of-service attacks (DDoS)**, **spam**, and **fast-flux** hosting of phishing and spam sites [see below for further explanation of the practices and terminology used in this definition].
- **Use of stolen credentials** – e.g. identity, access, and financial credentials to register domain names for malicious purposes, steal from, and/or otherwise disrupt and individual's or organization's operations.

In the report, the RAPWG reiterates that ICANN and its various supporting organizations have some purview over *registration* issues through the policy-making and enforcement processes, while *use* issues are more difficult to confront given ICANN's limited authority over how registrants use their domain names. Note that the definitions and activities provided in this section were solely those discussed by members of the RAPWG for the purposes of their report, and do not constitute an endorsement by ICANN as to which activities are in fact DNS abuse. The definitions

and activities noted here are provided to serve the work of the CCT-RT, and are for informational and discussion purposes only.

Specification 11 of the New gTLD Registry Agreement

Specification 11 of the New gTLD Registry Agreement mandates that registry operators commit to certain public interest commitments (PICs) as part of their contractual obligations with ICANN. Sub-sections 3a and 3b focus on registry operators' PICs as an aspect of DNS abuse, and describe activities that should be included in their efforts to mitigate and track abusive behavior in their TLDs. Specification 11 states:¹²

3a. Registry Operator will include a provision in its Registry-Registrar Agreement that requires Registrars to include in their Registration Agreements a provision prohibiting Registered Name Holders from distributing malware, abusively operating botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law, and providing (consistent with applicable law and any related procedures) consequences for such activities including suspension of the domain name.

3b. Registry Operator will periodically conduct a technical analysis to assess whether domains in the TLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. Registry Operator will maintain statistical reports on the number of security threats identified and the actions taken as a result of the periodic security checks. Registry Operator will maintain these reports for the term of the Agreement unless a shorter period is required by law or approved by ICANN, and will provide them to ICANN upon request.

The activities described within Specification 11 may provide an additional definitional framework for the CCT-RT as they refine the scope of their review.

DNS Abuse: Additional Terminology and Considerations

A number of other terms and considerations are worth noting in regard to the activities that constitute DNS abuse:

- **Phishing** uses both **social engineering** and technical subterfuge to steal consumers' personal identity data and financial account credentials. Social engineering schemes use spoofed emails to lead consumers to counterfeit websites designed to trick recipients into divulging financial data such as credit card numbers, account usernames, passwords and social security numbers.

¹² "Registry Agreements," accessed 4 February 2016, <https://www.icann.org/resources/pages/registries/registries-agreements-en>

- Spear-phishing** is a specific form of phishing email scam that targets specific individuals with high-value credentials within an organization to trick them into providing sensitive information.¹³
- **Fast-flux** is a technique carried out by botnets in phishing, spam, and other malware delivery activities in which attacks are sent from a constantly shifting set of IP addresses, rendering detection very difficult.¹⁴
 - **Typo-squatting**—aka “URL hijacking”—is a form of **cyber-squatting** that relies on users making a typographical error when entering a website address into a web browser, and often directs users to malicious sites.¹⁵
 - **Malvertising** is advertising on a website or ad network that is set up to infect viewers with malware either every time it is seen or at various intervals based on time or number of hits.¹⁶
 - **Search engine poisoning** is an activity that manipulates search engines to display search results that link to malicious websites.¹⁷
 - **Spoofing attacks** are when a malicious actor impersonates another device or user in order to launch attacks against network hosts, steal data, spread malware, or bypass access controls.¹⁸
 - **(Distributed) Denial of Service (DDoS) attacks** are cyber-attacks that work to make one or more computer systems unavailable. A *distributed* attack—carried out through a botnet—is when multiple systems are coordinated to overwhelm victims’ servers with requests. A new form of “**amplified**” **DDoS attack** has emerged that use DNS reflection and amplification to achieve extremely high attack data bit rates (reportedly exceeding 300 gigabits per second), which

<http://www.veracode.com/security/spoofing-attack>

overwhelm a victim's network capacity and result in significant or complete service outages.¹⁹

- **Domain shadowing** is another emerging form of DNS abuse in which criminals, using stolen or phished credentials, create numerous subdomains associated with existing legitimate domains in a registrant's portfolio. The legitimate domains continue to function normally from the view of the registrant while these subdomains direct visitors to malicious sites.²⁰
- **DNS cache poisoning** is an attack in which a malicious actor tricks a name server into adding or modifying cached DNS data with malicious data. **Pharming** is one form of this activity in which a malicious actor coaxes a victim into clicking on a link—usually sent via spam email—which in turn infects the victim's personal computer or server and redirects users to fraudulent websites where confidential personal information can be gathered.²¹

A key factor to remember when it comes to nearly all of these tactics is that they exploit **human weaknesses** in the forms of greed, carelessness, and/or naiveté. Thus, **end-users tend to be the weakest links in the cyber-security chain.**²²

DNS Abuse: Key Stats and Trends

A recent ICANN-sponsored global survey of 6,144 consumers reported the following:

- 74% were aware of phishing
- 79% were aware of spamming
- 40% were aware of cybersquatting
- 67% were aware of stolen credentials

- 76% were aware of malware

Along with high awareness of malicious behavior in the DNS, consumer end-users also reported high levels of being “very/somewhat scared” of each abusive behavior, and indicated a belief that they were also “very/somewhat” common.²³

Symantec, one of the world’s largest cyber-security firms, produces a yearly report on the state of global Internet security.²⁴ Its latest provides a number of indicators to illustrate general trends in key DNS abuse-related activities. As such it can serve as one point of departure for more segmented analysis of DNS abuse in new and legacy gTLDs as the work of the CCT-RT progresses:

Indicator	Descriptive Stats	Trend
Websites found with malware	<ul style="list-style-type: none"> • 2014: 1 in 1126 • 2013: 1 in 566 	
Overall Spam Rate (percentage of all emails classified as spam)	<ul style="list-style-type: none"> • 2015: 54%²⁵ • 2014: 60% • 2013: 66% 	
Global Spam Volume per Day (estimated)	<ul style="list-style-type: none"> • 2014: 28 billion • 2013: 29 billion 	
Email Phishing Rate (proportion of emails that are phishing attempts)	<ul style="list-style-type: none"> • 2014: 1 in 965 • 2013: 1 in 392 	
New Malware Variants Added Each Year	<ul style="list-style-type: none"> • 2014: 317 million • 2013: 252 million

²⁵ Note this 2015 number taken from Symantec’s November 2015 Intelligence Report at www.symantec.com/content/en/us/enterprise/other_resources/intelligence-report-11-2015-en-us.pdf. The figure listed is an annual figure minus reporting for December 2015. Symantec did not report annualized 2015 figures for the other metrics listed in this table.

Email Malware Rate (proportion of emails containing malware)	<ul style="list-style-type: none"> • 2014: 1 in 244 • 2013: 1 in 196 • 2012: 1 in 291 	
Number of Bots	<ul style="list-style-type: none"> • 2014: 1.9 million • 2013: 2.3 million • 2012: 3.4 million 	

While these data generally indicate downward trends in the specific forms of DNS abuse analyzed, it is important to note that they present a snapshot of those trends. For example, while phishing attacks appear to be going down according to the table, **since 2008 the number of phishing attacks has nearly doubled**, indicating the downward trend shown may be nothing more than a slight downtick in the overall trend line.²⁶ Furthermore, the data presented cover the *entire* DNS; they do not specifically describe DNS abuse in *new* gTLDs

DNS Abuse in New gTLDs

Few systematic studies on DNS abuse in new gTLDs have been conducted, which is likely a function of their newness. The ICANN-sponsored survey referenced above reported that **consumer trust in new gTLDs is much lower than in legacy TLDs**, with approximately 50% of consumers reporting trust in new versus approximately 90% reporting trust in legacy TLDs.²⁷ Researchers from the University of California, San Diego found that **new TLD domains are more than twice as likely as legacy TLDs to appear on a domain blacklist**—a list of domains of known spammers— within their first month of registration.²⁸

According to members of the APWG, it appears that **malicious actors are testing the new gTLD space** as a potential base for their activities.²⁹ They suggest this may be a result of increased competition in the new gTLD market, which drives down prices and in turn attracts malicious actors looking to capitalize on lower costs. However, they

²⁷ ICANN Global Consumer Research, conducted by Nielsen, April 2015, <https://www.icann.org/news/announcement-2015-05-29-en>

²⁸ Note this was a “snapshot” measure taken at the time of their study and did not reflect any longer term analysis. See Der et al., “From .academy to .zone: An Analysis of the New TLD Land Rush,” University of California, San Diego, Department of Computer Science and Engineering, October 2015, doi: 10.1145/2815675.2815696.

²⁹ Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 1H2014,” 25 September 2014, <https://apwg.org/apwg-news-center/>

note the difficulty in drawing conclusions based on limited comparative evidence given that new gTLDs are in the early phases of their introduction. They suggest that future studies compare DNS abuse in new and legacy TLDs when enough data is available.³⁰

Architelos, a TLD consulting and management firm, offers more segmented analysis of DNS abuse in new, legacy, and country-code TLDs (ccTLDs). Their latest report, released in June 2015, utilizes their Namespace Quality Index (NQI) measure, which is the **amount of abuse domains listed on their blacklist portfolio per million domains** under management in each registry, to analyze the state of abusive behavior in legacy and new gTLDs. The report offers a number of important findings:³¹

- According to the NQI from January 2014 to June 2015, the rate of **abusive activities** (phishing, malware, botnet command and control, and spam) in new gTLDs **has spiked dramatically** since the first abuse in new gTLDs was detected in February 2014, and is approaching the levels of legacy gTLDs.
- **Spam accounts for 99% of reported abuses in new gTLDs** during the timeframe of their analysis (spam comprised 90% in legacy gTLDs and in ccTLDs).
- In May 2015, **the NQI score for new gTLDs was 11,654 per million domains** under management compared to approximately **16,500 per million in legacy gTLDs**
- **Phishing, malware, and botnet command-and-control rates in new gTLDs are still very low** compared to legacy gTLDs, although this is likely to increase as awareness and adoption of new gTLDs increases. From May 2014 to May 2015, **the amount of phishing domains spiked** from seven blocklisted domains detected to 143, a 20-fold increase (compared to a rise from approximately 7,300 to 14,000 in legacy gTLDs for the same period). However, **77% of those 143 new phishing reports were concentrated in just ten new gTLDs.**

A Case Study in DNS Abuse: Phishing in New gTLDs

The prevalence of phishing can serve as one indicator of the extent to which malicious actors are abusing new gTLDs. In a study co-authored by members of the APWG, the authors noted that **the expansion of the DNS through the New gTLD Program is unlikely to increase the total amount of phishing in the world**, but will create **new, different locations from which phishing attacks can occur**, as cyber-criminals tend

³⁰ Ibid.

³¹ Architelos, “The NameSentrySM Abuse Report,” June 2015, <http://architelos.com/wp-content/uploads/2015/06/Architelos-StateOfAbuseReport2015-webc-FIN.pdf>

to favor “hopping” from TLD to TLD over time.³² Phishers will not usually register domains that have brand names, instead preferring nonsense strings or placing a brand name somewhere in a subdomain or subdirectory, as brand owners routinely scan for their names being used inappropriately. In the second half of 2014, only 1.9% of all domains used for phishing contained a brand name or variation (often they were misspellings).

In another analysis paper written by members of the APWG, the authors reached a similar conclusion, noting that new gTLDs have not caused a “bonanza” of new phishing. The authors of both papers utilize a measure, “phishing domains per 10,000”, which is the ratio of the number of domain names used for phishing in a TLD to the number of registered domain names in that TLD, as a gauge for the health of new TLDs as it pertains to phishing.³³ In their analysis, they conclude that a score **between 3.4 and 4.7 phishing domains per 10,000 represents a “middle ground” phishing prevalence score.**³⁴ Any score above 4.7 would indicate a TLD with above average levels of phishing. The median phishing domains per 10,000 score for all TLDs in the second half of 2014 was 3.4. **Only nine of the 295 new gTLDs (in 2014) had scores above 3.4.**³⁵ In addition, **the average “uptimes” of phishing attacks**—or how long those attacks are active and a key measure of the strength of phishers’ efforts—**are at historic lows**, indicating some **success of anti-phishing efforts.**³⁶

According to the authors of both papers, **domain price appears to be a significant driver of phishing** in TLDs, and domains tend to be cheaper in legacy TLDs.³⁷ This sentiment was echoed by a number of representatives from registries and registrars at an ICANN-sponsored teleconference on measuring DNS abuse, who indicated that **higher prices for domains was a key factor in reducing abusive activities in**

³² Illumintel, “Potential for Phishing in Sensitive-String Top-Level Domains,” study for the ICANN Board of Directors New gTLD Program Committee, 21 May 2015, <https://www.icann.org/resources/pages/new-gtld-program-committee-2014-03-21-en>

³³ Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 2H2014,” 27 May 2015, <https://apwg.org/apwg-news-center/>

³⁴ Note the APWG’s report from the first half of 2014 suggested a measure between 4.1 and 4.7. These measures change according to the “curve” of overall phishing activity.

³⁵ Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 2H2014,” 27 May 2015, <https://apwg.org/apwg-news-center/>

³⁶ The second half of 2014 did see a slight uptick in *median* uptimes, from 8 hours and 42 minutes to 10 hours and 6 minutes. See Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 2H2014,” 27 May 2015, <https://apwg.org/apwg-news-center/>

³⁷ Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 2H2014,” 27 May 2015, <https://apwg.org/apwg-news-center/>

general.³⁸ The authors from the APWG predict that as new gTLDs become more prevalent and prices drop due to increased supply and competition, we will see more phishing in them compared to legacy and country-code TLDs (ccTLDs). A key piece of evidence for this trend is demonstrated by the case of the .xyz gTLD, which offered free domains for a period of time. In the second half of 2014, nearly 2/3 of phishing in new gTLDs was concentrated in the .xyz registry.³⁹ Keeping costs down appears to be a significant concern for phishers, as studies have shown it to be an increasingly “low-skill low-reward business.”⁴⁰ While some stories show spectacular profits as a result of phishing, it appears as though the average phisher can net something on the order of a few hundred US dollars per week.⁴¹

The Nine Safeguards

In the lead-up to the New gTLD Program, ICANN solicited advice from subject matter experts in DNS abuse and cyber-security to suggest what pre-emptive measures could be taken to mitigate the kinds of activities explored above. The expert community arrived at the following nine safeguards presented below. It now remains with the CCT-RT to determine the extent to which these safeguards were effective in achieving their intended aims.

In order to understand the “effectiveness” of the nine safeguards to mitigate DNS abuse, **“effectiveness” must first be defined as a measureable concept.** The following pages will discuss such definitions in the context of each question posed as part of initial efforts to establish what kinds of safeguards would be necessary for the New gTLD Program. Available data on proposed “effectiveness” measures will be presented. If data is unavailable, then a discussion of the reasons behind the lack of data and other potential means to assess a given safeguard’s effectiveness will follow.

³⁸ One participant anecdotally posited a threshold of greater than US\$15 for a domain was generally when abuse rates began to decline. ICANN Operations and Policy Research, “Reviewing New gTLD Program Safeguards Against DNS Abuse,” 28 January 2016, teleconference proceedings, recordings available at <https://newgtlds.icann.org/en/reviews/dns-abuse>

³⁹ The authors note that most of the .xyz phishing registrations were made through Chinese registrars and used to attack Chinese targets. See Anti-Phishing Working Group, “Global Phishing Survey: Trends and Domain Name use in 2H2014,” 27 May 2015, <https://apwg.org/apwg-news-center/>

⁴⁰ Herley and Florencio, “A Profitless Endeavor: Phishing as Tragedy of the Commons,” Microsoft Research, September 2008, <http://research.microsoft.com/en-us/um/people/cormac/Papers/PhishingAsTragedy.pdf>

⁴¹ Ibid. Given its “underground” nature, data is difficult to obtain. Thus, there is still significant debate on the actual costs and benefits of phishing in general.

Question: How do we ensure that bad actors do not run Registries?

“Effectiveness” in the context of this question can be understood as preventing “bad actors,” such as those who have been convicted of a felony or misdemeanor related to financial activities, from running registries. As early as 2001, the .COM Registry Agreement mandated that termination of the Registry Agreement would be possible if a registry operator was:

“(a) convicted by a court of competent jurisdiction of a felony or other serious offense related to financial activities, or is the subject of a determination by a court of competent jurisdiction that ICANN reasonably deems as the substantive equivalent of those offenses; or (b) is disciplined by the government of its domicile for conduct involving dishonesty or misuse of funds of others.”⁴²

This clause also exists in the New gTLD Registry Agreement, along with additional provisions:

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer who is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator’s knowledge of the foregoing, or (ii) any member of Registry Operator’s board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator’s board of directors or similar governing body within thirty (30) calendar days of Registry Operator’s knowledge of the foregoing.⁴³

⁴² “.com Registry Agreement,” 25 May 2001, <https://www.icann.org/resources/unthemed-pages/registry-agmt-com-2001-05-25-en#II-16C>.

⁴³ “Registry Agreements,” 9 January 2014, <https://www.icann.org/resources/pages/registries/registries-agreements-en>

Safeguard: Vet Registry Operators

Background

Vetting registry operators prior to execution of a Registry Agreement and delegation of a TLD into the root zone was added as a safeguard to the gTLD Applicant Guidebook for the New gTLD Program in order to prevent applicants with a history of criminal or malicious behavior from running TLDs. The measure was developed as a means to create a defined process to screen registry operators prior to signing the Registry Agreement during the initial evaluation of applications.

ICANN engaged PricewaterhouseCoopers (PwC) to perform background screenings focused on two areas: 1) general business diligence and criminal history, and 2) history of cybersquatting behavior. The eligibility of a given application to proceed in the New gTLD Program was reported in Initial Evaluation and, sometimes, Extended Evaluation reports.

The background screening used in the New gTLD Program is conducted at a point in time during the Initial Evaluation process. In cases where an applicant reported changes to its application information in the course of the evaluation, an additional background screening occurred prior to signing the Registry Agreement. And in every case, ICANN reserved the right to conduct additional due diligence as necessary before signing an agreement.

Defining “Effectiveness”

For this safeguard, “effectiveness” can be conceived as preventing registry operators with a malicious or criminal history from signing a Registry Agreement with ICANN. However, as noted above, a vetting process occurs at a point in time, and changes can occur in the entity responsible for management of a TLD (e.g., a company may be sold, or an officer may be replaced). In the context of DNS abuse, it may also be important to consider whether there is evidence of bad actors running registries, or a risk of such, on an ongoing basis.

Current Context

According to the Program Implementation Review published in January 2016, the background screening process was “a review performed on all applying entities, and all individuals and organizations disclosed in questions 9-11 of the application, which included officers and directors of the applying entities, in addition to shareholders owning a significant stake in the entity.”⁴⁴ According to the Review, ICANN conducted 1,150 background screenings on 1,930 applications (a number of entities submitted multiple applications). The background screening results for each application were

⁴⁴ “Program Implementation Review,” 29 January 2016, <https://www.icann.org/en/system/files/files/program-review-29jan16-en.pdf>

reported following the completion of its Initial Evaluation procedures. In some cases clarifying questions were posed to the applicant by the background screening panel. Overall, the Program Implementation Review called the background screening a successful process as all applicants were able to be screened, but noted that the time between the application submission deadline and the signing of the Registry Agreements was longer than anticipated. This meant that many applicants had to be re-screened. The Review suggests that background screenings could be conducted at the contracting stage rather than during Initial Evaluation to minimize the need for re-screening.

Possible Methods of Data Collection and Measurement

It may be too soon to determine if *both* aspects of the safeguard have been effective as preventative measures. Any measure of “effectiveness” would have to take into account data on rejections based on the initial background screening as well as from terminations of Registry Agreements due to a registry’s failure to eliminate bad actors from its officer staff or board of directors. And due to the personal information involved and sensitivity around the background screening process, reports indicating whether applications were eligible to proceed to the next step in the process are limited. However, overall numbers are available. Formal compliance complaints and/or terminations of Registry Agreements could provide a gauge of whether this safeguard continues to be effective.

Additionally, the safeguard may have had a deterrent effect on prospective applicants with questionable staff backgrounds. However, measuring a deterrent effect—i.e. how many applicants *did not* apply—is near impossible given that such an effect does not generate measurable data.

Question: How do we ensure integrity and utility of registry information?

Defining “effectiveness” in terms of this question can be understood as the successful use of safeguards to aid in validating and securing registry information. The following three preventative safeguards were designed to accomplish this.

Safeguard: Require Demonstrated Plan for DNSSEC Deployment

Background

The Domain Name System Security Extension (DNSSEC) was developed to curtail attempts by malicious actors to hijack the DNS lookup process. Such actors can hack into a web user’s lookups and, for example, direct them to their malicious websites to steal confidential information. DNSSEC protects against such attacks by digitally signing data so users can be assured the source is valid. It employs cryptographic signatures to existing DNS records to verify that a DNS record comes from its official

name server and was not altered at any point.⁴⁵ Registries' deployment of DNSSEC allows registrants to assign specific domain name keys to their domains if they choose. Mandating DNSSEC via the Registry Agreement was aimed at ensuring its more widespread and rapid deployment.

The safeguard requires all new gTLD applicants to have a specific plan for DNSSEC deployment. This is evaluated during the Initial Evaluation process, with the primary aim to reduce the risk of spoofed DNS records. Under the Registry Agreement, new gTLD registry operators are required to sign TLD zone files with DNSSEC, follow best practices as described in the Internet Engineering Task Force's (IETF) RFC 4641 and its successors, accept public-key material from child domain names in a secure manner, and publish the DNSSEC Practice Statements (DPS) according to the format in RFC 6841.^{46 47}

Defining "Effectiveness"

"Effectiveness" of this safeguard can be defined in a number of ways. It could be defined simply as a registry operator having a specific plan for DNSSEC deployment, and passing the evaluation at the application stage. It could also be defined according to the number of issues reported on registry compliance with DNSSEC requirements. Finally, it could be defined according to more broad dissemination of DNSSEC, such as the rate of signing done by registrants or the development of DNSSEC-validating DNS resolvers within networks run by Internet Service Providers (ISPs).⁴⁸

Current Context

As of 23 February 2016, 1,073 of the 1,236 TLDs (including ccTLDs) in the root zone had signed DNSSEC keys.⁴⁹

⁴⁵ "DNSSEC – What Is It and Why Is It Important?" accessed 1 February 2016, <https://www.icann.org/resources/pages/dnssec-qa-2014-01-29-en>; "How DNSSEC Works," accessed 1 February 2016, <https://www.cloudflare.com/dnssec/how-dnssec-works/>

⁴⁷ "RFC" is a "Request for Comments" series of documents produced by the IETF that contain technical and organizational briefs on computer networking, protocols, procedures, and concepts. See www.ietf.org/rfc.

⁴⁸ "Deployment Guide: DNSSEC for Internet Service Providers (ISPs)," accessed 1 February 2016, <http://www.internetsociety.org/deploy360/resources/deployment-guide-dnssec-for-isps/>

⁴⁹ "TLD DNSSEC Report," accessed 23 February 2016, http://stats.research.icann.org/dns/tld_report/

Possible Methods of Data Collection and Measurement

Two measurements available now are the number of TLDs in the root zone and number of second-level domains in each that have signed keys.⁵⁰ More in-depth measures could focus on measuring DNSSEC issues that were discovered during pre-delegation testing, how many service-level agreement (SLA) monitoring issues have been reported, and the number of complaints have been received regarding DNSSEC compliance.

A comprehensive measure of “effectiveness” in this area would need to take into account the fact that registrars, registrants, DNS hosting providers, and ISPs all play a key role in full DNSSEC deployment and functionality. For example, while registry operators are required to demonstrate a plan for DNSSEC deployment, this does not mean that registrants will necessarily sign on. Preliminary data collected by ICANN Technical Services indicate that often only a small percentage of second-level domains have signed DNSSEC keys (although this varies significantly by TLD).⁵¹ A potential case study to consider could be that of CloudFlare—a domain name server services and DNS content delivery company—who decided to let anyone on their network secure their traffic with DNSSEC in a single step. A case study approach that provides a cross-industry look at support for DNSSEC by registries, registrars, DNS hosting providers, and ISPs could allow for the identification of areas of weakness in the deployment of DNSSEC across gTLDs. A group already collecting this information is the DNSSEC Deployment Working Group, which provides reports at dnssec-deployment.org.

Safeguard: Prohibition of Wildcarding

Background

This recommendation requires appropriate controls to prevent DNS “wildcarding.” This is when, rather than providing a “name error” response for non-existent DNS queries, registry operators instead use DNS redirection, wildcards, or synthesized responses.⁵² ICANN has prohibited these actions due to findings that suggest they pose a danger to the security and stability of the DNS by creating new opportunities for malicious attacks.⁵³

⁵⁰ See “DNSSEC Deployment Report,” accessed 23 February 2016, <http://rick.eng.br/dnssecstat/>

⁵¹ Data collected by ICANN Technical Services from publicly available zone files for the purposes of this report.

⁵² “About Wildcard Prohibition (Domain Redirect),” accessed February 1, 2016, <https://www.icann.org/resources/pages/wildcard-prohibition-2014-01-29-en>

⁵³ ICANN Security and Stability Advisory Committee, “SAC041: Recommendation to prohibit use of redirection and synthesized responses by new TLDs,” 10 June 2009, <https://www.icann.org/en/system/files/files/sac-041-en.pdf>

This safeguard is defined in section 2.2 of Specification 6 to the Registry Agreement:

2.2. Wildcard Prohibition. For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

However, in 2014, as part of the Name Collision Occurrence Management Framework, wildcarding was deployed in some TLDs for a limited period immediately after the delegation of the TLD (the controlled interruption period) as a means to identify any namespace collisions.⁵⁴ As stated in the JAS Phase 1 Report *Mitigating the Risk of DNS Namespace Collisions*:

We recommend that the registry implement the controlled interruption period immediately upon delegation in the root zone and the prohibition on wildcard records be temporarily suspended during this period. Given the objective of controlled interruption and the reality that no registrant data will be in the zone at this point, we believe that temporarily permitting wildcard records for this purpose is not counter to established ICANN prohibitions on wildcard

⁵⁴ See “Frequently Asked Questions: Name Collision Occurrence Management Framework for Registries,” accessed 11 February 2016, www.icann.org/resources/pages/name-collision-ro-faqs-2014-08-01-en, which states: “The prohibition against wildcards is waived for the controlled interruption period for applicable TLDs (i.e., where there are no active names under the TLD other than ‘nic’). This waiver only applies while there are no names delegated (hence, operational) within that TLD, removing the risks that are traditionally associated with wildcard implementations. The reason for lifting the prohibition and specifying the use of the wildcard is to catch all evident name collision situations. The wildcard at the ‘top’ of the zone will match all of the queries that will ever be seen once the zone runs in full production. This approach maximizes the steps taken to protect Internet users that are currently leaking queries that are meant to be local.”

records and does not raise the concerns that lead ICANN to establish these prohibitions.⁵⁵

Defining “Effectiveness”

For this measure, “effectiveness” could theoretically be defined in terms of the degree of compliance with the prohibition on wildcarding in new gTLDs. The assessment of this behavior as a means of ensuring the integrity and utility of registry information can also be considered. Input regarding the impact on the behaviors this safeguard sought to prevent could also be assessed.

Current Context

ICANN makes available a “Wildcard Prohibition (Domain Redirect) Complaint Form” to allow reports of noncompliance with contractual provisions.⁵⁶ To date, ICANN has not received any complaints on wildcard prohibition through this tool.⁵⁷

Possible Methods of Data Collection and Measurement

As noted above, no complaints have been received concerning wildcarding by new gTLD registries. Qualitative inquiry with subject matter experts on the effectiveness of this safeguard may be a means of circumventing this lack of quantitative data.

Another approach could include looking not only at complaints to ICANN about failures to prohibit wildcarding in specific TLDs, but also the current prevalence of the use of DNS redirection for “error traffic monetization,” which is the practice of redirecting DNS users to advertisement-oriented web servers when their DNS lookups fail. The University of California, Berkeley’s ICSI Netalyzr is a network diagnosis tool as well as part of a measurement study that is working to measure the health of the Internet. It has been used in previous studies examining issues of DNS redirection and may be a useful tool for understanding the implications of wildcarding in the DNS.⁵⁸

⁵⁵ JAS Global Advisors, “Mitigating the Risk of DNS Namespace Collisions,” 4 June 2014, <https://www.icann.org/en/system/files/files/name-collision-mitigation-study-06jun14-en.pdf>

⁵⁶ See “Wildcard Prohibition (Domain Redirect) Complaint Form,” accessed 11 February 2016, <https://forms.icann.org/en/resources/compliance/registries/wildcard-prohibition/form>

⁵⁷ However, Compliance has received some complaints on “Reserved Names/Controlled Interruption.” See “ICANN Contractual Compliance Dashboard for 2016,” accessed 12 February 2016, <https://features.icann.org/compliance/dashboard/0116/report>

⁵⁸ Weaver, Kreibich, and Paxson, “Redirecting DNS for Ads and Profit,” USENIX Workshop on Free and Open Communications on the Internet (FOCI), 2011, <http://www.icir.org/christian/publications/2011-foci-dns.pdf>

Safeguard: Removal of Orphan Glue Records

Background

This safeguard was developed to reduce the risk of malicious actors sneaking links to malicious domains into the root zone via “orphan glue” records, which are name server records that can remain once a “parent” record is removed from the zone. Orphan glue records can allow malicious actors to gain control of name servers, which then gives them the ability to carry out malicious activities from seemingly “legitimate” domains. For example, “fast-flux” attacks are known to make use of orphan glue records to host malicious domains for short amounts of time.⁵⁹

The safeguard requires registry operators to provide a plan in their application to remove orphan glue records once the parent record is removed. Once bound by the terms of the Registry Agreement, registry operators are required to take action to remove orphan glue records per specification 6, section 4.2 of the Agreement, which states: “Registry Operator shall take action to remove orphan glue records... when provided with evidence in written form that such records are present in connection with malicious conduct.”⁶⁰

Defining “Effectiveness”

For this measure, “effectiveness” can be understood as regularized practices on the part of registries to provide points of contact for end-users to report abuse and confirm the automatic removal of orphan glue records when a parent record is removed from the zone.

Current Context

Initial community feedback on this issue suggests that orphan glue records as a source of abuse has been largely neutralized through regular practice of removing them from zone files, although they remain a “low-level” issue in some cases.⁶¹

Possible Methods of Data Collection and Measurement

ICANN has received some initial feedback suggesting that this safeguard be measured by using zone files to track orphan glue record removal over time.

⁵⁹ See ICANN Security and Stability Advisory Committee, “SSAC Advisory on Fast Flux Hosting and DNS,” March 2008, <https://www.icann.org/en/system/files/files/sac-025-en.pdf>

⁶⁰ See ICANN Security and Stability Advisory Committee, “SSAC Comment on Orphan Glue Records in the Draft Applicant Guidebook,” May 2011, <https://www.icann.org/en/system/files/files/sac-048-en.pdf>.

⁶¹ ICANN Operations and Policy Research, “Reviewing New gTLD Program Safeguards Against DNS Abuse,” 28 January 2016, teleconference proceedings, recordings available at <https://newgtlds.icann.org/en/reviews/dns-abuse>

Discussing the prevalence and use of orphan glue records for malicious purposes with registry operators could provide a qualitative measure of whether registries, registrars, and registrants are effectively utilizing the required mechanisms for removal of orphan glue records. The “evidence in written form” required for a registry operator to remove orphan glue records as mandated by Specification 6 may also provide a useful source of data. It may also be useful to locate instances of recommendations for the removal of orphan glue records in registry anti-abuse policies. For example, the “.rich” TLD includes a section focusing on the removal of orphan glue records in its anti-abuse policy,⁶² while Afilias focuses on the issue as an element of fast flux hosting.⁶³

Question: How do we ensure more focused efforts on combating identified abuse?

This question focuses on the availability of information to curtail the activities of and aid in locating identified abusers in the DNS.

Safeguard: Requirement for Thick WHOIS records

Background

This safeguard requires that new gTLDs maintain and provide access to “thick WHOIS” records to help improve the availability and completeness of WHOIS data. Thick WHOIS records are records held by registries that “contain the registrant’s contact information and designated administrative and technical contact information, in addition to the sponsoring registrar and registration status.”⁶⁴ This is in contrast to “thin WHOIS” records, which only store information sufficient to identify the sponsoring registrar and status of the registration, and provide no information on the registrant. The use of thick WHOIS records may allow for more complete and rapid data search during efforts to identify malicious actors operating in the DNS.

Defining “Effectiveness”

For this measure, “effectiveness” can be defined by the development of a set of thick WHOIS records that are regularly used by authorities to track, identify, and curtail the activities of malicious actors in the DNS.

⁶² “.RICH Anti-Abuse Policy,” accessed 11 February 2016, <http://nic.rich/files/policies/rich-anti-abuse-policy.pdf>,

⁶³ “Afilias Anti-Abuse Policy,” accessed 11 February 2016, <http://dotblue.blue/about/afilias-anti-abuse-policy>

⁶⁴ ICANN WHOIS, “WHOIS Primer,” accessed 11 February 2016, <https://whois.icann.org/en/primer>

Current Context

Every new gTLD registry operator who has had their TLD(s) delegated into the root zone is required to create and maintain thick WHOIS records as part of their contractual obligations.

Possible Methods of Data Collection and Measurement

The intention behind mandating that new gTLD registries maintain thick WHOIS records was to create a more comprehensive set of contact records to enable authorities to track down and stop malicious activity. Obtaining feedback from DNS abuse responders regarding the utility of thick versus thin WHOIS records in curtailing DNS abuse could be one means of assessing this safeguard's effectiveness.

Other potential measures could stem from data generated by the WHOIS Accuracy Reporting System (ARS), which is a project currently in development whose goal is to “identify and report on accuracy in a systematic way to improve quality of contact data in the WHOIS”.⁶⁵ The following charts from the Phase 2 Report published December 2015 summarize overall gTLD accuracy to 2009 Registrar Accreditation Agreement (RAA) Syntax Requirements by mode and overall gTLD accuracy to 2009 RAA operability requirements by mode:⁶⁶

Overall gTLD Accuracy to 2009 RAA Syntax Requirements by Contact Mode

	Email	Telephone	Postal Address	ALL 3 Accurate
All 3 Contacts Accurate	99.1% ± 0.2%	83.3% ± 0.7%	79.4% ± 0.8%	67.2% ± 0.9%

Overall gTLD Accuracy to 2009 RAA Operability Requirements by Contact Mode

	Email	Telephone	Postal Address	ALL 3 Accurate
All 3 Contacts Accurate	87.1% ± 0.7%	74.0% ± 0.9%	98.0% ± 0.3%	64.7% ± 0.9%

⁶⁵ Note that Phase 3 of the study has yet to be carried out, but intends to focus on “Identity Requirements,” which test whether the contact provided is actually the individual or entity responsible for the domain. “Syntax Requirements” are defined as the format of the WHOIS entry. “Operability Requirements” are defined as the ability for contacts to resolve and connect to a user. Note that while contacts may be operable and connect to a user, the ARS does not test whether that user is the one indicated in the WHOIS record. See “WHOIS ARS Phase 2 Cycle 1 Report: Syntax and Operability Accuracy,” accessed February 1, 2016, <https://whois.icann.org/en/file/whois-ars-phase-2-cycle-1-report-syntax-and-operability-accuracy> and “WHOIS Accuracy Reporting System (ARS),” accessed 11 February 2016, <https://whois.icann.org/en/whoisars>

⁶⁶ Ibid.

The three phases of the WHOIS ARS study—which focus on syntax, accuracy, and validity, respectively—may provide a set of proxy measures for this safeguard’s effectiveness. In theory, more accurate WHOIS records would provide the anti-abuse community with a useful tool to combat DNS abuse. However, it is unlikely that malicious actors would proactively give out “accurate” contact details. It remains with the CCT-RT to decide whether “syntax, accuracy, and validity” are adequate proxies for effectiveness in this area.

Safeguard: Centralization of Zone-File Access

Background

This safeguard requires that access credentials to obtain registry zone file data be made available through a centralized source, which allows the anti-abuse community to more efficiently obtain updates on new domains as they are created within each TLD zone. This was intended to reduce the time necessary to take corrective action within TLDs experiencing malicious activity.

Defining “Effectiveness”

For this safeguard, “effectiveness” could be defined by the capacity of the Centralized Zone Data Service (CZDS) to handle requests for registry zone file data in a timely and efficient manner in order to minimize response times in countering malicious activity.

Current Context

New gTLD registries are required under Specification 4, Section 2 of the Registry Agreement to provide zone data to end users who request it. ICANN’s publicly available reports show more than 3 million zone file access (ZFA) passwords approved for 2015 alone.⁶⁷ Conversations with security researchers for the purposes of this report indicate that the CZDS provides a valuable service to DNS abuse responders and to those seeking to protect their intellectual property. However, while the CZDS was developed with the intention to make the process for providing access to zone files more efficient, registries themselves have reported widespread frustration with the service.⁶⁸ Registry operators still have to verify an end-user, and the Registry Agreement does not delimit the time in which registry operators must respond to access requests. This results in an often unmanageable amount of requests “piling up” for registry operators and a lack of capacity on their part to respond to requests in a timely manner. One registry representative reported receiving 7,000-10,000 requests

⁶⁷ CZDS ZFA- Password Monthly Reports, accessed 1 February 2016, <https://czds.icann.org/en/reports>

⁶⁸ ICANN Operations and Policy Research, “Reviewing New gTLD Program Safeguards Against DNS Abuse,” 28 January 2016, teleconference proceedings, recordings available at <https://newgtlds.icann.org/en/reviews/dns-abuse>

for zone file access *per day*.⁶⁹ This can result in less than full enforcement of the terms of use and cursory verification of the requestor’s credentials.⁷⁰ ICANN Compliance identified requests for zone file access by third parties via the CZDS as one of the top issues in registry compliance for 2015, with most complaints pertaining to registry operators not responding to requests for zone file access and registry operators being denied access for reasons not permitted in the Registry Agreement.⁷¹

Possible Methods of Data Collection and Measurement

A potential proxy for “effectiveness” could be gauged through CZDS password reports, which show the number of ZFA-passwords (given to users who have requested access to zone files in bulk) within the CZDS and the number of passwords approved each month within specific TLDs and as a whole.⁷² User feedback on the service may provide additional depth to such a measure as many users report problems with handling CZDS requests, at least anecdotally.

Safeguard: Documented Registry Level Abuse Contacts and Procedures

Background

This safeguard requires that registry operators establish a single point of contact responsible for handling abuse complaints. The Applicant Guidebook directs applicants to develop an “implementation plan to establish and publish on its website a single abuse point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints...”⁷³ Specification 6, section 4.1 of the Registry Agreement states: “Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquiries related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.”⁷⁴

⁶⁹ Ibid.

⁷⁰ Ibid.

⁷¹ “ICANN Contractual Compliance 2015 Annual Report,” January 2016, <https://www.icann.org/en/system/files/files/annual-2015-27jan16-en.pdf>

⁷² CZDS ZFA- Password Monthly Reports, accessed 1 February 2016, <https://czds.icann.org/en/reports>

⁷³ “gTLD Applicant Guidebook,” 4 June 2012, <https://newgtlds.icann.org/en/applicants/agb>

⁷⁴ “Registry Agreements,” 9 January 2014, <https://www.icann.org/resources/pages/registries/registries-agreements-en>

Defining “Effectiveness”

For this measure, “effectiveness” could be measured by the availability of this information to front-end users, and finding a way to measure the relative ease with which users can report DNS abuse. A complementary approach could be to interview law enforcement and registry operators themselves for their feedback on the effectiveness of this measure.

Current Context

ICANN Compliance has monitored abuse contact information that registries are required to post on their websites, and stated the following in the last Contractual Compliance Update to review the issue:

ICANN continued its proactive monitoring of the abuse contact information that registries under the New Registry Agreement must publish on their websites. By doing so, ICANN ensures that end-users, including but not limited to law enforcement agencies, find a point of contact to report malicious activities in the TLDs...ICANN reviewed the websites of 64 top-level domains that started the Claims Period between 1 January 2015 and 31 March 2015. The number of non-compliance inquiries or notices to registries was lower than in the previous round of monitoring. Some of the deficiencies noted were the following: not displaying the required information at all, missing primary contact, or missing mailing address for abuse reports. ICANN is collaborating with the registries to remediate the non-compliance found.⁷⁵

Some initial community feedback on this safeguard indicates that the points of contact for abuse were used mostly by spammers.⁷⁶

Possible Methods of Data Collection and Measurement

Analyzing ICANN Compliance reports and testimonials from those who use these contacts could be an approach to measuring the effectiveness of this safeguard. Another method could entail collecting registry abuse contact information and testing its functionality.

⁷⁵ See “ICANN Contractual Compliance Update January – March 2015,” <https://www.icann.org/en/system/files/files/compliance-update-mar15-en.pdf>.

⁷⁶ ICANN Operations and Policy Research, “Reviewing New gTLD Program Safeguards Against DNS Abuse,” 28 January 2016, teleconference proceedings, recordings available at <https://newgtlds.icann.org/en/reviews/dns-abuse>

Safeguard: Participation in an Expedited Registry Security Request Process (ERSR)

Background

This safeguard provides a mechanism for registry operators to take quick and decisive action in light of systemic threats to the DNS by establishing a dedicated process to review and approve expedited security requests. In practice, registries are allowed to request a contractual waiver that exempts them from a specific provision in the Registry Agreement for the time period required to respond to a security threat. It was designed to provide for operational security around a threat while keeping relevant parties informed of the threat's status. Note that this process was established in response to the Conficker virus and thus before the work to define safeguards for the New gTLD Program. It is not included in the latest Registry Agreement, but as a process is available to registries with a clear and present need for it.⁷⁷

Defining “Effectiveness”

“Effectiveness” could be conceptualized as the rapidity with which a security threat was identified and neutralized as a result of the ERSR.

Current Context

Given the sensitive nature of the data involved, ICANN does not report publicly on the details of this process. However, initial input from security researchers for the purposes of this report indicate that the safeguard has been used effectively since the emergence of the Conficker virus to dismantle subsequent botnets.

Possible Methods of Data Collection and Measurement

To understand the effectiveness of this measure, feedback from those who have requested the ERSR process could be collected to understand its capacity to handle security threats. Given the limited quantity of requests for the ERSR and the sensitivity of the security-oriented data inherent to the process, analytical focus could be placed on *how* the process was carried out—such as the speed and relative ease of addressing the threat as a result of the ERSR—rather than the number of instances the ERSR has been requested or the specifics of how the security threat was confronted.

⁷⁷ “Registration Abuse Policies Working Group Final Report,” May 2010, <http://gns0.icann.org/en/issues/rap/rap-wg-final-report-29may10-en.pdf>

Question: How do we provide an enhanced control framework for TLDs with intrinsic potential for malicious conduct?

Safeguard: Create a Draft Framework for a High Security Zone Verification Program

Background

This *recommendation*—it was never formally established in the Registry Agreement as a required safeguard nor instituted as an official, ICANN-backed initiative—suggested the creation of a voluntary program for registry operators who wanted to establish and prove an enhanced level of security and trust in their TLDs. The overall goal of the program was to provide a standardized set of practices for registries seeking to distinguish themselves along these lines.⁷⁸

Defining “Effectiveness”

For this measure, “effectiveness” could be seen as the successful adoption, implementation, and verification of a high security zone (HSZ) in a TLD with a high potential for malicious activity (e.g. those representing the banking/financial and pharmaceutical sectors).

Current Context

While no comprehensive draft framework for such a program has been formalized through ICANN’s various policy development and implementation mechanisms, a number of efforts have been aimed at addressing the increased security needs of certain strings.

During the application process for a new gTLD, applicants’ security policies as they relate to sensitive strings were assessed under the guidelines of question 30 of the Applicant Guidebook, which requires applicants to

...provide a summary of the security policy for the proposed registry, including but not limited to...[a] description of any augmented security levels or capabilities commensurate with the nature of the applied for TLD string, including the identification of any existing international or industry relevant security standards the applicant commits to following...⁷⁹

Additionally, ICANN’s Governmental Advisory Committee has recommended a model be created for the verification and validation of registry operator credentials as public

⁷⁸ icann.org, “Public Comment: High Security Zone TLD Final Report,” 11 March 2011, <https://www.icann.org/news/announcement-2011-03-11-en>

⁷⁹ “gTLD Applicant Guidebook,” 4 June 2012, <https://newgtlds.icann.org/en/applicants/agb>

interest commitments (PICs) in highly regulated sectors in order to establish and maintain the trustworthiness of those domains.⁸⁰

A number of independent efforts to increase security and trust in new gTLDs on the part of industry associations and registries have also emerged. For example, the fTLD Service, LLC registry is independently working to establish a high security zone for their “.bank” and “.insurance” TLDs.⁸¹ The “DNS Seal Project” is working to build trust in the domain name industry through self-regulation and identification of best practices to help internet users identify trustworthy websites.⁸²

Possible Methods of Data Collection and Measurement

Collecting feedback from registry operators on why they chose not to pursue HSZ verification could provide insight into this recommended safeguard’s lack of adoption. Also, speaking with the fTLD Service, LLC registry on why they chose to pursue their own HSZ could provide an additional source of data.

Research Proposal and Models

Significant **empirical puzzles** present themselves with regard to the relationship between the expansion of the DNS through the New gTLD Program and the prevalence of abusive, criminal behavior in the DNS. Important questions remain as to whether the New gTLD Program has contributed to an increase in DNS abuse *that is proportional to the increase in the size of the DNS as a result of the Program*, and—crucially—**whether the safeguards put in place to mitigate it have been effective in achieving their intended objectives**. However, the current body of literature focused on DNS abuse is populated almost exclusively by studies reliant on descriptive statistics and focused probes of specific DNS abuse activities, and suffers from a distinct lack of broadly-focused longitudinal studies employing multivariate, inferential statistical analyses.

In order to arrive at a comprehensive picture of the state of DNS abuse in New gTLDs and to assess the effectiveness of safeguards to mitigate it, this report proposes a **hypothesis-driven** causal analysis utilizing safeguards as intervening variables in a set of hypothetical models built on reasoned assumptions regarding the relationship

⁸⁰ See “GAC Communiqué – Buenos Aires, Argentina,” 24 June 2015, <https://www.icann.org/news/announcement-2-2015-06-24-en> and “GAC Communiqué - Dublin, Ireland,” 21 October 2015, <https://www.icann.org/news/announcement-2015-10-22-en>

⁸¹ See fTLD Registry Services, “Enhanced Security,” accessed 11 February 2016, www.ftld.com/enhanced-security/

⁸² “About the DNS Seal Project,” accessed 12 February 2016, http://dnsseal.wiki/About_the_DNS_Seal_Project

between the New gTLD Program safeguards and the prevalence of abusive behavior in the DNS. The model focuses on answering a central research question:

To what extent can the safeguards put in place to mitigate DNS abuse in new gTLDs account for the rate of abusive behavior in the DNS?

Answering this question in a comprehensive, scientifically sound manner necessitates building a testable hypothetical model and segmenting inquiry to focus on legacy and/or new TLDs, and/or the entire DNS space as appropriate. It requires establishing a **baseline measure** as a point of departure in answering the foundational question of whether there has been an increase in DNS abuse as a result of the New gTLD Program that is *proportional to the expansion of the DNS* itself. Once this measure has been established, we can begin to ask **questions focused on rates of abuse in the “pre-safeguard” era compared to the “safeguarded” era of DNS expansion**. This enables researchers to contextualize the potential relationship between the nine safeguards and the current rate of DNS abuse.⁸³

The models below lend themselves to both qualitative and quantitative testing methods. However, as alluded to above, many of the safeguard measures do not generate quantitative data in the quantities needed to conduct a robust statistical analysis. Two approaches can address this: exploring potential proxy measures for safeguard effectiveness, and employing qualitative methods—e.g. user feedback interviews, focus groups, review of relevant publications—in order to add empirical depth to the wider scope of what quantitative methods are possible in the context of the safeguards.

A Possible Qualitative Framework for Testing the Effectiveness of Safeguards

This proposal and models below represent first steps to inform discussion on the most effective means to test the effectiveness of safeguards to mitigate DNS abuse. It remains to the CCT-RT to decide the scope and method of their inquiry into DNS abuse mitigation efforts.

⁸³ Note that this approach to compare the rate of abuse in legacy TLDs both currently and during the “pre-New gTLD era” with abuse in new gTLDs was one independently brought up and favored by a number of participants at the teleconference session on measuring DNS abuse and the effectiveness of the nine safeguards. See ICANN Operations and Policy Research, “Reviewing New gTLD Program Safeguards Against DNS Abuse,” 28 January 2016, teleconference proceedings, recordings available at <https://newgtlds.icann.org/en/reviews/dns-abuse>

Research Design: Key Questions and Considerations

An abundance of potential data exists—be they in qualitative and quantitative form—that could potentially be applied to investigate the effectiveness of the nine safeguards to mitigate DNS abuse. However, before deciding on which data to use, a research design to structure the data and achieve the review’s objectives must be determined. Any research design must answer the following:⁸⁴

1. Identify the research problem clearly. What is the empirical puzzle we’re trying to solve?
2. Review and synthesize previously published literature associated with the problem.
3. Clearly and explicitly specify research questions and/or hypotheses central to the research problem.
4. Effectively describe the data necessary to adequately answer the research questions and/or test the hypotheses, and explain how such data will be obtained.
5. Describe the methods of analysis to be applied to the data in determining whether or not the hypotheses are true or false.

The Q&A below contextualizes these research tasks in terms of the DNS Abuse Review:

1. Identify the research problem clearly. What is the empirical puzzle we’re trying to solve?

Research problem: It is unclear how effective the safeguards to mitigate DNS abuse in new gTLDs have been.

Empirical puzzle: Some indicators point to reduced amounts of DNS abuse in TLDs in general (legacy and new), while others point to increasing rates in particular TLDs. The extent to which the safeguards to mitigate DNS abuse have played a role in this variation remains unclear.

2. Review and synthesize previously published literature associated with the problem.

This report is geared toward providing such a review and synthesis.

3. Clearly and explicitly specify research questions and/or hypotheses central to the research problem.

⁸⁴ This has been taken from the University of Southern California’s succinct list of research questions at <http://libguides.usc.edu/writingguide/researchdesigns> (accessed 26 February 2016).

Research question(s): What explains the variation in the rates of abuse in different TLDs? To what extent have the safeguards put in place to mitigate them been effective?

Hypothesis examples (see models below for in-depth exploration of defining hypothetical relationships):

- High-level (to guide overall or significant portion of review):
 - The expansion of the DNS has caused an *increase* in the amount of DNS Abuse that is not proportional to the expansion itself.
- Low-level (to guide specific portions of inquiry within the review):
 - X safeguard intended to prevent Y form of DNS abuse has been ineffective in its intended aims

Research questions and hypotheses should also indicate how each term is defined and/or measured. For example, as explored above, how do we measure “effectiveness” of a safeguard?

4. Effectively describe the data necessary to adequately answer the research questions and/or test the hypotheses, and explain how such data will be obtained.

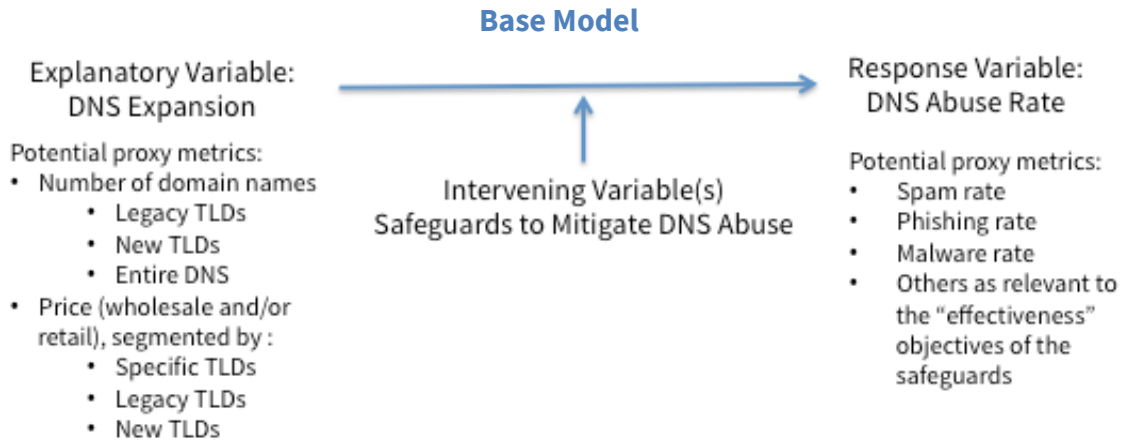

For example, “effectiveness” of safeguards may be measured qualitatively via interviews with experts and users of the safeguards. The extent to which the New gTLD Program has contributed to DNS Abuse may possibly be measured quantitatively by examining statistical correlations between the number of new domains and a DNS abuse proxy, such as phishing rate.

5. Describe the methods of analysis to be applied to the data in determining whether or not the hypotheses are true or false.

To be determined by the work of the CCT-RT, in addition to defining the research questions and hypotheses as explored above.

Causal Models and Hypotheses

The models below derive from a simple central hypothesis that—theoretically at least—the introduction of safeguards to prevent DNS abuse in new gTLDs should result in a “cleaner” (i.e. fewer malicious activities) DNS space compared to the “legacy” TLD era when such safeguards did not exist.

Three testable hypothetical scenarios derive from this base model:

Model 1: The expansion of the DNS has resulted in a proportional *decrease* in DNS abuse
(Effective Safeguard Hypothesis)

Research Question: To what extent are effective safeguards causal factors explaining the proportional *decrease* in DNS abuse?

Hypothesis 1: The “safeguarded” expansion of the DNS is a causal factor explaining the proportional **decrease** in DNS abuse in new and/or legacy TLDs, and/or the entire DNS (segment analysis by new and/or legacy, and/or entire DNS as appropriate).

Hypothesis 1.1: The safeguards put in place to mitigate DNS abuse have been **effective** in achieving their intended objectives, and are causal factors explaining the proportional decrease in DNS abuse (target individual safeguards for analysis as appropriate).

Model 2: The expansion of the DNS via the New gTLD Program has resulted in a proportional *increase* in DNS abuse (Ineffective Safeguard Hypothesis)

Research Question: To what extent are ineffective safeguards causal factors explaining the proportional *increase* in DNS abuse?

Hypothesis 2: The “safeguarded” expansion of the DNS is a causal factor explaining the proportional **increase** in DNS abuse in new and/or legacy TLDs, and/or the entire DNS (segment analysis by new and/or legacy, and/or entire DNS as appropriate).

Hypothesis 2.1: The safeguards put in place to mitigate DNS abuse have been **ineffective** in achieving their intended objectives (target individual safeguards for analysis as appropriate).

Model 3: The expansion of the DNS has had a *null effect* on DNS abuse (Ineffective Safeguard Hypothesis)

Research Question: To what extent are ineffective safeguards causal factors explaining the *lack of change* in DNS abuse?

Hypothesis 3: The “safeguarded” expansion of the DNS has had no effect on the proportion of abusive behavior occurring within new and/or legacy TLDs, and/or the entire DNS (segment analysis by new and/or legacy, and/or entire DNS as appropriate).

Hypothesis 3.1: The safeguards put in place to mitigate DNS abuse have been **ineffective** in achieving their intended objectives of providing a new gTLD space that is “safer” compared to the legacy space (target individual safeguards for analysis as appropriate).

Insofar as the work of the CCT-RT is concerned, this research proposal represents a possible approach to structuring their inquiry into the effectiveness of the nine safeguards to mitigate DNS abuse. Such an approach will likely necessitate hiring outside vendors with statistical and qualitative data collection and analysis expertise to build and conduct the actual study. It remains with the CCT-RT to decide the scope and method of any analysis. If nothing else, this research proposal can serve as a point of departure for discussing other possible approaches.

Content theft, or piracy as it's commonly known, poses a serious and underappreciated threat to Internet users by exposing them to harmful malware that can lead to identity theft, financial loss, and computers being taken over by hackers, according to a new report commissioned by the Digital Citizens Alliance.

Probing a sample of 800 sites dedicated to distributing stolen movies and television shows, the cyber security firm RiskIQ found that *one out of every three* content theft sites contained malware.

The study found that consumers are 28 times more likely to get malware from a content theft site than on similarly visited mainstream websites or licensed content providers.

And just as worrisome, merely visiting a content theft site can place a users' computer at risk: 45 percent of the malware was delivered through so-called "drive-by downloads" that invisibly download to the user's computer—without requiring them to click on a link.

While content theft has long been wounding creators large and small, the RiskIQ report shows that the base of victims includes the unwitting Internet users who go to content theft sites for "free" content.

By exploiting stolen content to bait mainstream consumers, bad actors have uncovered an effective means to hack into millions of computers.

Baiting Internet users, stealing their personal information, and taking control of their computers is becoming big business—an estimated \$70 million per year just from peddling malware.

Digital Citizens found a significant change in the content thieves' business model. Historically, they have profited by taking money out of the pockets of content creators. Now, content thieves have created another stream of revenue that comes from

the spread of malicious materials to the computers of unsuspecting consumers. Content thieves are no longer satisfied with targeting creators, not when there is big money to be made from preying on consumers as well.

After its two "[Good Money Going Bad](#)" reports explored the business models behind ad-supported content theft sites, DCA commissioned RiskIQ, a leading provider of online security and ad monitoring services, to estimate the amount and type of malware that content theft sites carry and to explore the connection between content theft and malware ecosystems in the dark corners of the Internet.

What RiskIQ found should be troubling to anyone concerned about keeping Internet users safe online. The research found that once hackers get into a computer, they can use it for a wide range of criminal schemes where the user of the computer is the victim.

These include:

→ *Stealing bank and credit card information* that is then sold on underground Internet exchanges. After the hack, consumers find their bank accounts depleted or suspicious charges on their credit cards. There is an underground market for credit card information that ranges from \$2 to \$135 per credit card credential.

→ *Finding personal information* that makes it easier to sell a person's identity to the highest bidder online. In July, the FBI added five online criminals to its "Most Wanted" list for creating computer programs that stole identities and financial information.

→ *Locking a user's computer* and demanding a ransom fee before returning access to their files.

Hackers don't just steal personal information and financial records—they gain access to an Internet user's computer, enabling them to control it for nefarious purposes, including ad fraud, spamming,

denial of service attacks, or extortion by threatening to cripple businesses through attacks on their computer systems.

The majority of malware installed through content theft sites was either Trojans, to spy on the consumer's computer, or adware, designed to co-opt the consumer's computer into advertising fraud schemes.

This is disturbing news for the advertising industry and consumers. The Interactive Advertising Bureau (IAB), the trade association for online advertisers and sellers, reports that revenue for online advertising totaled \$49.5 billion in 2014. This is largely due to innovations in advertising that open up the ecosystem to a mass market for any advertiser or publisher with a bank account. However, malware threatens to undermine the trust in the new market these innovations have opened.

The U.S. Department of Justice reports that 16.2 million U.S. consumers have been victimized by identity theft, with financial losses totaling over \$24.7 billion.

What is perhaps most troubling about these findings is how easy it is for hackers. Bad actors dangle free content, consumers take the bait, and the end result is millions of identities at risk and billions of

dollars stolen. Then these computers are taken over to wreak more havoc, causing a nightmare for everyone from Internet users, to advertisers who get defrauded, to corporations blackmailed into paying off hackers who threaten to use those rogue computers to launch attacks.

And it can all start with a casual visit by an Internet user to a content theft site.

These revelations should be a wake-up call. *To consumers:* be wary of content theft sites that offer something valuable for "free," for there is a good chance the price you actually pay is an infected computer. *To Internet safety groups:* create awareness and education campaigns, especially aimed towards younger Internet users who often don't consider the impact of their browsing choices. *To government:* step up enforcement of laws on the books to identify and deter those who bait and defraud consumers. *And to advertisers and ad networks:* continue to build safeguards against hackers who are creating elaborate fraud schemes and ultimately undermining trust in online advertising.

If the public better understands the intersection of content theft and malware, we can reduce the number of victims. Until we do so, there will be bait . . . and prey.

OBJECTIVES

DCA commissioned RiskIQ to assess and analyze any links between content theft sites distributing unlicensed copies of movies and television shows and malware.

RiskIQ performed this study in two parts. The first is a quantitative study that analyzed the rate of malware exposures across a sample of content theft sites against a control group representing the general web site population. The second is a research study into the malware distribution ecosystem and the role content theft sites play. Taken together, the two pieces present a clear picture of the mechanics of what, why, and how frequently content theft site operators place malware on their sites, and the economics of the partnership between content thieves with the pushers and designers of malware.

RiskIQ's focus is to detect malware incidents for web sites and advertisers trying to protect themselves from malware exploits that would affect their end consumers and partners. As such, RiskIQ detects anything ranging from suspicious incidents to outright, confirmed cases of malware. RiskIQ's system classifies cases as "exact" matches, which are confirmed and active cases, and "reputational" cases, which are incidents that are suspect because they use infrastructure that was previously used for a malware attack. In the interest of precision, for the purposes of this study, RiskIQ used only "exact" matches. This conservative approach suggests that the actual level of malware is larger—and perhaps much larger—than the estimates found here.

QUANTITATIVE STUDY METHODOLOGY OVERVIEW

The quantitative study was designed to provide an objective comparison of the amount and type of malware found on content theft sites with a control group of sites, which comprise a sam-

pling of legitimate viewing sites and random sites that are representative of the general Internet. In both groups, a broad sample of sites was analyzed, including sites that are highly popular and those less frequently visited.

RiskIQ defined malware as software designed with malicious intent to gain unauthorized access, collect private data, or inflict intentional damage.

The sites were probed for malware by simulating the behavior of users from the U.S. with a variety of browser profiles to approximate typical U.S. targets for malware distributors.

SAMPLE DESIGN

The sample group was comprised of "*content theft sites*" which consist of:

- 25 Sites from the March 2015 Notorious Markets Report published by the U.S. Trade Representative
- The top 25 sites from the Google Transparency Report (GTR) for the month before the scan. (Note this list overlaps with the Notorious Markets Report.)
- 750 sites selected at random from the top (250), middle (250) and bottom third (250) of the GTR with at least 20,000 copyright infringement removal requests since the inception of the GTR

The following were excluded from the sample group of content theft sites:

- Sites primarily dedicated to video game content theft were excluded from the study because most gaming files are executable files, which carry more apparent inherent risks of malware infection.
- Sites with primarily adult content were also excluded. This was done by filtering out adult related domains and by running a keyword classifier for page content.

CONTROL GROUP DESIGN

Control group sites were intended to represent legal online media sites and the general Internet and were drawn from the following sources:

- 100 sites were selected from the list of legal online media sites on Where to Watch, a site that promotes legal alternatives in the U.S. to content theft sites.
- 150 sites were selected, like the sample group, at random from among top third, middle third and bottom third of global Alexa-ranked sites ranging from the top ranked site to the 999,999 ranked site, and filtered so as to not overlap the sample group.

DATA COLLECTION

All sites in both the sample and control groups were scanned for malware for a period of four weeks from June to August 2015. RiskIQ's proprietary malware detection solution scans sites with a global proxy network of virtual users that simulate the behavior of real consumers with a variety of operating systems and browsers. For the purposes of this study, scans were limited to users across 20+ cities in the U.S. only. Malware analysis was run through a series of market standard malware detection tools, including VirusTotal and RiskIQ's own proprietary detection system.

Each simulated user was configured to navigate up to three levels deep for a maximum of 25 pages daily per site. Data collection sampled an average of just over 50 pages daily per site during the four-week period. Scans were designed to check for the presence of malware in either "drive-by downloads" (where no user initiated action is required) or user-initiated downloads, typically delivered through pop-ups or fake software update requests. Click throughs were performed based on a link scorer that preferred links containing downloads over

navigation links while clicking through 5 links per page to a depth of 3 pages within a site. Additionally, click throughs were limited to the domain of the first page in a site crawl.

The amount of malware discovered is a conservative measure because:

- No ads were clicked on for the study. Most malicious ads deliver malware upon loading. Even though RiskIQ's system is capable of clicking through on ads, previous experience had shown that the rate of malware exposure from actually clicking on ads was extremely low, indicating that clicking on ads would not have materially changed the results of this study; and
- No files were downloaded from the sites for the study, even though malware can be delivered through the file download, which means that the study does not include the malware risks from sites, such as torrent sites, that offer downloading of content.

These limitations of the methodology suggest that the malware uncovered by this report is a conservative measure of the total amount of malware delivered by content theft sites.

DATA AVAILABILITY

RiskIQ designed a study that could be easily repeated by any researcher with the capability to adequately analyze and detect malware on web sites.

The data and malware analysis from this report is available online at:

- <http://www.digitalcitizensalliance.org>

Researchers who wish to repeat the study or have questions about the results may contact the DCA through their online contact form.

PROFILE OF A CRIMEWARE DISTRIBUTION NETWORK

After calculating the amount of malware found on content theft sites, RiskIQ went on to probe the ecosystem connecting malware to content theft sites. Specifically, they looked at who deployed the malware, what kind of malware was prevalent, and how much money could be made from using content theft sites to distribute it. For the qualitative component of the study, RiskIQ sent researchers

with undercover online personas into DarkNet exchanges and marketplaces to collect information about popular malware distribution programs with ties to content theft sites. Multiple programs were found. A typical program is profiled in this report with some details removed to protect the sources that provided the information. This profile provides valuable insight into the typical revenue for sites involved with malware campaigns and sheds light on how the business relationships work.

SITES WITH MALWARE INCIDENTS

RiskIQ found that 33 percent of sites in the Content Theft Sample group had at least one malware incident over the month in which it collected data compared with 2 percent for the Control Group.

MALWARE INCIDENT RATES FOR USERS VISITING THESE SITES

RiskIQ found that users are 28 times more likely to be infected with malware when visiting sites in the Content Theft Sample group as compared with the Control Group. Of the Content Theft Sample group, 8 percent (1 in 12) of user visits resulted in exposure to malware, compared with 0.3 percent (1 in 333) user visits for the Control Group.

Many of the sites in the Content Theft Sample Group sustained very high exposure rates, suggesting that malware distribution was part of their ongoing modus operandi. For example, 20 of the content theft sites exposed more than three out of every four users (75 percent) that visited them to malware.

HOW MALWARE IS DELIVERED

"Drive-by downloads" allows malware to be delivered without the victims even having to click on anything after arriving on the page. Drive-by downloads infect users silently and can go completely

undetected. Forty-five percent of malware payloads found on the sample sites downloaded invisibly in the background and did not require the user to do anything to confirm the download. Users did not need to download media or click on any pop-up advertisements to be infected by these attacks.

The remaining 55 percent of the malware lured users with fake prompts for requests such as Flash downloads and anti-virus updates -- many of these prompts look virtually identical to prompts from the actual legitimate providers of such services. While some users may know enough to avoid fake prompts, attackers are often able to trick users into accepting a payload just to get rid of a pop-up. The malware payloads for these user initiated downloads are typically larger, containing more than one type of malware because they do not have to be installed surreptitiously in the background like drive-by downloads.

TYPES OF MALWARE

Over half of all malware detected was classified as Trojans by RiskIQ's malware analysis tools. "Trojan" is the general term for any malware that secretly installs itself to open unauthorized access to a computer.

Malicious adware and toolbar software were the next most prevalent types. The definition of Adware can range from benign to annoying to malicious. Adware detected by the anti-virus tools in this study was weighted toward the malicious end of the spectrum.

Lastly, "Other" was used to signify minor categories and instances where an exploit kit was detected but the malware type was not determined.

A subset of Trojans, Remote Access Trojans ("RATs"), were also quite prevalent. RATs can be used to steal logins and financial data, or take over a user's web cam and use it to spy on them. Below is a list of the top 10 RATs found in our scans.

TOP 10 REMOTE ACCESS TROJANS (RATS) IDENTIFIED IN RISKIQ SCANS

- 1. XTREME RAT*
- 2. BIFROST*
- 3. BACK ORIFICE*
- 4. NJRAT*
- 5. ADWIND*
- 6. DARKCOMET*
- 7. BLACKSHADES*
- 8. SBU7*
- 9. POISON IVY*
- 10. CERBERUS*

ESTIMATED NUMBER OF CONSUMERS AFFECTED

RiskIQ estimated that each month 12 million U.S. users were being exposed to malware attacks from the specific sites they visited in the Sample Content Theft Group, based on Alexa traffic data and RiskIQ's measure of malware incident rates.

RiskIQ applied the average malware exposure rate for each site with Alexa average monthly traffic of unique visitors. Note that Alexa data does not permit de-duplication of visitors; however, the 12 million user figure may still be a conservative estimate among the Sample Group for two reasons:

First, Alexa measures audiences by allowing Internet users to opt into a tracking panel. Many users who engage in illegal activities do not choose to opt in to the Alexa panel because they do not wish to have their online behavior tracked. For this reason, traffic to Content Theft sites, and DarkNet sites in general, is likely underreported. Second, Alexa tracks traffic data for only 21 percent of the sites in the Sample Content Theft Group. According to Alexa, the sites that were tracked average more than 88 million unique users from the U.S. each month.

Given that the remaining 79 percent of sites do not have traffic figures, and further that the non-Sample sites are not covered by this estimate; this number is a floor, not a ceiling, for the potential users affected.

THE INTERNET'S MOST DANGEROUS INTERSECTION: CONFEET THEFT & MALWARE

Malware inflicts significant harm on consumers, on advertisers, and on society in general. This section explains in words and in illustrations how the major types of malware work, and the serious problems they can inflict.

MALWARE AND ITS MANY TYPES

MALWARE

Software designed with malicious intent to gain unauthorized access, collect private data, or inflict intentional damage.

TROJANS

Software that installs itself without the user's knowledge either secretly or hidden inside a seemingly benign user action such as opening an email or web page. Most Trojans open up unauthorized access to the victim's computer.

REMOTE ACCESS TROJANS (RATs)

A particularly powerful form of Trojan that gives the attacker administrative access to the user's computer. Hackers use RATs to steal data and control webcams, even making videos of unsuspecting victims. For more information on RATs, see the DCA's report [Selling Slaving](#).

ADWARE

Software designed to make money through ads targeted at the computer's users. Adware is often installed without the user's consent as part of another program. Adware programs can be highly invasive, running in the background and serving pop-ups to the user even when they are not browsing, and collecting their personal data in order to target them with more profitable ads. They are also frequently used for the purposes of traffic fraud. Adware can range from the benign to the annoying to the malicious. Adware detected by the anti-virus tools in this study was weighted toward the malicious end of the spectrum.

BOTNET

A distributed system of Internet connected computers acting as a group at the command of a Bot controller, who directs them to accomplish certain tasks. Botnets are used to fake advertising traffic, attack web sites in Distributed Denial of Service attacks (DDOS), and carry out spam and phishing campaigns.

EXPLOIT

Software or a script that takes advantage of a computer's security vulnerability—often with Flash or Java—to install unwanted code such as malware. Where malware is the payload, the exploit is the tool that opens the computer's back door to install the program.

THREATS TO CONSUMERS

Few consumers who use content theft sites, or whose family members use such sites, realize they have become targets for malware. And malware means more than just a slow computer. An infected computer exposes everyone who uses it—children, spouses, or roommates—to the risks of being victimized by any of a variety of criminal schemes.

This study found a range of malware exploits on content theft sites targeting both computers and tablets. Typically, the risks to consumers fell into three categories.

Identity Theft is the most prevalent problem. As noted in our findings, Trojans were by far the most prevalent type of malware RiskIQ found in its scans. Popular Trojans such as Dyre, Zeus, Shyloc, and Ramnit are designed to steal consumer credentials on a massive scale. Once a consumer has inadvertently downloaded the software, the criminal behind the exploit, known as a harvester, batches together credentials from the same financial institution, and sells them online in underground exchanges for anywhere from \$2 to more than \$135 per credential,¹ depending on the quality. Trojan kits were once available only to highly skilled or connected cyber criminals. Today, anyone with basic web skills can find and deploy them.

Ransomware is malware that installs itself on the consumer's PC, encrypts their files, and posts a message demanding they make a payment in order to regain access to their files. Typically, criminal operators demand \$100-\$500 in ransom,⁴ the same price as a data recovery service would charge in most U.S. cities. In June 2015, the FBI reported receiving complaints amounting to \$18 million in losses due to ransomware for the past year alone.⁵

THE DEPARTMENT OF JUSTICE REPORTS THAT U.S. CONSUMERS LOSE \$24.7 BILLION TO IDENTITY THEFT IN A SINGLE YEAR.² CONSUMER REPORTS FOUND THAT MALWARE ALONE COSTS CONSUMERS \$2.3 BILLION.³

UP TO \$135
THE GOING RATE PER CONSUMER CREDIT CARD CREDENTIAL ON UNDERGROUND INTERNET EXCHANGES

\$100-\$500
TYPICAL AMOUNT CHARGED BY RANSOMWARE OPERATORS FOR CONSUMERS TO REGAIN ACCESS TO THEIR PC

Remote Access Trojans, or RATs, are a particularly potent form of Trojans that grant the controller full access to the victim's device. Not only can they log keystrokes and collect data or files, they can also access the camera. As the DCA reported in its study, [Selling Slaving](#), hackers who run networks of slaved devices sell video streams of men, women, boys, and girls as reality porn online to communities of voyeurs. Also concerning is the rise of one-to-one attacks by hackers who select a victim, "own" their computer, and proceed to blackmail and manipulate them. The most common scenario is to take compromising pictures or capture compromising secrets from the user's PC. Then, the attacker threatens to publish the pictures or information on social media if the victim does not meet their demands. As noted in the findings, RiskIQ found several popular RATs, which have large distribution and are very easy to use.

CONTENT THEFT SITES OFFER THE PERFECT VEHICLE TO DELIVER MALWARE TO MAINSTREAM CONSUMER HOUSEHOLDS. OFTEN KIDS DO THE DAMAGE BY VISITING SITE OFFERING FREE DOWNLOADS, LEAVING INFECTED THE HOUSEHOLD COMPUTER WHERE PARENTS PAY THE BILLS AND MANAGE BANK ACCOUNTS.

MALWARE FRAUD SCHEMES AGAINST CONSUMERS

"THE ID SNAG" → CREDENTIAL THEFT CYCLE

1. Household members visit content theft site
2. Site downloads Trojan or "spyware" to victim's computer
3. Spyware activates when adult members of household log in to banking site or credit card site
4. Malicious advertiser or "Harvester" grabs the consumer's logins and sells them into underground exchanges
5. "Cashiers" buy thousands of credentials and systematically exploit them
6. Victims often find later that their bank account has been drained or systematically raided with random charges that often go unnoticed for many months

"THE RANSOM" → RANSOMWARE SCHEME

1. Household member visits content theft site
2. Site installs malware that fully encrypts the user's files or merely posts a scare-tactic message. Some ransomware even posts fake messages about the user's "Illegal activity," demanding they pay a fine for downloading copyrighted media or illegal pornography.
3. Consumer must then negotiate with the attacker to pay a ransom fee to regain access to their computer and files

"THE SLAVER" → REMOTE ACCESS TROJANS

1. Household member visits content theft site
2. Site downloads Remote Access Trojan to victim's computer
3. Attacker then takes control of the computer in order to spy on the user's activity:
 - » Web cam can be turned on for a live web stream into the consumer's private life. Access to these web streams are commonly sold in forums to voyeurs.
 - » Personal data can then be used to blackmail the user with threats of posting information about their private life on their own social media accounts.
 - » Just as with any Trojan, identity theft is always an ultimate endgame when other options are not as fruitful for the attacker

THREATS TO ADVERTISERS

Malware distribution through content theft sites also defrauds advertisers. Double Verify, a leader in the ad verification business, observed in 2014 that content theft sites have unique characteristics that make them ideal for traffic laundering. They have high volume traffic from a valuable audience, but their objectionable (pirated) content drives away premium advertisers. Advertising fraud schemes offer content theft sites a way to earn money from premium advertisers without those advertisers knowing their ads appeared on such sites. For the criminals behind advertising fraud, a content theft site offers a vehicle to capture real, valuable users clicking on ads.

From the criminal's perspective, installing malware from content theft sites is an attractive line of business. Alternative money-making scams, such as phishing emails, have always been a blunt tool for targeting, and enforcement efforts have made them increasingly less effective. "Malvertising" campaigns, by contrast, are highly targeted and very efficient. The proliferation of malware via content theft sites contributes to three trends that should be of concern to anyone in advertising.

More malware means more bots, and more bots could mean more traffic fraud. Content theft sites use media content to draw quality audiences to their web sites. When these same consumers get

\$50-\$200

*PAY RATE PER 1,000 INSTALLS FOR A
TYPICAL MALVERTISING CAMPAIGN⁶*

malware on their PC, they may become a part of the massive infrastructure that perpetrates traffic fraud on the advertising industry.

In the November 2015 report from IAB and EY, "What is an untrustworthy supply chain costing the US digital advertising industry?", researchers estimated that advertisers would lose \$4.4 billion annually to fraudulent, non-human traffic.⁷

More malware means more ad blocking. Ad blocking has been on the rise since 2012, creating more obstacles for advertisers to reach their audience, and reducing the revenue necessary to drive the creation of more sites and services. Adobe reports that over 144 million Internet users globally use Ad Blocking software.⁸ Users who do use ad-blocking software cite privacy as their major concern. Publishers are now reporting ad-blocking rates from 10-50 percent depending on their demographic.⁹ Continued headlines over identity theft and malware infections delivered via ads will drive this advertiser-unfriendly trend.

HOW MALVERTISING WORKS

1. Attacker registers as an Advertiser with Self-Service Ad Platform
2. User visits website
3. User Targeting Data sent to Ad Platform
4. Impression sold to Attacker
5. Malvertisement served to Ad Platform
6. Malvertisement served to Website
7. Exploit kit loads
8. Vulnerable browser plugins discovered
9. Malware installed on User's device

MALWARE FRAUD SCHEMES AGAINST ADVERTISERS

"THE ROBOT ARMY" → HOW BOTS GENERATE FAKE IMPRESSIONS

1. Content theft sites attract mainstream population from valuable households
2. Household member's device infected by malware that converts PC into a "bot" that browses sites in the background, loading and clicking on ads
3. Bot owner rents out household PC for fraud schemes
4. The family is left to wonder why their home PC is running so slow, while it surfs the web and clicks on ads to make money for the bot owner and criminal ad fraud schemes

"THE WASH" → MONEY LAUNDERING SCHEME

1. A criminal organization sets up web sites as a "front." Often these are sketchy sites with cheap content—even stolen content, or sites run by "mules" who are recruited by the criminals to run ads to launder money
2. The web site operators or mules register with a sketchy ad network or advertising exchange without sufficient controls to detect traffic fraud
3. The same criminal organization that set up the web sites then runs click fraud bots to view and click on the ads
4. Web sites like content theft sites attract just enough natural traffic to avoid being detected for fraud
5. Money makes full cycle from advertiser to web sites that are usually controlled by the same organization. The typical revenue share to ad network or exchange and money mules is a reasonable fee for laundering the money

THREATS TO SOCIETY

Malware not only affects individuals and advertisers. Infected computers can also be enlisted into criminal activities that affect society at large.

Botnets play an essential role in the crimeware economy. Malware can convert the consumer's PC into a "bot" or "zombie" that performs the operator's bidding. Botnets essentially act as underground distributed computing systems for criminal operators.

Distributed Denial-of-Service Attacks (DDoS) disrupt consumer services by flooding a target web site or Internet service with so many requests that it simply shuts down. With rental rates from nefarious web site operators starting as low as \$150, botnets are relatively cheap to use for DDoS attacks and can exact an expensive toll on their targets.

DDoS attacks are sometimes used by hacktivists to attack or censure governments, organizations, and publications with which they disagree. They are also used by criminals to extort money from the organizations that they target. Last but not least, DDoS attacks can be used to distract security teams and keep them busy while hackers try to penetrate their defenses. Security firm Incapsula surveyed over 270 firms in North America between 250 and 10,000 employees on the impact of DDoS attacks. The average cost of an attack across all survey respondents was estimated to be about \$500,000. For a sense of how individual firms can be affected, technology firm Neustar offers this [DDoS cost calculator](#). DDoS attacks continue to be a tremendous cost to the private sector in terms of money, jobs, and productivity.

\$1,000

THE HOURLY RATE FOR RENTING
10,000 U.S. COMPUTERS ON
RECENTLY DISCOVERED BOTNET¹⁰

Spamming and Phishing clog the mail servers of the Internet and provide a major vector for malware distribution and credential theft. "Botted" computers acting as mail servers send out emails that would otherwise be blocked by most commercial senders. Some even host phishing sites themselves to avoid the obvious challenges of hosting them with a reputable commercial ISP. The largest documented botnets in history have been found to infect millions of computers and send out billions of emails per day.¹¹

Distributed Financial Fraud is another common use for infected computers. Some bots are capable of capturing a victim's account login and then using that same computer to log in and conduct transactions on the account to avoid detection. Because the transaction comes from the victim's own computer, it is much harder for financial institutions to detect the fraud.

In summary, botnets provide criminals with the infrastructure to wreak havoc and mischief on the Internet community at large. For the consumer, the most obvious effect of botnet software is a slow computer, but participating in a botnet unwittingly assists criminals to defraud other consumers. Consumers who host bots unwittingly become a part of a global network of computers that are the underpinning of many cybercrime schemes.

MALWARE FRAUD SCHEMES AGAINST SOCIETY

"THE SHAKEDOWN" → DISTRIBUTED DENIAL OF SERVICE EXTORTION AND CENSORSHIP

1. A criminal organization contacts the target organization and warns them of impending Denial of Service (DDoS) attacks if they do not cooperate. For online publishers and public-facing organizations, the demand may be political in nature. For corporations, the demand may be for money.
2. If the organization refuses to cooperate, the extortionists stage a DDoS attack by renting a botnet service to provide the computing power
3. Depending on their security posture and resources, the target will experience down time on their public site in the worst case, or a financial loss of computing and human resources

At the heart of content thieves' efforts is criminal exploitation of both the creator and consumer of pirated content.

“Crimeware” refers to software written for the purpose of these criminal enterprises. To understand how it works and how such an operation can achieve scale, it is important first to understand the basic infrastructure of the economy underpinning the Internet criminal underground that has developed over the past fifteen years—which Digital Citizens calls the crimeware economy.

THE DARKNET

The DarkNet is the term commonly used to describe the criminal underground that operates online outside the public eye. It is made up of private forums, “friend-to-friend” private networks, and anonymous networks such as Tor that enable criminal activity without fear of being identified. In that underground, criminals buy and sell illegal wares including stolen credit cards, personal information, drugs, and human trafficking. Payments are made using anonymous payment methods such as Bitcoin, Litecoin, and Ripple¹² that cannot be traced by law enforcement. In this environment, criminals have operated with impunity since the early 2000s. In the DarkNet, there is a thriving market for crimeware.

INSIDE THE DARKNET

The DarkNet costs economies around the globe more than \$300 billion per year.¹³ At the heart of the

underground economy are the online chat forums, where criminals buy and sell their wares. These forums can range from specialized “carding forums”—where criminals purchase or sell stolen credit cards—to full-fledged e-commerce sites. Before it was taken down, Silk Road made millions connecting sellers of illegal drugs to interested buyers. In the post-Silk Road era, sites have emerged that sell illegal and dangerous items all on one site—including illicit drugs, personal financial information, weapons, and malware.

As of August 2015, there were about 47 such online markets.¹⁴ The majority of these sites are in the English language. There are also markets in French, Finnish, Italian, Polish, and Russian.¹⁵ A single carding forum can have as many as 13,000 members with 4,000 daily visits and 20 sub-forums covering a range of topics such as online security, tutorials, carding, botnets, web design, and money laundering.¹⁶ It is in these underground markets that hackers peddle malware, exploits, botnets, etc.

THE PROFESSIONAL HACKER

Modern hackers are professional, organized, and monetarily motivated. According to Marc Goodman, author of *Future Crime*, 80 percent of hackers are affiliated with organized crime.¹⁷ As Goodman points out, this radical shift has led to the creation of increasingly sophisticated criminal organizations that operate with the professionalism, discipline, and structure of legitimate enterprises.

CRIMEWARE SPECIALIZATION

Like any market, the crimeware market has evolved to reflect a division of labor. Within the DarkNet are dozens of unique product and services categories. Anyone from professional criminals to nation states can purchase Trojan malware, Exploit kits/packs, or services such as dedicated hosting or Distributed Denial-of-Service attack services.¹⁸ Many of these products and services come complete with service agreements and money-back guarantees.

The DarkNet allows individual hacking groups to specialize in specific categories and to earn money for delivery of goods and services to other criminals. For example, one organization may special-

ize in developing the malware that is installed on consumer devices and sell it on the web. Another organization will be responsible for distributing and installing the malware on consumer PCs or mobile devices. A third group that runs a forum might also purchase stolen consumer credentials and resell them in the DarkNet. The ultimate buyer of the credentials plays the role of *cashier* to collect cash from the credentials by actually exploiting the bank or credit card accounts. Because of the role the DarkNet plays in facilitating anonymous communication, none of these specialized groups ever has to meet one another. This enables a very efficient market for crimeware developers and distributors.

To better understand the economics and working relationships behind a typical crimeware distribution network, RiskIQ sent covert agents into the DarkNet to research organized malware programs that exploited the content theft sites in the sample sites scanned in the earlier part of the study.

CRIMEWARE AND AFFILIATE PROGRAMS

Affiliate programs are the primary vehicle for spreading programs like malware and adware via content theft sites. These programs are a common model in the advertising world. Typically, a malware publisher or *affiliate* joins an ad network that rewards them on some type of "pay for performance" model. The two most common models are "Pay-Per-Click," where the advertiser pays an affiliate publisher for each user click on an ad, and "Pay-Per-Action," where the advertiser pays for a specific action such as filling out a form or making a purchase. In the world of advertising, there is a range of affiliate networks, some with high business standards, and some that operate in gray areas. It is typical for less reputable affiliate networks to offer same-day payouts, which enable participants to join, engage in a questionable advertising campaign, and leave with their money in the same day. In the criminal underground, crimeware distribution campaigns are commonly referred to as "Pay-Per-Install" (PPI) campaigns because they pay out for every malware installation that the publisher delivers.

Affiliate programs offering a PPI model can pay as little as five cents per install to as much as \$2. For malware that involves secondary conversions, there is an additional source of revenue after the user installs the malware. These include such schemes as Fake Anti-virus or Ransomware, where

the payout per user for the affiliate can be as high as \$25 for each victim that ends up paying the ransom, which (as noted above) is typically \$100-\$500.

The PPI affiliate programs work in two ways: hosting models and traffic models.

In a hosting model, the program provides the malicious download to the affiliate and relies on the affiliate to generate installs. This means the affiliate is responsible for (1) hosting the install, (2) creating a lure to trick people into downloading it (such as codecs), and (3) generating traffic to the download location.

Generally speaking, these types of programs are sophisticated and tightly guarded. For instance, a program run by one of the world's top spammers will re-package their malware every few hours in order to avoid detection by anti-virus software. The affiliate is then responsible for constantly refreshing the install if they want to avoid having it flagged by anti-virus software. In fact, this malware affiliate program is so strict that affiliates hosting old executable files that were flagged by anti-virus software are expelled from the program. This particular program is advertised only in Russian-language underground forums open only to vetted individuals; even then, the potential affiliates must also prove they have the ability to deliver traffic.

The traffic model, by contrast, relies on the affiliate to drive traffic to the page hosting the install that was created by the program. Most of the affiliate programs RiskIQ observed fell into this category. Media-related traffic is delivered via redirect links, popups and popunders. Most offer a movie download as the lure to get consumers to unwittingly in-

stall an executable malware file. Each affiliate web site is compensated for every malware install completed.

The malware RiskIQ observed from these sources tend to be adware or bloatware, which monitors traffic and slows down machines. And since many of these programs are for actual user-prompted downloads, the operators also have the ability to control what people download, which can lead to more severe infections.

HOW ONE AFFILIATE PROGRAM WORKS

RiskIQ identified one program in particular that was very popular within the content theft community. To protect sources, it is referred to it as *Advertising Underground* (not its real name).

Advertising Underground was found in RiskIQ's scans of content theft sites. It has been around since 2009, a very long time for such a program, which is a testament to its durability and quality, and has been drawing a lot of attention lately in the Russian underground. As is the case with other affiliate programs, *Advertising Underground* has used different names and guises since 2009, which helps it fly under the radar of law enforcement.

Advertising Underground, which appears to be based in Russia, has a strong reputation and is recommended in the Russian underground community, because it pays out its affiliates in a timely manner and converts traffic to installations at a high rate. *Advertising Underground* mainly installs toolbars, torrent download clients, and games, which are generally associated with adware, though more trusted affiliates of *Advertising Underground* could be given sites with more malicious and lucrative installs like ransomware.

Advertising Underground's program managers have acknowledged that it is involved in the spread of adware and other malicious programs. When asked if VirusTotal—a leading malware and anti-virus platform—will detect their malware, they respond that they frequently "clean" or repackage the installs to evade antivirus detection, just as the affiliate program discussed above did.

Advertising Underground operates both in the English and Russian languages and offers support and a personal manager. Potential affiliates are required to contact them with their web sites and eventually prove that they can deliver traffic. Following a chat over ICQ or Skype to vet potential affiliates, the affiliate must then prove their ability to deliver traffic to *Advertising Underground*.

» Torrent downloader from Advertising Underground using Captain America (in download box on the far right) as an enticement to install the program.

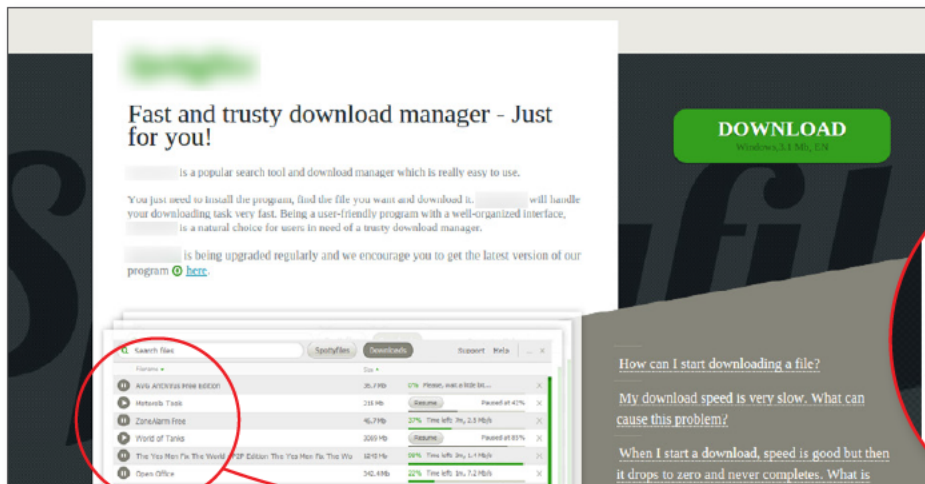

PAYOUTS

Advertising Underground pays for each application installed and appears to operate a traffic model. So it will provide the page with the install to which the affiliate drives traffic. They are not concerned with how the traffic is delivered to the page, except they explicitly prohibit spam traffic.

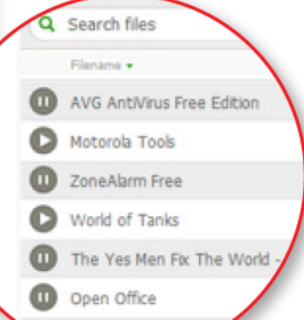

Advertising Underground claims a conversion rate of 1 download for every 7 visits, and will pay 10 cents U.S. per install in countries within the Commonwealth of Independent States and up to 20 cents U.S. for installs in Western countries.

However, some installs, such as the torrent downloader client described below, will earn an affiliate up to \$2 per download. RiskIQ observed this download in the crawls as spottyfls.com, and it was tied to the general-catalog.com home page.

The spottyfls.com torrent downloader is classified as adware by VirusTotal, and, since it controls the users' results, could be used to download more malicious programs in the form of torrents.

AFFILIATE EARNINGS

According to *Advertising Underground*'s claims, one arm of *Advertising Underground* supposedly has generated more than 150 million worldwide installs since 2012 and is said to have paid out \$12 million to affiliates.

Advertising Underground has been observed reaching out to other pirated media sites that were in the list of Sample Content Theft Sites to direct traffic to the *Advertising Underground*'s sites.

In one of the underground forum threads, one of the affiliates claimed that *Advertising Underground* generated 30,000 installs a day for him. Below are statistics from several users, whose earnings are \$200-600 a day from the affiliate program.

Advertising Underground's payout vehicles are a further testament to their criminal purpose. Payments to affiliate are only available via (1) WebMoney, which is one of the *de facto* means of payment in the criminal underground, (2) Epese, a Russian anonymous payment program, or (3) Western Union/MoneyGram.

» Advertising Underground statistics 2

To better understand the incentives for distributing malware on content theft sites, RiskIQ calculated an estimate of the potential revenues these sites earn from malware.

PAY-PER-INSTALL RATES

Estimates of Pay-Per-Install rates range widely in crimeware research. Trend Micro found that the Russian Underground paid a range of 5-20 cents U.S. per install, depending on the target country.¹⁹ In RiskIQ's research into Pay-Per-Install Programs, it found an active affiliate campaign with typical mid-tier content theft sites offering 10-20 cents per install. The program profiled was well reviewed by third party users, not just its own web site, and had been in existence for some years. So, for the purposes of this model, RiskIQ used 15 cents as a conservative average Pay-Per-Install rate to estimate revenue.

ESTIMATED MALWARE EXPOSURES

The subset of the 800 content theft sample group sites for which visitor statistics are available on Alexa (n=229) average over 88 million U.S. users per month. Taking into account the sites' average malware exposure rates indicates that an estimated 12 million U.S. users were being exposed to malware each month from these sites. There is likely some

level of carryover in users across sites; however, Alexa does not measure de-duplicated visitors.

ESTIMATED INSTALL RATE

It is difficult to estimate the actual install rate for these malware exposures, as not every user's system is vulnerable in the same ways, and not every user clicks on the lure for user-initiated installs. In RiskIQ's underground research, it found that the program profiled claimed a 1 in 7 conversion rate for traffic (15 percent). Therefore, RiskIQ used this number for the purposes of estimating revenue.

REVENUE FROM MALWARE

Once malware is installed, there are ongoing services that add to the total lifetime value of the malware installation. Consumer credentials harvested by Trojans can be sold for \$20-45 per user (although less than \$10 if the market is flooded or the credentials are stale).²⁰ Botnets can be rented for up to \$1,000 per hour for 10,000 U.S. computers.²¹ Lastly, as mentioned earlier, Symantec found that the typical charge for a Ransomware clean up is \$100-\$500.²² For the purposes of this study, RiskIQ focused exclusively on the money earned from malware installations through content theft sites, not on the add-ons.

ESTIMATING POTENTIAL MALWARE-RELATED REVENUE

Combining these estimates leads us to calculate that the operators of the sample of content theft sites studied with Alexa visitor data (n=229) are generating roughly \$3.3 million in revenue per year:

12.2 MILLION Monthly U.S. Users Exposed to Malware (for Sample Group Sites with Alexa User Data)
X **15 PERCENT** Estimated Install Rate
X **15 CENTS** Pay-Per-Install Rate

= **\$274,500** Monthly Revenue
= **\$3.3 MILLION** Estimated Annual Revenue

This estimate has some limitations as previously described, but is within range of similar research studies on the economics of malware. For example, in 2012, Symantec found a group of sites running Pay-Per-Install malware campaigns where the top site was earning more than \$200,000 per year. This figure is in line with the data from our study, where only three exceptional sites are estimated to earn more than this figure.

Again, our estimate above is only for a small sample of sites. There are 4,865 sites in the Google Transparency Report that received 1,000 or more copyright infringing URL removal requests in the year preceding this analysis. Projecting the earnings from the 229 sites in the sample group to this broader universe suggests that these content theft sites may be generating roughly \$70 million in revenue per year:

(\$3.3 MILLION Estimated Annual Revenue for 229 Sample Group Sites
÷ **229** Sample Group Sites)
X **4,865** Sites w. 1,000 or more copyright infringing URL removal requests in the past year

= **\$70 MILLION** Estimated Annual Revenue

These assumptions are conservative in two respects. First, they do not take into consideration malware income from any of the many thousands of content theft sites that receive less than 1,000 notices per year. Because the malware rates across content theft sites are relatively constant regardless of size (7-9%), this may be a considerable sum. Second, they do not take into consideration the "add-ons" that content sites can earn from peddling malware.

While this is a rough estimate limited by the lack of comprehensive visitation data, it is easy to see that malware and content theft work together as a big business for the organizations behind them. Add to this estimate the obvious potential for additional revenue once the malware is installed, and it is easy to see that this is an industry that can generate hundreds of millions of dollars for the criminals behind it, at the expense of consumers, advertisers, and society.

For the last two decades, content theft has largely been an issue for creators who were denied compensation and credit for their work. But RiskIQ's research has revealed that cybercriminals have expanded the group of victims to include the hundreds of millions of Internet users who go online each day looking for high-quality content free or cheap.

By dangling such content as bait, criminals lure in unsuspecting users and infect their computers. In doing so, these criminals are exploiting a lack of understanding and awareness among users about the risks that visiting shady websites can pose.

There is an adage from the Watergate era: "Follow the money." It is clear why cybercriminals have targeted consumers. They present an enormous potential windfall to scam and cheat. And it can be done relatively inexpensively through malware and other viruses.

Over the last few years, significant breaches in the customer databases of high-profile companies have created greater awareness about the need for cyber security. The threat of content theft and malware must be part of that conversation.

For consumers, it comes down to another adage: "If it seems too good to be true, it is." The delivery of content—whether radio programs long ago or movies and TV series and sports now—has always been based on some transaction that provides a reward for the content provider—that is the creative incentive, and was most frequently funded by ad revenues or a monthly subscription payment.

But the consumer who goes to a content theft site is paying someone—not the creator of the content, and not just money—they may also be giving up their user identity, access to their financial information or control of their computer. It's a great deal for the cybercriminal, and it leaves millions of Internet users victimized and wondering "what happened?"

It is not fair or reasonable to expect Internet users to understand all these risks because the Internet is an impossibly complex ecosystem. But it does underscore the importance of education campaigns to raise awareness about the threats and how to avoid them.

This report should compel law enforcement authorities to devote more attention and resources to tracking and apprehending global cybercriminals who operate in the shadows and put so many Internet users in harm's way.

And it is incumbent upon our leading digital platforms and financial facilitators to ensure that they are not aiding cybercriminals. That means choking cybercriminals at their key points: how they are found (search engines) and how they bank their ill-gotten gains.

With this report, Digital Citizens hopes to help Internet users—even those who have no care or respect for creators who are victimized by content theft—understand that there are more victims than they may think . . . and some of them are right there in the mirror.

The Digital Citizens Alliance is a nonprofit, 501(c)(6) organization that is a consumer-oriented coalition focused on educating the public and policymakers on the threats that consumers face on the Internet. Digital Citizens wants to create a dialogue on the importance for Internet stakeholders— individuals, government, and industry—to make the Web a safer place.

This is the fourth report in which Digital Citizens has studied content theft sites. In 2014 and 2015, Digital Citizens released its ["Good Money Gone Bad"](#) reports looking at the revenues of ad-supported content theft websites. Also in 2014, Digital Citizens published ["Behind the Cyberlocker Door: A Report on How Shadowy Cyberlocker Businesses Use Credit Card Companies to Make Millions"](#) which broke down the profits and operating costs of the largest cyberlockers.

Based in Washington, DC, the Digital Citizens Alliance counts among its supporters: private citizens, the health, pharmaceutical and creative industries as well as online safety experts and other communities focused on Internet safety. Visit us at digitalcitizensalliance.org.

OUR MISSION

RiskIQ solves the problem of collecting and analyzing Internet-scale data. It enables security teams to expand their security program outside the firewall. Our technology addresses the growing challenge of external threats targeting the enterprise, its customers and employees.

RiskIQ is designed to detect threats that corrupt the core tenets of the Internet—the principles of open standards and information sharing—to extort, scam, invade systems and infect its users. Our mission is to provide web-scale detection to the people responsible for protecting their business against the threats that exist outside of the firewall.

OUR STORY

From the beginning, RiskIQ sought to solve the complex issues security professionals face. RiskIQ saw firsthand how the emergence of the Internet as the primary place for companies to do business also made it the ideal launching pad for malicious attacks. As security professionals build up their firewall technology in an effort to shield their companies, their greatest vulnerability continues to be outside the firewall, on the Internet, where their web sites and apps live.

At RiskIQ, we've taken a unique approach to security by creating a user-emulating security management technology that monitors the entire web and mobile attack surface from the outside in. We're the only company that sees the Internet from the perspective of the browsing public. Our intelligent software outwits the smartest adversaries by seeing what traditional malware scanners can't—even the assets our customers did not even know existed.

By empowering security teams with the ability to see what their web and mobile assets are currently serving to the public from the perspective of their users, organizations can take control of their security program outside their firewall.

At RiskIQ, we believe that knowing is the best defense.

RiskIQ was founded in 2008 and is based in San Francisco.

— ACKNOWLEDGMENTS —

We present this report to the American people for their consideration. The Commission on the Theft of American Intellectual Property reached consensus on its insights and recommendations after a thorough and independent investigation of one of the most pressing issues of economic and national security facing our country. We investigated the scale and complexities of international intellectual property (IP) theft, the driving forces behind it, and its consequences for Americans. We collected the evidence, formed assessments, and developed a set of policy recommendations for Congress and the Administration.

This Commission is composed of extraordinary members. We are indebted to our fellow Commissioners for their contributions. They have brought to the Commission diligence, selfless bipartisanship, and tremendous expertise and wisdom. Coming from industry, defense, advanced education, and politics, and with senior-level diplomatic, national security, legal, and other public policy experience, they span the spectrum of American professional life that has huge stakes in IP rights. They have our deepest appreciation.

The Commission reached out to many remarkable specialists and leaders who shared their experiences and perspectives as we developed an understanding of the problem and a very rich set of policy recommendations. Business leaders with whom we spoke provided inputs anonymously; they represent a cross-section of companies that deal with the problem of IP theft, as well as trade associations with major interests in the problem and its solutions. Other interlocutors were officials from Republican and Democratic administrations, policy analysts, lawyers, economists, international trade experts, and international relations and area specialists. We benefited from the efforts of those in the U.S. government who have been working hard on these issues for years. We thank them for their work and hope that our shining the spotlight on the facts and recommending strong policy make their goals more achievable.

The Commission's staff was exemplary. It includes Director Richard Ellings, Deputy Director Roy Kamphausen, Casey Bruner, John Graham, Creigh Agnew, Meredith Miller, Clara Gillispie, Sonia Luthra, Amanda Keverkamp, Deborah Cooper, Karolos Karnikis, Joshua Ziemkowski, and Jonathan Walton. The Commission is grateful to The National Bureau of Asian Research (NBR) and its Slade Gorton International Policy Center, which provided the unrestricted support that underwrote the Commission's work and complete independence.

Leading an effort that attempts to define and prescribe a focus as complex as IP protection is truly daunting. Given the subject of this report, it comes as no surprise that the People's Republic of China figures prominently throughout. It should be noted that we co-chairs have spent a considerable part of our professional lives building and managing important aspects of the U.S.-China relationship. We have participated in and observed the development—whether diplomatic, military, economic, or cultural—of the most critical bilateral relationship of the 21st century, one that will have a significant impact on the security and prosperity of the entire world. Ensuring its viability and success in part gave rise to this Commission and our participation in it. We recognize as well the historic reform efforts that continue to be undertaken in China and offer this report as a step toward solutions and pragmatic problem solving that have characterized the interaction of both countries for over four decades.

Dennis C. Blair
Co-chair

Jon M. Huntsman, Jr.
Co-chair

The Commission on the Theft of American Intellectual Property is an independent and bipartisan initiative of leading Americans from the private sector, public service in national security and foreign affairs, academe, and politics. The members are:

- **Dennis C. Blair** (co-chair), former Director of National Intelligence and Commander in Chief of the U.S. Pacific Command
- **Jon M. Huntsman, Jr.** (co-chair), former Ambassador to China, Governor of the state of Utah, and Deputy U.S. Trade Representative
- **Craig R. Barrett**, former Chairman and CEO of Intel Corporation
- **Slade Gorton**, former U.S. Senator from the state of Washington, Washington Attorney General, and member of the 9-11 Commission
- **William J. Lynn III**, CEO of DRS Technologies and former Deputy Secretary of Defense
- **Deborah Wince-Smith**, President and CEO of the Council on Competitiveness
- **Michael K. Young**, President of the University of Washington and former Deputy Under Secretary of State

The three purposes of the Commission are to:

1. Document and assess the causes, scale, and other major dimensions of international intellectual property theft as they affect the United States
2. Document and assess the role of China in international intellectual property theft
3. Propose appropriate U.S. policy responses that would mitigate ongoing and future damage and obtain greater enforcement of intellectual property rights by China and other infringers

Introduction

The scale of international theft of American intellectual property (IP) is unprecedented—hundreds of billions of dollars per year, on the order of the size of U.S. exports to Asia. The effects of this theft are twofold. The first is the tremendous loss of revenue and reward for those who made the inventions or who have purchased licenses to provide goods and services based on them, as well as of the jobs associated with those losses. American companies of all sizes are victimized. The second and even more pernicious effect is that illegal theft of intellectual property is undermining both the means and the incentive for entrepreneurs to innovate, which will slow the development of new inventions and industries that can further expand the world economy and continue to raise the prosperity and quality of life for everyone. Unless current trends are reversed, there is a risk of stifling innovation, with adverse consequences for both developed and still developing countries. The American response to date of hectoring governments and prosecuting individuals has been utterly inadequate to deal with the problem.

China has been the principal focus of U.S. intellectual property rights (IPR) policy for many years. As its economy developed, China built a sophisticated body of law that includes IPR protection. It has a vibrant, although flawed, patent system. For a variety of historical reasons, however, as well as because of economic and commercial practices and official policies aimed to favor Chinese entities

and spur economic growth and technological advancement, China is the world's largest source of IP theft. The evidence presented here is a compilation of the best governmental and private studies undertaken to date, interviews, individual cases, assessments of the impact of IP theft on the American economy, and examinations of PRC policies. There is now enough information, in our view, to warrant urgent consideration of the findings and recommendations that follow.

The IP Commission has met numerous times over the course of an eleven-month period; heard from experts and specialists on international law, the American legal system, cybersecurity, and the economy, as well as from industry representatives and many others; and conducted research on a range of topics. The Commission has also reviewed the current actions being taken by the U.S. government and international organizations like the World Trade Organization (WTO) and the recommendations of official and private studies of the problem. Both current and proposed actions generally emphasize more intensive government-to-government communication requesting foreign governments to rein in their companies and other actors. The Commission judges that the scope of the problem requires stronger action, involving swifter and more stringent penalties for IP theft. The Commission believes that over the long term, as their companies mature and have trade secrets to protect, China and other leading infringers will develop adequate legal regimes to protect the intellectual property of international companies as well as domestic companies. The United States cannot afford to wait for that process, however, and needs to take action in the near term to protect its own economic interests.

The Commissioners unanimously advocate the recommendations contained within this report.

Key Findings

The Impact of International IP Theft on the American Economy

Hundreds of billions of dollars per year. The annual losses are likely to be comparable to the current annual level of U.S. exports to Asia—over \$300 billion. The exact figure is unknowable, but private and governmental studies tend to understate the impacts due to inadequacies in data or scope. The members of the Commission agree with the assessment by the Commander of the United States Cyber Command and Director of the National Security Agency, General Keith Alexander, that the ongoing theft of IP is “the greatest transfer of wealth in history.”

Millions of jobs. If IP were to receive the same protection overseas that it does here, the American economy would add millions of jobs.

A drag on U.S. GDP growth. Better protection of IP would encourage significantly more R&D investment and economic growth.

Innovation. The incentive to innovate drives productivity growth and the advancements that improve the quality of life. The threat of IP theft diminishes that incentive.

Long Supply Chains Pose a Major Challenge

Stolen IP represents a subsidy to foreign suppliers that do not have to bear the costs of developing or licensing it. In China, where many overseas supply chains extend, even ethical multinational companies frequently procure counterfeit items or items whose manufacture benefits from stolen IP, including proprietary business processes, counterfeited machine tools, pirated software, etc.

International IP Theft Is Not Just a Problem in China

Russia, India, and other countries constitute important actors in a worldwide challenge. Many issues are the same: poor legal environments for IPR, protectionist industrial policies, and a sense that IP theft is justified by a playing field that benefits developed countries.

The Role of China

Between 50% and 80% of the problem. The major studies range in their estimates of China's share of international IP theft; many are roughly 70%, but in specific industries we see a broader range.

The evidence. Evidence comes from disparate sources: the portion of court cases in which China is the destination for stolen IP, reports by the U.S. Trade Representative, studies from specialized firms and industry groups, and studies sponsored by the U.S. government.

Why does China stand out? A core component of China's successful growth strategy is acquiring science and technology. It does this in part by legal means—imports, foreign domestic investment, licensing, and joint ventures—but also by means that are illegal. National industrial policy goals in China encourage IP theft, and an extraordinary number of Chinese in business and government entities are engaged in this practice. There are also weaknesses and biases in the legal and patent systems that lessen the protection of foreign IP. In addition, other policies weaken IPR, from mandating technology standards that favor domestic suppliers to leveraging access to the Chinese market for foreign companies' technologies.

Existing Remedies Are Not Keeping Up

Short product life cycles. Even in the best judicial systems, the slow pace of legal remedies for IP infringement does not meet the needs of companies whose products have rapid product life and profit cycles.

Inadequate institutional capacity. Particularly in developing countries there is inadequate institutional capacity to handle IP-infringement cases—for example, a shortage of trained judges.

China's approach to IPR is evolving too slowly. The improvements over the years have not produced meaningful protection for American IP, nor is there evidence that substantial improvement is imminent. Indeed, cyberattacks are increasing.

Limitations in trade agreements. Although there appears to be a great deal of activity on the part of the United States through the WTO, there are also significant problems in the process that have made it impossible to obtain effective resolutions. Bilateral and regional free trade agreements are not a panacea either.

Steps undertaken by Congress and the administration are inadequate. Actions have been taken recently both to elevate the problem as a policy priority and to tighten U.S. economic espionage law. These are positive steps. A bill in Congress that would allow greater information-sharing between government and private business needs to be enacted and amended if needed. All of these efforts, however, will not change the underlying incentive structure for IP thieves and will therefore have limited effect.

The Commission's Strategy

With U.S. companies suffering losses and American workers losing jobs, and our innovative economy and security thus at stake, more effective measures are required. The problem is compounded

by newer methods of stealing IP, including cyber methods. Of the cyber threat, President Obama has said that it is “one of the most serious economic and national security challenges we face.” Network attacks, together with other forms of IP attacks, are doing great damage to the United States, and constitute an issue of the first order in U.S.-China relations.

The Commission regards changing the incentive structure for IP thieves to be a paramount goal in reducing the scale and scope of IP theft. Simply put, the conditions that encourage foreign companies to steal American intellectual property must be changed in large part by making theft unprofitable. The starting point is the recognition that access to the American market is the single most important goal of foreign firms seeking to be international corporate leaders. Companies that seek access by using stolen intellectual property have an unearned competitive advantage, and because the costs of stealing are negligible or nonexistent, they continue to operate with impunity. Cheating has become commonplace.

The Commission regards changing the cost-benefit calculus for foreign entities that steal American intellectual property to be its principal policy focus. IP theft needs to have consequences, with costs sufficiently high that state and corporate behavior and attitudes that support such theft are fundamentally changed.

Beyond changing behavior in the short term, the Commission regards strengthening the legal frameworks that govern the protection of IP to be a set of important medium-term recommendations. From that point, and over the longer term, the Commission judges that capacity-building in countries, especially China, that have poor IP-protection standards is of critical importance.

Recommendations

The Commission recommends short-term, medium-term, and long-term remedies.

Short-term measures incorporate the immediate steps that policymakers should take to stem the tide of IP theft and include the following:

- *Designate the national security advisor as the principal policy coordinator for all actions on the protection of American IP.* The theft of American IP poses enormous challenges to national security and the welfare of the nation. These challenges require the direct involvement of the president’s principal advisor on national security issues to ensure that they receive the proper priority and the full engagement of the U.S. government.
- *Provide statutory responsibility and authority to the secretary of commerce to serve as the principal official to manage all aspects of IP protection.* The secretary of commerce has sufficient human, budgetary, and investigative resources to address the full range of IP-protection issues. If given the statutory authority to protect American IP, we anticipate a robust set of responses.
- *Strengthen the International Trade Commission’s 337 process to sequester goods containing stolen IP.* The current 337 process is not fast enough to prevent goods containing or benefitting from stolen IP from entering the United States. A speedier process, managed by a strong interagency group led by the secretary of commerce, can both prevent counterfeit goods from entering the United States and serve as a deterrent to future offenders. The speedier process would impound imports suspected of containing or benefitting from IP theft based

on probable cause. A subsequent investigation would allow the importing company to prove that the goods did not contain or benefit from stolen IP.

- *Empower the secretary of the treasury, on the recommendation of the secretary of commerce, to deny the use of the American banking system to foreign companies that repeatedly use or benefit from the theft of American IP.* Access to the American market is a principal interest of firms desiring to become global industrial leaders. Protecting American IP should be a precondition for operating in the American market. Failure to do so ought to result in sanctions on bank activities, essentially curtailing U.S. operations.
- *Increase Department of Justice and Federal Bureau of Investigation resources to investigate and prosecute cases of trade-secret theft, especially those enabled by cyber means.* The increase in trade-secret theft, in many ways enabled by emerging cyber capabilities, requires a significant increase in investigative and prosecutorial resources.
- *Consider the degree of protection afforded to American companies' IP a criterion for approving major foreign investments in the United States under the Committee on Foreign Investment in the U.S. (CFIUS) process.* CFIUS assesses national security risk and national security implications of proposed transactions involving U.S. companies. Adding an additional evaluative criterion to the review process that assesses the manner in which a foreign company obtains IP would help improve IP-protection environments.
- *Enforce strict supply-chain accountability for the U.S. government.* Establishing control and auditing measures that enable suppliers to the U.S. government to guarantee the strongest IP-protection standards should be the “new normal” that the U.S. government demands.
- *Require the Securities and Exchange Commission to judge whether companies' use of stolen IP is a material condition that ought to be publicly reported.* Corporate leaders will take seriously the protection of IP, including in their supply chains, if reporting IP theft in disclosure statements and reports to boards of directors and shareholders is mandatory.
- *Greatly expand the number of green cards available to foreign students who earn science, technology, engineering, and mathematics degrees in American universities and who have a job offer in their field upon graduation.* In too many cases, American universities train the best minds of foreign countries, who then return home with a great deal of IP knowledge and use it to compete with American companies. Many of these graduates have job offers and would gladly stay in the United States if afforded the opportunity.

Legislative and legal reforms represent actions that aim to have positive effects over the medium-term. To build a more sustainable legal framework to protect American IP, Congress and the administration should take the following actions:

- *Amend the Economic Espionage Act (EEA) to provide a federal private right of action for trade-secret theft.* If companies or individuals can sue for damages due to the theft of IP, especially trade secrets, this will both punish bad behavior and deter future theft.
- *Make the Court of Appeals for the Federal Circuit (CAFC) the appellate court for all actions under the EEA.* The CAFC is the appellate court for all International Trade Commission cases and has accumulated the most expertise of any appellate court on IP issues. It is thus in the best position to serve as the appellate court for all matters under the EEA.

- *Instruct the Federal Trade Commission (FTC) to obtain meaningful sanctions against foreign companies using stolen IP.* Having demonstrated that foreign companies have stolen IP, the FTC can take sanctions against those companies.
- *Strengthen American diplomatic priorities in the protection of American IP.* American ambassadors ought to be assessed on protecting intellectual property, as they are now assessed on promoting trade and exports. Raising the rank of IP attachés in countries in which theft is the most serious enhances their ability to protect American IP.

Over the longer term, the Commission recommends the following capacity-building measures:

- *Build institutions in priority countries that contribute toward a “rule of law” environment in ways that protect IP.* Legal and judicial exchanges, as well as training programs sponsored by elements of the U.S. government—including the U.S. Patent and Trademark Office—will pay long-term dividends in the protection of IP.
- *Develop a program that encourages technological innovation to improve the ability to detect counterfeit goods.* Prize competitions have proved to be both meaningful and cost-effective ways to rapidly develop and assess new technologies. New technologies, either to validate the integrity of goods or to detect fraud, would both deter bad behavior and serve as models for the creation of new IP.
- *Ensure that top U.S. officials from all agencies push to move China, in particular, beyond a policy of indigenous innovation toward becoming a self-innovating economy.* China’s various industrial policies, including indigenous innovation, serve to dampen the country’s own technological advancements. Utility, or “petty,” patents are a particularly pernicious form of Chinese IP behavior and need to cease being abused.
- *Develop IP “centers of excellence” on a regional basis within China and other priority countries.* This policy aims to show local and provincial leaders that protecting IP can enhance inward foreign investment; this policy both strengthens the protection of IP and benefits the promotion possibilities of officials whose economic goals are achieved by producing foreign investment.
- *Establish in the private, nonprofit sector an assessment or rating system of levels of IP legal protection, beginning in China but extending to other countries as well.* One of the tools necessary to develop “centers of excellence” is a rating system that shows the best—and worst—geographical areas for the protection of IP.

The Commission recommends the following measures to address cybersecurity:

- *Implement prudent vulnerability-mitigation measures.* This recommendation provides a summary of the security activities that ought to be undertaken by companies. Activities such as network surveillance, sequestering of critical information, and the use of redundant firewalls are proven and effective vulnerability-mitigation measures.
- *Support American companies and technology that can both identify and recover IP stolen through cyber means.* Without damaging the intruder’s own network, companies that experience cyber theft ought to be able to retrieve their electronic files or prevent the exploitation of their stolen information.

- *Reconcile necessary changes in the law with a changing technical environment.* Both technology and law must be developed to implement a range of more aggressive measures that identify and penalize illegal intruders into proprietary networks, but do not cause damage to third parties. Only when the danger of hacking into a company's network and exfiltrating trade secrets exceeds the rewards will such theft be reduced from a threat to a nuisance.

The Nature of the Problem

Economic Development in the Postwar Period

The unprecedented economic growth in country after country since the Second World War followed a familiar pattern. Taking advantage of reduced barriers to international trade and their lower costs for labor and other expenses, less developed countries manufactured lower-technology products and provided lower-technology services for sale to the more developed countries. The developed countries, meanwhile, closed entire industries and converted their labor forces to work on more advanced products and services based on newly invented products and processes. Prosperity increased as new technologies drove productivity gains and wages rose. Countries moved up the technology ladder.

This system produced phenomenal benefits for both the developed and developing worlds, and generations had the chance to live better lives than their parents and grandparents. In the period since the Second World War, humanity experienced more economic growth, which was led by more scientific progress, than at any prior time in history. From 1950 to 2012, world output expanded more than sixteen-fold, while population grew 2.7 times.¹ Driven by scientific breakthroughs, new technologies, and open trade, standards of living and life expectancy skyrocketed for enormous populations worldwide.²

This virtuous cycle of innovation, with benefits for both developed and developing countries, depended on innovators receiving adequate compensation for the risks they took. The developing world acquired and adapted foreign technology, but the driving discoveries in the areas of information technology, materials science, and biochemistry came from a combination of entrepreneurship and private and government research in the developed world—primarily the United States, Western Europe, and Japan. These discoveries gave birth to entire new manufacturing and service industries and transformed traditional sectors like transportation and health care.

The Underpinnings of an Economic System at Risk

On an unprecedented level, a critical driver of this worldwide economic growth is in trouble. Trade secrets, patents, copyrights, and trademarks are being stolen, especially from American but also from European, Japanese, and other nations' companies and organizations. The effects are twofold. The first is the loss of revenue and reward for those who made the inventions or who have purchased licenses to provide goods and services based on them. In addition, there is the loss of jobs, which is in the millions. Companies injured by the theft of intellectual property (IP) cut back

¹ See Angus Maddison, *The World Economy: A Millennial Perspective/Historical Statistics* (Paris: OECD, 2007); and International Monetary Fund (IMF) and World Bank statistics. From the year 1000 to 1820 the advance in per capita income was “a slow crawl”—the world per capita income rose only about 50% in 820 years. Most of the growth went to accommodate a fourfold increase in population. From about 1820, world development began accelerating far faster than population growth. Between 1820 and 1950 the world economy grew nearly eightfold. In less than half that time, between 1950 and 2012, the world economy grew more than sixteen-fold. Figures are measured in constant dollars.

² See, for example, the Human Development Index, published annually by the United Nations Development Programme. Drawing on data that goes back to 1975, the index shows gains in human development in all regions of the world. Even the industrialized world shows marked improvements. In the United States, average life expectancy at birth has grown for all groups by 10%–15% since 1949.

on payrolls. Payrolls are also hit by lost export and licensing markets and unfair competition both in the American market and in markets around the world. The losses are more acute for companies whose innovation cycles are ever shorter. IP theft prior to or soon after a product's release can eliminate all or vast portions of what a company could earn.

The second, and more fundamental, effect is that IP theft is undermining both the means and the incentive for entrepreneurs to innovate, which will slow the development of new inventions and new industries that can further expand the world economy and continue to raise the prosperity of all. This effect has received some attention in the cases of a few industries, but it affects others as well. Unless current trends are reversed, there is a risk of the relative stagnation of innovation, with adverse consequences for both developed and developing countries.

Because IP theft is not a new phenomenon, it is important to understand why it is an urgent issue now. Compared with prior eras, today's economic world is far more interconnected and operates at a far higher speed, with product cycles measured in months rather than years. Companies in the developing world that steal intellectual property from those in the developed world become instant international competitors without becoming innovators themselves. Bypassing the difficult work of developing over decades the human talent, the business processes, and the incentive systems to become innovators, these companies simply drive more inventive companies in the developed world out of markets or out of business entirely. If more and more companies compete for the same amount of business using the same technology and processes, growth stagnates. It is only through innovation that world economic growth can be sustained. In addition, in this new era of globalization, national industrial policies unforeseen in times past have become possible. Many countries have taken advantage of the opportunities provided by international businesses eager for entry into their markets and by generous national and international development programs. Some have gone beyond this by leveraging access to their markets for IP and by sponsoring IP theft.

Finally, the enormous scale of IP theft is a relatively recent phenomenon, and the United States and the rest of the developed world have been slow to respond. American policy in this area has been limited mostly to attempts to talk foreign leaders into building more effective intellectual property rights (IPR) regimes. In addition, the U.S. Department of Justice has prosecuted individual employees of American companies who have been caught attempting to carry trade secrets with

them to foreign companies and entities. This policy of jawboning and jailing a few individuals has produced no measurable effect on the problem. The only encouraging sign on the horizon is a nascent and small group of entrepreneurs who may be working within their developing countries for more robust systems of protection of their own inventions against competitors.

If the United States continues on its current path, with the incentives eroding, innovation will decline and our economy will stagnate. In this fundamental sense, IP theft is now a national security issue.

The theft of American IP is about much more than the aggregation of big numbers. It is also the collection of individual, sometimes devastating, stories of loss. For instance, when the American Superconductor Corporation had its wind-energy software code stolen by a major customer in China, it lost not only that customer, but also 90% of its stock value.

SOURCE: Michael A. Riley and Ashlee Vance, "China Corporate Espionage Boom Knocks Wind Out of U.S. Companies," *Bloomberg Businessweek*, March 19–25, 2012.

The Toll of IP Theft and Vulnerable Supply Chains

It is difficult to overstate the importance of intellectual property to U.S. economic prosperity and difficult to gauge the full extent of the damage done by IP theft. According to a figure cited in the president's 2006 Economic Report to Congress, 70% of the value of publicly traded corporations is estimated to be in "intangible assets," that is, IP. A 2012 study by the Department of Commerce found that protection and enforcement of IPR around the globe directly affects an estimated 27 million American jobs in IP-intensive industries, which is roughly 19% of the U.S. workforce, producing over one-third of America's GDP.³

Overseas, products are counterfeited on a mammoth scale or re-engineered with small changes and then patented as if they were new inventions. Because much of the theft is not counted, estimates of the total vary. In 2010, the commander of the U.S. Cyber Command and director of the National Security Agency, General Keith Alexander, stated that "our intellectual property here is about \$5 trillion. Of that, approximately \$300 billion [6%] is stolen over the networks per year."⁴ He later called the theft "the greatest transfer of wealth in history."⁵

Intellectual property that is stolen over the Internet constitutes only a portion of total IP theft. Much of it occurs the old-fashioned way. Hard drives are either duplicated on site or physically stolen by bribed employees; employees are planted temporarily in companies or permanent employees leave and illegally share proprietary information; products are dissected, re-engineered, and sold without permission or payment of royalties; digitized products are pirated and sold illegally; phones are tapped for the purpose of obtaining trade secrets; and email accounts are compromised. The list goes on. The stories that appear in court records and occasionally appear in the media demonstrate that while there are new tools being utilized in IP theft, traditional tools continue to cause enormous damage. *Totaled, it is safe to say that dollar losses from IP theft are hundreds of billions per year, which is at least in the range of total exports to Asia in 2012 (valued at \$320 billion).*

Indeed, IP is hugely important to the U.S. economy. Loss of revenues to the victimized inventor or owner of a trade secret is the first and most obvious cost of IP theft, but an asset is lost too. Both losses mean fewer jobs and less money to reinvest in the next generation of products. Stolen IP represents a subsidy to the party that did not have to bear the costs of developing it, and the effects can ripple across industries and companies. A prime example is the pirated software utilized in manufacturing systems and management of companies. Stolen corporate software—from basic computer and network operating systems and office technology to sophisticated design algorithms—allows companies to cut costs unfairly. The problem is rampant in many countries around the world, but in the People's Republic of China (PRC), a country to which so many overseas supply chains extend, even ethical multinational companies find themselves complicit.

The member companies of the American Chamber of Commerce in the People's Republic of China (AmCham China) express their concerns in annual surveys. In the most recent, conducted in late 2012, over 40% of respondents reported that the risk of data breach to their operations in China

³ U.S. Department of Commerce, "Intellectual Property and the U.S. Economy: Industries in Focus," March 2012.

⁴ Jim Garamone, "Cybercom Chief Details Cyberspace Defense," American Forces Press Service, September 23, 2010. A decade ago the U.S. government reported that "private estimates put the combined costs of foreign and domestic economic espionage [by all methods], including the theft of intellectual property, as high as \$300 billion per year and rising." See "Annual Report to Congress on Foreign Economic Collection and Industrial Espionage—2002," Office of the National Counterintelligence Executive, NCIX 2003-10006, 2003.

⁵ Keith B. Alexander, "Cybersecurity and American Power" (conference presentation hosted by the American Enterprise Institute, Washington, D.C., July 9, 2012).

is increasing, and those who indicated that IP infringement has resulted in “material damage” to China operations or global operations increased from 18% in 2010 to 48% in 2012.⁶

The longer the supply line, the more vulnerable it is to IP theft. In an extensive study of the Department of Defense’s supply chain, the U.S. Senate Armed Services Committee reported a “flood” of counterfeit parts. The investigation

uncovered 1,800 cases of suspect electronic parts. The total number of individual suspect parts involved in those cases exceeded one million.

China is the dominant source country for counterfeit electronic parts that are infiltrating the defense supply chain..... The Committee tracked well over 100 cases of suspect counterfeit parts back through the supply chain. China was found to be the source country for suspect counterfeit parts in an overwhelming majority of those cases, with more than 70 percent of the suspect parts traced to that country.⁷

One of the witnesses in the investigation testified that he observed “factories in China of 10,000 to 15,000 people set up for the purpose of counterfeiting.” Electronic components can be compromised both unintentionally and intentionally and could be subject to embargoes in times of crisis. Fierce competition gives the cheating overseas supplier a cost advantage, but at the expense of American firms, American employees, American security, and future American innovation.

A 2011 study by the U.S. International Trade Commission estimated that if IP protection in just China were improved to a level comparable to that in the United States, the U.S. economy would obtain an estimated \$107 billion in additional annual sales and net U.S. employment could increase by 2.1-million jobs.⁸ Yet as useful as it is, this study underestimated employment impacts because it did not consider “less-IP intensive industries,” likely underestimated the effects of trade-secret theft (much of which is never revealed or even known by the victims), and did not have the participation of many vulnerable U.S. companies.⁹

Despite the understandable reluctance of companies to publicize successful or even attempted breeches, there are many documented examples of IP theft. An American company, for example, developed at great cost a critical component in current smartphones and computers, only to have that technology illegally replicated by a Chinese company. The latter subsequently undersold the inventor and took much of the world market for the technology. In another case, one copy of an American company’s software was purchased in China and illegally copied onto 30 million Chinese

⁸ U.S. International Trade Commission (USITC), *China: Effects of Intellectual Property Infringement and Indigenous Innovation Policies on the U.S. Economy*, no. 332-519, USITC Publication 4226, May 2011, xviii–xx, <http://www.usitc.gov/publications/332/pub4226.pdf>. In addition, an estimate of the international value during 2009–15 of just pirated and counterfeited goods, such as software and clothing, is \$1.12 trillion. See Pamela Passman, “How to Protect Intellectual Property: From Fair Trade to Legal Trade,” *Foreign Affairs*, February 27, 2013.

⁹ Nor do these findings take into account that IP theft also increases cybercrime and other security threats, particularly with regard to counterfeit software use. According to a recent report by the International Data Corporation (IDC), counterfeit software is a major vehicle for carrying dangerous malware that imposes costs on the economy and exposes IT systems and data. The IDC study states that “the direct costs to enterprises from dealing with malware from counterfeit software will hit \$114 billion” in 2013 and “potential losses from data breaches could reach nearly \$350 billion.” See John F. Gantz et al., “The Dangerous World of Counterfeit and Pirated Software: How Pirated Software Can Compromise the Cybersecurity of Consumers, Enterprises, and Nations ... and the Resultant Costs in Time and Money,” IDC, White Paper, no. 239751, March 2013, 3–4, <http://www.computerworld.com.pt/media/2013/03/IDC030513.pdf>.

computers, an act of piracy with a multibillion dollar commercial value.¹⁰ While most cases of IP theft do not end up in courts, twenty trade-secret cases involving China revealed the wide range of industries hit: automobiles, automobile tires, aviation, chemicals, consumer electronics, defense systems, electronic trading, industrial software, and pharmaceuticals.¹¹

American scientific innovations and new technologies are tracked and stolen from American universities, national laboratories, private think tanks, and start-up companies, as well as from the major R&D centers of multinational companies. Virtually every sector and technology is attacked—from low-tech to high-tech; from agricultural machinery and biotechnology to wind-power generation; from mobile phones, computers, and televisions to chemical compounds and aeronautics.

Start-up companies are at the heart of the American innovative society. In his 2012 State of the Union address, President Obama noted the important place of start-ups when he observed that “innovation is what America has always been about. Most new jobs are created in start-ups and small businesses.”¹²

Start-ups rely heavily on IP protection just to get their inventions to market. As the Biotechnology Industry Organization (BIO) points out, “the vast majority of BIO’s members are small and medium sized enterprises that currently do not have products on the market. As such BIO’s members rely heavily on the strength and scope of their patents to generate investment to take their technologies to commercialization.”¹³ Start-ups, such as those in the biotech field, are extremely vulnerable to IP theft. Typically located in “incubator” areas near major research universities, these small operations have limited legal and technological resources to deal with the nearly relentless efforts targeting their IP. Moreover, they are often staffed by graduate students or post-degree fellows, who sometimes turn into “walking IP” and take trade secrets with them when they leave. As BIO observes, once the IP is lost, the company may simply fold because it is unable to attract any investment.

In addition to the illegal forms of IP theft, the United States may be losing a significant portion of its IP through completely legal and even institutionalized means. For example, each year hundreds thousands of students from all over the world come to the United States to pursue science, technology, engineering, and mathematics graduate degrees. Upon graduation, many return to their country of origin, not because they choose to but because current U.S. immigration law limits the number of visas granted to these graduates. This cap on visas forces thousands of highly skilled workers, a core input for economic growth and production, to leave the country, taking their knowledge, skills, and innovative spirit with them.

Weak Rule of Law and the Absence of a Culture of Compliance

Contributing to the problem of IP theft globally is a lack of institutional capacity and a general unwillingness to confront the issue at a national level. Often, judicial resources are either not utilized or lack the capacity or experience to hear cases. Likewise, there is a lack of criminal sanctions for end-users in some countries where IPR violations are rife. The two most populous nations in the world, India and China, suffer from inefficient judicial institutions, have weak criminal enforcement of IPR violations, and seldom impose sentences that would rise to the level of deterrence for IP crimes. In China, for example, the courts are overwhelmed with cases, and judges in the IP courts are spread thinly.¹⁴ Barriers to discovery in China also remain a vexing problem for U.S. parties seeking redress both there and in U.S. courts.¹⁵ Despite improvements in some sectors following China's 2010 Special IPR Enforcement Campaign, the country remained on the "priority watch list" published by the United States Trade Representative (USTR) in 2012 and 2013. The USTR notes that IP protection and enforcement remain a significant challenge.¹⁶

Even where there are established administrative mechanisms to deal with IPR protection, such mechanisms often suffer from understaffing, underfunding, bureaucratic paralysis, or a combination of hindrances. As an example, a confluence of factors limits the effectiveness of China's copyright bureaucracy. Devolution of state power to the local level, local protectionism, lack of sufficient resources, and low bureaucratic rank have all been cited as reasons for the inefficacy of the National Copyright Administration and its local counterparts.¹⁷

Further, China has just redrafted its Guidelines on Anti-Monopoly Enforcement for Intellectual Property, and certain provisions could possibly be used to penalize IP producers rather than spur innovative activity. For instance, the guidelines require compulsory licensing of IP when a company is deemed to be in a dominant market position. In a disconcerting trend that has emerged in recent court cases, patent holders have been forced into compulsory licenses for their patents at rates that are far below market value (e.g., in *Interdigital v. Huawei*), and the definition of what constitutes a "dominant market position" remains unclear.¹⁸ While establishing guidelines for anti-monopoly enforcement of IP and opening these rules up for public comment are positive steps, more must be done to ensure that these guidelines are not used to suppress innovative activity rather than encourage it.

What Countries?

The USTR's 2013 Special 301 Report reviews the state of IPR protection and enforcement across the globe. In its most recent report on U.S. trading partners, the USTR identifies 1 priority country (Ukraine), while including 10 countries on its "priority watch list" and 30 on its "watch list." Most of these 41 countries are the subject of a sternly worded paragraph on problems in their IPR protection

¹⁷ As Andrew Mertha notes, the state is not necessarily complicit in the devolution of power; rather, it may actually objectively recognize the limitations of its own abilities to control certain activities at the local level. See Andrew C. Mertha, *China's Water Warriors: Citizen Action and Policy Change* (Ithaca: Cornell University Press, 2008), 159.

¹⁸ See Frank Schoneveld, "Abuse of IP Rights under China's Antitrust Rules: Recent Cases Have a Potentially Serious Impact," *Lexology*, March 22, 2013, <http://www.lexology.com/library/detail.aspx?g=9f45d667-7444-4a74-ae61-bf4b5d04e0fe>.

and enforcement. Beyond the special focus on Ukraine, however, 3 countries on the priority watch list warrant more extensive comments: India, Russia, and China.

According to the USTR, the outlook for Indian protection of IP is discouraging, so much so that “there are serious questions about the future condition of the innovation climate across multiple sectors and disciplines.” Companies, for example, are challenged to patent and defend already patented pharmaceuticals. If a recent case serves as a precedent, companies from many sectors may be forced into compulsory licensing if they wish to sell in the country but do not manufacture the product there.

Russia frequently ranks among the worst-offending countries in the USTR’s Special 301 reports, and this year’s assessment finds an overall decline in IPR enforcement. However, with Russia’s accession to the WTO, some improvement in the piracy rate of software, and the introduction of a new special court, the report is hopeful about the future.

China receives the lion’s share of attention in the 2013 report, which notes that according to the U.S. National Counterintelligence Executive, “Chinese actors are the world’s most active and persistent perpetrators of economic espionage.” The USTR also cites evidence from privately sponsored studies suggesting that entities “affiliated with the Chinese military and Chinese Government” have obtained “all forms of trade secrets.” Overall, the report describes Chinese companies and entities as “escalating” infringement of trade secrets and continuing infringement of trademarks, copyrights, and patents. In addition, it notes that “central, provincial, and local level Chinese agencies inappropriately require or pressure rights holders to transfer IPR from foreign to domestic entities.”¹⁹

The indicators of China’s complex role in IPR infringement come from a host of other studies over the years. Of the counterfeit or pirated goods seized by U.S. Customs and Border Protection in 2012, 72% were Chinese in origin.²⁰ Seven of the eleven cases brought under the Economic Espionage Act since 2010 concern stolen IP destined for Chinese entities. For almost all categories of IP theft, currently available evidence and studies suggest that between 50% and 80% of the problem, both globally and in the United States, can be traced back to China.

By legal as well as illegal means, China has done a Herculean job of absorbing American and other countries’ technology. China now manufactures more cars than any other country, in 2012 producing almost as many as the United States and Japan combined;²¹ launches astronauts into orbit; assembles and makes many components for sophisticated consumer products like the iPad; leads the world in many green industries; builds most of the world’s new nuclear power plants; is rapidly advancing its military technology, often at a quicker pace than most experts predict; and makes some of the world’s fastest supercomputers. China is projected to pass the United States in total economic output between 2016 and 2030, depending on the source and methodology used.²² At the point of GDP parity, each of the two economies will account for an estimated 18% of world product.

Beyond these accomplishments, which suggest extraordinary inputs, are factors that make China the biggest IP offender in the world. In the first major study on China and IPR, Michel Oksenberg

and colleagues noted in 1996 that the problem in China begins with historical and cultural factors, which are then exacerbated by leadership priorities, bureaucracies competing for authority, an immature legal system, and local-level leaders motivated first and foremost by short-term economic and political interests. “This widespread disregard for intellectual property rights,” they wrote, “is an area of great concern for all high-technology firms operating in the Chinese market.... and won’t be easily solved.”²³

Nearly two decades later, IPR still suffers from lax enforcement by a judicial system that, despite extraordinary reforms, does not deter IP theft. In fact, the most recent member surveys by AmCham China suggest that the situation is deteriorating. In 2012 the percentage of responding companies that classified IPR enforcement as “ineffective” and “totally ineffective” rose to 72%.²⁴ Doing business in China entails navigating a system that defies the outsider’s full apprehension, and IP theft represents a special risk.²⁵

PRC Policy

The legacy of the “four modernizations” policy, launched by Deng Xiaoping in 1978, is crucial to understanding IPR in China. The targets of Deng’s remarkably successful development policy were the core economic sectors of society, and foreign IP was seen as crucial for each. The Chinese government elicited the support of the UN Development Programme in fall 1978 for technical assistance and financial resources. China soon became the World Bank’s major recipient of support. To accelerate the modernization process, foreign trade was encouraged, with machinery and know-how from the West and Japan purchased or obtained through aid or other means. Eventually millions of Chinese studied abroad, many of them in the sciences. Having adopted fundamental reforms that included an export-led growth strategy similar to those that were pioneered by Japan and the “four tigers,” China was able to speed up its economic development with foreign investment and access to technologies and management expertise.²⁶

Over the years, the policy to acquire and develop technology has existed under different names and been given subtly different emphases. U.S. firms and national labs were targeted from the beginning. A congressional report documented successful efforts between the late 1970s and mid-1990s by a range of Chinese actors to obtain very advanced technologies.²⁷ By the late 1980s, American companies and trade negotiators were complaining, as reflected in the USTR Special 301 reports. These reports serve as an instructive historical record from 1989 to the present. The very first report listed China as one of the top three IPR offenders, and by 1996 China stood alone as the country of greatest concern.

At the core of the “indigenous innovation” policy launched in 2006 and incorporated into the National Medium- and Long-Term Plan for the Development of Science and Technology (2006–2020) were procurement rules that further favored Chinese companies, advantages for Chinese companies

in the protection of IP and in the patent system,²⁸ efforts to set Chinese technology standards to favor Chinese entities, requirements for foreign companies to share or expose their technologies for access to the Chinese market, and subsidies for key industries to enable them to beat foreign competitors. Many foreign businesses came to see the heightened mandate to import technologies and assimilate them as justification for greater theft of foreign-generated IP, as well as for stronger pressure on foreign companies to share technology. An increase in theft and compulsory technology transfer in fact seems to have been the outcome.²⁹ China's indigenous innovation policy also included a mandate to consolidate industry so that one or a few Chinese companies would dominate key sectors. After decades of reforms, state-owned enterprises today produce an estimated half of China's total manufacturing and services output, and they dominate such sectors as energy, telecommunications, and transportation.³⁰

In China's 12th five-year plan (2011–15), developing technological capabilities across a broad swath of industries remains a top priority. Added to the plan in July 2012 were seven “national strategic emerging industries” of special interest, on top of the traditional focuses. These seven industries are (1) *new energy auto industry*, (2) *energy-saving and environmental-protection industry* (energy-efficient industry, advanced environmental-protection industry, resource-recycling industry), (3) *new-generation information-technology industry* (next-generation information-network industry, fundamental industry of core electronics, high-end software, and new information-service industry), (4) *biotechnology industry* (bio-pharmaceutical industry, bio-medical engineering industry, bio-breeding industry, bio-manufacturing industry), (5) *high-end equipment manufacturing industry* (aviation equipment industry, satellite and satellite application industry, rail transportation equipment industry, marine engineering equipment industry, intelligent equipment-manufacturing industry), (6) *new energy industry* (nuclear energy technology industry, wind energy industry, solar energy industry, biomass industry), and (7) *new material industry* (new functional-material industry, advanced structural-material industry, high-performance composite-material industry).

As the new Chinese leadership settles in, IPR issues loom. The fundamental question is whether the new leaders will confront the major societal and policy forces that continue to work against IPR. The patent and trade-secret legal environments, for example, require reform. The patent system encourages Chinese entities to copy and file foreign patents as if these patents were their own, and seems to establish the right of Chinese entities to sue the foreign, original inventor that seeks to sell the technology in China. A deluge of such suits could occur in the next few years. Separately, proposed legal amendments are now circulating that would force foreign companies into licensing agreements in exchange for those companies' access to the Chinese market. The amendments would produce a situation similar to the one developing in India, where foreign manufacturers may be prevented from importing their products and left with the choice of either licensing their technology to an Indian firm or manufacturing products in the country if they wish access to the Indian market.

²⁸ For example, the PRC pays entities to file for patents, and most patents are granted based on small or no design changes from the foreign originals.

Cyber Methods for Stealing IP

Russia and other states are known to use espionage and cyberattacks on networks to steal defense and other secrets. Hackers stealing trade secrets, money, and personal information are also a worldwide problem. Quantitatively, however, China stands out in regard to attacks for IP. A confluence of factors, from government priorities to an underdeveloped legal system, causes China to be a massive source of cyber-enabled IP theft. Much of this theft stems from the undirected, uncoordinated actions of Chinese citizens and entities who see within a permissive domestic legal environment an opportunity to advance their own commercial interests. With rare penalties for offenders and large profits to be gained, Chinese businesses thrive on stolen technology.

While traditional industrial espionage techniques have been used extensively, cyber methods for stealing IP have become especially pernicious. In a March 2012 report to Congress, the People's Liberation Army (PLA) was identified as a key player, and was noted as often acting in concert with commercial entities. The report suggests that "rather than isolate certain state owned IT firms as exclusively 'defense' in orientation, the PLA...alternately collaborates with China's civilian IT companies and universities." The report concludes that "computer network operations have assumed a strategic significance for the Chinese leadership that moves beyond solely military applications and is being broadly applied to assist with long term strategies for China's national development."³¹

In its study of successful attacks conducted in 2012, Verizon, in cooperation with eighteen private organizations and government agencies, found that "state-affiliated actors" accounted for 19% of the 621 successful "breaches" in the 47,000 attacks reported.³² Of cases that were deemed motivated by "espionage," the PRC was determined to be responsible for 96%. In spite of the sophistication and reputation of the series of Verizon studies, this figure may exaggerate China's dominance in this arena. Nonetheless, the study adds weight to the findings of the other principal studies in the field, all of which point to China as the major source of state-sponsored attacks on IP.

Similarly, Mandiant Corporation's February 2013 study, entitled "Exposing One of China's Cyber Espionage Units," traces Chinese government sponsorship for cyberattacks on IP. All the industries targeted by the PLA unit studied by Mandiant fall into those considered strategic by the PRC, "including four of the seven strategic emerging industries that China identified in its 12th Five-Year Plan." The PLA unit began operations in 2006, the year that the indigenous innovation policy was approved. The purposes of the cyberattacks were found to be straightforward: to commit espionage and steal data. The unit was judged to access networks over months or even years to "steal broad categories of intellectual property, including technology blueprints, proprietary manufacturing processes, test results, business plans, pricing documents, partnership agreements, and emails and contact lists from victim organization's leadership." In the words of the report, "the cyber command is fully institutionalized within the CPC [Communist Party of China] and able to draw upon the resources of China's state-owned enterprises to support its operations."³³

In addition, on May 6 the U.S. Department of Defense issued its 2013 report to Congress on Chinese military developments. Reinforcing the findings from the Mandiant Corporation, the

³³ Mandiant Corporation, "APT1: Exposing One of China's Cyber Espionage Units," February 2013, http://intelreport.mandiant.com/Mandiant_APT1_Report.pdf.

report notes that the PRC “is using its computer network exploitation (CNE) capability to support intelligence collection against the U.S. diplomatic, economic, and defense industrial base sectors that support U.S. national defense programs.” It asserts that “the information targeted could potentially be used to benefit China’s defense industry, high technology industries, [and] policymaker interest in U.S. leadership thinking on key China issues,” among other things.³⁴

In a sense, China’s current policy toward IP protection is similar to its policy toward environmental protection several years ago. Both IP and environmental protection impose costs and competitive disadvantages on China’s highest priority—comprehensive development—and have therefore been widely disregarded. Now, however, Chinese policy is better reflecting the understanding that environmental protection is essential for its citizens to lead healthy lives. Similarly, a solid IPR regime is essential to China obtaining the benefits from innovation necessary to sustain economic progress. Such a regime would encourage Chinese innovation as well as sustain Western innovation, from which China could continue to receive enormous benefits. Although degradation of the atmosphere for innovation is not as obvious as degradation of the air in Chinese cities, the long-term impact is equally devastating.

Problems with Available Trade Mechanisms

Traditionally, in order to solve trade disputes, most developed countries have relied on tools such as unilateral trade sanctions, trade remedies such as countervailing duties, and “voluntary” export restraints.³⁵ Due to obligations assumed as a result of the World Trade Organization’s Uruguay Round negotiations, the United States and other major countries agreed to use WTO mechanisms to settle disputes. The Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS), negotiated in 1994 and administered by the WTO, establishes minimum standards for many forms of IP regulation. A qualified success, WTO dispute mechanisms have seen more than 339 settlement reports and arbitration awards issued by the organization’s dispute body from 1995 (its year of inception) through 2011. Of these, the United States participated in 140.³⁶

Participation rates notwithstanding, WTO dispute mechanisms have several problems. Chief among these is the time required to reach a resolution. The process can be so time-consuming that recapturing any damages through this process is often illusory. As noted above, many products today, especially in the software and other high-tech industries, generate the bulk of profits for their companies in the first weeks or months of release.

Dispute mechanisms for trade in goods have worked reasonably well. However, resolutions to disputes involving IP are often reached behind closed doors, by lawyers lacking a sufficient background to make decisions on important issues of IP protection.³⁷ This stands in contrast to most modern procedural codes, which generally adhere to common transparent guidelines, including

that “judicial proceedings must be public and that, in principle, the control of the allegations and proof belongs to the parties.”³⁸

The paucity of legal interpretations of the TRIPS agreement and a general sense of ambiguity inherent in many of the TRIPS obligations have also made it difficult to establish noncompliance and enforce the agreement.³⁹ For instance, the need for a plaintiff to show clear evidence of systemic failure, as opposed to anecdotal weaknesses in a country’s IP enforcement regime, leads to great difficulty in proving a culture of noncompliance under TRIPS for cases in which access to such clear evidence is restricted or otherwise unavailable.⁴⁰

Bilateral and multilateral trade agreements have also often been used to address global IP issues. Such discussions have allowed for more detailed treatment of trade-related issues between the United States and its trading partners that could not be easily dealt with through other avenues, such as the WTO. The Korea-U.S. Free Trade Agreement contains provisions specifically designed to address IP protections. For example, it includes specific provisions for improving enforcement and strengthening the overall legal environment for patents, trademarks, and copyright.⁴¹ The ongoing negotiations of the Trans-Pacific Partnership and U.S.-EU agreements are expected to have similarly high standards for protecting IP. As important as agreements are, however, progress in IP protection often occurs only when U.S. pressure reinforces some preexisting domestic impetus for change.⁴²

Recent U.S. Policy Responses Are Inadequate

In addition to participating in WTO dispute mechanisms such as TRIPS, the United States has relied on a series of other measures to deal with IP theft, none of which has solved the problem.

First, the United States has attempted to hector China and other foreign countries into doing a better job of protecting IP. The mechanism utilized annually is the USTR Special 301 Report. As discussed earlier, the report assesses foreign countries on their ability to protect intellectual property and identifies actions taken or anticipated by the U.S. government. In the recently released 2013 report, the USTR notes a grave concern with cyber-enabled trade-secret theft from China. Top administration officials have more frequently decried foreign theft of American IP amid promises to get tough. In March 2013, Thomas Donilon, President Obama’s national security advisor, specifically called attention to the problem of Chinese cyber-enabled theft of confidential American proprietary information.⁴³

A second U.S. government approach has been to increase enforcement and prosecution initiatives. The Office of the Intellectual Property Enforcement Coordinator was established in 2008 in the Office

⁴² Examples of such agreements have included the U.S.-Japan Structural Impediments Initiative, the U.S.-EU Summit process, and the Security and Prosperity Partnership with Canada and Mexico. See CFR, “U.S. Trade and Investment Policy.”

⁴³ See Thomas Donilon, “The United States and the Asia-Pacific in 2013” (remarks presented at the Asia Society, New York, March 11, 2013). Donilon stated: “Increasingly, U.S. businesses are speaking out about their serious concerns about sophisticated, targeted theft of confidential business information and proprietary technologies through cyber intrusions emanating from China on an unprecedented scale.... [S]pecifically with respect to the issue of cyber-enabled theft, we seek three things from the Chinese side. First, we need a recognition of the urgency and scope of this problem and the risk it poses—to international trade, to the reputation of Chinese industry and to our overall relations. Second, Beijing should take serious steps to investigate and put a stop to these activities. Finally, we need China to engage with us in a constructive direct dialogue to establish acceptable norms of behavior in cyberspace.”

of Management and Budget. Improved legislation and increased enforcement of foreign theft have resulted in the arrest and prosecution of Chinese and other foreign nationals at rates greater than in the past.⁴⁴ Seizures by U.S. Customs and Border Protection are also on the rise in many categories.⁴⁵

As important as these efforts are, they just do not have sufficient “teeth” and do not catch perpetrators often enough to make a difference. Theft is increasing, and cyber-enabled forms, in particular, are proving ever more deleterious.

Despite the inadequacy of U.S. government policy and action, many U.S. and other international companies large and small have made the calculation that they can mitigate the risk or absorb the lost revenues and profits. Some U.S. corporate actors are also pursuing their own solutions. Companies such as IBM are supporting the proposed Cyber Intelligence Sharing and Protection Act to allow for greater information sharing between the government and the private sector. Many companies support programs that encourage the rule of law abroad. Others, such as the Center for Responsible Enterprise and Trade (CREATE), seek to standardize best practices for corporate IP policy by enhancing supply-chain accountability on behalf of multinational companies. A final set of actors is increasingly looking to “take matters into its own hands” and pursue unilateral actions, particularly in the cyber domain, against foreign entities that steal their IP.

These conditions cannot be allowed to fester. China has taken aggressive private and public actions that are inflicting major damage to the American economy and national security. Robust and swift action must be taken by the U.S. government. IP thieves must rapidly discover that the costs of stealing American IP greatly exceed the benefits, and several changes are needed to make that happen. This report contains a series of recommendations that will reverse the negative trends of the past and make immediate improvements in the protection of American IP.

Conclusion

While IP theft is not new to the planet, today’s scale of economic impacts—with national security ramifications, international dimensions, significant foreign-state involvement, and inadequacy of legal and policy remedies and deterrents—makes for an unprecedented set of circumstances.

China poses an especially difficult problem, given the size and importance of its economy and the interdependence of the Chinese economy with those of the United States, Europe, and Japan. In 1996, Professor Oksenberg and colleagues argued that “Gradually, policy communities supportive and understanding of IPR are arising on the Chinese landscape. In effect, constituencies who stand to gain from IPR are beginning to appear and influence policy. But their strength is relatively weak...”⁴⁶ Three and half decades of Chinese economic development and progress in legal reform, together with well-intentioned and improved U.S. policy, have not proved effective. Almost the same things that were said twenty years ago can be restated today, except that now China is the world’s second-largest economy and the losses from IP theft have increased greatly. With American companies and workers hurting, millions of jobs, the vibrancy of our innovative economy, and our security are at stake. Meanwhile, the risks for stealing are low and cheating is commonplace.

The starting point for redressing the problem is an understanding of the tools available to fix it. The IP Commission regards access to the American market as the single most important lever

⁴⁴ See chapter 9 of this report for a thorough description and analysis of recent U.S. government actions to improve the protection of American intellectual property.

⁴⁵ See chapter 2 of this report for a discussion of recent seizure rates.

⁴⁶ Oksenberg et al., “Advancing Intellectual Property Rights,” 29.

in dealing with foreign companies with international ambitions. Thus, the Commission views changing the cost-benefit calculus for foreign entities that steal intellectual property to be its principal policy focus. Stealing American IP needs to have serious consequences, with costs sufficiently high that state and corporate behavior and policies that support IP theft are fundamentally changed. Companies that seek competitive advantages within the American market by using stolen intellectual property must find their access to that market made more difficult or thwarted altogether until they stop stealing.

The forces within China promoting greater IP protection need to be applauded and supported. At the same time, the incentive structure that currently rewards IP theft must be changed. The new Chinese leadership has a great opportunity in this regard. What the Commission can do is recommend specific steps that the United States can take to change the environment of IP theft, while offering to work with all groups in China who see that it is in their interest, as much as ours, to build an effective business environment that protects every country's innovators.

Beyond contributing toward a better functioning Chinese system, the Commission makes a series of recommendations that seek to protect American companies against all sources and forms of IP theft.

Measuring the Scale and Scope of the Loss of Intellectual Property

After reviewing the extant literature and hearing testimony from a wide range of experts, the IP Commission assesses that when the estimated value of lost sales, stock assets, investments, and other dimensions are added in, the total annual losses due to stolen IP are in the hundreds of billions of dollars.

Technet, a national coalition of CEOs in the high-tech field, estimates that more than six million jobs and more than a third of the United States' \$15-trillion economy rely on innovation.¹ A U.S. Patent and Trademark Office study estimates that IP-intensive industries directly accounted for 27.1 million American jobs in 2010, or 18.8% of all employment in the economy. An annual loss of hundreds of billions of dollars of stolen IP—the very lifeblood of America's innovation economy—is indeed extraordinary, especially to a still-recovering U.S. economy.

If the cost is so high and the implications for the U.S. economy so great, why is the IP Commission not able to more precisely measure the loss? The reasons are many.² First, loss is necessarily measured in different ways across different sectors and different types of IP theft. For instance, the value of unauthorized software is somewhat easier to measure, in part by counting the number of computers seeking to update software. Similarly, good statistics are kept on the value of seized counterfeit goods entering the United States. On the other hand, some losses are not ever aggregated. Trade-secret losses, for instance, by definition are not included in a total, in part because the value of the loss of an individual company's IP may only become known well after the fact, such as during the trial of a suspected thief or if the company ultimately goes out of business.

A second factor is that companies are highly disincentivized to report their losses for two reasons. First, when a company divulges that it has been a victim of IP theft, there can be certain reputational effects that may affect market confidence in corporate leadership and the value of a company's stock. Second, identifying IP theft almost necessarily requires identifying the source of the theft. If the origin of the theft is in a strategically important market for a company, then a certain level of theft may be written off as merely a “cost of doing business” in an otherwise profitable market.

A third factor centers on the surveys that are often used to measure loss, either by counting the losses reported by survey respondents or by estimating loss from reported statistics. Both approaches are problematic for essentially the same reason. Because IP theft varies widely across sectors and between companies—even within the same sector, companies have widely varying success in protecting their IP—unless every single company is polled and accurately reports its losses, neither aggregating nor estimating has much of a chance of being useful.³

What is indisputable is that the scale and scope of the loss is enormous. In a year of research, testimony, and interviews, the IP Commission has not heard one expert suggest the problem is not

¹ See Technet, “America's Innovation Economy,” website, <http://www.technet.org>.

² See the Appendix to this chapter for an in-depth report on the challenges of measuring the value of IP theft.

³ That said, we cite some of these surveys later in the report. Flawed as they might be, they are all that was available. We recognize that we are in some cases drawing conclusions from data that is incomplete.

breathhtaking in scale. Even more important than the scale and scope of the loss is an overwhelming assessment by experts that current legal and regulatory approaches to mitigating the loss are staggeringly ineffective.

Below are summaries of a range of highly knowledgeable efforts, which help bound the scale and scope of the problem.

The Details

International Data Corporation (IDC): "The Dangerous World of Counterfeit and Pirated Software" (2013). Counterfeit software is a major vector for the distribution of dangerous malware that imposes substantial costs on the economy and decreases the security of IT systems and data. IDC estimated that globally "the direct costs to enterprises from dealing with malware from counterfeit software will hit \$114 billion" in 2013 and "[t]he potential losses from data breaches could reach nearly \$350 billion."⁴ High rates of IP theft also increase the risks of cybercrime and other security threats, particularly with regard to counterfeit software use.

Bureau of Economic Affairs/U.S. Patent and Trademark Office: "Intellectual Property and the U.S. Economy: Industries in Focus" (2012). The entire U.S. economy relies on some form of IP because virtually every industry either produces or uses it. The report identified 75 industries (from among 313 total) as IP-intensive. These IP-intensive industries directly accounted for 27.1-million American jobs in 2010, or 18.8% of all employment in the economy. The vast majority were in the 60 trademark-intensive industries (which included 22.6 million jobs in 2010).

IP-intensive industries accounted for about \$5.06 trillion in value added in 2010, or 34.8% of U.S. GDP. While IP-intensive industries directly supported 27.1-million jobs, either on their payrolls or under employment contracts, these sectors also indirectly supported 12.9 million more supply-chain jobs throughout the economy. In total, 40.0-million jobs, or 27.7% of all jobs, were directly or indirectly attributable to the most IP-intensive industries. Merchandise exports of IP-intensive industries totaled \$775 billion in 2010, accounting for 60.7% of total U.S. merchandise exports.⁵

Business Software Alliance: "Shadow Market: 2011 BSA Global Software Piracy Study" (2012). The commercial value of the "shadow market" of globally pirated software climbed from \$58.8 billion in 2010 to \$63.4 billion in 2011. The study by the Business Software Alliance estimates that the global piracy rate is 42%. The EU rate was judged to be 33%, Japan's is 21%, and the U.S. rate is 19%. However, the piracy rate for emerging economies is over 68%. India's piracy rate is 63% (a 9% decline over the last decade), Russia's rate is 63% (a 24% decline), and Indonesia's rate is 85%.

Meanwhile, China's illegal software market was \$9 billion in 2011 out of a total market of nearly \$12 billion, for an astonishing piracy rate of 77%. Chinese PC owners spend less than a quarter of the amount of other BRIC countries on software and a mere 7% of U.S. software spending. The BSA study suggests that the problem is only expected to get worse. Emerging markets—the key origins of pirated software—took in 56% of new PC deliveries in 2011.⁶

⁵ U.S. Department of Commerce, "Intellectual Property and the U.S. Economy: Industries in Focus," prepared by the Economics and Statistics Administration and U.S. Patent and Trademark Office, March 2012, <http://www.esa.doc.gov/sites/default/files/reports/documents/ipandtheuseconomyindustriesinfocus.pdf>.

⁶ Business Software Alliance (BSA), "Shadow Market: 2011 BSA Global Software Piracy Study," May 2012, http://portal.bsa.org/globalpiracy2011/downloads/study_pdf/2011_BSA_Piracy_Study-Standard.pdf.

U.S. Customs and Border Patrol: Intellectual Property Rights Fiscal Year (FY) 2012 Seizure Statistics. The number of IPR seizures decreased to 22,848 shipments in FY 2012 from 24,792 in FY 2011 (largely due to certain high-volume counterfeited patents leaving service). The estimated manufacturer's suggested retail price for all FY 2012 IPR seizures is \$1.26 billion, up from \$1.1 billion in FY 2011. China was the source for 72% of seized goods.⁷

International Chamber of Commerce: "Estimating the Global Economic and Social Impacts of Counterfeiting and Piracy" (2011). A report commissioned by the International Chamber of Commerce estimates that, based on 2008 data compiled by the Organisation for Economic Co-operation and Development (OECD), the total global economic value of counterfeit and pirated products is as much as \$650 billion every year. Moreover, the extent of the problem is expected to grow, in large part as a result of the growth of the Internet. Based on existing estimates, the report also projects that the *global value of counterfeit and pirated products could amount to \$1.7 trillion by 2015*. Previous studies have indicated that if counterfeiting and piracy could be eradicated or seriously reduced, up to 2.5-million jobs could be created in the legitimate economies of the G20.⁸

U.S. International Trade Commission (USITC): China: Effects of Intellectual Property Infringement and Indigenous Innovation Policies on the U.S. Economy (2011). In 2009, the theft of U.S. IP from China alone was equivalent in value to \$48.2 billion in lost sales, royalties, and license fees. This estimate falls within a broad \$14.2-billion to \$90.5-billion range; the breadth of this range is explained by the fact that many firms were unable to calculate such losses. Of the \$48.2 billion in total reported losses, approximately \$36.6 billion (75.9%) was attributable to lost sales, while the remaining \$11.6 billion was attributable to a combination of lost royalty and license payments as well as other unspecified losses.

The USITC report estimated that an improvement in IPR protection in China to levels comparable to those in the United States could lead to an estimated \$107.0-billion gain in U.S. exports and sales to majority-owned affiliates in China (after adjusting for the double-counting of U.S. exports to affiliate firms in China). U.S. exports of goods and services to China—including the receipt of royalties and license fees—could increase by an estimated \$21.4 billion, and sales to U.S. majority-owned affiliates in China could increase by an estimated \$87.8 billion.⁹

Organisation for Economic Co-operation and Development: The Economic Impact of Counterfeiting and Piracy (2008). Quantitative analysis carried out by the OECD indicates that the volume of tangible counterfeit and pirated products in international trade could have been up to \$200 billion in 2005.¹⁰ This figure does not, however, include counterfeit and pirated products that are produced and consumed domestically, nor does it include the significant volume of pirated digital products that are being distributed via the Internet. If these items were added, the total magnitude of counterfeiting and piracy worldwide could well be several hundred billion dollars more. The OECD report also finds that 70% of the source economies of IP theft are in the Asia-Pacific region.

Effects on R&D and Innovation

Regardless of how overall monetary value of IP loss is quantified, the true losses extend far beyond decreased revenues and lost market share. There are also secondary effects that directly influence companies to significantly reduce their R&D investments, thus slowing long-term economic progress. Reduced incentive to innovate, diversion of revenues to IP-infringing firms and away from IP-creating firms, and diversion of revenues to IP-protection measures and away from R&D investment are just a few of the reasons that companies may struggle to maintain investment in innovative activity.

Reduced Incentive to Innovate

IP protections in the United States are based on the fundamental belief that providing limited monopolies to inventors and creators incentivizes further innovation, driving forward human and economic development.¹¹ A 2011 study conducted for the U.S. Chamber of Commerce's Global Intellectual Property Center examined the contributions of IP-intensive industries in the U.S. economy and concluded that they were responsible for up to a third of U.S. economic output.¹² This economic growth, however, is not limited to specific industries or classes; the benefits of IP are felt across all sectors and, to some extent, affect every job in the economy. As explained in a recent report by the U.S. Patent and Trademark Office, "every job in some way produces, supplies, consumes, or relies on innovation, creativity, and commercial distinctiveness. Protecting our ideas and IP promotes innovative, open, and competitive markets."¹³

While the argument that strong IP protections are an overall benefit to the economy has historically been a theoretical and anecdotal one, it has garnered an increasing body of empirical support.¹⁴ Recent studies have shown that the level of a country's IP protections is a key determinant of its overall economic development.¹⁵ In an OECD study of WTO TRIPS (trade-related aspects of intellectual property rights) signatories, researchers found that patent rights in developing countries tended to be positively associated with increased levels of FDI as the strength of those rights increased.¹⁶ It is important to note, however, that IP protections are only beneficial to an economy when they are adequately enforced.¹⁷ The lack of enforcement is the key issue in many countries. As one expert noted when discussing Chinese IP rights, "the problem is not the lack of laws.... The problem is implementation."¹⁸

¹⁷ Park and Lippoldt, "The Impact of Trade-Related Intellectual Property Rights," 4.

¹⁸ Adam Segal, *Advantage: How American Innovation Can Overcome the Asian Challenge* (New York: W.W. Norton, 2012).

When IP protections are strong and effective, they can provide tremendous incentive for innovators, create jobs, and drive broad economic development, especially in sectors where returns on investment are long term.¹⁹ Conversely, when IP is not protected, the incentive structure for individuals and firms changes, with start-up companies being the clear losers.

Revenues Diverted to IP Infringers

When a country fails to provide adequate protection for intellectual property, the result is not only a lost incentive to innovate but also a positive incentive to infringe. In all the IP-intensive industries there exist both IP creators and IP infringers. The former use their time, money, and human resources in the pursuit of new and better inventions and vary in size from large multinational corporations to small start-ups operating out of a garage. What they all have in common is a drive to create, with the expectation that the market will reward them for their ingenuity. IP infringers do not create. They instead use the creative powers of other firms or individuals to generate revenue for themselves. Examples include industrial spies stealing proprietary chemical formulas, patrons of cybercriminals who break into corporate networks in order to steal trade secrets for use in their own products, DVD and software pirates across Asia, and manufacturers of counterfeit luxury goods. When these infringers are allowed to succeed in their endeavors, we allow the marketplace to reward and incentivize IP theft. This state of affairs creates a vicious cycle, whereby ill-gotten revenues are utilized to continue to fund the firm's standing business model of IP theft.

Clearly, while both IP infringers and creators can generate revenue from an economy, only one of these business models creates lasting, long-term economic growth.

Revenues Diverted to IP Protections

Most firms see R&D expenditures as investments in their long-term growth. As outside firms and individuals steal IP, firms increasingly spend revenue trying to protect their previous R&D investments from being stolen rather than on new R&D investments.²⁰ Rampant infringement of IP in China has been directly cited by U.S. firms as a reason for reduced expenditures on R&D, and even reduced employment in the U.S.²¹ Why would these companies continue to spend from a continually shrinking pot on new R&D investments when they cannot protect the return on their previous investments?

According to the previously cited USITC report, "firms in the U.S. IP-intensive economy...spent approximately \$4.8 billion in 2009 to address possible Chinese IPR infringement."²² Again, the hardest-hit sector was information services. Furthermore, a company's costs for protecting its IP on the Internet are increasing rapidly. A recent study estimated that the median annualized cost to organizations of cybercrime for 50 benchmarked companies was \$5.9 million per year and ranged

²² *Ibid.*

from \$1.5 million to \$36.5 million per company.²³ Smaller companies have suffered the most and incur almost four times the per capita cost of large companies.²⁴

Beyond lost incentives and fewer resources, a lack of IP protection also incentivizes unfair competition. Not all stolen IP comes in the form of a final product. In many cases, stolen IP is used as an input to make what would otherwise be classified as legitimate goods. For instance, a fishing company in Thailand was recently fined for using pirated software to manage its business infrastructure.²⁵ By using illegal software, this company was able to operate at significantly lower cost than its IP-respecting counterparts, resulting in an unfair advantage. When these violations are allowed to persist, business practices become a race to the bottom. Forced to compete on a tilted playing field, other companies will also begin to use stolen IP simply to remain competitive in the marketplace.

Regardless of the specific reason, it is clear that the theft of IP is proving to be an inhibiting factor in realizing the value of currently held IP while depriving firms of funding aimed at the production of new IP. In the face of staggering losses, firms will have less motivation to innovate, have less money to invest in R&D, and hire fewer employees. They will also continue to be distracted by attempts to chase down the perpetrators of IP theft in a desperate, and often futile, attempt to stem their losses.

The studies give sobering evidence that the United States, along with other countries, faces one of the greatest and most vexing political-economic challenges in history. America's core economic strength is being attacked successfully on a mammoth scale, and we are well into the game.

Appendix: Challenges in Measuring IP Loss

Studies often begin with disparate views as to what should be counted when measuring IP theft, resulting in wide variation between studies in terms of the bottom-line value of IP theft. In general terms, these definitions of “what counts” include:

- *Effects on industry.* Lost sales; lost brand value; reduced scope of operations; lost jobs and reduced ability to provide employee benefits; reduced ability to conduct R&D; increased IP protection expenses for prevention, remediation, and enforcement; increased costs from dealing with malware acquired from unlicensed software; reduced incentive to innovate.
- *Effects on government.* Lost tax revenue; increased IP protection expenses for prevention, remediation, and enforcement, including costs to store, secure, and destroy seized assets; benefit to criminal networks looking to launder money or harm the public; impact on national security; impact on civilian safety, in that illegally obtained goods and processes that depend on IP might not have safety-dependent updates (in the case of software) or appropriate protections may have been left out or deleted (in the case of counterfeit goods).
- *Effects on consumers.* Harm to health, harm to safety, costs incurred as a result of product failure, decreased or increased purchasing power.
- *Effects on the U.S. economy as a whole.* Decline in economic growth as incentives to innovate are reduced, lost trade revenue, impact on the environment; increase in companies with substandard working conditions.

Most existing research on IP theft uses one or more of the following indicators to create a broad yet sizeable estimate:

- *Volume of goods (VOG) seized by U.S. Customs and Border Protection (CBP).* While often used as a baseline for estimates, the limitations of using VOG include uncertainty regarding whether it reflects the aggregate of the loss, whether the assessed percentage of loss can be known, or simply whether it represents the maximum volume that CBP is able to capture given its resources. CBP seizures are an inadequate metric for a number of categories of loss, including digital piracy and trade-secret theft.
- *Dollar value of goods seized by CBP.* In using the value of seized goods in estimating total loss, one must first determine whether to measure production cost, domestic value, the manufacturer’s suggested retail price, or some interim price point depending upon methodology.²⁶ As with VOG, it is also unclear if these numbers reflect the totality or a set fraction of the problem, or simply the maximum volume that CBP is able to capture given its resources. It is also a poor measure of digital piracy.
- *Ratio of the volume or value of illegitimate goods to legitimate goods in a particular industry.* This approach often uses CBP data as a primary indicator, but can use specialty formulas derived from surveys.
- *Extrapolations based upon consumer surveys.* This methodology often attempts to combine quantitative data (how many goods were pirated) with more qualitative data (how much value was actually lost based upon knowledge of consumer behavior).

Survey questions may focus on the following: customer willingness to pay for counterfeit goods; personal ethics regarding piracy; number of illegitimate purchases during a set timeframe;

²⁶ For example, BSA and IDC use a formula that suggests that the value of pirated goods = [(legitimate market value) / (1 - piracy rate) - legitimate market value]. However, this formula does not appear to be universal.

minimum expectations regarding quality; pricing points that would eliminate incentives for piracy; awareness of and reactions to penalties or side effects (including health, safety, and legal). This method can be especially useful for measuring losses in software or other digital products that are not reflected in CBP data. Surveys can ask consumers to indicate how many of a certain unit they have installed to estimate total products available and then subtract that number from the known number of units sold. Negative numbers can indicate the extent of piracy in a given industry.

However, a survey approach has limitations. It can be cost and labor intensive, it can be distorted by reporting bias, and is subject to the quality of the survey design.

- *Economic multipliers.* This approach shows how capital changes in one industry affect output and employment in associated industries.

The Bureau of Economic Analysis at the Department of Commerce has published guidelines that make regional multipliers available through its Regional Input-Output Modeling System (RIMS II).

- *“Rule of thumb.”* The U.S. Government Accountability Office (USGAO) argues that there is no reliable “rule of thumb” for estimating the percentage of a given industry that is dominated by piracy.

Other difficulties to bear in mind in the measurement challenge include the following:

- Many agencies such as the Department of Commerce and the FBI rely on industry statistics rather than original research, which can result in inconsistent or unverifiable methodologies.
- Some industries do not want to expose the scale of counterfeiting and thus may underreport. Increased IP theft may increase overall revenue directed towards a particular IP, as sampling results in greater product exposure. IP theft can allow companies to “move into the aftermarket”—effectively acquiring knowledge that can allow them to become true competitors rather than solely continuing to copy products. This phenomenon may be even more difficult to capture in a cost assessment.
- Research by the USGAO indicates that three widely cited studies on the impact of counterfeiting on the U.S. economy—attributed to the FBI, CBP, and FTC—“cannot be substantiated due to the absence of underlying studies,” creating additional challenges for researchers.

Types of IP Theft

IP theft varies widely in both type and method. It ranges from more commonly known forms, such as software and music piracy, to more elaborate types, such as the use of economic espionage tactics to steal complex industrial trade secrets. Each type of IPR violation harms an economy in unique ways and brings with it a discrete set of challenges that make both deterrence and enforcement difficult.

In the chapters that follow, we discuss each type of IP theft, how it is perpetrated, how it affects the local economy, how it costs American jobs, and why each type is so inherently difficult to stop. The anecdotes we use are real, documented stories, based on facts largely available in the public domain. They support some of our early conclusions as a commission—namely, that IP theft in general is substantially human, manifestly local, and unceasingly pervasive.

The stories that most people hear or imagine when thinking about IP theft, economic espionage, or trade-secret theft are the grist of high-tech espionage thrillers. However, while it is true that the rise of personal computing has added a new dynamic to protecting intellectual property, it is important to remember that nearly all IP loss, no matter how high-tech, still requires a human component. It is rare that a significant violation is perpetrated through cyber methods alone. In order for IP theft to be successful, a human element is needed. While cyber methods add new challenges, the fight is still human.

Additionally, the mention of global IP thieves often conjures up images of a foreign enemy based somewhere on the other side of a vast ocean. State-sponsored efforts immediately leap to mind—for example, Shanghai-based PLA Unit 61398, which has been identified as the source of many recent cyberattacks.¹ In reality, however, most IP theft is committed within American offices, factories, and even neighborhoods and homes. Our research has shown that large IP losses, the ones that affect the American economy and national security in the most significant ways, are committed within U.S. borders.

Finally, IP theft and its effects are not isolated to a few high-tech industries or sectors. There are a total of 27-million jobs within the U.S. IP-intensive economy, which is nearly 20% of all jobs in the American economy.² However, IP is used everywhere and in nearly all jobs. Even though a sector may not be dedicated to creating IP, it still uses intellectual property or is in some way supported by industries that are within the IP-intensive economy. With an economy as interconnected as ours, when IP is lost in one sector, the negative effects of this loss are felt throughout.

In the chapters that follow, we examine the global environment with regard to IP theft through case studies and analysis in the areas of patent, trade-secret, trademark, and copyright law.

Patent Violations

Viewing China's development of a patent system in a global historical context provides a vivid illustration of the large amount of progress that the country has achieved in a relatively short period of time. Patent protection, along with copyright, was one of the earliest forms of IP protection, formally dating to fifteenth-century Italy and the Venetian Statute of 1474. In England, the late Tudors (c. 1561) initiated the practice of issuing "letters patent" granting monopolies on the manufacture and sale of commodities. The policy was intended to attract foreign craftsmen and tradespeople to settle in the country and make use of their knowledge and skills domestically.¹ This practice was extended by Elizabeth I and later James I into the early seventeenth century to encompass the inventions of native Englishmen as well, solidifying the granting of monopolies as a discretionary means of extracting income and maintaining political power.²

By the end of the reign of James I, changes began to occur that would alter the political and social landscape, eventually giving birth to a diverse intellectual environment tolerant of opposing viewpoints. A fairly developed patent system emerged, along with institutions to enforce an individual's claim to original creation.³ The process began with the deprecation of the royal issuance of letters patent for monopolies by Parliament in 1621.⁴ This was immediately followed by the promulgation of the Statute of Monopolies in 1624, the first patent law formally defining invention, and setting a fourteen-year period as the standard for patents.⁵ The statute also stipulated parliamentary approval for all patents, although a compromise in section 6 allowed the crown to retain power of letters patent only when issued to "the true and first inventor" of "new manufactures." This would remain the effective patent law for all of England's industrial revolution until 1852, when a new law established a patent office.⁶

In the United States, patent rights were authorized in Article I of the Constitution: "The Congress shall have power... To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."⁷ The United States has generally maintained this utilitarian view by providing patent protection with the belief that it would incentivize innovation and economic development. Thomas Jefferson, one of the first patent commissioners, wrote in a 1789 letter to James Madison that the Bill of Rights should include the language "monopolies may be allowed to persons for... their own inventions in the arts for a term not exceeding—years but for no longer term and no other purpose."⁸ The founders believed that this

inherently “monopolistic” policy generally incentivized innovation. If researchers and inventors are not assured a reasonable expectation of return, they are less likely to expend time, money, and energy in developing new innovations. This is especially true in today’s modern economy, where R&D expenditures for new high-tech innovation can run into the billions of dollars. When patent laws are violated or inventions misappropriated internationally, incentive for innovation is greatly reduced and revenue is diverted from innovating companies to infringing companies. A review of the 2012 Special 301 report from the office of the USTR indicates that although there has been progress rooting out patent violations, infringing activities and weak patent regimes remain a global problem even in some of the world’s largest economies.

China itself has made great progress in its nascent patent system. In the fewer than three decades since the introduction of a modern patent regime in China (enacted in 1985), the PRC has become the leading country in the world in terms of the number of patents filed in domestic offices. Over the past decade and a half alone, domestic patent applications have increased from around 105,000 in 1997 to over 1.6 million in 2011.⁹ This flurry of activity may be seen as a response to a concerted government effort to spark innovative activity. It is led not only by many of the largest Chinese companies (e.g., the technology companies ZTE and Huawei) but also by many smaller companies taking advantage of government incentives such as tax breaks and financial rewards available to firms that actively file patents both domestically and abroad.¹⁰ Yet while the overall numbers may create an impression of increased innovative activity, they should be taken with caution. The evidence suggests that the steep increase in the number of patents reflects in part a greater incentive simply to patent, rather than to innovate. This “ecosystem of incentive” provides tenure to professors, *hukou* (residence) permits to students and workers, cash bonuses and rebates to filers, and even bonuses to patent examiners based on the number of patents approved.¹¹

*Patent Infringement*¹²

A study by the U.S. International Trade Commission found that U.S. firms estimate losses to Chinese patent infringers to have topped \$1.3 billion in 2009 alone.¹³ Although many of these companies could not identify whether or not they thought patent infringement had either increased or decreased during the polling period of 2007–9, substantially more thought that it had increased (24%) than decreased (<1%).¹⁴ A significant number of these companies also noted that as a result of

⁹ Figures cover both resident and nonresident applications. See World Intellectual Property Organization (WIPO), Country Statistical Profiles (China), http://www.wipo.int/ipstats/en/statistics/country_profile/countries/cn.html.

¹¹ “Innovation in China: Patents, Yes; Ideas, Maybe,” *Economist*, October 14, 2010, <http://www.economist.com/node/17257940>.

¹² Infringement of a patent occurs when a non-patent holder practices all the steps of the patented invention without authorization, whether or not that entity was previously aware of the existence of the patent. Infringement can be direct or indirect. In both the United States and China, direct infringement requires one actor to perform each step of the patented method or system. U.S. law allows for two types of indirect infringement, contributory and induced. 35 U.S.C. § 271(b) defines induced infringement as “[w]hoever actively induces infringement of a patent shall be liable as an infringer” and requires the patentee to show that another person actually infringed and that the alleged inducer knew of the patent and, nevertheless, knowingly induced the infringing acts with a specific intent to encourage infringement by that person. Contributory infringement requires that there is direct infringement, that the accused infringer had knowledge of the patent, that the component has no substantial non-infringing uses, and that the component is a material part of the invention. China does not have specific doctrine related to indirect infringement; rather, claims for all forms of IPR infringement are handled under its Tort Liability Law, under which section 8 provides for joint and several liability for tortious acts in general. See Patrick E. King, Timothy T. Lau, and Gautam V. Kene, “Navigating the Shoals of Joint Infringement, Indirect Infringement, and Territoriality Doctrines: A Comparative Analysis of Chinese and American Patent Laws,” *Columbia Journal of Asian Law* 25, no. 2 (2012): 275, 277, 81. the losses, they put less money into R&D and were forced to divert funds to legal costs that otherwise would have gone to R&D.¹⁵

Industries with high levels of R&D expenditures, such as biotechnology, high-technology, and pharmaceutical companies, typically rely on the protection provided by patent systems (usually for twenty years or more) to recoup expenses in product development and realize profit from their inventions. In this way, patents provide incentive to these companies to continually innovate. Patents not only form the core of the assets for large R&D-centric companies but also offer important protection for the inventions of small start-up companies that may be seeking early-round venture capital investment.¹⁶

The Utility Model Patents

One result of the recent Chinese emphasis on the volume of patents has been an exponential increase in the number of utility model patents. Utility model patents, sometimes referred to as “petty patents,” are distinct from invention model patents in that they confer a patent term of ten years instead of twenty, require only a basic description of the subject matter being patented, and do not require an extensive examination in order to determine whether the subject matter of the application is actually innovative.¹⁷ Although China is not the only country with a patent law that allows such patents—several other countries, including Germany, Japan, South Korea, and Australia, feature utility model patents as part of their system—no other country makes such extensive use of this form. While these patents were originally intended to spur innovation by serving as a limited-time protection and are restricted in their use to physical goods, the speed with which they can be obtained and their effectiveness as a tool in litigation have resulted in a dramatic upsurge in this type of patent.¹⁸ Filing of utility model patents in China was already on the rise in the mid-2000s, but it began to explode at the start of China’s indigenous-innovation campaign in 2006 and after Schneider Electric, a French electronics company, lost a landmark \$45-million case in 2007. The case was brought by Chint Group, a Chinese company that held a utility model patent for a miniature circuit breaker similar to one sold by Schneider.¹⁹ Between 2007 and 2011, filings by residents for utility model patents, which had been growing at an increasing rate of about 10,000 to 20,000 per year for nearly a decade, ballooned from 180,000 to 580,000 per year. By way of contrast, the second-largest filer of utility model patents, Germany, saw only about 16,000 total utility model applications in 2011.²⁰

An unfortunate side effect of the state-led indigenous-innovation campaign, as well as the rush to file patents following high-value verdicts, is that patents granted under China’s utility model system are creating a “patent thicket.” U.S. companies must now navigate through a large volume of patents that may be of questionable value if they desire to operate in China.²¹ A recent report prepared by Thomas Moga for the U.S. Chamber of Commerce concluded that utility model patents in China not only do not serve their original purpose of encouraging inventors. Because they are cheap, not

rigorously examined, quickly granted, and difficult to invalidate, these patents have in fact become “disruptive to normal business growth” and may even be leading to a rise in nonpracticing entities (i.e., patent trolls) that seek to register patents that may already exist abroad for the sole purpose of litigating against these foreign patent holders if they seek to enter the Chinese market.²² Utility model patents based on questionable research, copied ideas (sometimes even including photocopies of old patents in the applications), and even old, invalidated technology are being pursued and granted in record numbers.²³

These are not the only reasons, however, for the proliferation of low-quality patents in China. A 2012 report by the European Chamber of Commerce in China also noted that the problem is systemic, stating that it is rooted “in a wide range of policies and other measures, as well as administrative and enforcement approaches, that do not seem to be effectively addressed at present, nor on course to be effectively addressed, and in some cases are not even discussed at all.”²⁴

The rise of utility model patents has produced a multitude of negative consequences in China for U.S. companies. One consequence is higher business transaction costs as a result of uncertainty with regard to the scope and validity of granted patents, whether an invention is patentable, or whether a patent will even be enforced. Another negative effect is the encouragement of unnecessary patent disputes, resulting in greater litigation costs. In addition, this system has created an increasing cycle of patent abuse whereby domestic parties in China race to file utility model patents based on recently disclosed foreign patents or leaked product images or descriptions. They then sue the foreign company when it tries to market these products in China.²⁵ According to a Beijing-based attorney at the international law firm Orrick, Herrington & Sutcliffe, one can “literally copy patents from any country and have them filed and granted in China as a utility model patent.”²⁶ It appears that Chinese companies are using such means to stockpile utility model patents with the goal of going after foreign companies as soon as they seek to enter the Chinese market.²⁷ Dan Prud’homme, manager of the IPR and R&D groups at the European Chamber of Commerce in China, remarked to an IP-management publication that some sources put the number of utility model patents filed with the intent of being asserted offensively at 50%. He further argued that there are many “concerning cases” where patents were “filed on inventions that were already part of the prior art and were used as harassment tools, barriers to entry and restrictions on freedom to operate.”²⁸ This trend makes it increasingly evident that the utility model system is being abused to provide what is effectively a state-sanctioned tool for the extortion of global businesses.

Anecdotally, such extortion appears to be becoming increasingly flagrant. In a recent instance of harassment in fall 2012, Hong Kong company Goophone released a product purportedly based on a leaked image of Apple’s iPhone 5 and promptly threatened to sue Apple if it proceeded to release its

as-yet-unannounced smartphone in China.²⁹ Among other things, Goophone threatened to assert its patents for the design of the phone—a claim that indicates Goophone’s use of the utility model patent framework to obtain fast coverage of the leaked design.³⁰ To be sure, Chinese authorities recognize that there are substantial problems with this system as it is applied in China and are taking steps to address these issues.³¹ Recent publications from the U.S. Chamber of Commerce and the EU Chamber of Commerce in China have made several recommendations aimed at bolstering the utility model system in China.³² Among these suggestions are recognizing the statutory requirement for innovation in utility model patents, meaning an actual evaluation of inventiveness; adopting the requirement that the loser pays court costs in lawsuits; making utility model patents easier to invalidate by broadening the scope of what is admissible as prior art; reducing barriers to obtaining preliminary injunctions; and strengthening rules on discovery and evidence preservation. All of these measures would provide strong disincentives to abuse the utility model system in China.

Trade-Secret Theft

Patents only represent one method for protecting the competitiveness of inventions in the marketplace. Due to public-disclosure requirements for patent protection and the difficulty of enforcing patents in other nations and markets, many firms choose to keep their competitive edge by opting not to patent their inventions and trying instead to keep them as trade secrets.¹ A famous example of this calculus dates to late eighteenth-century England, where overly ambiguous patents led to almost a century of stalled innovation with regard to the development of the steam engine.² This state of affairs would influence famed porcelain manufacturer Josiah Wedgwood to abandon the patent process entirely, resorting instead to constant innovation and secrecy in order to maintain his lead in the porcelain industry.³

Protecting proprietary information as a trade secret, however, poses its own challenges and may not be any safer than the patent process. Foreign firms and individuals are increasingly focusing on the theft of trade secrets, primarily through two avenues: industrial and economic espionage and cyber espionage.

Industrial and Economic Espionage

Titanium dioxide, also known as titanium white, is one of the most valuable and ubiquitous chemicals in the world. It has been used to whiten consumer goods such as car paint, sunscreen, paper, plastics, toothpaste, and cosmetics, and was even used to paint the Saturn V rocket. If a product is white, it probably contains titanium white. In 2012, it was estimated that the worldwide market value for the pigment was \$17 billion, with DuPont controlling nearly 20% of that market.⁴

As manufacturing has increased exponentially in China and other Asian countries, the demand for titanium white has also increased. After DuPont refused to sell its proprietary manufacturing process to China, the Chinese began looking for different avenues to obtain DuPont's secret chlorination production method. According to an indictment filed by the FBI, the "People's Republic of China (PRC) publicly identified the development of chloride-route titanium dioxide (TiO₂) production technology as a scientific and economic priority."⁵ Prosecutors believe that in the 1990s, Walter Liew, a California resident, assembled a team of former DuPont employees for the purposes of conveying the company's proprietary technology to entities in the PRC.⁶ Pangang Group Co. Ltd., a Chinese state-owned enterprise, awarded Liew a \$17 million contract to build a factory in China that could produce 100,000 metric tons of titanium white.⁷ The FBI listed five individuals within the United

States and a number of Chinese entities and individuals as defendants in conspiring to steal the formula from DuPont. One of the U.S. defendants, Tze Chao, who worked at DuPont from 1966 to 2002, was charged with conspiracy to commit economic espionage.⁸ Pangang officials allegedly hired Chao and instructed him to work with Liew in Liew's "development" of the DuPont formula.⁹ In his guilty plea, Chao told prosecutors that officials from the PRC "overtly appealed to my Chinese ethnicity and asked me to work for the good of the PRC."¹⁰

While federal prosecutors successfully obtained a plea bargain from Chao, their case against Pangang Group has been less successful. In an attempt to bring Pangang officials to court, on February 9, 2012, the U.S. government delivered a summons for each of the Pangang Group defendants to Brenda Kong. Ms. Kong was the office manager at a company called Pan America, which is owned in part by Pangang Group.¹¹ The trial judge, however, held that serving the court summons to Pan America was an improper method for serving Pangang Group and quashed the indictment. Pangang now runs the largest titanium complex in China and is one of the country's largest titanium white producers.¹²

Industrial espionage is nothing new. It is a classic business tactic used by less than reputable organizations to try and obtain a competitor's secrets in order to gain an economic advantage in the marketplace. The USITC reported that in 2009 U.S. firms in the IP-intensive economy lost roughly \$1.1 billion from the misappropriation of trade secrets to China alone.¹³ The range of this estimate is particularly uncertain because many victims of economic espionage and trade-secret theft are unaware that they were ever robbed.¹⁴ Among those who are aware of their losses, many choose to not report them for business reasons.¹⁵ While many U.S. firms are noting some improvement in other areas of IPR protection, protecting trade secrets remains a significant challenge internationally, particularly in China.¹⁶ Industrial espionage, however, is not only a problem in China. The Office of the National Counterintelligence Executive, after noting China as a "persistent collector," stated that Russia,

motivated by [its] high dependence on natural resources, the need to diversify its economy, and the belief that the global economic system is tilted toward U.S. and other Western interests at the expense of Russia, [is] using [human intelligence], cyber, and other operations to collect economic information and technology to support Russia's economic development and security.¹⁷

¹⁷ Office of the National Counterintelligence Executive, "Foreign Spies."

The report maintained that both China and Russia would “remain aggressive and capable collectors of sensitive U.S. economic information and technologies, particularly in cyberspace.”¹⁸

In many ways, trade-secret theft is a foreseeable outgrowth of expanding international markets. When large multinational companies expand their overseas operations, they almost inevitably face challenges related to supply accountability and protection against such theft. Their foreign manufacturing operations and joint-venture partners require customer lists, internal standards, manufacturing processes, information on sources of goods, recipes, and production and sales strategies in order to carry out their operational responsibilities.¹⁹ Each new piece of information that is sent overseas opens a company’s supply chain and puts its valuable IP at risk.

Another reason that trade-secret theft and economic espionage are so challenging to curtail is because it is notoriously difficult to enforce current law within the established legal framework. In the mid-1990s, the U.S. Congress responded to the growing problem of international trade-secret theft by passing the Economic Espionage Act of 1996 (EEA). When President Clinton signed the legislation, he stated that the new law “will help us crack down on acts like software piracy and copyright infringement that cost American businesses billions of dollars in lost revenues. And it will advance our national security.”²⁰

The EEA criminalized two distinct actions: economic espionage and theft of trade secrets. Economic espionage is defined as stealing, misappropriating, or receiving trade secrets while “intending or knowing that the offense will benefit any foreign government, foreign instrumentality, or foreign agent.”²¹ Theft of trade secrets, on the other hand, is defined as stealing, misappropriating, or receiving such secrets “with intent to convert [the] trade secret... to the economic benefit of anyone other than the owner thereof.”²²

Thus, the key distinction between economic espionage and theft of trade secrets is who benefits. Economic espionage is done for the benefit of a foreign nation, whereas theft of trade secrets is done for the economic benefit of an individual or organization.

Because economic espionage requires that the act be done with intent to benefit a foreign nation, it is a much more difficult crime to prosecute. The first conviction for economic espionage under the EEA was handed down in *United States v. Dongfan Chung* in 2009. Chung, who is a Chinese native and U.S. citizen, was a stress engineer at Boeing who worked on the fuselage for the U.S. space shuttle, among other projects.²³ Upon arresting him, federal prosecutors found 300,000 pages of documents in his home, including “a veritable treasure trove of Boeing’s documents relating to the Space Shuttle, Delta IV Rocket, F-15 fighter, B-52 bomber, CH-46/47 Chinook helicopter, and other proprietary aerospace and military technologies.”²⁴ Chung was convicted of economic espionage and sentenced to fifteen years in prison.

It is more common, however, for federal prosecutors to charge a defendant with trade-secret theft because it does not require that they prove the defendant acted with intent to benefit a foreign power. One example is the case of Xiang Dong “Mike” Yu, who pleaded guilty in 2010 to trade-secret theft

after copying 4,000 proprietary documents right before leaving his job at Ford. He then took the documents with him to his new job at Beijing Automotive. Yu was sentenced to nearly six years.²⁵

One important aspect of the EEA is its extraterritorial jurisdiction component. The law protects against theft in three instances: the act occurred in the United States; the act occurred outside the United States, but an act in furtherance of the offense was committed in the United States; or the violator is a U.S. person or organization.²⁶ Thus, the EEA can be used both to prosecute foreign persons and to prosecute theft outside the United States as long as either the violator is a U.S. person or organization or an act in furtherance of the offense was committed in the United States.²⁷ While this semi-broad reach is useful in defining trade-secret theft, it is still limited in that prosecutors lack enforcement and proper service mechanisms against individuals and entities located outside the United States, such as Pangang Group. Prosecutors cannot charge alleged violators of the EEA until they cross U.S. borders.

In a recent development, on December 28, 2012, President Obama signed the Theft of Trade Secrets Clarification Act. The act was a response to a recent case involving a Goldman Sachs programmer who, on his last day at work, transferred 500,000 lines of source code to a private server to take with him to his new job.²⁸ After the trial court found him guilty of theft of a trade secret, the Court of Appeals for the Second Circuit overturned this conviction, holding that the stolen code was not a trade secret “that is related to or included in a product that is produced for or placed in interstate or foreign commerce.”²⁹ The new law rewords § 1832(a) of the EEA by removing this limitation on its application and instead broadening the statute to apply to “a product or service used in or intended for use” in interstate or foreign commerce.³⁰ This minor change expands the EEA’s reach in two ways. First, it removes the limitation of trade secrets to goods (which the U.S. Court of Appeals for the Second Circuit recently held does not include software code) and defines services as secrets as well.³¹ Second, it removes the limitation on the law’s applicability to goods to be placed in interstate or foreign commerce, expanding it to goods or services to be used or intended for use in interstate or foreign commerce.

This expanded reach may give the United States an added tool to prosecute IP-infringement activities abroad. Nonetheless, while this clarification helps strengthen the definition of crimes under the EEA, its extraterritorial reach remains limited. Once a secret has been stolen and the perpetrator has left the country, there is little a prosecutor can do to enforce the law. Furthermore, there is nothing a victim of economic espionage can do because the EEA currently does not provide for a private civil cause of action for victims. The limits of the EEA are especially conspicuous when looking at the number of cases prosecuted under the law. Since the passage of the EEA in 1996, there have been only around one hundred indictments and a handful of convictions.³² Notably, of the seven cases adjudicated under the EEA in 2010, six involved some link to China.³³

Cyberespionage

The rise of the Internet has provided the world the fastest and most effective communications system in history. However, this system, in conjunction with traditional espionage methods, is being used to steal some of U.S. businesses' most valuable trade secrets. In the past two years, an unprecedented number of cyberattacks have been uncovered against major corporations, nonprofit institutions, and governments alike. The vast majority of these attacks have been traced back to China. A single attack against RSA, the maker of the widely used SecurID tokens, resulted in the compromise of at least 3 major defense contractors.³⁴ The same attack compromised security at an estimated 720 companies, including 20% of the Fortune 100.³⁵ Through another series of attacks, dubbed operation Shady RAT, it was discovered that petabytes of highly proprietary information, including sensitive military and infrastructure data, had been siphoned off from the U.S. government and its allies, supranational organizations such as the United Nations, and many other sovereign nations and independent organizations over a period of more than five years.³⁶ Notably, General Keith Alexander, the head of the U.S. military's Cyber Command, said that one U.S. company alone recently lost \$1 billion worth of intellectual property over the course of a couple of days.³⁷

In a world where the highest-value assets are intangible and easy to transfer over networks, espionage has taken on a new dimension. The size and scale of recent attacks point to state sponsors, meaning that such events are no longer being perpetrated by ad hoc groups operating in the shadows but are much more organized and nationalized. According to a report released on November 1, 2011, representing fourteen U.S. intelligence agencies, such attacks will accelerate in coming years as a "growing and persistent threat."³⁸ In its white paper on Shady RAT, McAfee indicated that the attack was more than likely the work of a group operating on behalf of a state actor. While not calling out China specifically, the geographical data discovered by McAfee's cyber forensic team on the spread of the attack strongly suggests China's involvement.³⁹

These attacks are having a devastating effect on U.S. economic interests both at home and abroad. Throughout 2011 and into 2012, the cost to organizations of cybercrime continued upward unabated. A 2011 study by the Ponemon Institute found that the median annualized cost for 50 benchmarked companies was \$5.9 million per year and ranged from \$1.5 million to \$36.5 million per company. This is a \$2.1 million, or 56%, increase from the median cost of \$3.8 million to benchmarked companies in 2010. The study also found that smaller organizations incur almost four times the per capita cost (\$1,088) as larger organizations (\$284) in dealing with cyberattacks.⁴⁰

In addition, the Ponemon study found that cyberattacks are common occurrences, with participating companies experiencing 72 successful attacks per week—an average of 1.4 per

organization polled—representing a 44% increase from the previous year.⁴¹ This figure is consistent with recently available information from Cisco Systems, which found a 46% increase in web malware during the first quarter of 2011 alone, with malicious webmail increasing by an astounding 391%.⁴² The Ponemon study also found that the major costs from these intrusions were those related to information theft (40%), followed closely by costs associated with disruption to business and lost productivity (28%).⁴³

Web- and email-based malware attacks continue to gain prominence as a prime attack vector for cybercriminals. Most such attacks operate by sending a targeted person or group of people a personalized email and convincing them to open an attachment containing malicious software that grants the cyberattacker broad access to their systems. The malware is thus intended to be executed by the target on the same day (or close to the same day) that it is sent. Such “zero day” attacks are highly customized and take advantage of previously unknown software vulnerabilities that prevent detection by existing antivirus or signature-based systems installed at most organizations. During the fourth quarter of 2011, 33% of web malware encountered by Cisco Systems was zero-day in nature and not detectable by the traditional signature-based systems at the time of attack.⁴⁴ The onslaught of zero-day attack vectors is reflected in the increase in web malware hosts, as recorded by Cisco, from an average 14,217 per month in 2010 to 20,141 in 2011—a 30% increase.⁴⁵ Likewise, in an April 2012 report, Symantec recorded an increase in the number of advanced persistent threats from an average of 77 per day in 2010 to 82 per day in 2011.⁴⁶ The Symantec report noted that such attacks differ from conventional targeted attacks in key ways, including by employing a high degree of customization, using stealthy and patient methods to avoid detection, being more tightly focused on gaining access to high-value information and organizations of strategic importance, and displaying signs of originating from well-funded and highly staffed operators (such as military or state intelligence organizations).⁴⁷

Of further concern, it is now clear that companies and industries in every sector are being targeted, although the extent to which they are suffering attacks varies by industry segment. The Ponemon study’s findings indicate that the three top sectors being targeted are defense, utilities and energy, and financial services, although even companies in retail, hospitality, and consumer products are under fire.⁴⁸ This data largely tracks with the “Cisco 4Q11 Global Threat Report.” Pharmaceutical and chemical companies topped the list of companies targeted with malware at 422% of the median, followed closely by agriculture and mining and energy, oil, and gas.⁴⁹ Finally, Symantec’s 2011 report also makes the important point that it is not just large companies that are being hit by targeted attacks. To the contrary, more than half of all targeted attacks recorded by Symantec in 2011 were directed at companies with fewer than 2,500 employees and almost 18% targeted companies with 250 or fewer employees. Adding to the difficulty in preparing for and intercepting such attacks, the

majority tend to target lower-level employees, who may lack direct access to sensitive information but be more susceptible to compromise.⁵⁰

In the rapidly evolving landscape of cyberespionage, it has become clear that not even the smallest organizations or lowest-level employees are safe from attack. Of equal concern is that effective and deeply penetrating cyberattacks are occurring across a broad spectrum of IP-intensive industries. Unfortunately, despite pressing China on the issue for several years, none of the United States' diplomatic efforts seem to have had any effect in abating the scale of the threat. Then U.S. defense secretary Leon Panetta remarked after a recent trip to China that the most important thing was that China was willing to even engage in a dialogue on the issue of cyberattacks.⁵¹ Richard Bejtlich, president of the cybersecurity firm Mandiant, described the issue more bluntly, stating that the efforts of U.S. and Chinese officials have lacked any impact at all and that “the Chinese don't seem to care. So I don't have any hope that the dialogue is reaching anyone of note.”⁵²

Trademark Violations

Apple is one of the most popular brands in the world, so when an Apple store was opened in the city of Kunming, China, its six million residents were excited to take advantage of the products and services offered. The new store came complete with the large distinct wooden tables, sleek interior design, large colorful advertisements, and helpful staff members wearing the blue shirts donned by Apple store employees worldwide.¹ Everything was seemingly in place, except for one major problem—this was not actually an Apple store. The store in Kunming had appropriated Apple’s trademarks and trade dress—even convincing its own employees that they were working for Apple itself—in order to sell Apple products and provide Apple-branded services, all without the company’s permission.²

Some have argued that the public’s initial shock at the discovery of these fake stores was overblown. The products being sold by the store appear to have been legitimate Apple products, even though the source of the products was unknown.³ The example, however, clearly demonstrates the ubiquity of trademark infringement internationally and the lengths to which infringers are willing to go in order to convincingly counterfeit goods and services, diverting profits from trademark owners to themselves.

A “trademark” is simply a word, phrase, symbol, or design that identifies and distinguishes the sources of the goods of one party from those of others.⁴ Unlike the protections granted to patents and copyrights, trademark protection is not directly derived from the U.S. Constitution. For many years, it only existed as a common law right derived from a party’s actual usage of the mark and defended in state courts.⁵ It was not until Congress passed the first federal trademark law in 1881, under its Commerce Clause authority, that trademarks received nationwide protection.⁶ Since that time, trademark jurisprudence has grown substantially. Statutes have been continually amended and updated under the Lanham Act, originally enacted as a federal trademark statute in 1946 and frequently amended since that time.⁷

Unlike patents and copyrights, trademarks do not confer protection for the use or replication of specific products. Trademark protection can be violated in several ways. For one, trademarks can be infringed when they are misappropriated. Misappropriation occurs when an existing mark is replicated onto a product without the trademark holder’s authorization (counterfeiting).⁸ The most ubiquitous examples are purses or shoes available at sidewalk stands in cities such as New York and

Beijing (and increasingly on auction websites) that are not authorized by the owner of the brand they carry. In addition, trademarks can be infringed on when a manufacturer uses marks or design elements very similar to those of a competitor in order to confuse consumers and trick them into purchasing a product.⁹ Strong trademark protections provide significant benefits to an economy by allowing entities to derive benefits from investment in their brands. Where trademark protection is weak, both consumers and producers suffer. Consumers are hurt because they may be receiving an inferior product or service, while producers suffer because they will reap a lower reward for their investment in their mark. Perhaps worse, if the trademark is famous, producers may suffer from brand dilution or other negative effects on their brand's reputation as a result of the infringement.

Consumers benefit from trademark protection in a number of ways, all stemming from the information trademarks provide about a product's origin and quality. This in turn, creates a positive incentive for companies to create higher-quality, longer-lasting products. When a company uses its trademark on goods or services that it provides, it will generally work to ensure that the goods are of a sufficiently high quality to maintain its identity in the marketplace. In this way, strong trademark protections allow brands to serve as a signal of quality to the consumer. Simply put, such protections foster the development of better goods and services.¹⁰

Producers, for their part, benefit from strong trademark protection because it helps them maintain long-standing relationships with consumers. For instance, when a company produces high-quality products, provides excellent service, and invests in carefully marketing its products, it builds goodwill that translates into a higher level of consumer confidence. Consumers will express this confidence by returning to the company repeatedly, generating long-term revenue streams for the producer. When these elements are not present, however, consumers may be dissuaded from purchasing future products or services from that company.

The Economic Costs of Counterfeiting

Counterfeiting is a rampant practice in countries that possess even a modest manufacturing industry. The list of consumer goods that are counterfeited is long and includes apparel, footwear, mobile phones, herbal remedies, computer and networking equipment, batteries, cigarettes, cosmetics, home appliances, cement, auto parts, and more. The bulk of losses to American business in the light and consumer-goods manufacturing sector is primarily due to trademark violations and counterfeit products.¹¹ When a consumer purchases a counterfeit good, the true trademark holder loses that revenue.

Some observers have argued that estimates of losses are exaggerated because of potentially low substitution rates. The argument is that a consumer who purchases lower-priced counterfeit goods would not have purchased a legitimate product if the fakes were not available. Therefore, the true trademark holders have not actually lost revenue. While this may be true for some small physical markets, many of these counterfeit products are frequently showing up for sale on eBay, Amazon Marketplace, Craigslist, and other legitimate websites with access to a global consumer base, where unsuspecting customers may believe that they have found a discounted legitimate product rather

than a fake.¹² If consumers believe that they are buying a legitimate product to begin with, chances are that they still would have purchased one if the knock-off were unavailable.

Furthermore, the loss to producers is much more significant than the immediate loss of revenue. There is also a long-term threat to the brand itself. Whether it is cosmetics, appliances, apparel, or auto parts, counterfeit goods frequently fall short of the industry and quality standards by which legitimate goods are measured. As they enter the marketplace, low-quality knock-off goods and services can hurt a company's reputation by decreasing consumer confidence, diluting the brand, and harming long-term revenues. Revisiting the Apple example, the fake Kunming store offered repair and support services for the Apple products it sold. However, because the employees had not been trained according to Apple's standards, the quality of service they offered is unknown. To the extent that the technical support and customer service provided at these illicit outlets were below the exceptionally high standard set by Apple in its own stores, such experiences could damage Apple's reputation in the eyes of customers, leading them to purchase products from another source in the future.

Overall, rampant trademark infringement lowers product quality, decreases consumer confidence, and reduces legitimate business revenue.

Barriers to Enforcement and Recovery

In a 2009 USITC survey of U.S. companies, more firms reported losses from trademark infringement by Chinese entities—an estimated \$6.1 billion in losses in that year alone—than from other forms of Chinese IPR infringement. When these losses could be attributed to a specific market, 37.7% identified China, 32.3% identified the United States, and 30.1% identified “all other markets.”¹³ This spread illustrates that the problem is not just trademark infringement inside China but also involves goods being shipped into the United States. In fact, U.S. Customs and Border Protection announced that it made “22,848 intellectual property rights seizures with a manufacturer's suggested retail value of \$1.26 billion” in 2012, with goods from China responsible for 72% of this amount.¹⁴ Companies have also reported problems registering their trademarks in China, including long backlogs that require a wait of up to two years, trademarks with similar names being registered by competitors, companies registering an identical mark in a different product class, and “squatting” by people who register someone else's trademark as their own.¹⁵ The latter is a problem specific to China's system, which grants rights to the first person to file for a trademark, whereas the U.S. system protects the party who is first to use the mark in commerce. Even as companies gain traction on policing their own brands in China, counterfeiting continues to grow. Factors include the shift from traditional centers such as Guangzhou to smaller “living room” operations, continued lax penalties for retailers selling fake goods, and the growth of Internet sales, such as on eBay, Taobao, or Alibaba.¹⁶ Online sales of counterfeit goods, in particular, have been growing at an alarming rate. U.S. Customs and Border Protection reported a shift in 2007–11 toward lower-value shipments

¹² USITC, *China: Effects of Intellectual Property Infringement*, 3-37.

¹³ *Ibid.*, 3-31.

¹⁴ Counterfeit handbags and wallets constituted roughly 40% of seizures in 2012, followed by watches and jewelry (15%), and apparel and accessories (11%). See “Intellectual Property Rights Fiscal Year 2012 Seizure Statistics,” U.S. Customs and Border Protection, 2012, <http://1.usa.gov/13WfmP>.

¹⁵ USITC, *China: Effects of Intellectual Property Infringement*, 3-34.

¹⁶ *Ibid.*, 3-33.

by international mail and express courier, presumably to individual buyers, and away from larger container shipments to bulk purchasers.¹⁷

In a series of recent decisions, courts in China have also indicated a change from their earlier reasoning that using trademarks on goods while manufacturing items for export constitutes “use” of the mark.¹⁸ This would allow, for example, Nike to enforce its Chinese trademark rights against the manufacturer producing shoes for sale in Spain, where another entity holds the rights to the Nike mark. Through these decisions, it appears that Chinese courts are increasingly willing to consider such original equipment manufacturing activities to be a form of “reasonable use,” and that it should also be required to show that such use is likely to result in confusion among consumers in the relevant Chinese market as to the source of the goods.¹⁹ These decisions could make it more difficult for brand owners to enforce their trademarks in China by closing one door they had previously used to shut down the manufacture of goods bearing their mark. These decisions also leave unanswered the question of how Chinese courts will determine the legitimate owner of the mark in the destination country, as well as how they will determine the “relevant public” in evaluating the likelihood of confusion.²⁰

Given the large number of companies reporting trademark-related losses attributable to Chinese IPR violations that occur in the United States, and the high value of items being seized by U.S. Customs and Border Protection, owners of global brands have begun to fight back through the U.S. legal system. Notably, Gucci America and Tiffany have been attempting to obtain information on parties in China who have been selling counterfeit goods over eBay.²¹ A recent report described the problems that these companies encountered in trying to obtain bank and contact information regarding the absentee defendants. Established protocols under the Hague Convention have proved both slow-moving and unfruitful, with Chinese banks frequently citing secrecy laws as a shield against discovery of the counterfeiters’ bank account information.²² Without access to this information, it is impossible for the companies that are suffering losses due to trademark infringement to calculate the value of their losses and uncover other potential defendants in cases where sellers were acting as middlemen for the original manufacturer.²³

These examples make clear that U.S. companies face a sobering local environment for protecting their trademarks within China. Companies continue to have difficulty tracking down perpetrators utilizing global websites, payment systems, and the international mail system. The next chapter examines the subject of copyright and presents the staggering rate at which this form of intellectual property is being exploited and stolen.

Copyright Infringement

In 1999, a political scientist was in an economically well-developed area of China studying, ironically, intellectual property rights. While interviewing an official who worked in the Office of the Education, Science, Culture, and Public Health Committee of the Provincial People's Congress, the researcher mentioned that he was interested in purchasing a CD-ROM set of China's national and local laws, but even at the reduced price of \$1,000, this was more than the academic could afford. The government official took the researcher to a market notorious for openly selling pirated software. The researcher walked away with the entire set for roughly \$1.50.¹

Copyright law protects original works of authorship that are in a fixed, tangible form of expression.² Put another way, copyright protects the expression of ideas.³ Like patent protection, copyright was one of the early forms of IP protection afforded by the U.S. Constitution.⁴ While such protection originally covered tangible items like books and paintings, over time Congress and the courts have extended it to include audio recordings, movies, and computer software.⁵ A common form of copyright infringement is the production of pirated goods, which are any goods made without the consent of the copyright holder. These may take the form of physical books or DVDs in a market in Shenzhen or digital downloads made available to a broader audience via the Internet.⁶ The purpose of copyright protection, again similar to patent protection, is to maintain a positive incentive to write, create, and publish new works, since such innovation is generally seen as an overall benefit to society.⁷

The USITC estimates that copyright infringement is the most costly form of IP loss for the United States with respect to China, costing U.S. producers nearly \$24 billion in 2009.⁸ Not surprisingly, IP theft has hurt the information services industry the most, with losses in 2009 of nearly \$26 billion.⁹ Globally, some estimates place the commercial value of software theft at over \$60 billion.¹⁰ Yet the true cost remains unknown for numerous and sometimes contradictory reasons. First among these is the unknown substitution rate.¹¹ Many studies simply calculate how many versions of a particular piece of software are currently installed on computers and compare it with how many copies were sold.¹² They then multiply that figure by the retail price to determine “lost revenues,” or the value

¹ This story is told at length and in greater detail in Andrew C. Mertha, *The Politics of Piracy: Intellectual Property in Contemporary China* (Ithaca: Cornell University Press, 2005).

lost if all software installations had been purchased legally. The problem with this approach is that if piracy were not an option, some of these consumers, particularly in low-income economies, would never purchase the software because it is priced too high.¹³

On the other hand, studies that use survey methods to estimate losses may provide estimates that are too low because many companies opt to not report their losses for financial and business reasons.¹⁴ As an example, one high-tech software company that the Commission spoke to in its investigation reported that it had sold a single copy of a piece of software to a bank in China. Later, 30 million copies of software traced to that single license contacted the corporate servers of this company for software updates. Between this anecdote and countless others, it is clear that the true loss to companies from piracy is difficult to accurately measure but unarguably substantial.

China is not alone in its high piracy rates; software piracy is in fact a global problem. In 2011, many countries exceeded China's piracy rate of 77%, including Vietnam (81%), Pakistan (86%), and Venezuela (88%).¹⁵ Yet though the higher piracy rates in these and other countries should not be ignored, the sheer size of the Chinese market makes it the most significant focus for improvement. In 2011, China had the second-largest commercial value of pirated software at nearly \$9 billion. Russia was third with \$3.2 billion, while first place belonged to the United States, with a commercial value of pirated software approaching \$10 billion. However, with a piracy rate of only 19%, the United States had nearly \$39 billion more in legitimate sales.¹⁶

Ukraine was recently declared to be a "priority foreign country" by the U.S. Trade Representative in its annual Special 301 Report—the first country given this designation in seven years.¹⁷ The report cites Ukraine's persistent failure to combat online piracy as a primary reason for its 301 status. Most striking, however, is the pervasive use of illegal and unlicensed software within the Ukrainian government itself. Industry reports show similar findings. According to a study by the Business Software Alliance, the country's piracy rate has hovered around 85% since 2007 and has shown no improvement.¹⁸ In contrast, Ukraine is not listed by the BSA as one of the top-twenty possessors of pirated software as measured by commercial value. Presumably, this is due to the relatively small size of the Ukrainian software market.¹⁹

While pirated software is the most highly publicized form of international and domestic copyright infringement, the entertainment industry also experiences significant losses from piracy. A 2007 study estimates that the U.S. economy loses \$12.5 billion in total output annually due to piracy of sound recordings.²⁰ A similar 2007 study estimates that movie piracy now results in total lost output among all U.S. industries of \$20.5 billion annually.²¹ As with similar software piracy studies, however, these estimates are limited by uncertain substitution rates.²² In China, 99% of all music downloads are illegal. The total music revenue in the country for 2010, including both digital and physical sales,

was only \$64 million. To put this figure in perspective, it is less than total sales in Thailand, which registered \$68 million in sales in 2010.²³ Thailand has a population and GDP (based on purchasing power parity) twenty times smaller than that of China. If China had purchased the same amount of music on a per capita basis as Thailand, a country not known for staunch IP protections, sales would have been nearly \$1.4 billion.²⁴

U.S. Government Responses

U.S. administration efforts to date have made important strides in protecting intellectual property, although much work remains to be done. The position of the Intellectual Property Enforcement Coordinator (IPEC) was established by Congress through the Prioritizing Resources and Organization for Intellectual Property Act of 2008 (PRO-IP Act). The administration housed the position within the Office of Management and Budget, staffing it with members of various bureaucracies, largely from the enforcement side. Veteran U.S. trade negotiator and IP counsel Victoria Espinel was appointed the first IPEC. The administration has pushed forward on the following five policy fronts.

1. Joint Strategic Plan on Intellectual Property Enforcement

The administration released the Joint Strategic Plan on Intellectual Property Enforcement in June 2010. The plan's central tenets included 33 action items to improve intellectual property enforcement, falling into six categories:¹

1. Leading by example and working to ensure that the U.S. government does not purchase or use infringing products
2. Being transparent in policymaking and enforcement
3. Improving coordination of law enforcement at the federal, state, and local levels; of overseas personnel; and of international training efforts
4. Enforcing U.S. rights internationally in order to ensure that the United States is effectively working with foreign governments
5. Working to secure the U.S. supply chain by attempting to limit the infringing products entering the country
6. Building a data-driven government and ensuring that U.S. policies are as well-informed as possible by improving data collection on IP-enforcement efforts, measuring the economic impact of IP industries, and assessing U.S. laws to ensure that they effectively protect and enforce IP rights

2. Foreign Economic Espionage Penalty Enhancement Act

The Foreign Economic Espionage Penalty Enhancement Act of 2012 (H.R. 6029) was signed into law by President Obama on January 14, 2013. This act significantly increases maximum penalties for the misappropriation of trade secrets to benefit a foreign government, allowing penalties of up to \$5 million for individuals and up to three times the actual value of the trade secret for organizations. This is a significant increase from the respective \$500,000 and \$10 million caps on penalties that limited the effectiveness of the previous version of the statute. Because the new law is equipped to more adequately reflect the actual value of a stolen trade secret, it may provide greater incentive for prosecutors to pursue EEA violations, while increasing pressure on violators of U.S. trade-secret laws.

¹ The following list draws from the Executive Office of the President of the United States, "Joint Strategic Plan on Intellectual Property Enforcement," 2010.

The passage of this bill came shortly after the Theft of Trade Secrets Clarification Act of 2012, which was signed into law on December 28, 2012, and expands section 1832 of the EEA to include trade secrets “related to a product or service used in or intended for use in interstate or foreign commerce.” Taken together, these two modifications to the EEA provide important new enforcement and deterrent tools to prosecutors.

Despite their usefulness, more still needs to be done. There is currently no federal private right of action under the EEA for those who hold trade secrets. Thus, only government prosecutors can file lawsuits in order to seek redress for violations of the statute. Such a bill was introduced in July of last year (the Protecting American Trade Secrets and Innovation Act of 2012, S. 3389), but the Senate Judiciary Committee chose to not act on the bill. The recent speedy passage of the Foreign Economic Espionage Penalty Enhancement Act and the Theft of Trade Secrets Clarification Act, however, indicates a shift in momentum favoring legislation designed to protect U.S. intellectual property. Both bills were rapidly passed with nearly unanimous votes and were quickly signed into law by the president.

3. Executive Order on Cybersecurity

The administration has also recently issued an executive order on cybersecurity that:

- directs increased sharing of unclassified information from government entities to private-sector providers of critical infrastructure;
- proposes to bring more subject-matter experts from the private sector into temporary government service;
- increases the quantity and specificity of threat information to the private sector;
- establishes a consultative process to coordinate improvements to the cybersecurity of critical infrastructure;
- directs the National Institute of Standards and Technology to develop a framework to reduce cyber risks to critical infrastructure (the Cybersecurity Framework); and
- develops procedures for implementing a risk-based approach to determining which infrastructure is most vital.²

While this executive order is an important first step, there are some challenges. First, although the potential impacts of the budget sequester are still unclear, it could conceivably result in fewer resources being available to accomplish these tasks, especially in view of their urgent timelines. Second, while the goal of increased information-sharing is important and laudable, the executive order does not create new authorities for such sharing. It essentially tells government agencies to do a better job than they are doing now. Third, the order does not protect the sharing of information from a request or lawsuit under the Freedom of Information Act, nor can it. Only Congress can create these important protections. Fourth, the direction to the National Institute of Standards and Technology to develop guidelines, which other agencies are then directed to implement, is a compliance-oriented approach that may not actually increase security. As technology and the nature of the threats constantly evolve, regulations will have a hard time keeping up.

² “Executive Order—Improving Critical Infrastructure Cybersecurity,” White House, Executive Order, February 12, 2013, <http://www.whitehouse.gov/the-press-office/2013/02/12/executive-order-improving-critical-infrastructure-cybersecurity>.

Perhaps most importantly, the executive order does not address what can or ought to be done against perpetrators. With such an approach, it risks making the victims of cybercrime bear disproportionate costs to prevent loss, while doing little to raise the costs to perpetrators. The IP Commission Report recommends several measures to increase the deterrent value of U.S. policy against cybercrime.

4. Strategy on Mitigating the Theft of U.S. Trade Secrets

In February 2013, the White House released its “Administration Strategy on Mitigating the Theft of U.S. Trade Secrets.” The strategy has five main pillars:

1. international engagement, including diplomatic messaging and use of trade policy tools
2. company-to-company sharing of best practices to reduce the risk of trade secret theft
3. investigation and prosecution of trade secret theft and increased information sharing between law enforcement, the intelligence community, and companies,
4. a review of U.S. legislation,
5. increasing public awareness of the risks of trade secret theft.³

Although the strategy has many important components, its singular shortcoming is that it focuses almost exclusively on preventing loss from the perspective of the potential victim of trade-secret theft. The strategy does not address what ought to be done to raise the costs to the people and institutions that commit such theft. The IP Commission Report builds on this solid foundation by offering recommendations for substantive executive orders and legislative proposals that raise the costs of stealing U.S. intellectual property and thus increase deterrence.

5. U.S. Capacity-Building Efforts in Foreign Countries

The May 2013 Special 301 Report by the U.S. Trade Representative also notes some important IP capacity-building efforts undertaken by the U.S. government:⁴

- The Global Intellectual Property Academy (GIPA) in the Office of Policy and External Affairs at the U.S. Patent and Trademark Office (USPTO) “offers programs in the United States and around the world to provide education, training, and capacity-building on IPR protection and enforcement. These programs are offered to patent, trademark, and copyright officials, judges and prosecutors, police and customs officials, foreign policymakers, and U.S. rights holders.” The report adds that in 2012 “GIPA provided training to 9,217 foreign IPR officials from 130 countries, through 140 separate programs.”
- The report notes that U.S. government agencies, such as the Department of State and the U.S. Copyright Office, “conduct conferences and training symposia in Washington, D.C. In March 2012, for example, the Copyright Office, with co-sponsorship from the World Intellectual Property Organization, hosted an international training symposium for representatives from

³ Office of the U.S. Intellectual Property Enforcement Coordinator, “Intellectual Property Spotlight,” January/February 2013, 1. For the text of the strategy, see Executive Office of the President of the United States, “Administration Strategy on Mitigating the Theft of U.S. Trade Secrets,” 2013.

⁴ The items in the following bulleted list are drawn from Office of the USTR, “2013 Special 301 Report,” May 2013, 16–18, <http://www.ustr.gov/sites/default/files/05012013%202013%20Special%20301%20Report.pdf>.

17 developing countries and countries in transition on emerging issues in copyright and related rights.”

- In addition, “the USPTO’s Office of Policy and External Affairs provides capacity building in countries around the world, and has concluded agreements with more than 40 national, regional, and international IPR organizations.”
- Further, “the Department of Commerce’s International Trade Administration (ITA) collaborates with the private sector to develop programs to heighten the awareness of the dangers of counterfeit products and of the economic value of IPR to national economies.”
- In 2012, the Immigration and Customs Enforcement’s Homeland Security Investigations conducted training programs overseas through the National IPR Coordination Center and in conjunction with INTERPOL.
- The Department of State “provides training funds each year to U.S. Government agencies that provide IPR enforcement training and technical assistance to foreign governments.”
- The “government-to-government technical assistance” provided by the Commerce Department’s Commercial Law Development Program is in large part focused on IPR protection.
- The Department of Justice’s Criminal Division, which is funded by the Department of State, provided IPR-enforcement training to foreign officials in cooperation with other U.S. agencies.

Developments in China

The IP Commission Report demonstrates through a variety of metrics that IP theft is a global problem but that Chinese-origin IP theft is disproportionately large in size and impact. Notwithstanding this evidence, it should be noted that China has made important strides in improving its IP protection.

China's patent system, in particular, has made progress, according to some measures. As chapter 4 observes, China now grants more patents than any other country (more than 1.6 million in 2011 alone). While many are utility or "petty" patents and of low quality, the process of granting patents reflects important steps along a road toward greater rule of law.¹ However, as chapter 4 also noted, the increase in patents largely represents a response to government incentives programs to patent rather than to innovate.

Other highlights of the Chinese system include better IP-enforcement and IP-protection strategies. Some important trends are worthy of highlighting in data made available from reporting on IP enforcement in 2012:

- In 2012, civil IP cases increased by nearly 50% to a total of 87,419 cases accepted. (This is more than five times the total of six years prior.)
- The courts accepted 7,840 criminal IP cases, an increase of more than 150% over 2011.
- Patent administrative appeals remained mostly static over previous years, suggesting that it is still difficult to appeal a decision of the State Intellectual Property Office.
- There were 420 specialized IPR tribunals in 2012. The number of basic courts that can hear IP cases increased from 29 in 2009 to 69 in 2012, but there was no change in the number of high courts engaged in the effort to combine civil, criminal, and administrative cases since 2009. However, China has nothing like the U.S. Court of Appeals for the Federal Circuit, which is an example of an appellate patent court.²

China's State Intellectual Property Office released its national IP strategy for 2013 in March 2013. Key elements of this ambitious plan include:³

- Prepare a work plan for intellectual property in China's strategic and emerging industries
- Prioritize patent examination for industries such as clean energy
- Improve statistical reporting on copyright, and prepare a report on the contribution of the copyright industries to China's economy
- Increase the number of basic courts hearing IP cases, the number of intermediate courts hearing patent cases, and the experiments in combining civil, criminal, and administrative IP cases
- Promote openness in administrative proceedings with model rules

³ The following list draws from the "Promotion Plan for the Implementation of the National Intellectual Property Strategy in 2013," Office of the Inter-Ministerial Joint Meeting for Implementation of the National Intellectual Property Strategy, available at <http://www.cipnews.com.cn/showArticle.asp?Articleid=26744>.

- Improve coordination between administrative and criminal enforcement
- Promote software legalization by the government and preinstallation of legal software
- Improve patent administrative enforcement
- Conduct preparatory work for China to join the Hague Convention on industrial designs
- Enhance the protection of geographical indications, including at the border, and proceed with the negotiation of the Sino-European agreement on geographical indications
- Develop access and benefit-sharing rules for genetic resources
- Improve IP management in national science and technology projects, and develop new rules and practices for transgenic biotechnology, including new rules on IP protection
- Work to improve the situation for overseas students returning to China
- Continue efforts to increase IP-capable people in China, including a focus on textbooks for teaching the young, and begin to develop IP-service professions, including new regulations on patent and trademark agents and law firms handling patent matters

Supporters of developments in China make note of the “stage of economic development” dynamic for Beijing. They essentially argue that when China begins producing its own intellectual property in significant quantities, the country’s own entrepreneurs and inventors will put pressure on political and Communist Party leaders to change the laws and improve IP protections. There is evidence that this is already happening.⁴

The Special 301 Report released in May 2013 by the U.S. Trade Representative notes some additional ways in which China’s IP-protection system has made improvements.⁵

- On January 1, 2013, a new Chinese civil procedure law went into effect that might address some hurdles U.S. plaintiffs face in seeking redress in Chinese civil court actions.
- Also effective January 1, 2013, the Supreme People’s Court issued a judicial interpretation on the liability of Internet intermediaries entitled “Rules of Supreme Court on Several Issues Concerning the Application of Law in Adjudication of Civil Disputes Related to Infringement of Right of Communication over Information Networks.”
- China invited comment on numerous draft rules and guidelines for proposed regulations governing domestic IPR enforcement, suggesting a degree of willingness to hear foreign inputs.
- China’s State Council established a permanent national leading group office (Leading Group) to better coordinate and improve the country’s efforts to combat IP infringement and the manufacture and sale of counterfeit goods. Under the Leading Group, eleven special campaigns concentrating on key IP concerns were completed in 2012. This development is potentially of great importance.
- In May 2011, the Chinese government reported that software legalization in central government offices was complete. At the provincial level, a similar effort was reported to have been completed by the end of 2012. Software legalization efforts have more recently extended to Chinese state-owned enterprises (SOE). In 2012, China confirmed that it requires SOEs “to purchase and use legitimate software, including but not limited to operating system and office suite software.”⁶

⁵ USTR, “2013 Special 301 Report,” May 2013, 32–33, <http://www.ustr.gov/sites/default/files/05012013%202013%20Special%20301%20Report.pdf>.

⁶ *Ibid.*, 34.

- China has made important commitments regarding technology transfer as well: “That technology transfer and technological cooperation shall be decided by businesses independently and will not be used by the Chinese Government as a pre-condition for market access,” and “to treat and protect intellectual property rights (IPR) owned or developed in other countries the same as domestically owned or developed IPR.” In addition, at the 2012 Joint Commission on Commerce and Trade, China “reaffirmed that technology transfer and technology cooperation are the autonomous decisions of enterprises” and further pledged that “if departmental or local documents contain language inconsistent with the above commitment, China will correct them in a timely manner.”⁷

⁷ USTR, “2013 Special 301 Report,” 36.

Short-term Solutions: Agile Administration Executive Action

The immediate actions we are recommending, largely regulatory or made effective via executive order, seek to provide immediate redress to a range of IP-theft problems.

Recommendation:

Raise the policy and enforcement priority of IP protection in the U.S. government. Designate the national security advisor as the principal policy coordinator for all actions regarding the protection of American intellectual property.

The position of the U.S. Intellectual Property Enforcement Coordinator, established by Congress in 2008, is currently a statutory office in the Office of Management and Budget. The office is staffed by U.S. government personnel mostly on detail from other enforcement agencies. The current coordinator is well respected, and her office is busy at the working level, yet the importance of the problem demands higher-level attention.

The theft of intellectual property poses enormous challenges to American national security and the welfare of the nation, as has been demonstrated in the preceding chapters. The risks include the possibility that theft of sensitive military or dual-use technologies can benefit potential adversaries. Other challenges extend to the potential degradation of the industrial base, in part from the sheer breadth and volume of attacks (see chapter 5). Although it is certainly true that not all problems rise to a national security challenge, the means by which IP is stolen (including foreign government involvement) and the recent assertion by the president's national security advisor that the U.S. government must take action to safeguard American companies in response to massive cyber and other attacks demonstrate that IP theft is a national security priority.¹

The nature of the challenge is complex and broad in scope, with significant ramifications for bilateral relations with China and other major countries with which the United States has many common and conflicting interests. Therefore, the responsibility for interagency coordination must reside in the White House. Such a set of challenges requires the direct involvement of the president's principal advisor on national security issues to ensure that it is given the proper priority and the full engagement of the U.S. government.

While the Commission believes that policy coordination and emphasis on IP protection need to be accomplished at the White House level, it does not recommend that the detailed work of implementing an effective program can or should be supervised by White House staff. Efforts to protect American intellectual property will involve literally thousands of detailed actions—data gathering and research, interagency coordination, work with the private sector, coordination with Congress, and interactions with foreign government agencies. This work must be done by expert officials across many departments and agencies working together in interagency teams with a great deal of private-sector outreach. The government needs to develop an interagency team of expert

¹ In his speech to the Asia Society in March 2013, the president's national security advisor, Thomas Donilon, made clear the linkage between attacks on American companies, especially via cyber means, and U.S. national security.

officials similar to, but even more active than, the Committee on Foreign Investment in the United States (CFIUS). Membership on the interagency team would include, at a minimum, representatives from the Commerce Department, FBI, Justice Department, Office of the Director of National Intelligence, State Department, U.S. Customs and Border Protection, U.S. Patent and Trademark Office, and U.S. Trade Representative.

Accomplishing all of these specific actions under a higher-priority IP-protection program will require the leadership of a cabinet-level official charged with sufficient responsibility.

Recommendation:

Establish the secretary of commerce as the principal government official responsible for enhancing and implementing policies regarding the protection of intellectual property, enforcement of implementation actions, and policy development.

The USTR has statutory authority to identify, monitor, and assess foreign countries for their protection of intellectual property and adherence to trade-agreement obligations. The USTR is principally and properly focused on the international trade environment. The Commission recognizes this important role for the USTR and seeks to complement it by strengthening the authority of the secretary of commerce to organize operational elements of the U.S. government to improve IP-protection measures.²

Despite the great work being done by the office of the USTR through the Special 301 Report and ongoing bilateral and multilateral negotiations, as well as increased enforcement efforts through the Office of the Intellectual Property Enforcement Coordinator, IP-related losses by U.S. companies appear to be getting worse. Chapter 1 discusses this and other problems with the current U.S. policy responses to the theft of IP by foreign actors.

The secretary of commerce has sufficient human, budget, and investigative resources to address the full range of IP-protection issues. The under secretary of commerce for intellectual property/director of the USPTO is already the president's advisor on intellectual property policy. Giving the secretary of commerce statutory authority for overall responsibility for implementation of IP policy builds on existing authorities and leverages the other existing capabilities within the Commerce Department.

The Commission recommends that an executive order be drafted that assigns the secretary of commerce the following responsibilities:

- Publication of an annual report describing the state of IP protection, including both overall numbers of violations and descriptions of major violations, as well as the effectiveness of U.S. IP-protection policy with recommendations to improve
- Responsibility for recommending to the secretary of homeland security the sequester of imported goods that have been judged to contain or benefit from stolen U.S. intellectual property
- Responsibility for recommending to the secretary of the treasury the sanctioning of individuals and companies that have stolen U.S. intellectual property

² The USTR's Special 301 Report states the following: "Pursuant to Section 182 of the Trade Act of 1974, as amended by the Omnibus Trade and Competitiveness Act of 1988 and the Uruguay Round Agreements Act ('Special 301'), USTR is required to identify those countries that deny adequate and effective protection for IPR or deny fair and equitable market access for persons that rely on IPR protection. The USTR is required to designate countries that have the most onerous or egregious acts, policies, or practices and whose acts, policies, or practices have the greatest adverse impact (actual or potential) on the relevant U.S. products as 'Priority Foreign Countries. USTR has created a 'Priority Watch List' and 'Watch List' under Special 301 provisions. Placement of a trading partner on the Priority Watch List or Watch List indicates that particular problems exist in that country with respect to IPR protection, enforcement, or market access for persons relying on IPR." Office of the United States Trade Representative, "2013 Special 301 Report," May 2013, 57, <http://www.ustr.gov/sites/default/files/05012013%202013%20Special%20301%20Report.pdf>.

- Responsibility for developing and chairing an interagency team of expert officials from all involved departments to develop a detailed body of knowledge on the full extent of foreign misappropriation of U.S. intellectual property, and to recommend counter-employing the full range of official sanctions

Recommendation:

Establish a quick-response capability to sequester imported goods that incorporate stolen or pirated materials or were made with a business process that includes illegally procured intellectual property, strengthening the existing 337 process of the Tariff Act.

The example of thousands of counterfeit parts arriving on U.S. shores, as discussed in chapter 1, and the increasing use of the international mail system to send trademark-infringing goods into the United States, highlighted in chapter 6, both point to a need to provide a faster process to identify and sequester goods entering the U.S. market from abroad.

While faster than federal court litigation, the current USITC sequestration process pursuant to Section 337 of the Tariff Act of 1930 is still too lengthy and bureaucratic to protect American companies that find their products or processes infringed upon by goods entering the United States. Under current practice, a case is not accepted by the USITC unless a lengthy complaint is submitted. Moreover, after an investigation (of unbounded duration) if the administrative law judge assigned to the case supports a finding of IP violations, a judgment preventing goods from entering the U.S. market takes effect 60 days after the judgment. Average case time is more than a year. While provisions for temporary relief exist, the rules emphasize compliance above stopping illegal use of the intellectual property of others.³

As mentioned in chapter 1, the profitable life cycle of certain goods is strongest in the immediate days and weeks following the product's release. In this context, the existing Section 337 process does not provide a rapid enough mechanism for companies to seek injunctions and compensation for infringement. In an era in which the profitable life cycles of some goods and processes can be measured in days and weeks, the existing Section 337 process is in desperate need of overhaul.

What is needed is a faster process that can sequester goods suspected of containing illegally obtained IP (under a "probable cause" standard of proof) until rapid judgment can be made that the goods or processes contain no illegal IP. Once the judgment is made, then the company's export license for those goods is revoked if the presence of illegal IP is confirmed, or the goods are released for import if no infringement of IP is confirmed.

For this recommendation, the sequestration would be triggered either by U.S. government information or by information provided by companies as they scan their own markets. The government team described below must ensure that the procedures for a U.S. company to trigger a complaint are not so burdensome that small and medium-sized U.S. companies are discouraged from using them. If lengthy procedures become necessary, then the government team needs to establish a "help desk" to assist smaller companies in submitting complaints.

Once theft of a product or process is alleged, the interagency team described above would consider the case under an expedited deadline. This process would set a lower standard of proof for the merits of the allegation, a standard similar to the "probable cause" used for the issuance of warrants to law-enforcement officers to make searches, on the premise that speed is the most important dimension

³ USITC, "Section 337 Investigations: Answers to Frequently Asked Questions," March 2009, http://www.usitc.gov/intellectual_property/documents/337_faqs.pdf.

in limiting losses to rights holders. An expedited legal review would then ensue within a strict time frame to determine whether to keep the goods impounded or allow them to enter the U.S. market.

American businesses consider a “bar to entry” dimension to be an essential component of a broad-based IP-enforcement program, as it serves to prevent economic harm to American companies from occurring while a careful review of a product is undertaken. Restricting the entry of IP-invalid goods or services both protects the market share of IP-compliant companies and conveys a powerful deterrent message to potential violators. A mandatory legal review ensures that the rights of companies entering the U.S. market are protected. Evidence from a study by the *Michigan Law Review* finds that default rates are rising faster than the increase in USITC 337 cases in recent years, thereby keeping counterfeit goods from the American market. This trend suggests that in many cases the mere threat of a USITC investigation serves the deterrent purposes of preventing counterfeit goods from entering the U.S. market.⁴

This recommendation has two potential negative effects that must be monitored and, if necessary, mitigated. Companies found not to be in violation could, in some cases, sue the U.S. government for loss of revenue. A swift and transparent adjudication process should mitigate this potential effect. Another potential downside of this process is that it could create a perverse incentive for American companies to lodge false allegations against foreign competitors as a means to gain a short-term advantage. The interagency team that accepts and evaluates complaints will quickly learn whether the system is being manipulated and can easily decline to accept additional complaints from these American companies.

While this process would have no effect on goods or processes that do not enter the U.S. market, it will have a strong deterrent effect on major foreign companies with international ambitions, as it forces them to choose between obtaining IP illegally and selling in the U.S. market. This quick-response capability is based on identification of a particular good or service that incorporates stolen IP. The penalty for the infraction is taken against the product or service. When a Chinese or other foreign company is identified as a repeat offender, using stolen IP on a larger scale, then action needs to be taken against the company itself.

Recommendation:

Empower the secretary of the treasury, on the recommendation of the secretary of commerce, to deny the use of the American banking system to foreign companies that repeatedly benefit from the misappropriation of American intellectual property.⁵

Foreign companies that sell goods or services in the American market, or do business in dollar-denominated markets, such as the international oil market, must use American banks to clear their transactions. Chapter 1 discusses how companies may illegally make use of the IP of American companies as part of their supply chains, and chapters 6 and 7 discuss misappropriation of IP through trademark and copyright infringement. Companies that repeatedly misappropriate the intellectual property of an American company—either as incorporated within their product or as part of the business process (machine tools, business software, etc.) that created the good or service—should forfeit the privilege of using the American banking system.

⁴ John C. Evans, “Addressing Default Trends in Patent-Based Section 337 Proceedings in the United States International Trade Commission,” *Michigan Law Review* 106, no. 4 (2008).

⁵ Using the language “use or benefit from” implies a broader reach. It includes not only the thieves of the IP but also those who, for example, have licensed IP but use it past the expiration of the license or use it for a purpose that is not covered by the license.

International banks are the gateway to the American economy. Banking restrictions have proved to be an extremely effective tool in controlling financial operations related to other illegal international activities, such as terrorism, money laundering, and drug smuggling. Making compliance with IP laws a prerequisite for entry into the U.S. market, and utilizing the financial system as the gatekeeper of that process, creates an enforcement tool without geographical boundaries. Companies that make use of stolen American IP anywhere in the world would suddenly face the real prospect of severe restrictions on their ability to access the U.S. banking system.

The same Commerce-led interagency team established in the recommendations above would have the expertise, experience, and charter to determine which foreign companies should be subject to this sanction. When the interagency team observes repeated confirmed instances of IP theft by a foreign company, it would forward the name of that company to the secretary of the treasury for financial sanctions for a period of time.

The Commission does not prescribe specific lengths of time for the sanction to be imposed, nor procedures for a foreign company to be removed from the sanctions. These procedures should be at the discretion of the interagency team, based on its experience. The Commission is fairly certain that, unlike in the cases of terrorist financing that supports ideologically driven mayhem or inherently illegal activities such as drug-smuggling or money-laundering, using American financial institutions to sanction market-sensitive enterprises that steal IP would have enormous deterrent value. The number of companies that are stealing IP would likely dwindle rapidly.

Chinese or other foreign companies may resort to tactics such as the use of “reverse mergers” and the creation of shell companies and subsidiaries to protect parent companies from these financial sanctions. The interagency team would thus need to establish procedures to ensure that the penalties affect the parent company.

This recommendation would add one more set of administrative requirements and open one more potential basis for suits to the already heavy burdens placed on American international banks. On the other hand, it establishes no new processes or mechanisms to the existing requirements for understanding their customers, which ensure that U.S. banks are not being used for other forms of illegal activity. Foreign companies and governments may consider bringing action against the United States in the WTO for these procedures, but the Commission believes that this is a risk worth taking.

Recommendation:

Increase Department of Justice and FBI resources to investigate and prosecute cases of trade-secret theft, especially those enabled by cyber means.

While issues of IP protection are not necessarily new, as the Commission and this report point out, what has changed dramatically in recent years is the way in which new capabilities, such as cyber, have affected and enabled the stealing of trade secrets. The discussion in chapter 1 of cyber methods sets the background for the importance of this recommendation.

The Department of Justice and FBI need more resources to investigate the sharp increase in trade-secret theft cases, and the Commission strongly recommends the increase of investigative and prosecutorial resources. These resources are especially needed to investigate cases where the theft was perpetrated against small businesses and start-ups, as mentioned in chapter 1. Start-ups and small businesses are an indispensable part of the United States’ culture of innovation, are being increasingly targeted by IP thieves, and have fewer resources to defend themselves.

Recommendation:

Consider the degree of protection afforded to American companies' IP a criterion for approving major foreign investments in the United States under the Committee on Foreign Investment in the U.S. process.

CFIUS is an interagency committee authorized to review transactions that could result in control of a U.S. business by a foreign entity in order to determine the effect of such transactions on the national security of the United States. If CFIUS finds that a covered transaction presents national security risks and that other provisions of law do not provide adequate authority to address the risks, then CFIUS may enter into an agreement with or impose conditions on parties to mitigate such risks or may refer the case to the president for action.⁶

As demonstrated by the flood of counterfeit parts discussed in chapter 1, as well as by widespread cyber infiltrations discussed in chapters 1 and 5, the Commission assesses that the theft of American intellectual property has direct implications for national security. Given that CFIUS has a large amount of flexibility in evaluating potential transactions, it seems appropriate for CFIUS to factor into its judgment the degree to which the foreign actor protects intellectual property.

Recommendation:

Enforce strict supply-chain accountability for acquisitions by U.S. government departments and agencies by June 1, 2014, and work to enhance corporate accountability for the IP integrity of the supply chain.

Chapter 1 discusses the ways in which companies that use illegal IP as part of their supply chain, either as a process or part of an end product, gain an unfair advantage in the marketplace against those who are careful to audit and patrol their suppliers and factories. The U.S. government should not be giving business to contractors that use stolen IP in the goods and services they provide, including their subcontractors and subcomponents. Governments traditionally have imposed heightened requirements on contractors on the rationale that taxpayer funds should not be used to support businesses that engage in unethical or illegal conduct.

At least with regard to software, legal bases currently exist to impose IP compliance requirements on federal contractors. Executive Order 13103, signed by President Clinton on September 30, 1998, requires not only that federal agencies use legal software in their own operations, but also that they impose similar requirements on contractors:

Contractors and recipients of Federal financial assistance, including recipients of grants and loan guarantee assistance, should have appropriate systems and controls in place to ensure that Federal funds are not used to acquire, operate, or maintain computer software in violation of applicable copyright laws. If agencies become aware that contractors or recipients are using Federal funds to acquire, operate, or maintain computer software in violation of copyright laws and determine that such actions of the contractors or recipients may affect the

⁶ "CFIUS operates pursuant to section 721 of the Defense Production Act of 1950, as amended by the Foreign Investment and National Security Act of 2007 (FINSIA) (section 721) and as implemented by Executive Order 11858, as amended, and regulations at 31 C.F.R. Part 800... The members of CFIUS include the heads of the following departments and offices: Department of the Treasury (chair); Department of Justice; Department of Homeland Security; Department of Commerce; Department of Defense; Department of State; Department of Energy; Office of the U.S. Trade Representative; and Office of Science & Technology Policy. The Office of Management & Budget, Council of Economic Advisors, National Security Council, National Economic Council, and Homeland Security Council are observers. The Director of National Intelligence and the Secretary of Labor are non-voting, *ex-officio* members of CFIUS with roles as defined by statute and regulation." See U.S. Department of the Treasury, "The Committee on Foreign Investment in the United States (CFIUS)," December 20, 2012, <http://www.treasury.gov/resource-center/international/Pages/Committee-on-Foreign-Investment-in-US.aspx>.

integrity of the agency's contracting and Federal financial assistance processes, agencies shall take such measures, including the use of certifications or written assurances, as the agency head deems appropriate and consistent with the requirements of law.

Other provisions of U.S. procurement law provide additional bases for requiring federal contractors to use legal software. The Federal Acquisition Regulation (FAR), which governs most federal contracts, requires contracts expected to exceed \$5,000,000 and a performance period of 120 days or more to include a clause requiring the contractor to comply with applicable laws and generally adhere to ethical business practices.⁷ Similarly, contracts for the acquisition of commercial items must contain the clause at FAR 52.212-4, *Contract Terms and Conditions—Commercial Items*, one provision of which provides that contractors “shall comply with all applicable Federal, State and local laws, executive orders, rules and regulations applicable to its performance under this contract.”⁸

Federal agencies should enforce Executive Order 13103 more aggressively, including by requiring contractors to certify that they comply with the order as a condition of bidding on federal contracts. Federal agencies also should interpret Executive Order 13103's provision prohibiting contractors from using federal funds to acquire, operate, or maintain unlicensed software to bar the use of unlicensed software throughout the contractor's business operations. Consideration should be given to applying the same rules to subcontractors.

Additionally, organizations such as CREATE and Verafirm have developed processes that assist companies with increasing the accountability of their supply-chain providers.⁹ Companies can be held accountable through their supply chains for certain marine content in fish products, textiles produced by minors, and toxic materials in consumable products. Thus, these companies can be held accountable for ensuring that the supply chains and processes they oversee are also IP-protection compliant.

Beyond its recommendations for the U.S. government, the Commission encourages businesses to improve their audits and accountability for their own supply chains. Corporate executives should be encouraged to adopt a zero-tolerance policy toward IP theft within their companies and with their suppliers, including foreign suppliers, and to consider a mechanism whereby the company can be alerted about known or suspected IP theft, including in their supply chains. Companies also should seek to implement best practices with regard to supply-chain IP compliance. Specifically, companies should implement audit provisions in supply-chain agreements requiring suppliers to increase accountability.

Over time, what could develop is a process whereby an IP certification, or “IP passport,” could be awarded to companies with a high degree of integrity in their international supply chains. This would have demonstrable benefits for the speed with which the goods and services enter the U.S. market.

The Commission acknowledges that for some small and medium-sized enterprises increasing accountability in supply chains can pose a burden. However, the Commission also notes that increasing such protection actually improves the legal standing of companies in the event of lawsuits.

⁷ See Federal Acquisition Regulation §3.1004(a), requiring use of contract clause at §FAR 52.203-13, *Contractor Code of Business Ethics and Conduct*, which require contractors to “promote an organizational culture that encourages ethical conduct and a commitment to compliance with the law,” to have an internal control system that establishes “standards and procedures to facilitate timely discovery of improper conduct in connection with Government contracts,” and to impose “disciplinary action for improper conduct or for failing to take reasonable steps to prevent or detect improper conduct.”

⁸ 48 CFR 52.212-4(q).

⁹ See CREATE, “Tools and Training,” <http://www.create.org/tools-training>; and Verafirm, “About Verafirm,” <https://www.verafirm.org/Pages/General/About.aspx>.

Recommendation:

Require the Securities and Exchange Commission (SEC) to investigate whether the knowing, systematic, or widespread use of stolen software or other stolen IP within a listed company is or should be subject to executive and auditor disclosure rules and, if so, to issue guidance to that effect (a “red flag” provision).

Chapter 1 describes the degree to which supply chains are an increasing source of IP theft. Further targeting the misappropriation of IP in globalized supply chains, the SEC can play a significant role as a watchdog with regard to U.S.-listed companies. In recent years, U.S. policymakers and regulators have become increasingly active in requiring publicly listed companies to promote legal compliance and root out fraud. This is based in part on the rationale that a corporate culture that tolerates legal violations and fraud is more likely to engage in conduct that could mislead investors about the company’s financial health.

An example of this can be found in Section 302 of the Sarbanes-Oxley Act. The SEC rules for implementing Section 302 require the CEO and CFO of a listed company (including a foreign private issuer) to disclose any fraud to the company’s auditors and board of directors, whether or not material, that involves management or other employees who have a significant role in the company’s internal control over financial reporting.¹⁰ Failure to act on known fraud may subject the CEO and CFO to personal liability, which could extend to board members in certain cases.

Separately, the Securities Exchange Act provides that if a company’s auditors become “aware of information indicating that an illegal act (*whether or not perceived to have a material effect on the financial statements of the company*) has or may have occurred,” the auditor must inform “the appropriate level” of the company’s management and insure that the company’s audit committee—or board of directors in the absence of an audit committee—is “adequately informed with respect to illegal acts” that the auditor has detected.¹¹ A company’s use of stolen software falls within the scope of this provision, yet most auditing firms today do not routinely audit listed companies for legal software use.

The Commerce-led interagency team proposed in the two previous recommendations will also have information that should be provided to the SEC to be used in the regulation of both companies that are currently listed on American stock exchanges and those that are applying for listing.

There is ample evidence that stolen software can introduce security vulnerabilities into a company’s IT system.¹² Use of such software within a corporation is a “red flag” of inadequate internal controls more broadly. If the SEC makes such a finding, it should work with other international securities regulators to implement a standardized approach.

Recommendation:

Greatly expand the number of green cards available to foreign students who earn science, technology, engineering, and mathematics (STEM) graduate degrees in American universities.

Chapter 1 highlights the issue of highly skilled foreign students who are unable to stay in the United States after graduation due to U.S. government limitations on visas. According to a recent

¹⁰ Securities Exchange Act of 1934, rules 13a-14, 15d-14.

¹¹ Securities Exchange Act of 1934, §10A(b)(1).

¹² See John F. Gantz et al., “The Dangerous World of Counterfeit and Pirated Software: How Pirated Software Can Compromise the Cybersecurity of Consumers, Enterprises, and Nations...and the Resultant Costs in Time and Money,” IDC, White Paper, no. 239751, March 2013, 3–4, <http://www.computerworld.com.pt/media/2013/03/IDC030513.pdf>.

Brookings Institution study, in 2010 more than 96,000 foreign students were in the United States pursuing graduate degrees in STEM fields. However, a mere 19,000 stayed after graduation to work in the United States. Many American high-tech companies have publicly advocated increasing the number of visas available for these scientists and engineers in order to help them fill open jobs. However, the loss of these valuable workers has other damaging effects. Many of the 77,000 graduates who return home every year have knowledge of American intellectual property, gained in the course of their studies or in internships during their time in the United States. This intellectual property is of great benefit to foreign companies, enabling them to more quickly and effectively compete with American companies, both in overseas markets and even in the American market.

Several proposals to reform U.S. immigration procedures would make earning a green card for graduate students in STEM fields an easier process after graduation and with a job offer in hand. The Brookings study estimated that numerous metropolitan areas, especially in the Midwest, would see dramatic benefits if a much larger percentage of foreign students were permitted to stay.¹³

The Commission supports such initiatives on immigration reform. Sending qualified and talented scientists and engineers home almost ensures that their American educations will benefit other nations' economic development and will represent missed opportunities for the American economy.

To be sure, some of the foreign students who would remain in the United States under the terms of this arrangement would be subject to pressure or inducements from home countries and companies to commit IP theft while working for a U.S. company. There have been multiple cases of the FBI prosecuting green card holders. Nonetheless, if the full range of this report's recommendations were adopted to deal with IP theft systemically, the Commission judges that this risk is far outweighed by the potential benefits of such a program.

¹³ Neil Ruiz, "Immigration Facts on Foreign Students," Brookings Institution, April 9, 2013, <http://www.brookings.edu/research/interactives/2013/facts-on-foreign-students>.

Medium-term Solutions: Legislative and Legal Reform

These are efforts that will strengthen the U.S. legal system, which possesses inadequate legal remedies for the scale of the problems we face, and increase the priority of IP protection in U.S. diplomatic missions overseas.

Recommendation:

Amend the Economic Espionage Act to provide a private right of action for those who hold trade secrets and further to make the Court of Appeals for the Federal Circuit (CAFC) the appellate court for all actions under this statute.

The EEA was passed in 1996 to criminalize trade-secret theft at the federal level in order to provide a mechanism to stem losses to U.S. entities as a result of such theft. Two amendments recently signed into law by President Obama serve to broaden the scope of protection (Theft of Trade Secrets Clarification Act of 2012) and to increase monetary penalties for criminal activities under the EEA (Foreign Economic Espionage Penalty Enhancement Act of 2012).

As discussed in depth in chapter 5, while the EEA has been somewhat helpful in protecting IP internationally, there are still some deficiencies that need to be addressed. Missing from the EEA is a private civil cause of action that would enable companies to individually pursue the perpetrators of economic espionage in federal court, though the statute does create a limited civil cause of action allowing the U.S. attorney general to seek injunctive relief against offenders. Under current law, companies and individuals are left to pursue their cases for trade-secret misappropriation in state courts, which gives rise to many of its own complications, including limited access to evidence and difficulty in enforcing judgments.¹

An amendment allowing a private civil cause of action under the EEA would allow the rights holders themselves, rather than just government prosecutors, to file lawsuits in order to protect their proprietary methods and information. This could also help alleviate the burden on federal prosecutors, who are already suffering from severe resource constraints when it comes to pursuing EEA actions.

¹ A bill that would have provided a private civil cause of action at the federal level for economic espionage was introduced in July 2012, entitled the Protecting American Trade Secrets and Innovation Act of 2012. The bill would have amended §1836 of the EEA to allow a person who is aggrieved by an act of economic espionage, theft of a trade secret, or misappropriation of a trade secret that is related to or included in a product that is produced for or placed in interstate or foreign commerce to bring a civil action under the EEA, instead of requiring that the civil action be brought by the U.S. attorney general.

As summarized by the Library of Congress, the bill contained the following provisions: “Requires a complaint filed in such an action to: (1) describe with specificity the reasonable measures taken to protect the secrecy of the alleged trade secrets in dispute, and (2) include a sworn representation by the party asserting the claim that the dispute involves either substantial need for nationwide service of process or misappropriation of trade secrets from the United States to another country. Authorizes the court, in a civil action, upon ex parte application and if the court finds by clear and convincing evidence that issuing the order is necessary to prevent irreparable harm, to issue an order providing for: (1) the seizure of any property (including computers) used or intended to be used to commit or facilitate the commission of the alleged violation, and (2) the preservation of evidence. Sets forth provisions regarding the scope of such an order, rights of a party injured by a seizure under such an order, and remedies with respect to civil actions brought under this Act. Establishes a three-year limitations period, beginning when the misappropriation is discovered or should have been discovered.” See Library of Congress, “Summary: S.3389—112th Congress (2011–2012),” available at [http://beta.congress.gov/bill/112th%20Congress%20\(2011-2012\)-congress/senate-bill/3389](http://beta.congress.gov/bill/112th%20Congress%20(2011-2012)-congress/senate-bill/3389).

The second proposed change to the Economic Espionage Act mandates that the appellate court for all actions under the EEA would be the Court of Appeals for the Federal Circuit. The CAFC serves as the appellate court for nearly all IP-related cases, and thus has a high degree of competency on IP issues. Making the CAFC the appellate court for all EEA issues ensures a degree of continuity in judicial opinion. Moreover, it helps support the federal circuit in expanding extraterritorial enforcement.

Recommendation:

The U.S. Federal Trade Commission (FTC) should investigate instances of foreign companies stealing IP and use its broad enforcement powers under Section 5 of the FTC Act to obtain meaningful sanctions against any foreign companies that use stolen IP. The Commission also recommends that attorneys general of other states follow the example of the recent aggressive enforcement actions against IP theft taken by the California and Massachusetts attorneys general.

Most businesses today rely on software and other information technologies to improve their efficiency and productivity. In a 2008 study, the U.S. Department of Commerce found a significant correlation between IT investment and productivity growth.² In 2010, U.S. manufacturers spent nearly \$30 billion on software in order to run their businesses more efficiently and to gain a competitive edge.³ Many of these companies operate on tight margins where small differences in costs can significantly affect their profits and market success.

When a foreign company uses stolen software to run its business and then competes in a U.S. market against companies that use legal software, this distorts competition in the United States by providing the foreign company with an unfair and artificial cost advantage. If left unaddressed, this creates perverse incentives by providing a competitive advantage to companies that engage in illegal conduct and placing at a competitive disadvantage those law-abiding companies that may be more innovative or efficient but that pay for their software. These market distortions may reduce lawful competition and lead to suboptimal investments in innovation, since enterprises that pay for their software and lose sales to firms that engage in software theft will have fewer resources to invest in R&D. Over time, software theft by foreign companies whose products or services are offered in U.S. markets will distort competition in these markets and will leave U.S. consumers worse off. Reiterating the earlier notions of chapter 1, these losses are becoming more and more potent due to shorter product life cycles. In industries that gain the vast majority of their revenues during the first few months of a product release, the enforcement mechanisms need to be equally responsive.

Legislatures in Washington State and Louisiana have passed laws specifically targeting this form of unfair competition,⁴ while state attorneys general in California and Massachusetts recently announced actions against foreign manufacturers' use of stolen software under these states' respective

² According to the Department of Commerce, "average growth for IT-intensive industries for this period [1989–2001] was 3.03 percent, far exceeding growth in the less IT-intensive industries which averaged 0.42 percent." U.S. Department of Commerce, Economics and Statistics Administration, *Digital Economy 2003*, December 2003, 45–54, http://www.esa.doc.gov/sites/default/files/reports/documents/dig_econ_2003.pdf.

existing unfair-competition laws.⁵ Also, 39 state and territorial attorneys general recently sent a letter to the FTC highlighting the problem, pledging to seek ways to use the powers of their respective offices to address the issue, and urging the FTC to consider how Section 5 of the FTC Act could be brought to bear on the problem at the federal level.⁶

This recommendation is a complement to enacting a federal private right of action under a revised EEA. At the state level, the accumulation of case law will serve as a longer-term deterrent to illegal gain as a result of the misappropriation of intellectual property. State case law also extends to the unlawful use of pirated software in the production of a good. The Massachusetts attorney general recently brought a successful case against a Thai company, which settled out of court after paying a fine.⁷

Recommendation:

Expand and strengthen diplomatic priorities in the protection of American intellectual property by increasing the diplomatic rank of IP attachés assigned to priority embassies and by making the protection of intellectual property one of the criteria on which ambassadors are graded.

In countries with which the United States has a particularly challenging relationship in the field of IP protection, one way the United States can demonstrate the priority with which it holds the protection of intellectual property is by giving appropriately senior rank to its IP attaché. By doing so, the United States also facilitates more effective interactions with host countries and will contribute to more mature rule of law perspectives in many developing nations, as discussed in chapter 1.

Similarly, if the criteria on which U.S. ambassadors are evaluated on an annual basis include their efforts to protect American intellectual property, as they now include efforts to promote American exports, they would likely find new and innovative ways to protect IP. Moreover, adopting this recommendation will send a strong message to the host country.

Long-term Solutions: Capacity-building

This set of recommendations is aspirational in nature. The recommendations seek to build consensus in priority countries for the support of IP protection.

Recommendation:

Help build institutions in priority countries that contribute toward a “rule of law” environment in ways that protect intellectual property.

Currently, there is a range of efforts, both public and private, that contributes to the development of rule of law in China and other foreign countries that do not protect intellectual property. These should be encouraged and endorsed by Congress and the administration as extremely cost-effective ways to bring about systemic change.

In particular, the U.S. Patent and Trademark Office organizes a range of capacity-building efforts, such as U.S.-China legal exchanges, which include the participation of sitting American judges. These efforts are largely cost-free to taxpayers—being funded by the fees that the USPTO collects—and have been enormously effective. Of particular importance are efforts that demonstrate the purposes and value of an independent judiciary.

Recommendation:

Develop a program that encourages technological innovation to improve the ability to detect counterfeit goods and products.

The U.S. government has become quite good at motivating developments in the government and private sectors through a range of incentive programs. Such programs are often quite successful at developing new technological solutions that can have important policy impacts.

Innovation for the purposes of greater protection against counterfeiting also sends important messages about the value the U.S. government places on domestic innovation. Technologies that could more simply and reliably detect counterfeit items or verify the authenticity of true products are examples. Such an initiative is also self-reinforcing: innovation that protects existing innovation is thus both a goal and a means to an end.

Recommendation:

Ensure that top U.S. officials from all agencies push to move China, in particular, beyond a policy of indigenous innovation toward becoming a self-innovating economy.

As discussed in chapter 1, China in particular needs to continue to reform its IP-protection system. It is assessed that China will become a stronger supporter of intellectual property when Chinese innovators demand more domestic protection for their own technological advances. Chinese inventors and entrepreneurs are on the cusp of tremendous breakthroughs in a range of sectors. What they lack are the legal and regulatory protections at home that will enable them to realize the benefits of their ideas.

Bringing to an end the use of Chinese-granted “petty patents,” as described in chapter 4, would be an important early step toward becoming an innovation economy. The system of petty, or utility, patents does not advance China toward becoming a technological leader. Quite the contrary, petty patents actually impede innovation because the system incentivizes the copying of others’ work.

Recommendation:

Encourage the development of IP “centers of excellence” on a regional basis within China and other priority countries.

Incentivizing provincial and municipal leaders in countries such as China, Russia, and India to create business environments that protect intellectual property is a critical long-term activity. One of the ways the U.S. government can encourage better protection of intellectual property in China is pointing foreign investment toward those cities and provinces with stronger protection of intellectual property. Increased levels of foreign investment would then have positive impacts on helping reach the levels of economic growth that mark outstanding local leaders as destined for promotion.

This can be an enormously challenging process, especially in countries that have uneven IP-protection regimes in place. Developing a nongovernmental assessment and rating system, as described below, is a first step toward encouraging the development of IP centers of excellence.

Recommendation:

Establish in the private, nonprofit sector an assessment/rating system of levels of IP legal protection, beginning with China but extending to other countries as well.

The assessment would focus on the regional or sub-national level and could be conducted by an international consortium of relevant educational and business associations to provide both a status report and a directional indicator—improvement or regression—of the level of IP protection within a specific region. Such an assessment system would help identify geographical regions in which IP protection is notably stronger than in others. Implicit within the development of such a system is that foreign investors would use its findings to inform their own investment patterns in IP protection-challenged countries such as China, Russia, and India.

Cyber Solutions

There are two types of intruders into corporate computer networks that are connected to the Internet. The “opportunistic hacker” uses the Internet to run probing attacks against many networks and then intrudes wherever he finds vulnerability. The “targeted hacker” seeks to take specific proprietary information in a specific network belonging to a specific government agency or private company. Whereas some hackers target entities for individual ideological reasons, many others are sponsored by a government agency, often for direct military purposes—intelligence and reconnaissance—or to damage military networks. Other targeted hackers seek to intrude on behalf of a foreign corporate competitor into the network of a U.S. corporation, often to take specific information to gain a business advantage. Cyberattacks, in combination with traditional economic espionage activities involving human efforts targeted against corporate proprietary information, can result in the theft of highly protected trade secrets.

The sheer scale of cyberattacks on American companies, with corresponding economic interests at stake, causes the issue of IP to rise to a genuine national security concern. The administration recognizes this new reality. As National Security Advisor Tom Donilon said recently, “the United States will do all it must to protect our national networks, critical infrastructure, and our valuable public and private sector property.”¹

Vulnerability Mitigation Is Effective Only against Opportunistic Hackers

Almost all network security approaches to date have been based on the concept of vulnerability mitigation, which seeks to strengthen one’s existing network security by pursuing the newest and best software, network appliances, regular updates, updated firewalls, most recent patches to software weaknesses, and so forth. Moreover, they place a high burden on network administrators to comply with established minimum requirements and manage the integration of an ever-expanding universe of security products. Vulnerability mitigation is a fundamentally passive approach to network defense. Companies spend inordinate amounts of money attempting to protect their networks against all threats, but in reality only succeed in keeping out the opportunistic hackers who may otherwise have no direct interest in the information of a particular company. Thus, the costs borne by individual companies to defend themselves have no effect on the incentives of opportunistic hackers. Time and opportunity are on their side. If presented with a challenging network defense, they simply move on to more lightly defended networks. *Perhaps more importantly, vulnerability-mitigation measures have proved largely ineffective in defending against targeted hackers, who are hired specifically to pursue American corporations’ intellectual property.*

A different concept for security, known as threat-based deterrence, has been identified as a means to protect the most important information in corporate or government networks.

¹ Thomas Donilon, “The United States and the Asia-Pacific in 2013” (speech to the Asia Society, New York, March 11, 2013), <http://www.whitehouse.gov/the-press-office/2013/03/11/remarks-tom-donilon-national-security-advisory-president-united-states-a>.

Threat-based Deterrence against Targeted Hackers

Even the best security systems using vulnerability-mitigation measures, including those with full-time dedicated operations centers, cannot be relied on for protection against the most highly skilled targeted hackers. A network exists in order to share information with authorized users, and a targeted hacker, given enough time, will always be able to penetrate even the best network defenses.

Effective security concepts against targeted attacks must be based on the reality that a perfect defense against intrusion is impossible. The security concept of threat-based deterrence is designed to introduce countermeasures against targeted hackers to the point that they decide it is no longer worth making the attacks in the first place. In short, it reverses the time, opportunity, and resource advantage of the targeted attacker by reducing his incentives and raising his costs without raising costs for the defender. Conceptual thinking about and effective tools for threat-based deterrence are in their infancy, but their development is a very high priority both for the U.S. government and for private companies.

Chapter 1 provides an in-depth review of the extent to which cyberattacks affect the U.S. national economy, and chapter 5 discusses the problem of cyberespionage in detail.

Recommendation:

Encourage adherence to best-in-class vulnerability-mitigation measures by companies and governments in the face of an evolving cybersecurity environment.

Despite their limited utility against skilled and persistent targeted hackers, computer security systems still need to maintain not only the most up-to-date vulnerability-mitigation measures, such as firewalls, password-protection systems, and other passive measures. They should also install active systems that monitor activity on the network, detect anomalous behavior, and trigger intrusion alarms that initiate both network and physical actions immediately. This is a full-time effort. Organizations need network operators “standing watch” who are prepared to take actions based on the indications provided by their systems, and who keep a “man in the loop” to ensure that machine responses cannot be manipulated. Organizations need to have systems—software, hardware, and staff—to take real-time action to shut down free movement around the house, lock inside doors, and immobilize attackers once the alarms indicate that an intrusion has started. Some government agencies and a few corporations have comprehensive security systems like this, but most do not.

Finally, emphasis should be given to developing cutting-edge technologies that will promote a healthier Internet ecosystem. Examples of such technologies come in many forms. For one, since a large number of the successful targeted attacks are still arriving in the form of email campaigns containing links or files exploiting a zero-day vulnerability in common software packages, systems that are capable of rapidly analyzing the behavior of unknown files and links are an important element. So too is technology that allows for the isolation of computing environments so that damage is limited to a quarantined area and cannot infect the rest of the network. Last, systems providing advanced, real-time network analysis would also be a necessary element of this ecosystem.

Recommendation:

Support efforts by American private entities both to identify and to recover or render inoperable intellectual property stolen through cyber means.

Some information or data developed by companies must remain exposed to the Internet and thus may not be physically isolated from it. In these cases, protection must be undertaken for the files themselves and not just the network, which always has the ability to be compromised. Companies should consider marking their electronic files through techniques such as “meta-tagging,” “beaconing,” and “watermarking.” Such tools allow for awareness of whether protected information has left an authorized network and can potentially identify the location of files in the event that they are stolen.

Additionally, software can be written that will allow only authorized users to open files containing valuable information. If an unauthorized person accesses the information, a range of actions might then occur. For example, the file could be rendered inaccessible and the unauthorized user’s computer could be locked down, with instructions on how to contact law enforcement to get the password needed to unlock the account. Such measures do not violate existing laws on the use of the Internet, yet they serve to blunt attacks and stabilize a cyber incident to provide both time and evidence for law enforcement to become involved.

Recommendation:

Reconcile necessary changes in the law with a changing technical environment.

When theft of valuable information, including intellectual property, occurs at network speed, sometimes merely containing a situation until law enforcement can become involved is not an entirely satisfactory course of action. While not currently permitted under U.S. law, there are increasing calls for creating a more permissive environment for active network defense that allows companies not only to stabilize a situation but to take further steps, including actively retrieving stolen information, altering it within the intruder’s networks, or even destroying the information within an unauthorized network. Additional measures go further, including photographing the hacker using his own system’s camera, implanting malware in the hacker’s network, or even physically disabling or destroying the hacker’s own computer or network.

The legal underpinnings of such actions taken at network speed within the networks of hackers, even when undertaken by governments, have not yet been developed. Further, the de facto sanctioning of corporate cyber retribution is not supported by established legal precedents and norms. Part of the basis for this bias against “offensive cyber” in the law includes the potential for collateral damage on the Internet. An action against a hacker designed to recover a stolen information file or to degrade or damage the computer system of a hacker might degrade or damage the computer or network systems of an innocent third party. The challenges are compounded if the hacker is in one country and the victim in another.

For these reasons and others, the Commission does not recommend specific revised laws under present circumstances. However, current law and law-enforcement procedures simply have not kept pace with the technology of hacking and the speed of the Internet. Almost all the advantages are on the side of the hacker; the current situation is not sustainable. Moreover, as has been shown above, entirely defensive measures are likely to continue to become increasingly expensive and decreasingly effective, while being unlikely to change the cost-benefit calculus of targeted hackers away from attacking corporate networks.

New options need to be considered. As a first step, corporations need better information, and thus an open, two-way communications flow between companies and U.S. government agencies is more necessary than ever before. Companies cannot be asked to share more information unless they have a reasonable expectation that they will receive useful information in return, and they need protections from lawsuits if they do provide information. The Cyber Information Security Protection Act is an example of a statutory effort to address this problem, and the Commission recommends its passage.

Second, an aggressive assessment of the sufficiency of current legal norms to address the new circumstances needs to be undertaken, and new statutes should be considered. The law needs to be clarified to match common sense. The Department of Homeland Security, the Department of Defense, and law enforcement agencies should have the legal authority to use threat-based deterrence systems that operate at network speed against unauthorized intrusions into national security and critical infrastructure networks.

Finally, new laws might be considered for corporations and individuals to protect themselves in an environment where law enforcement is very limited. Statutes should be formulated that protect companies seeking to deter entry into their networks and prevent exploitation of their own network information while properly empowered law-enforcement authorities are mobilized in a timely way against attackers. Informed deliberations over whether corporations and individuals should be legally able to conduct threat-based deterrence operations against network intrusion, without doing undue harm to an attacker or to innocent third parties, ought to be undertaken.

Potential Future Measures

The Commission considered three additional ideas for protecting the intellectual property of American companies that it does not recommend at this time. In the future, if the loss of IP continues at current levels, these measures ought to be considered.

Recommend that Congress and the administration authorize aggressive cyber actions against cyber IP thieves. Currently, Internet attacks against hackers for purposes of self-defense are as illegal under U.S. law as the attacks by hackers themselves. As discussed in the cyber recommendations above, if counterattacks against hackers were legal, there are many techniques that companies could employ that would cause severe damage to the capability of those conducting IP theft. These attacks would raise the cost to IP thieves of their actions, potentially deterring them from undertaking these activities in the first place.

The Commission is not ready to endorse this recommendation because of the larger questions of collateral damage caused by computer attacks, the dangers of misuse of legal hacking authorities, and the potential for nondestructive countermeasures such as beaconing, tagging, and self-destructing that are currently in development to stymie hackers without the potential for destructive collateral damage. Further work and research are necessary before moving ahead.

Recommend to Congress and the administration that U.S. funding to the World Health Organization (WHO) program budget in whole or in part be withheld until (1) the WHO's process of certifying national regulatory agencies includes attestation that IP protection is an essential part of the regulatory evaluation process, and (2) the WHO refrains from prequalifying any product until the regulating agency of jurisdiction demonstrates and certifies that it does not violate IP rights. An additional approach—a carrot approach—would be to have a specified WHO contribution by the U.S. government, in addition to current funding, that would be dedicated to developing, implementing, and evaluating the above improvements to the regulatory and prequalification processes.

The U.S. government has leverage at the WHO chiefly because of its financial support, which consists of annual “means tested” contributions to the WHO’s program budget and “voluntary” contributions whose total value is about \$350 million. This support from the United States can be a carrot or a stick to influence the WHO’s actions.

Multilateral coordination may also be possible. For example, the IP of Japanese-developed medicine is frequently stolen, and Japan’s current annual and voluntary contributions to the WHO total over \$70 million.

The Commission believes this recommendation has strong promise but is not ready to endorse it. To be acted upon, this recommendation requires careful assessment of the likely impacts and the potential for unintended consequences. It will be essential to ensure that the poorest and most vulnerable across the world continue to have access to life-saving, high-quality health interventions, now and in the future. In fact, IP protections are vital to that outcome, because they preserve incentives for innovation and foster predictable markets for manufacturers. Developing consensus around the policy solution among policymakers and manufacturers, particularly regarding the source of any additional funding, will be the necessary next step.

Recommend that Congress and the administration impose a tariff on all Chinese-origin imports, designed to raise 150% of all U.S. losses from Chinese IP theft in the previous year, as estimated by the secretary of commerce. This tariff would be subject to modification by the president on national security grounds.

The argument for this proposal is that only by seriously limiting the U.S. market for Chinese goods and services will sufficient incentive be created for Chinese authorities to systematically reduce IP theft. The method proposed to accomplish that goal is to impose the calibrated tariff just described. While such action would allow retaliation, the huge Chinese trade surplus with the United States could cause the retaliation to be ineffective. Chinese exports to the United States are between three and four times the dollar value of U.S. exports to China.

The Commission is not prepared to make such a recommendation now because of the difficulty of estimating the value of stolen IP, the difficulty of identifying the appropriate imports, and the many legal questions raised by such an action under the United States' WTO obligations. If major IP theft continues or increases, however, the proposal should be further refined and considered.

Dennis C. Blair is the former U.S. Director of National Intelligence. In this role he led sixteen national intelligence agencies, administering a budget of \$50 billion and providing integrated intelligence support to the president, Congress, and operations in the field. Prior to rejoining the government, he held the John M. Shalikashvili Chair in National Security Studies with The National Bureau of Asian Research, served as Deputy Director of the Project for National Security Reform, and as a member of the Energy Security Leadership Council of Securing America's Future Energy.

From 2003 to 2006, Admiral Blair was President and Chief Executive Officer of the Institute for Defense Analyses, a federally funded research and development center based in Alexandria, Virginia, that supports the Department of Defense, the Department of Homeland Security, and the intelligence community. He has been a director of two public companies, EDO and Tyco International, and has served on the boards of many nonprofit organizations.

Prior to retiring from the U.S. Navy in 2002, Admiral Blair served as Commander in Chief of U.S. Pacific Command, the largest of the combatant commands. During his 34-year Navy career, he also served on guided missile destroyers in both the Atlantic and Pacific fleets and commanded the Kitty Hawk Battle Group. Ashore, Admiral Blair served as Director of the Joint Staff and held budget and policy positions on the National Security Council and several major Navy staffs.

A graduate of the U.S. Naval Academy, Admiral Blair earned a master's degree in history and languages from Oxford University as a Rhodes scholar and was a White House Fellow at the Department of Housing and Urban Development. He has been awarded four Defense Distinguished Service medals and three National Intelligence Distinguished Service medals, and has received decorations from the governments of Japan, Thailand, Korea, Australia, the Philippines, and Taiwan.

Jon M. Huntsman, Jr., is the former U.S. Ambassador to China (2009–11) and former Governor of Utah (2005–9).

Governor Huntsman was appointed U.S. Ambassador to China by President Barack Obama and confirmed by the Senate on August 7, 2009. As ambassador, he focused on working closely with American business owners to facilitate commerce in the growing Asian market and advocating for the release of American citizens wrongfully imprisoned.

As governor, he cut waste and made government more efficient. As a result, Utah held its AAA bond rating and earned national accolades for debt management. Under his leadership, Utah ranked number one in the nation in job creation and was named the best-managed state by the Pew Research Center.

Prior to serving as governor, he was named U.S. Ambassador to Singapore, becoming the youngest head of an American diplomatic mission in a century. Governor Huntsman also served as U.S. Trade Ambassador under President George W. Bush, during which time he helped negotiate dozens of free trade agreements with Asian and African nations.

Governor Huntsman holds a BA in international politics from the University of Pennsylvania.

Craig R. Barrett is a leading advocate for improving education in the United States and around the world. He is also a vocal spokesman for the value technology can provide in raising social and economic standards globally.

Dr. Barrett joined Intel Corporation in 1974 and held positions of Vice President, Senior Vice President, and Executive Vice President from 1984 to 1990. In 1992, he was elected to Intel Corporation's Board of Directors and was promoted to chief operating officer in 1993. Dr. Barrett became Intel's fourth President in 1997, Chief Executive Officer in 1998, and Chairman of the Board in 2005, a post he held until May 2009.

Dr. Barrett has served on numerous boards and policy and government panels. Until June 2009, he was Chairman of the United Nations Global Alliance for Information and Communication Technologies and Development, which works to bring computers and other technology to developing parts of the world. Dr. Barrett has also been an appointee of the President's Advisory Committee for Trade Policy and Negotiations and the American Health Information Community. He has co-chaired the Business Coalition for Student Achievement and the National Innovation Initiative Leadership Council, and has served as a member of the Board of Trustees for the U.S. Council for International Business and the Clinton Global Initiative Education Advisory Board. Dr. Barrett has been a member of the National Governors' Association Task Force on Innovation America, the National Infrastructure Advisory Council, and the Committee on Scientific Communication and National Security, and served on the Board of Directors of the U.S. Semiconductor Industry Association, the National Action Council for Minorities in Engineering, and TechNet.

Dr. Barrett received BS, MS, and PhD degrees in Materials Science from Stanford University. After graduation, he joined the faculty of Stanford University in the Department of Materials Science and Engineering, and remained through 1974. He was a Fulbright Fellow at Danish Technical University in Denmark in 1972 and a NATO Postdoctoral Fellow at the National Physical Laboratory in England from 1964 to 1965.

Slade Gorton is a former U.S. Senator (1981–87 and 1989–2001) and a member of the National Commission on Terrorist Attacks Upon the United States.

Senator Gorton's years in the Senate saw him appointed to powerful committee posts including Appropriations; Budget; Commerce, Science and Transportation; and Energy and Natural Resources. He served as the Chairman of the Interior Appropriations Subcommittee (1995–2001), the Commerce Subcommittees on Consumer Affairs (1995–99), and the Aviation Committee (1999–2000). He was also a member of the Republican leadership as counsel to the majority leader (1996–2000).

Senator Gorton began his political career in 1958 as a Washington State representative, and he went on to serve as state House Majority Leader. In 1968, he was elected Attorney General of Washington State, in which capacity he argued fourteen cases before the U.S. Supreme Court. In June 1980, Senator Gorton received the Wyman Award, the highest honor accorded by the National Association of Attorneys General.

Senator Gorton also served on the President's Consumer Advisory Council (1975–77) and on the Washington State Criminal Justice Training Commission (1969–1981). He was chairman of the Washington State Law & Justice Commission (1969–76), and served as an instructor in constitutional law to public administration graduate students at the University of Puget Sound

Senator Gorton received his BA from Dartmouth College and his JD from Columbia Law School.

William J. Lynn III is the CEO of DRS Technologies, Inc., and former U.S. Deputy Secretary of Defense (2009–2011).

As Deputy Secretary of Defense, Mr. Lynn served under Secretaries Robert Gates and Leon Panetta, managing three million personnel and overseeing an annual budget of \$700 billion. He also personally led the department's efforts in cybersecurity, space strategy, and energy policy.

From 2002 to 2009, Mr. Lynn was Senior Vice President of Government Operations and Strategy at the Raytheon Company. Previously, he served as Under Secretary of Defense (Comptroller) from 1997 to 2001 and as Director of Program Analysis and Evaluation in the Office of the Secretary of Defense from 1993 to 1997. Mr. Lynn also worked on the staff of Senator Ted Kennedy as his counsel for the Senate Armed Services Committee.

He has been recognized for numerous professional and service contributions, including four Department of Defense medals for distinguished public service, the Joint Distinguished Civilian Service Award from the Chairman of the Joint Chiefs of Staff, and awards from the U.S. Army, Navy, and Air Force.

Mr. Lynn holds a law degree from Cornell Law School and a master's degree in public affairs from the Woodrow Wilson School of Public and International Affairs at Princeton University. He is also a graduate of Dartmouth College.

Deborah Wince-Smith is the President and CEO of the Council on Competitiveness. Founded in 1986, this unique business-labor-academia coalition of leading CEOs, university presidents, and labor union leaders puts forth actionable public policy solutions to make America more competitive in the global marketplace.

In 2004, Ms. Wince-Smith spearheaded the groundbreaking National Innovation Initiative (NII). The NII shaped the bipartisan America COMPETES Act, created state and regional innovation initiatives, and brought a global focus to innovation. She has also led a bilateral dialogue between the United States and Brazil on competitiveness and innovation strategy, including leading the 2007 and 2010 U.S.-Brazil Innovation Summit.

Ms. Wince-Smith serves as a director of several publicly and privately held companies, leading national and international organizations, and U.S. government advisory committees. She is also a Senate-confirmed member of the Oversight Board of the IRS. She recently chaired the secretary of commerce's Advisory Committee on Strengthening America's Communities and currently serves on the secretary of state's Advisory Committee on International Economic Policy. During her seventeen-year tenure in the federal government, Ms. Wince-Smith held leading positions in the areas of science, technology policy, and international economic affairs. Most notably, she served as the nation's first Senate-confirmed Assistant Secretary of Commerce for Technology Policy in the administration of President George H.W. Bush.

Ms. Wince-Smith received a BA from Vassar College and was one of the first female students to enter King's College at the University of Cambridge, where she read for a master's degree in classical archaeology. In 2006, she received an honorary doctorate in humanities from Michigan State University.

Michael K. Young is the President of the University of Washington. Also a tenured Professor of Law, he has a distinguished record as an academic leader with broad experience in public service and diplomacy. As president of the University of Washington, he leads the nation's top public university (second among all universities) in attracting federal research funding.

Prior to his appointment at the University of Washington, he served as President and Distinguished Professor of Law at the University of Utah. Under President Young's leadership, Utah raised its stature nationally and internationally.

Before assuming the presidency at Utah, he was Dean and Lobingier Professor of Comparative Law and Jurisprudence at the George Washington University Law School. He was also a Professor at Columbia University for more than twenty years, and prior to joining the Columbia University faculty, he served as a law clerk to the late Chief (then Associate) Justice William H. Rehnquist of the U.S. Supreme Court.

President Young has held numerous government positions, including Deputy Under Secretary for Economic and Agricultural Affairs and Ambassador for Trade and Environmental Affairs in the Department of State during the presidency of George H.W. Bush. He also served as a member of the U.S. Commission on International Religious Freedom from 1998 to 2005 and chaired the commission on two occasions.

He has published extensively on a wide range of topics, including the Japanese legal system, dispute resolution, mergers and acquisitions, labor relations, the legal profession, comparative law, industrial policy, international trade law, the North American Free Trade Agreement, the General Agreement on Tariffs and Trade, international environmental law, and international human rights and freedom of religion. He is a member of the Council on Foreign Relations and a Fellow of the American Bar Foundation.

President Young received a BA from Brigham Young University and a JD from Harvard Law School, where he served as a note editor of the *Harvard Law Review*.

THE IP COMMISSION

THE COMMISSION ON THE THEFT OF
AMERICAN INTELLECTUAL PROPERTY

The Commission on the Theft of American Intellectual Property is an independent and bipartisan initiative of leading Americans from the private sector, public service in national security and foreign affairs, academe, and politics. The three purposes of the Commission are to:

1. Document and assess the causes, scale, and other major dimensions of international intellectual property theft as they affect the United States
2. Document and assess the role of China in international intellectual property theft
3. Propose appropriate U.S. policy responses that would mitigate ongoing and future damage and obtain greater enforcement of intellectual property rights by China and other infringers

Executive Summary

The Implementation Advisory Group for Competition, Consumer Trust & Consumer Choice (IAG-CCT) was convened in October 2013 by the ICANN Board of Directors to evaluate metrics proposed by the Generic Names Supporting Organization (GNSO) and the At-Large Advisory Committee (ALAC). After eight months of deliberation, the group presents the metrics referenced herein to be used for ICANN's review of the New gTLD Program, as mandated by the Affirmation of Commitments (AOC), section 9.3.¹

The IAG-CCT's mandate was to develop a set of recommendations on the metrics suggested for the eventual review team to compile and analyze. The group evaluated each metric on its feasibility, utility and cost-effectiveness. Its evaluation considered data available to the review team both internally from ICANN, as well as that which may be acquired from third party sources. The CCT review is one of four periodic reviews called for in the AOC focused on the following four objectives:

1. Ensuring accountability, transparency and the interests of global Internet users;
2. Preserving security, stability and resiliency of the DNS;
3. Promoting competition, consumer trust and consumer choice; and
4. Whois policy.

In its discussions, the 28 IAG-CCT members debated the merits of the recommended metrics, including whether targeted values demonstrated that a particular metric would be useful in evaluating the impact of the New gTLD Program. Where the IAG-CCT's recommendations differed from those of the GNSO and ALAC, members consulted with their communities to share the IAG-CCT's rationale and determine whether the collective recommendations sufficiently addressed the larger community's goals. Ultimately, the group came to a consensus on the below recommendations.

The CCT review is expected to launch after new gTLDs have been in operation for one year. However, in order to establish a baseline for activity in the current TLD space, some metrics were measured soon after they were deemed to be feasible and useful for the review team to ensure an accurate baseline was captured.

Recommendations

The IAG-CCT reviewed the 70 recommended metrics from the GNSO and ALAC and makes the following recommendations:

- Collect data on 65 metrics, with some adjustments to terms and parameters for data collection.
- Delete 5 metrics.
- Add one new metric on the impact of name collisions on new gTLD registrations.

¹ Affirmation of Commitments, 9.3: "ICANN will ensure that as it contemplates expanding the top-level domain space, the various issues that are involved (including competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection) will be adequately addressed prior to implementation. If and when new gTLDs (whether in ASCII or other language character sets) have been in operation for one year, ICANN will organize a review that will examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. ICANN will organize a further review of its execution of the above commitments two years after the first review, and then no less frequently than every four years."

Of the 65 recommended metrics, several included baseline figures that capture a snapshot of behaviors and activity in the domain name marketplace prior to the saturation of new gTLDs. Depending on the metric, the baseline period may span from one year to multiple years prior to the delegation of new gTLDs.

ICANN staff recommends a baseline period of two years prior to the first delegation of a new gTLD in October 2013.

Background

ICANN's Affirmation of Commitments (AoC) is one of the key documents guiding the organization's operating principles. As an agreement between ICANN and the U.S. Department of Commerce, the AoC lays out commitments from both sides to: ensure that decisions made related to the global technical coordination of the DNS are made in the public interest and are accountable and transparent; preserve the security, stability and resiliency of the DNS; promote competition, consumer trust, and consumer choice in the DNS marketplace; and facilitate international participation in DNS technical coordination. While the U.S. Department of Commerce in March 2014 announced its intention to transition its oversight of the IANA functions to the multistakeholder community, ICANN plans to maintain its commitments, including those explicitly prescribed in the document.

As one of the four key objectives to be evaluated as part of the AoC, the CCT review will also help inform how ICANN may approach a second round of new gTLDs, from the opening of the application process to delegation. To that end, the ICANN Board tasked the GNSO and ALAC to propose metrics that would not only inform this review but also provide insight into how to improve on the rollout of a new round of gTLD applications.

The ICANN Board asked the GNSO and ALAC to come up with metrics in December 2010. In June 2011, at the ICANN meeting in Singapore, a working group was formed to come up with recommended metrics for the CCT review. The working group's goal was to provide the ICANN Board with definitions, measures, and targets that could be useful to the CCT review team. In December 2012, the group presented the board with a document detailing 70 recommended metrics, with proposed definitions and three-year targets.²

The ICANN Board formed the IAG-CCT in September 2013 to review those recommended metrics and make recommendations to the review team based on an evaluation of the feasibility, utility and cost-effectiveness of each of the proposed 70 metrics. The group first met in November 2013, first via conference call, then in-person at the ICANN 48 meeting in Buenos Aires.

With the IAG-CCT's recommendations in hand, the ICANN Board may now take steps toward forming a review team to collecting the recommended data points, considering those recommendations made by the IAG-CCT. The CCT evaluation will provide insight into how the program fared, how the next round of applications might be improved, as well as provide general information on how people use the internet, view the DNS, and collect opinions Internet users may have about ICANN.

² See the updated document, "Advice requested by the ICANN Board regarding definitions, measures, and targets for competition, consumer trust and consumer choice," for a summary of the updated recommendations.

Previous new gTLD evaluations

Part of the IAG-CCT's mandate was to assess historical data regarding metrics used to evaluate earlier rounds of new gTLDs in 2000 and 2004. Five previous reports provided input on several metrics to evaluate past rounds and provide recommendations on implementation of future rounds of new gTLD delegations. With the selection in 2000 of seven new gTLDs (which were subsequently delegated in 2001 and 2002), the domain name space increased from 7 to 14. The seven new gTLDs chosen for delegation in 2000 included four unsponsored (.biz, .info, .name and .pro) and three sponsored TLDs: .aero, .coop and .museum. Six more sponsored gTLDs were introduced in 2003: .asia, .cat, .jobs, .mobi, .tel and .travel.

"The Final Report of the New TLD Evaluation Process Planning Task Force³," published in 2002, explored various topics like the opportunities and risks associated with parallel processing, quickening the pace of gTLD launches against the risk of cutting short the evaluation of the program, and setting priorities for the future evaluation team. The report's aim was to set the parameters for a future evaluation team, which published "A Plan for Action Regarding New gTLDs,"⁴ in 2002. That report found that sponsored TLDs seemed to generate fewer community and business concerns and generate fewer problems than unsponsored TLDs. For example, there were less worries about trademark infringement and cybersquatting in the sponsored space. Further, sponsored TLDs had fewer and less complex start-up and launch phase concerns.

Another report, published in 2004, by the Organization for Economic Co-operation and Development, "Generic Top Level Domain Names: Market Development and Allocation Issues,"⁵ found that ICANN's changes to the market structure for registering gTLDs has been successful. In particular, the division between registry and registrar functions has led to more competition with lower prices and greater innovation. The report did note, however, the early defensive registrations, domain name speculation and traffic aggregation has made it difficult to evaluate the early success of new gTLDs. The report tracked second-level domain name registrations in major gTLDs and ccTLDs, as well as geographic locations of registrations. In addition, it charted geographic locations of registries and registry operators and evaluated the market share of registries and registrars.

Also in 2004, Summit Strategies International's "Evaluation of the New gTLDs: Policy and Legal Issues"⁶ determined that the 2000 round of new gTLDs introduced some competition to the domain name marketplace, but indicated that how much competition was debatable. The report noted that examining market share, choice and price elasticity indicates a minimal level of enhanced competition. Other evidence the report notes indicates that registrants were finding new uses for domain names in the new gTLDs and that the new gTLDs may have attracted domain name registrants who didn't previously have any registrations.

A 2005 report from the World Intellectual Property Organization (WIPO), "New Generic Top-Level Domains: Intellectual Property Considerations⁷," explored the concerns and benefits of new gTLDs for IP

owners. On the one hand, the cost of policing registered marks and other protected names were highlighted as a concern of the expansion, the report also noted benefits for rights holders in an expanded DNS with potentially more relevant TLDs or TLDs identified with their brands.

Metric evaluation

The IAG-CCT met on a regular basis starting in November 2013 until the publication of this report. The first few meetings focused on categorizing the original 70 recommended metrics. They were grouped by ICANN staff into those where data was easily accessible; those whose data was deemed to be more difficult to compile due to challenges in acquiring meaningful statistics; metrics whose data came with a price tag; and those whose values or targets were unclear and thus were unlikely to provide meaningful input for the evaluation. Staff provided feedback to the IAG on each of these evaluation axes. Based on the final analysis, the group settled on its recommendations, which are detailed below.

The IAG took several passes at evaluating metrics. First, they explored those which staff deemed to be easily collectible and clearly useful to the evaluation. Of those, metrics that had baseline data that needed to be captured immediately as a snapshot in time were categorized as the first priority for collection. In the case of the global consumer survey of Internet users, registrants and potential registrants, and the economic study, the group discussed possible methodologies and related costs before coming to a consensus on a recommendation that was made to the ICANN Board at the ICANN 49 meeting in Singapore. For more on the survey and the economic study, see the First Priority Metrics section below.

The remaining metrics, upon further investigation by both ICANN staff and IAG-CCT members, were deemed to require outside resources, and thus came with a cost or needed further definition or clarification in order to make an informed recommendation. Based upon their evaluation for feasibility, utility and cost-effectiveness, the IAG-CCT members recommended the next subset of metrics for collection.

Some of the metrics that are included in the recommendation come with caveats for the analysis as the data produced may not offer a complete picture of the metric's indication of the New gTLD Program's success. For example, metrics 5.2, 5.3 and 5.4 are all related to growth in use of tools that hide domain names, such as QR codes or URL shorteners, and the use of Google or Facebook for hosted pages with domain names that may not be otherwise memorable. There was disagreement among IAG-CCT members on whether an increase in the use of such tools is indicative of trust in the DNS. Some members argued that an increase in the use of tools is more a reflection of increased choice to consumers using the Internet or simply a change in the nature of how Internet users employ technology. Others suggested that an increase in the use of such tools as compared with modest increases of registration and traffic in domain names registered in new gTLDs as opposed to domain names in the legacy space is an indication of a lack of trust. The group agreed to collect the data to offer the review team a robust cross-section of sources for their evaluation.

For the five metrics that were not recommended for inclusion in the review, the IAG-CCT members, together with staff, evaluated the data sources available for the five metrics that were flagged as potentially difficult to measure. The group collectively determined that those metrics were either redundant or that the data was not sufficiently available to provide meaningful insight.

First priority metrics

Baseline and available data

In an effort to categorize a subset of metrics as leading priorities, 37 of the 70 metrics were highlighted as falling into this category. These metrics were included because they calculated data that was readily available either internally or could be easily obtained from third party sources. They also represented data which were deemed to provide useful insight into the New gTLD Program.

Several of these metrics required the collection of baseline data to allow for a later comparison when domain name registrations in new gTLDs begin to saturate the market. IAG-CCT members expressed concern that some of this baseline data could become more difficult to obtain or no longer be available for collection with the passage of time. This issue was of particular concern with regard to the consumer survey as well as the economic study, as detailed below.

Table 1: First priority metrics

Metric	Description	Data source	Category
1.1	% DNS Service Availability (present SLA is 100%).	Internal, technical services team and registry reporting	Trust
1.2	% Availability for Registration Data Directory Services (RDDS). (SLA is 98%)	Internal, technical services team	Trust
1.3	% of Service Availability for Shared Registration Services (SRS, using EPP). (SLA is 98%). Open TLDs only.	Internal, technical services team	Trust
1.6	Relative incidence of breach notices issued to Registry operators for contract or policy compliance matters.	Internal, compliance team	Trust
1.7	Relative incidence of breach notices issued to Registrars, for contract or policy compliance matters.	Internal, compliance team	Trust
1.8	Relative Incidence of Registry & Registrar general complaints submitted to ICANN's Internic System.	Internal, compliance team	Trust
1.9	Relative incidence of combined UDRP and URS Complaints. URS is required only in new gTLDs, so combined UDRP and URS complaints may be comparable to UDRP complaints in legacy gTLDs	Internal, compliance team	Trust
1.10	Relative incidence of combined UDRP and URS Decisions against registrants.	Internal, collecting UDRP and URS providers' decisions	Trust
1.12	Decisions against Registry Operator arising from Registry Restrictions Dispute Resolutions Procedure (RRDRP).	Internal, collecting RRDRP decisions	Trust
1.20	Quantity and relative incidence of complaints regarding inaccurate, invalid, or suspect WHOIS records in new gTLD.	Internal, compliance team	Trust
1.22	Qualitative comparison of mission and purpose set forth in Question 18 of the new gTLD Application with current actual	Internal/external. Qualitative study may be conducted externally or may require a third	Trust

	use of the gTLD.	party's analysis.	
2.4	Quantity of TLDs using IDN scripts or languages other than English.	Internal, registry agreements	Choice
2.5	Quantity of Registrar websites offering IDN scripts or languages other than English.	Internal, registry and registrar agreements, websites	Choice
2.7	Quantity of different national legal regimes where new gTLD Registry Operators are based.	Internal, registry agreements	Choice
2.11	Measure the increased geographic diversity of registrants across all new gTLDs, as indication of new choices created by gTLD expansion.	Internal, technical services team, Whois records, zone files. Note that Whois records may not be a reliable record of geographic locations of registrants.	Choice
3.1	Quantity of total TLDs before and after expansion.	Internal, registry agreements	Competition
3.2	Quantity of gTLDs before and after expansion.	Internal, registry agreements	Competition
3.3	Quantity of unique gTLD Registry Operators before and after expansion.	Internal, registry agreements	Competition
3.4	Quantity of unique gTLD Registry Service Providers before and after expansion.	Internal, registry agreements	Competition
3.5	Quantity of Registrars before and after expansion, along with indication of country where Registrar is based. This measure should count only registrars distributing Open gTLDs.	Internal, registrar accreditation agreements	Competition
3.6	Relative share of new gTLD registrations held by "new entrants". For purposes of this measure, "new entrants" are gTLDs run by Registry Operators that did not operate a legacy gTLD. A "new entrant" is one whose ownership is not among owners of legacy gTLD registries.	Internal, registry agreements	Competition
7.1	How many gTLD registries have privacy policies which are clearly and easily accessible by end users	Internal, registry websites	Trust
7.2	How many gTLD registries have allocation policies which are clearly and easily accessible by end users, even if those policies simply restrict or prohibit public availability	Internal, registry websites	Trust
7.3	How many registries disclose end-user information regarding their codes of conduct for sub-domain owner/operators	Internal, registry websites	Trust
8.1	How many complaints are received by ICANN related to confusion or	Internal, compliance team	Trust

	misunderstanding of TLD functions		
8.3	How many registries have been the subject of complaints related to their Public Interest Commitments (PICs)	Internal, compliance team	Trust
8.4	How many registries have lost a dispute resolution process related to their PICs	Internal, compliance team	Trust
9.1	Are end-user software applications capable of implementing all of the new gTLDs; Can browsers and DNS clients in end-user systems resolve all new gTLDs	Internal, technical services team. Universal acceptance study will examine this and metric 9.2.	Trust
9.2	Which browsers or other end-user applications require plugins or user-installed enhancements in order to use new gTLDs	See 9.1.	Trust
9.3	Number of reports of name collisions	Internal, technical services team	Trust

Consumer survey and economic study

Another subset of metrics derived from the first priority class were categorized as requiring a global consumer survey to gauge public opinion not only on the New gTLD Program, but also on general use and understanding of the DNS. As anticipated in the ICANN Board of Directors Resolution 2014.03.27.22 – 2014.03.27.26,⁸ passed at the ICANN 49 meeting in Singapore, the two studies are critical “to establish a benchmark of the current state of the generic domain name sector prior to the widespread adoption and use of new gTLDs.”

After gaining board approval for the two studies, two smaller groups of IAG-CCT members split into ad hoc working groups to provide feedback to ICANN staff on the RFPs that were to be written. A timeline for the consumer survey RFP was agreed upon:

RFP released	16 July 2014
Respondent proposals due	6 August 2014
Target date for contracting	24 September 2014

With this timeline in mind, ICANN anticipates the launch of a baseline survey in either late 2014 or early 2015 with a follow-on survey to be conducted one year later. ICANN staff contacted more than 20 survey firms with an invitation to participate in the survey, in addition to publicly making the RFP available on the ICANN website: <https://www.icann.org/resources/pages/rfps-2012-02-25-en>

Table 2: Survey metrics

Metric	Description	Considerations/Definitions	Category
--------	-------------	----------------------------	----------

⁸ See: <https://features.icann.org/collection-benchmarking-metrics-new-gtld-program-support-future-aoc-review-competition-consumer>

<p>1.4</p>	<p>Survey of perceived consumer trust in DNS, relative to experiences before the gTLD expansion. Survey could at least measure experiences with phishing, malware and spam; confusion about new gTLDs; user experience in reaching meaningful second-level domains; registrant experience in being in a different gTLD; Registrant and Internet users' experience with regard to cybersquatting. Survey to be conducted every two years (biennial).</p>	<p>CONSIDERATIONS: Note that questions related to trust should also include measures of awareness about new gTLDs, and DNS in general. Capture baseline of attitudes now – do not ask survey respondents to recall past attitudes. ICANN provides the following definitions as a starting point for the contracted vendor to refine these terms into clear, common-language definitions that can easily translate into other languages:</p> <p>Consumer: Actual Internet users and registrants, and potential registrants.</p> <p>Consumer trust: The confidence Consumers have in the domain name system. This includes (i) trust in the consistency of name resolution (ii) confidence that a TLD registry operator is fulfilling the Registry's stated purpose and is complying with ICANN policies and applicable national laws and (iii) confidence in ICANN's compliance function.</p> <p>Consumer choice: The range of options available to Consumers for domain scripts and languages, and for TLDs that offer meaningful choices as to the proposed purpose and integrity of their domain name registrants.</p> <p>Phishing: Using social and technical engineering to steal consumers' personal identity data and financial account credentials.</p> <p>Malware: Short for malicious software, used to disrupt computer operations, gather sensitive information or gain access to private computer systems.</p> <p>Spam: Electronic junk mail or junk newsgroup postings. Some people define spam even more generally as</p>	<p>Trust</p>
------------	---	--	--------------

		<p>any unsolicited email.</p> <p>Second-level domains: The data directly before the top-level domain (TLD). For example, in www.example.com, “example” represents the second level domain, as the suffix “(dot)-com” represents the TLD. The SLD is generally the portion of the URL that identifies the website's domain name.</p> <p>Cybersquatting: Registering, trafficking in, or using a domain name with bad faith intent to profit from the goodwill of a trademark belonging to someone else. Note: While the IAG-CCT proposed this as a starting point for a definition in the RFP for the global consumer survey, there was divergence in the group’s opinion on how narrowly to define cybersquatting. In particular, some group members indicated that measuring bad faith registrations would be difficult and potentially indiscernible to the average Internet user.</p> <p>gTLDs: A TLD (top-level domain) appears in a domain name as the string of letters following the last (right-most) dot, such as “net” in www.example.net. A gTLD (generic TLD) is a TLD that does not correspond to any country code.</p>	
2.1	<p>Measure potential registrants’ understanding of TLD benefits and restrictions, such that potential registrants can make informed choices about registration of their domain names.</p>	<p>CONSIDERATIONS FOR 2.1 AND 2.2: Survey should not serve as a venue to explain policies or to explain the nature of gTLD benefits or restrictions. It is reasonable to assume that registrants’ and end-users’ understanding and knowledge of gTLD benefits and restrictions will be conditional on their awareness of new gTLDs. Therefore, ICANN anticipates survey questions</p>	Choice

		regarding this metric will likely include skip patterns to target survey respondents who are aware of the issues, while allowing survey respondents who are unaware to move to the next section of the survey.	
2.2	Measure Internet users’ understanding of TLD eligibility restrictions, such that Internet users can make informed choices about reliance on domain names in that TLD.	CONSIDERATIONS: See considerations in 2.1.	Choice
2.3	Biennial surveys of perceived consumer choice in DNS, relative to experience before the gTLD expansion. Survey should assess public awareness of new gTLDs. Survey should also measure costs of defensive or duplicate registrations. Survey should assess motivations, intent and satisfaction with new gTLDs.		Choice
2.10	Automated analysis or online survey to determine the number of “duplicate” registrations in new gTLDs.	<p>CONSIDERATIONS FOR 2.10, 2.13, and 4.3: Responses will likely be dependent on awareness of new gTLDs and perhaps on the financial resources of registrants. For registrants who are aware of new gTLDs, the survey instrument should be constructed to measure:</p> <ol style="list-style-type: none"> 1. Prevalence of registrants holding multiple domains 2. Motivation for registering (e.g., defensive) and not registering (e.g., lack of resources) multiple domains, regardless of knowledge of new gTLDs. 3. For registrants who are aware of expansion, measure attitudes towards expansion and satisfaction with expansion of gTLDs. For example, the instrument might inquire about what the expansion means to the respondent (what are the 	Choice

		implications, such as providing increased choice or necessitating defensive measures), and inquiries about the potential benefits in comparison to the potential costs.	
2.12	Survey or Study to gauge the frequency with which users access Internet resources via tools that do not reveal the TLD (e.g. QR Codes, search results, apps, etc., that do not display URLs).	CONSIDERATIONS: If this metric is also used to inform trust in the DNS, will need to disentangle the issue of familiarity from why users choose these tools. To operationalize these metric, contractors will work with ICANN to devise a list of relevant examples of tools that do not reveal gTLDs, and to describe the examples in plain language.	Choice
2.13	Biennial survey of perceived consumer choice relative to experiences before the gTLD expansion. Survey should assess public awareness of new gTLDs. Survey should also measure costs of defensive or duplicate registrations. Survey should assess motivations, intent, and satisfaction with new gTLDs.	CONSIDERATIONS: See 2.10.	Choice
4.1	Frequency of success in reaching the intended information supplier through direct entry of domain names.		Trust
4.2	Frequency of landing at unintended destinations.		Trust
4.3	Frequency of redundant or defensive domains (i.e., multiple domains pointing to the same destination)	CONSIDERATIONS: See 2.10.	Trust
5.1	Relative preference or explicit use of domain names versus search engines for end-user general Internet use.	CONSIDERATIONS: The survey should also consider including as part of this topic, other tools that do not reveal TLDs such as those mentioned in Metric 2.12.	Trust

Metrics 3.9-3.11 were determined to require a third party's economic analysis of wholesale and retail pricing in the new gTLD space, as well as other indicators of non-price-related competition indicators. Because pricing in the legacy gTLD space may shift with the introduction of new gTLD domain names,

IAG-CCT members felt it was important to launch this study as soon as possible to ensure a sufficient baseline of data was available for comparison when new gTLD domain names become more prevalent online. The study will place high importance on confidentiality of pricing data, particularly as it relates to specific registries, to guard against the appearance of collusion, and to protect registries' and registrars' competitive positions.

In addition to the issues raised in metrics 3.9-3.11, the IAG-CCT members recommended several additional issues to be considered in the study. The following considerations were included in the RFP for the economic study published in September 2014:

- How are consumers informed about or able to purchase so-called “premium” domain names? And how do registrars identify domain names for premium pricing?
- How many domain names have been withdrawn from general availability due to speculation or bulk registrations?
- Which registries are supported by which registrars?
- How do registrars present TLDs on their websites, i.e. in terms of shelf space?
- Is shelf space fixed, randomly rotated, or adaptable according to different criteria, such as price?
- Do registrars give priority on their websites or within their pricing and service offerings to gTLDs which they operate or with which they are otherwise associated?

ICANN anticipates contracting a vendor to conduct this study by November 2014.

Table 3: Economic study metrics

Metric	Description	Category
3.9	Wholesale price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition
3.10	Retail price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition
3.11	Qualitative assessment of non-price indicia of competition through innovations that benefit registrants and users, particularly for new markets served.	Competition

Remaining metrics

The remaining metrics were evaluated based on feasibility, utility and cost-effectiveness – the three axes for analysis prescribed in the IAG-CCT’s mandate from the ICANN Board. ICANN staff and IAG-CCT members worked together to research possible data sources, evaluate their applicability to the review and provide feedback to the review team. Most of these remaining metrics were adopted in the recommendation for inclusion in the review. The remaining metrics were broken into two categories: Those that would require multiple data sources that may not be sufficient to provide a complete picture, and those that were recommended for exclusion.

Table 4: Remaining metrics for evaluation

Metric	Description	Data source/considerations	Category
1.5	% Uptime for Registrar services such as WHOIS, contact info, and complaints, assuming that SLAs are established for these measures in the new RAA.	Internal, technical services and RAAs, dependent upon established SLAs	Trust
1.11	Quantity of intellectual property claims and cost of domain name policing relating to new gTLDs. Relative incidence of IP claims made in good faith should be measured in 3 areas: IP claims against registrants regarding second level domains in new gTLDs; IP claims against registrars regarding Second level domains in new gTLDs; IP claims against new gTLD registries regarding second level domains and TLDs. Quantity of second level domains acquired because of infringement or other violations of IP rights of acquiring parties; and Cost of domain name policing and enforcement efforts by IP owners.	External, IAG-CCT members exploring feasibility with International Trademark Association (INTA,) which has expressed an interesting in polling their members on this topic. Subject to some definition of terms, such as which costs would be included, whether these are internal or external (in-house vs. outside counsel.)	Trust
1.13	Quantity of Compliance Concerns regarding Applicable National Laws, including reported data security breaches.	Internal, compliance team. Data security breaches are tracked, but not concerns related to applicable national laws. Rephrased to read: Quantity of compliance concerns regarding data security breaches.	Trust
1.14	Quantity and relative incidence of domain takedowns.	External, will require reporting from registries	Trust
1.15	Quantity and relative incidence of spam from domains in new gTLDs, which could be measured via specialized email addresses and methodologies.	External, multiple sources will likely be required to capture a comprehensive picture of abusive activity in the DNS. Possible sources include the Anti-Phishing Working Group, Surbl, Spamhaus and others.	Trust
1.16	Quantity and relative incidence of fraudulent transactions caused by phishing sites in new gTLDs.	See 1.15.	Trust
1.17	Quantity and relative incidence of detected phishing sites using new gTLDs	See 1.15.	Trust
1.18	Quantity and relative incidence of detected botnets and malware distributed using new gTLDs.	See 1.15.	Trust
1.21	Relative incidence of errors in new gTLD	Internal, technical services team.	Trust

	zones.	Will require some clearer definition of "errors."	
2.8	Measure share of Sunrise registrations & domain blocks to total registrations in each new gTLD.	Internal, may require some data from registries.	Choice
2.9	Relative share of new gTLD registrations already having the same domain in legacy TLDs prior to expansion. For this measure, count all registrations that redirect to domains in legacy TLDs. Open gTLDs only.	Internal, technical services team. The team can query redirects in the system to SLDs that match between legacy TLDs and new gTLDs.	Choice
2.10	Automated analysis or online survey to determine the number of "duplicate" registrations in new gTLDs. For purposes of this measure, "duplicate" registrations are those where registrant reports having (and still maintaining) the same domain name in a legacy gTLD. Open gTLDs only.	Internal, consumer survey results. 2.10 is related to 2.9 but may require survey results from a statistically significant sample of relevant registrants.	Choice
2.14	DNS traffic in new gTLDs should be compared to contemporary user traffic in legacy gTLDs. DNS traffic is an indicator of trust, choice, and competition. If comprehensive traffic data is not available, sampling should be used.	External, registry reports, DNS traffic market research. Some of the data may be reported by registry operators, while some purchased data may be required for a more complete picture.	Choice
3.7	To assess competitive impact of new gTLDs, measure the quantity of second level registrations per gTLD and ccTLD on a weekly or other interval. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, registration, country of operations, single registrant, etc.).	Internal, external, zone files. While gTLD zone file data is readily available, ccTLD data is not or may have use restrictions. This may limit the review team's ability to comprehensively analyze the data.	Competition
3.8	Quantity of "unique" second level registrations in the new gTLD space where that same string does not appear as a registration in any other TLD on a weekly or other interval basis (data analyzed in conjunction with website traffic identified in metric 2.14). Open gTLDs only.	See 2.14 and 3.7.	Competition
4.4	Frequency of dead-end domains (registered but do not resolve)	Internal, technical services team. May require comparing zone files to Whois records.	Trust
4.5	Numbers of complaints received by ICANN regarding improper use of	Internal, compliance team. Will require defining "improper use"	Trust

	domains	with categories of compliance categories already tracked in system.	
5.2	Growth in use of hosted pages for organizations (such as Facebook or Google+)	External, market research. May want to consider in parallel with survey metrics related to use of tools that hide URLs.	Trust
5.3	Growth in use of QR codes	See 5.2.	Trust
5.4	Growth in use of URL shortening services	See 5.2.	Trust
5.5	Growth in registrations in ccTLDs relative to gTLDs	Internal, technical services team. Will require data from ccTLDs, which may not provide a representative sample. In addition, ccTLD data may have use restrictions.	Trust
6.2	Number of complaints to police agencies alleging fraud or misrepresentation based on – or traced to – domain names	External, fraud reports, government and law enforcement authorities. May be difficult to gather a representative sample of data that can be traced to domain names. May have to rely on reports more generally tracking cyber crime.	Trust

Metrics that may require contextual analysis or rephrasing

A subset of metrics were identified as requiring additional contextual analysis in the final review or rephrasing to capture the available data. Twelve metrics fell into this category. Among them:

1.5: % Uptime for Registrar services such as WHOIS, contact info, and complaints, assuming that SLAs are established for these measures in the new RAA.

ICANN’s technical services team can provide data on this metric provided the SLAs are established and ICANN receives reportable data.

1.11: Quantity of intellectual property claims and cost of domain name policing relating to new gTLDs. Relative incidence of IP claims made in good faith should be measured in 3 areas: IP claims against registrants regarding second level domains in new gTLDs; IP claims against registrars regarding Second level domains in new gTLDs; IP claims against new gTLD registries regarding second level domains and TLDs. Quantity of second level domains acquired because of infringement or other violations of IP rights of acquiring parties; and cost of domain name policing and enforcement efforts by IP owners.

IAG-CCT members and ICANN staff continue to explore avenues for collecting this data. The International Trademark Association (INTA) has expressed an interesting in polling its members on this topic.

1.13: Quantity of compliance concerns regarding applicable national laws, including reported data security breaches.

ICANN staff working with its liaisons in the law enforcement community determined there was no reliable way to gather data linking compliance concerns and “applicable” national laws. As such, the group decided to drop the first part of the metric. In addition, as data security breaches are required to be reported to ICANN, this part of the metric will be counted. The rephrased metric now reads: “Number of reported data security breaches.”

1.14 Quantity and relative incidence of domain takedowns.

ICANN will reach out to registries to provide this information, which they are not required to provide. It will be important to gauge the incidences of takedowns in the context of the reasons for the takedowns. For examples, were domains taken down for nonpayment of services or due to law enforcement concerns? The relative incidence of various justifications may provide greater insight into the nature of abusive behavior in particular TLDs. It may also require additional information from governments or law enforcement authorities, who may only provide partial data on some of these requests.

1.15 Quantity and relative incidence of spam from domains in new gTLDs, which could be measured via specialized email addresses and methodologies.

1.16 Quantity and relative incidence of fraudulent transactions caused by phishing sites in new gTLDs.

1.17 Quantity and relative incidence of detected phishing sites using new gTLDs

1.18 Quantity and relative incidence of detected botnets and malware distributed using new gTLDs.

Data on abusive behavior in the DNS is widely available and collected by third parties. Though these data sets often come with a fee – and will require some technical expertise to interpret and analyze the numbers – the IAG-CCT members agreed that this is important data to collect and compare against a baseline of abusive behavior in the legacy TLDs. Given the fact that multiple streams of data define particularly botnets and malware in different ways, the group recommended exploring multiple sources of information to compare the data and help the review team reach a conclusion about how this behavior is changing over time. Spam and phishing statistics may be best provided by Spamhaus and the Anti-Phishing Working Group.

1.19: Quantity and relative incidence of sites found to be dealing in or distributing identities and account information used in identity fraud.

IAG-CCT members investigated the possibility of asking an academic or graduate students to conduct this research as it may require a complex mapping effort or more detailed research efforts than can be provided in-house. IAG-CCT members also noted the data that is available may only provide a snapshot of a larger, underground network, making it more important to capture a baseline soon.

1.21 Relative incidence of errors in new gTLD zones.

While this is data that can be internally gathered, IAG-CCT members were asked to provide a further definition of “errors” in the case of gTLD zones. Some initial definitions included the following: Errors may be caused by commas instead of dots, bad IP addresses or malformed domains. ICANN is working with its technical services team to better define measures to capture this data.

Upon consultation with ICANN’s technical services team, ICANN staff recommends using a test based on that which is used to measure lame delegations. In short, the test would query a given TLD for domain names registered and whether they are actually represented in the zone file. ICANN staff suggested that

syntactic errors (such as commas instead of dots) are extremely difficult to measure due to DNS resiliency. The distinction is that the chosen test should measure the quality of the registration data and not the quality of registrants' DNS operations.

2.6: The percentage of IDNs as compared to the total number of gTLDs in each script or language should be compared to the percentage of people who use each particular language or script.

IAG-CCT members decided that the numerator in this instance is the data in metrics 2.4 and 2.5 regarding IDN registrations and available registries. The group recommends the review team collect this data by comparing the numbers available to UNESCO or other data on languages spoken in the world if the review team so chooses. The group recommends the metric to be rephrased to read: "The number of registrations in IDN TLDs as compared to the total number of registrations in new gTLDs. Measure growth over time."

2.8: Measure share of Sunrise registrations & domain blocks to total registrations in each new gTLD.

IAG-CCT members agreed that this is an important metric to capture the nature of domain name transactions during the sunrise and launch periods. To provide a baseline for comparison, ICANN may need to require some legacy registries to provide sunrise and domain block information. For new gTLDs, registries will provide ICANN with sunrise data, but registries are not required to report domain blocks. Depending on the response ICANN receives from registry operators, the available data may be limited and thus difficult to analyze. It will be important to distinguish between domain blocks and IDN variants to ensure that the right set of data is being captured.

2.9: Relative share of new gTLD registrations already having the same domain in legacy TLDs prior to expansion. For this measure, count all registrations that redirect to domains in legacy TLDs. Open gTLDs only.

2.10: Automated analysis or online survey to determine the number of "duplicate" registrations in new gTLDs. For purposes of this measure, "duplicate" registrations are those where registrant reports having (and still maintaining) the same domain name in a legacy gTLD. Open gTLDs only.

The distinction between these two metrics is that 2.10 is meant to survey registrants who are maintaining identical sites in different TLDs, while 2.9 only looks at those domain names which redirect from new gTLDs to legacy TLDs. The group noted that 2.10 may be a challenge if the consumer survey does not sample a statistically significant sample of registrants. Further, ICANN's technical services team notes that this would be extremely difficult to measure using queries or other methodologies given the size of the data sets that must be compared. The IAG-CCT members agreed to recommend the review team put 2.10 on hold until it can confirm that 2.9 resulted in a statistically significant sample of relevant registrants.

2.14: DNS traffic in new gTLDs should be compared to contemporary user traffic in legacy gTLDs. DNS traffic is an indicator of trust, choice, and competition. If comprehensive traffic data is not available, sampling should be used.

Measuring traffic in new gTLDs may require the purchase of third party data. Sampling traffic in particular TLDs may not offer an accurate picture of traffic in the DNS. Registry operators report on queries that the TLD receives. This may be one source for capturing the data. Multiple vendors offer access to more complete data sources on DNS traffic, though the price tag may vary. ICANN staff recommends the review team revisit this topic to determine the best source of data.

3.7: To assess competitive impact of new gTLDs, measure the quantity of second level registrations per gTLD and ccTLD on a weekly or other interval. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, registration, country of operations, single registrant, etc.).

3.8: Quantity of “unique” second level registrations in the new gTLD space where that same string does not appear as a registration in any other TLD on a weekly or other interval basis (data analyzed in conjunction with website traffic identified in 2.14). Open gTLDs only.

While ICANN has access to zone files for gTLDs, there may be use restrictions for ccTLD zone files. With limitations on data available from ccTLDs IAG-CCT members acknowledged these metrics may prove challenging to gain a comprehensive picture of unique domain name registrations in the new gTLD space. Counting active domain name registrations may result in a clearer picture of rate of growth.

4.4: Frequency of dead-end domains (registered but do not resolve)

ICANN staff recommends further refining the definition of “dead-end domains.” Domains that are registered but do not resolve may be attributed to IDN variants, where a set of variants may be registered but only one may resolve. Measuring parked domains may also result in faulty data as some domains may be registered for email or other such purposes. Similarly, websites that redirect may also result in false reports of “dead-end domains.” Finally, a dead-end domain could be one registered and delegated but the authoritative servers for the name are inoperable, unreachable or otherwise misfiring. This might be a measure of how little a registrant values a name registration in the TLD or just bad management by the registrant.

4.5: Numbers of complaints received by ICANN regarding improper use of domains.

8.1: How many complaints are received by ICANN related to confusion or misunderstanding of TLD function?

These metrics both required further definition to be able to parse data available from ICANN’s contractual compliance department. Because the compliance department tracks complaints based on certain types of complaints, ICANN staff worked with the IAG-CCT members to identify complaint types that were most applicable to these metrics.

Complaints related to improper use of domains:

- Reports of alleged illegal activity: These complaints are referred to government or law enforcement agencies.
- Legitimate domain use: Registrants are not required to use their websites in any particular way.
- Website content: As ICANN does not have the authority to police website content, these complaints are closed.
- Hijacking (email or control panel): Hijacking of email addresses or access credentials should be reported to law enforcement.
- Denied OK – Evidence of fraud: The registrar was justified in refusing to transfer a domain name because of evidence of fraud.
- Spam: ICANN does not have authority to address complaints about spam.

Complaints related to confusion or misunderstanding of a TLD function:

- Non-IDN: The complaint is not for an IDN domain name.

- Registrar does not offer IDNs: Complaint about an IDN registered with a registrar that does not offer IDNs.
- Deletion OK: Registrar demonstration that deletion of a domain name was compliant with the 2013 RAA.
- Not a new gTLD: Complaint notice about trademark notices in a domain that is not a new gTLD, which require trademark notices.
- Outside claims period: Trademark notice complaint that is outside the claim notice period.
- Non-2013 RAA: Complaint is related to a 2013 RAA but the registrar is using a 2001 or 2009 version of the RAA.
- ccTLD: The complaint is related to a domain registered in a ccTLD. ICANN does not accredit ccTLD registrars.
- Customer service not in RAA: ICANN does not have contractual authority to address customer service issues that fall outside the RAA.
- Private dispute: The complaint indicates a private dispute between the complainant and a third party, over which ICANN does not have contractual authority.
- Spam: ICANN does not have authority to police spam.
- Website content: ICANN does not regulate website content.
- Complaint about wrong website: Complaint referred to a site that is not registered with the referenced registrar.
- Complaint about wrong entity: Complaint referenced a non-ICANN-accredited registrar or a wrong entity.
- Complaint outside data retention obligations: Complaint references data that registrars aren't obligated to maintain or those that can no longer be maintained due to age.
- Irrelevant: A Whois-related complaint for an irrelevant/invalid complaint.
- Complainant owns domain name: Complainant owns the domain name about which they are complaining.
- Complaint outside scope: Complaint falls outside provisions of registry agreement.
- ICANN not a registrar: ICANN doesn't register domain names.
- Not applicable to this TLD (Invalid): The complaint is not applicable to the generic, top-level domain (gTLD) of the complaint.
- Reseller/web hosting: Complaint falls outside the scope of the RAA and is with an entity that does not have a contractual relationship with ICANN.
- Blocked SLD confirmed (Invalid): The registry operator may reserve or block additional character strings at its own discretion; or the second level domain (SLD) name of the complaint is in the list of SLD names required to be blocked per the Alternate Path to Delegation Report of the gTLD of the complaint.

5.2: Growth in use of hosted pages for organizations (such as Facebook or Google+)

5.3: Growth in use of QR codes

5.4: Growth in use of URL shortening services

There was disagreement among IAG-CCT members on the utility of these metrics as gauges of trust in the DNS. Some members argued that growth in the use of alternative tools to access content on the Internet is more a reflection of changes in how people interact with the DNS than a measure of trust. As such, some members argued that it may be a better indicator of choice, though not choice in the DNS.

Other IAG-CCT members suggested the metrics are reliable indicators of trust because growth in the use of these services may indicate diminished trust in and use of what may arguably be more memorable domain names in the new gTLDs.

Because the data is available, for a fee, using market research and other web analytic firms, the group decided to recommend collection of this data to the review team. ICANN staff recommend considering the findings in context, perhaps in consideration with DNS traffic in new gTLDs to be measured in 2.14.

6.2: Number of complaints to police agencies alleging fraud or misrepresentation based on – or traced to – domain names

The review team may want to consider rephrasing this metric to be more broadly inclusive of cyber crime or cyber fraud, as opposed to connecting those crimes to domain names, which may be difficult to track. There is global data available on cyber crime, such as Kroll's Global Fraud Report and econsumer.gov, an initiative of the International Consumer Protection and Enforcement Network.

Metrics that were not recommended

The following metrics were deemed to be redundant, presented difficulties for data collection, or were defined in such a way that other metrics may be capturing the same information.

2.13: Biennial survey of perceived consumer choice relative to experiences before the gTLD expansion. Survey should assess public awareness of new gTLDs. Survey should also measure costs of defensive or duplicate registrations. Survey should assess motivations, intent, and satisfaction with new gTLDs.

IAG-CCT members decided this metric was duplicative of metric 2.3: Biennial surveys of perceived consumer choice in DNS, relative to experience before the gTLD expansion.

5.6: Growth of Software Defined Networking (SDN) as alternative to the DNS

For the purposes of this analysis, SDN was defined as those tools that hide a URL when navigating the Internet, such as QR codes. Given that the group recommended the collection of data related to tools that present an alternative to memorable domain names in metrics 5.2-5.4, the IAG-CCT members chose to recommend this metric for exclusion from the analysis. IAG-CCT members also noted another definition for SDN as a different approach to computer networking.

6.1: Number of consumer complaints to government agencies related to confusing or misleading domain names

The IAG-CCT members agreed that this would be difficult data to capture from government agencies that may track data in disparate ways. In addition, the group expressed concern that the "confusing or misleading domain names" may be difficult to define in a consistent way across different legal environments and cultures.

6.3: Number of fraud investigations where WHOIS information positively assisted investigation and identification of offending parties

The group recommended this metric be excluded from the evaluation as feedback indicated law enforcement would be unwilling to reveal their investigation techniques in a public way, nor were they likely to keep track of this data on a larger scale. Further, some members suggested that there was little connection between this metric and the success of the New gTLD Program.

8.2: How many registries are subject to Compliance activity based on reported breaches of RAA?

The group members agreed that metric 1.6, Relative incidence of breach notices issued to Registry operators for contract or policy compliance matters, covers this topic given that registries are not subject to compliance activity based on reported breaches of an RAA. Further, metric 1.7 also captures compliance activity related to registrar breach notices: Relative incidence of breach notices issued to Registrars, for contract or policy compliance matters. Consequently, this measure was recommended for exclusion.

Proposed new metrics

Over the course of its discussions, IAG-CCT members raised examples of potential abuses in the New gTLD Program and debated potential sources of data that may be able to quantify some of that activity. As a result, the group came up with 14 potential new metrics. The group came to the consensus that many of these could be included in the economic study ICANN is commissioning to evaluate pricing trends and marketing models. Others were deemed difficult to obtain or would rely on contracted parties providing the data. Below are listed each of the metrics followed by both IAG-CCT and staff feedback on their utility.

Evaluation

1. Number or percentage of failed registrations
2. Percentage or number of pre-registrations that converted into real registrations
3. Number of registrars who accepted pre-registrations on gTLDs but did not enter into a contract with the registry

Evaluation: ICANN does not have access to this data and would have to ask registrars for their cooperation in providing this information. With more than 1,000 accredited registrars, it could prove difficult to capture a meaningful sample of registrars willing to provide the necessary data. Further, some of the data may not be an accurate indicator of trust or choice. For example, in metric 1, failed registrations may be due to canceled credit card transactions or a registrant changing her mind. Similarly with metric 2, an increase over time may simply be an indicator of trust in a registrar and not necessarily in the DNS. Some data related to metric 3 may be captured in the economic study insofar as it relates to registrars marketing new gTLDs.

4. How were users informed or able to purchase premium names?

Evaluation: The group recommended incorporating this question into the economic study.

5. Number of registrations that are non-arms-length transactions.
6. If a registration was non-arms-length transaction how was the domain used?

Evaluation: Arms-length transactions were defined as those which involve a third party in the registration of a domain name. For example, if a registry is registering domain names through a related party, it would be considered an arms-length transaction. If it was directly registering domain names, that would be considered non-arms-length. The data may be difficult to obtain as it relies on registries' self-reporting these figures. Gathering a representative sample of these figures from enough new gTLDs to draw valid conclusions may be a challenge.

The metrics question the impact of such behavior on consumer trust and choice. These metrics may be somewhat addressed in metric 2.8, the share of sunrise registrations and domain blocks in new

gTLDs. Evaluating these registrations for motive may be difficult to establish. Survey metrics related to registrants' experiences attempting to register domain names in new gTLDs may help to provide context for this metric.

7. Which registries and TLDs are supported by which registrars?
8. How does each registrar present each TLD on their websites, from the point of view of "shelf space" and the user experience?
9. Is the presentation or prioritization of "shelf space" among available TLDs is fixed, randomly rotated, or adaptable according to different criteria, including payment?
10. Do registrars give priority, on their websites or within their pricing and service offerings, to TLDs which they own (as vertically integrated registrars) or with which they are otherwise associated?
11. Data on the registration of domain names in the new gTLDs.
12. Data on the numbers of domains which have been withdrawn from consumer choice by speculation or bulk registrations.
13. Baseline data on wholesale/retail prices charged for 'premium' valued domains across the spectrum of new Registries.

Evaluation: IAG-CCT members agreed that these questions could all be incorporated into the RFP for the economic study, particularly as they relate to marketing of new gTLDs.

14. Number of reports of name collisions

Evaluation: IAG-CCT members felt that given the attention this issue has received and ICANN's own plans to track incidences of such collisions, this would be an important metric to include. It will be included in the category of trust metrics.

Conclusion

The IAG-CCT members worked together over the course of nearly a year to reach consensus on the recommendations made in this report. While there may have been disagreement on some metrics, this report aims to present a complete picture of the various viewpoints that were considered in the group's discussions in order to inform more fully the review team's own plans for moving forward with its review plan.

By using the IAG-CCT's mandate to evaluate each metric for feasibility, utility and cost-effectiveness, the group used a consistent approach in composing its advice. The final group of 66 recommended metrics represents the IAG-CCT'S attempt to capture a complete picture of the New gTLD's Program's progress through several lenses encapsulating competition, consumer choice and consumer trust. These represent several axes of ICANN's own internally available data, as well as external sources, such as the global consumer survey, economic study and market research.

The IAG-CCT submits this report with the goal of serving as a useful tool as the review team begins to tackle the challenge of the CCT review.

Appendix 1: Original proposed metrics

Note: All metrics were recommended by the Generic Names Supporting Organization (GNSO) and the At-Large Advisory Committee (ALAC).

METRIC	DESCRIPTION	CATEGORY
1.1	% DNS Service Availability (present SLA is 100%).	Trust
1.2	% Availability for Registration Data Directory Services (RDDS). (SLA is 98%).	Trust
1.3	% of Service Availability for Shared Registration Services (SRS, using EPP). (SLA is 98%). Open TLDs only	Trust
1.4	Survey of perceived consumer trust in DNS, relative to experiences before the gTLD expansion. Survey could at least measure experiences with phishing, parking sites, malware and spam; confusion about new gTLDs; user experience in reaching meaningful second-level TLDs; registrant experience in being in a different gTLD; Registrant and Internet users' experience with regard to cybersquatting. Survey to be conducted every two years (biennial).	Trust
1.5	% Uptime for Registrar services such as WHOIS, contact info, and complaints, assuming that SLAs are established for these measures in the new RAA.	Trust
1.6	Relative incidence of breach notices issued to Registry operators for contract or policy compliance matters.	Trust
1.7	Relative incidence of breach notices issued to Registrars, for contract or policy compliance matters.	Trust
1.8	Relative Incidence of Registry & Registrar general complaints submitted to ICANN's Internic System.	Trust
1.9	Relative incidence of combined UDRP and URS Complaints. URS is required only in new gTLDs, so combined UDRP and URS complaints may be comparable to UDRP complaints in legacy gTLDs	Trust
1.10	Relative incidence of combined UDRP and URS Decisions against registrants.	Trust

1.11	<p>Quantity of intellectual property claims and cost of domain name policing relating to new gTLDs.</p> <p>Relative incidence of IP claims made in good faith should be measured in 3 areas:</p> <p>IP claims against registrants regarding second level domains in new gTLDs;</p> <p>IP claims against registrars regarding Second level domains in new gTLDs;</p> <p>IP claims against new gTLD registries regarding second level domains and TLDs.</p> <p>Quantity of second level domains acquired because of infringement or other violations of IP rights of acquiring parties; and</p> <p>Cost of domain name policing and enforcement efforts by IP owners.</p>	Trust
1.12	Decisions against Registry Operator arising from Registry Restrictions Dispute Resolutions Procedure (RRDRP).	Trust
1.13	Quantity of Compliance Concerns regarding Applicable National Laws, including reported data security breaches.	Trust
1.14	Quantity and relative incidence of Domain Takedowns.	Trust
1.15	Quantity and relative incidence of spam from domains in new gTLDs, which could be measured via specialized email addresses and methodologies.	Trust
1.16	Quantity and relative incidence of fraudulent transactions caused by phishing sites in new gTLDs.	Trust
1.17	Quantity and relative incidence of detected phishing sites using new gTLDs.	Trust
1.18	Quantity and relative incidence of detected botnets and malware distributed using new gTLDs.	Trust
1.19	Quantity and relative incidence of sites found to be dealing in or distributing identities and account information used in identity fraud.	Trust
1.20	Quantity and relative incidence of complaints regarding inaccurate, invalid, or suspect WHOIS records in new gTLD.	Trust
1.21	Relative incidence of errors in new gTLD zones.	Trust
1.22	Qualitative comparison of mission and purpose set forth in Question 18 of the new gTLD Application with current actual use of the gTLD.	Trust
2.1	Measure potential registrants' understanding of TLD benefits and restrictions, such that potential registrants can make informed choices about registration of their domain names.	Choice

2.2	Measure Internet users' understanding of TLD eligibility restrictions, such that Internet users can make informed choices about reliance on domain names in that TLD.	Choice
2.3	Biennial surveys of perceived consumer choice in DNS, relative to experience before the gTLD expansion.	Choice
2.4	Quantity of TLDs using IDN scripts or languages other than English.	Choice
2.5	Quantity of Registrar websites offering IDN scripts or languages other than English.	Choice
2.6	The percentage of IDNs as compared to the total number of gTLDs in each script or language should be compared to the percentage of people who use each particular language or script.	Choice
2.7	Quantity of different national legal regimes where new gTLD Registry Operators are based.	Choice
2.8	Measure share of Sunrise registrations & domain blocks to total registrations in each new gTLD.	Choice
2.9	Relative share of new gTLD registrations already having the same domain in legacy TLDs prior to expansion.	Choice
2.10	Automated analysis or online survey to determine the number of "duplicate" registrations in new gTLDs.	Choice
2.11	Measure the increased geographic diversity of registrants across all new gTLDs, as indication of new choices created by gTLD expansion.	Choice
2.12	Survey or Study to gauge the frequency with which users access internet resources via tools that do not reveal the TLD (e.g. QR Codes, search results, apps, etc., that do not display URLs).	Choice
2.13	Biennial survey of perceived consumer choice relative to experiences before the gTLD expansion. Survey should assess public awareness of new gTLDs. Survey should also measure costs of defensive or duplicate registrations. Survey should assess motivations, intent, and satisfaction with new gTLDs.	Choice
2.14	DNS traffic in new gTLDs should be compared to contemporary user traffic in legacy gTLDs. DNS traffic is an indicator of trust, choice, and competition. If comprehensive traffic data is not available, sampling should be used.	Choice
3.1	Quantity of total TLDs before and after expansion.	Competition
3.2	Quantity of gTLDs before and after expansion.	Competition
3.3	Quantity of unique gTLD Registry Operators before and after	Competition

	expansion.	
3.4	Quantity of unique gTLD Registry Service Providers before and after expansion.	Competition
3.5	Quantity of Registrars before and after expansion, along with indication of country where Registrar is based. This measure should count only registrars distributing Open gTLDs.	Competition
3.6	Relative share of new gTLD registrations held by “new entrants”. For purposes of this measure, “new entrants” are gTLDs run by Registry Operators that did not operate a legacy gTLD. A "new entrant" is one whose ownership is not among owners of legacy gTLD registries.	Competition
3.7	To assess competitive impact of new gTLDs, measure the quantity of second level registrations per gTLD and ccTLD on a weekly or other interval. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, registration, country of operations, single registrant, etc.).	Competition
3.8	Quantity of “unique” second level registrations in the new gTLD space where that same string does not appear as a registration in any other TLD on a weekly or other interval basis (data analyzed in conjunction with website traffic identified in Choice). Open gTLDs only.	Competition
3.9	Wholesale price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition
3.10	Retail price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition
3.11	Qualitative assessment of non-price indicia of competition through innovations that benefit registrants and users, particularly for new markets served.	Competition
4.1	Frequency of success in reaching the intended information supplier through direct entry of domain names	Trust
4.2	Frequency of landing at unintended destinations	Trust
4.3	Frequency of redundant or defensive domains (i.e., multiple domains pointing to the same destination)	Trust
4.4	Frequency of dead-end domains (registered but do not resolve)	Trust
4.5	Numbers of complaints received by ICANN regarding improper use of domains	Trust

5.1	Relative preference of explicit use of domain names versus search engines for end-user general Internet use	Trust
5.2	Growth in use of hosted pages for organizations (such as Facebook or Google+)	Trust
5.3	Growth in use of QR codes	Trust
5.4	Growth in use of URL shortening services	Trust
5.5	Growth in registrations in ccTLDs relative to gTLDs	Trust
5.6	Growth of Software Defined Networking (SDN) as alternative to the DNS	Choice
6.1	Number of consumer complaints to government agencies related to confusing or misleading domain names	Trust
6.2	Number of complaints to police agencies alleging fraud or misrepresentation based on – or traced to – domain names	Trust
6.3	Number of fraud investigations where WHOIS information positively assisted investigation and identification of offending parties	Trust
7.1	How many gTLD registries have privacy policies which are clearly and easily accessible by end users	Trust
7.2	How many gTLD registries have allocation policies which are clearly and easily accessible by end users, even if those policies simply restrict or prohibit public availability	Trust
7.3	How many registries disclose end-user information regarding their codes of conduct for sub-domain owner/operators	Trust
8.1	How many complaints are received by ICANN related to confusion or misunderstanding of TLD functions	Trust
8.2	How many registries are subject to Compliance activity based on reported breaches of RAA?	Trust
8.3	How many registries have been the subject of complaints related to their Public Interest Commitments (PICs)	Trust
8.4	How many registries have lost a dispute resolution process related to their PICs	Trust
9.1	Are end-user software applications capable of implementing all of the new gTLDs; Can browsers and DNS clients in end-user systems resolve all new gTLDs	Trust
9.2	Which browsers or other end-user applications require plugins or user-installed enhancements in order to use new gTLDs	Trust

Appendix 2: Recommended metrics, reorganization, and data collection phases

Working together with ICANN staff, the IAG-CCT came to a consensus on reorganizing the metrics to better represent the various categories of data that will be collected. Each category of data would then be examined on the axes of choice, competition and trust. As such, the group proposes the following structure for the eventual review team report:

- I. Technical metrics
- II. Registration data
- III. Law enforcement/domain abuse
- IV. DNS use/choice
- V. Compliance
- VI. Global consumer survey
- VII. Qualitative studies

Also included below are the recommended phases for data collection. Phases were broken down to account for metrics that required a baseline, as well as collection to begin one year after new gTLDs have been in operation. The phases represent the following time periods:

Phase 1: Baseline metrics requiring immediate collection, March-September 2014

Phase 2: Baseline metrics that do not require immediate collection, June-September 2014

Phase 3: Metrics that are readily available in-house, October 2014-until collected

Phase 4: All metrics that are due to be collected one year after the launch of new gTLDs

Phase 4A: Technical services and compliance metrics, October-December 2014

Phase 4B: Registry and registrar-related metrics, November 2014-January 2015

Phase 4C: Consumer survey, qualitative studies, December 2014-February 2016

Technical metrics

#	Description	Category	Baseline phase	General collection phase
1.1	% DNS Service Availability (present SLA is 100%).	Trust		3
1.2	% Availability for Registration Data Directory Services (RDDS). (SLA is 98%).	Trust		3
1.3	% of Service Availability for Shared Registration Services (SRS, using EPP). (SLA is 98%). Open TLDs only	Trust		3

1.5	% Uptime for Registrar services such as WHOIS, contact info, and complaints, assuming that SLAs are established for these measures in the new RAA.	Trust		4B
1.21	Relative incidence of errors in new gTLD zones.	Trust		4A
2.10	Automated analysis or online survey to determine the number of “duplicate” registrations in new gTLDs.	Choice		4B
2.14	DNS traffic in new gTLDs should be compared to contemporary user traffic in legacy gTLDs. DNS traffic is an indicator of trust, choice, and competition. If comprehensive traffic data is not available, sampling should be used.	Choice	2	4A
4.4	Frequency of dead-end domains (registered but do not resolve)	Trust		
9.1	Are end-user software applications capable of implementing all of the new gTLDs; Can browsers and DNS clients in end-user systems resolve all new gTLDs	Trust		4A
9.2	Which browsers or other end-user applications require plugins or user-installed enhancements in order to use new gTLDs	Trust		4A
9.3	Number of reports of name collisions	Choice		4A

Registration data

#	Description	Category	Baseline phase	General collection phase
2.11	Measure the increased geographic diversity of registrants across all new gTLDs, as indication of new choices created by gTLD expansion.	Choice		4A
2.4	Quantity of TLDs using IDN scripts or languages other than English.	Choice	2	4B
2.5	Quantity of Registrar websites offering IDN scripts or languages other than English.	Choice	2	4B
2.6	The number of registrations in IDN TLDs as compared to the total number of registrations in new gTLDs. Measure growth over time.	Choice	2	4B
2.7	Quantity of different national legal regimes where new gTLD Registry Operators are based.	Choice	1	4A
2.8	Measure share of Sunrise registrations & domain blocks to total registrations in each new gTLD.	Choice	2	4A

2.9	Relative share of new gTLD registrations already having the same domain in legacy TLDs prior to expansion.	Choice	2	4A
3.1	Quantity of total TLDs before and after expansion.	Competition		3
3.2	Quantity of gTLDs before and after expansion.	Competition	1	4B
3.3	Quantity of unique gTLD Registry Operators before and after expansion.	Competition	3	4B
3.4	Quantity of unique gTLD Registry Service Providers before and after expansion.	Competition	3	4B
3.5	Quantity of Registrars ⁵ before and after expansion, along with indication of country where Registrar is based. This measure should count only registrars distributing Open gTLDs.	Competition	3	4B
3.6	Relative share of new gTLD registrations held by “new entrants”. For purposes of this measure, “new entrants” are gTLDs run by Registry Operators that did not operate a legacy gTLD. A “new entrant” is one whose ownership is not among owners of legacy gTLD registries.	Competition	2	4A
3.7	To assess competitive impact of new gTLDs, measure the quantity of second level registrations per gTLD and ccTLD on a weekly or other interval. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, registration, country of operations, single registrant, etc.).	Competition	1	4A
3.8	Quantity of “unique” second level registrations in the new gTLD space where that same string does not appear as a registration in any other TLD on a weekly or other interval basis (data analyzed in conjunction with website traffic identified in Choice). Open gTLDs only.	Competition	2	4A
5.5	Growth in registrations in ccTLDs relative to gTLDs	Trust	2	4B
7.1	How many gTLD registries have privacy policies which are clearly and easily accessible by end users	Trust	1	4B
7.2	How many gTLD registries have allocation policies which are clearly and easily accessible by end users, even if those policies simply restrict or prohibit public availability	Trust	1	4B
7.3	How many registries disclose end-user information regarding their codes of conduct for sub-domain owner/operators	Trust	1	4B

Law enforcement/domain abuse

#	Description	Category	Baseline phase	General collection phase
1.11	Quantity of intellectual property claims and cost of domain name policing relating to new gTLDs. Relative incidence of IP claims made in good faith should be measured in 3 areas: IP claims against registrants regarding second level domains in new gTLDs; IP claims against registrars regarding Second level domains in new gTLDs; IP claims against new gTLD registries regarding second level domains and TLDs. Quantity of second level domains acquired because of infringement or other violations of IP rights of acquiring parties; and Cost of domain name policing and enforcement efforts by IP owners.	Trust	1	4C
1.13	Number of reported data security breaches.	Trust	2	4A
1.14	Quantity and relative incidence of Domain Takedowns.	Trust		4B
1.15	Quantity and relative incidence of spam from domains in new gTLDs, which could be measured via specialized email addresses and methodologies.	Trust		4B
1.16	Quantity and relative incidence of fraudulent transactions caused by phishing sites in new gTLDs.	Trust		4C
1.17	Quantity and relative incidence of detected phishing sites using new gTLDs.	Trust	2	4A
1.18	Quantity and relative incidence of detected botnets and malware distributed using new gTLDs.	Trust	2	4A
1.19	Quantity and relative incidence of sites found to be dealing in or distributing identities and account information used in identity fraud.	Trust	2	4A
6.2	Number of complaints to police agencies alleging fraud or misrepresentation based on – or traced to – domain names	Trust	1	4B

DNS use/choice

#	Description	Category	Baseline phase	General collection phase
5.2	Growth in use of hosted pages for organizations (such as Facebook or Google+)	Trust	1	4B
5.3	Growth in use of QR codes	Trust	1	4B

5.4	Growth in use of URL shortening services	Trust	1	4B
-----	--	-------	---	----

Compliance metrics

#	Description	Category	Baseline phase	General collection phase
1.6	Relative incidence of breach notices issued to Registry operators for contract or policy compliance matters.	Trust	1	4A
1.7	Relative incidence of breach notices issued to Registrars, for contract or policy compliance matters.	Trust	1	4A
1.8	Relative Incidence of Registry & Registrar general complaints submitted to ICANN's Internic System.	Trust	1	4A
1.9	Relative incidence of combined UDRP and URS Complaints. URS is required only in new gTLDs, so combined UDRP and URS complaints may be comparable to UDRP complaints in legacy gTLDs	Trust	1	4A
1.10	Relative incidence of combined UDRP and URS Decisions against registrants.	Trust	1	4A
1.12	Decisions against Registry Operator arising from Registry Restrictions Dispute Resolutions Procedure (RRDRP).	Trust		3
1.20	Quantity and relative incidence of complaints regarding inaccurate, invalid, or suspect WHOIS records in new gTLD.	Trust	1	4A
4.5	Numbers of complaints received by ICANN regarding improper use of domains	Trust	1	4A
8.1	How many complaints are received by ICANN related to confusion or misunderstanding of TLD functions	Trust	1	4A
8.3	How many registries have been the subject of complaints related to their Public Interest Commitments (PICs)	Trust		3
8.4	How many registries have lost a dispute resolution process related to their PICs	Trust		3

Surveys

#	Description	Category	Baseline phase	General collection phase
---	-------------	----------	----------------	--------------------------

1.4	Survey of perceived consumer trust in DNS, relative to experiences before the gTLD expansion. Survey could at least measure experiences with phishing, parking sites, malware and spam; confusion about new gTLDs; user experience in reaching meaningful second-level TLDs; registrant experience in being in a different gTLD; Registrant and Internet users' experience with regard to cybersquatting. Survey to be conducted every two years (biennial).	Trust	1	4C
2.1	Measure potential registrants' understanding of TLD benefits and restrictions, such that potential registrants can make informed choices about registration of their domain names.	Choice	1	4C
2.2	Measure Internet users' understanding of TLD eligibility restrictions, such that Internet users can make informed choices about reliance on domain names in that TLD.	Choice	1	4C
2.3	Biennial surveys of perceived consumer choice in DNS, relative to experience before the gTLD expansion.	Choice	1	4C
2.12	Survey or Study to gauge the frequency with which users access internet resources via tools that do not reveal the TLD (e.g. QR Codes, search results, apps, etc., that do not display URLs).	Choice	1	4C
4.1	Frequency of success in reaching the intended information supplier through direct entry of domain names	Trust	1	4C
4.2	Frequency of landing at unintended destinations	Trust	1	4C
4.3	Frequency of redundant or defensive domains (ie, multiple domains pointing to the same destination)	Trust	1	4C
5.1	Relative preference of explicit use of domain names versus search engines for end-user general Internet use	Trust	1	4C

Qualitative studies

#	Description	Category	Baseline phase	General collection phase
1.22	Qualitative comparison of mission and purpose set forth in Question 18 of the new gTLD Application with current actual use of the gTLD.	Trust	1	4C
3.10	Retail price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition	1	4C

3.11	Qualitative assessment of non-price indicia of competition through innovations that benefit registrants and users, particularly for new markets served.	Competition	1	4C
3.9	Wholesale price of domains in new gTLD domains offered to the general public. TLD attributes should be noted with the data (i.e. open TLDs, closed keyword TLDs, country of operations, single registrant, etc.).	Competition	1	4C

Appendix 3: Metrics breakdown

Appendix 4: Team composition

A list of all meetings, including links to agendas, recordings and transcripts is available at the following link: <https://community.icann.org/display/IAG/IAG-CCT+Conference+Call+Schedule>

Candidate	Country	Affiliation	SOI
A.B. Ishiaku	Nigeria		Adamu Ishiaku - SOI
Carlton Samuels	Jamaica	ALAC	Carlton Samuels - SOI
Cheryl Langdon-Orr	Australia	Currently serve as ICANN NomCom Chair; Affiliation also (in order) ccNSO (please note they have given Council endorsement for me to represent their interests in this work and as no ccNSO SOI exists you should note I am a Director of auDA the ccTLD for AU, have been for more than 10 years and am active in the ccNSO community and have served on ccNSO Council; Also a Member of At-Large ALS ISOC-AU Regional Asia Pacific ; various ALAC appointment roles; Individual Member of the GNSO's Non Commercial Stakeholder Group.	Cheryl Langdon-Orr - SOI
Christa Taylor	Canada		Christa Taylor - SOI
Christopher Wilkinson	Europe/Great Britain	ISOC-Wallonia; EURid	Christopher Wilkinson - SOI
Cintra Sooknanan	Caribbean/Trinidad and Tobago	NPOC; Internet Society Trinidad and Tobago Chapter (ISOC-TT)	Cintra Sooknanan SOI
Darryl C. Wilson	United States		Darryl Wilson SOI
David C. Stuckman	United States		David Stuckman - SOI
Ephraim Percy Kenyanito	Kenya		Ephraim Percy Kenyanito SOI
Evan Leibovitch	Canada	ALAC / ISOC Canada	ALAC SOI /GNSO SOI

Jeffrey Thomas	United States		Jeffrey Thomas - SOI
Jeremy Rowley	United States		Jeremy Rowley - SOI
Jonathan Zuck	Belgium		Jonathan Zuck - SOI
Judy Song-Marshall	United States		Judy Song-Marshall - SOI
Mason Cole	United States	RySG	Mason Cole - SOI
Michael A. Flynn	United States		Michael A Flynn - SOI
Michael Graham			Michael Graham - SOI
Michael R. Nelson	United States		Michael R. Nelson - SOI
Nathalie Coupet	Haiti / USA		Nathalie Coupet SOI
Olga Cavalli	Argentina		Olga Cavalli SOI
Phil Buckingham	United Kingdom		Phil Buckingham - SOI

IID Predicts Massive Botnet Takeover of IoT Devices by 2017

December 1 2015

Cybersecurity firm also anticipates a spate of domain failures, leading to demise of websites relying on them

TACOMA, Wash. — December 1, 2015 — IID (<http://www.internetidentity.com/>), the source for clear cyberthreat intelligence, today announced its predictions for 2017 and beyond. After analyzing billions of pieces of cyberthreat data, IID anticipates Internet of Things (IoT) devices will increasingly become part of large-scale botnets, websites utilizing many of the new generic top-level domains (gTLDs) will go dark and China-based cybercrime will undergo a marked shift.

IID isn't interested in making safe, short-range prognostications whose outcomes are already inevitable. That's why its latest forecast looks at least two years ahead, much like IID's predictions did [in previous years \(http://internetidentity.com/predictions/\)](http://internetidentity.com/predictions/).

Botnets Invade IoT

IID predicts that by the end of 2017, botnet operators seeking new frontiers will execute a full-scale invasion of compromised Internet of Things (IoT) devices such as wearables and connected home products. A botnet is a collective of private computers, infected with malware, that are controlled by cybercriminals to launch mass attacks, unbeknownst to their owners.

These "zombified" IoT devices, upon being hijacked by cybercriminals into their botnet army via malware, will be used for a variety of nefarious purposes, including:

- Executing network-based attacks, such as Distributed Denial of Service attacks, against large companies by commanding these IoT bots to overwhelm systems with fake traffic.
- Deceitfully or forcefully redirecting users to commercial content in order to generate revenue, in what is essentially a form of marketing or affiliate fraud (e.g. pay-per-click fraud).
- Spying on users for the purpose of extortion or political influence.

"The increasingly advanced technical capabilities of IoT devices such as autonomous consumer-grade drones and smart appliances will not be able to keep pace with security and privacy requirements. This will drive large-scale compromises of IoT devices," said IID Vice President of Threat Intelligence Sean Tierney. "As these devices are used to attack other networks or for retaliatory attacks, it will eventually lead to the 'Battle of the Botnet' for domination of IoT."

gTLD Websites Go Dark

When the Internet Corporation for Assigned Names and Numbers (ICANN), which oversees the Domain Name System, began the process to issue hundreds of new gTLDs in 2013, the possibilities seemed limitless. Today, gTLDs run the gamut from “.apartments” to “.dentist” to “.porn” and so on. But looking ahead, many of these TLDs, as well as websites and other services that rely on them, could be short-lived because their adoption has been much smaller than anticipated.

IID anticipates an unprecedented series of domain registry failures as a result of the lack of gTLD popularity by 2017 in the form of bankruptcies and abandonment. “Most new gTLDs have failed to take off and many have already been riddled with so many fraudulent and junk registrations that they are being blocked wholesale,” said IID President and CTO Rod Rasmussen. “This will eventually cause ripple effects on the entire domain registration ecosystem, including consolidation and mass consumer confusion as unprofitable TLDs are dropped by their sponsoring registries.”

Should a gTLD go down, it would take any resident websites, email or other services with it, forcing their owners to scramble for new virtual real estate. There is a process in place to continue support of struggling registry operations until a larger registry or organization buys them in auction and rescues them. However, questions abound as to who would risk an investment in poorly performing TLDs, especially as they start to number in the hundreds. “That’s why eventually some are going to just plain go dark,” added Rasmussen.

The writing is already on the wall. For instance, in its original Fiscal Year 2015 budget draft, ICANN predicted 33 million new gTLD domain name registrations—a number it later revised to just 15 million. According to ntldstats.com, the final tally for FY2015, which ended June 30, 2015, was only 4.9 million registrations.

Chinese Cybercrime Reshapes Geopolitics

IID also predicts that if the downturn in the Chinese economy continues, this could drive exponential growth of organized cybercriminal enterprises within the country. IID expects that by 2017 these “persistent criminal enterprises” will rival and ultimately surpass Eastern European organized cybercrime in scope, size and complexity.

Moreover, IID predicts that the Russian Chinese Cyber Alliance will dissolve by 2019, after these same Chinese cybercriminal organizations start aggressively targeting Eastern European citizens, companies and even rival cybercrime organizations—funneling their stolen money into China. Such a development would undermine Russia’s original strategy behind the pact, which was to form stronger ties with the Eastern powers in response to strained relations with the U.S.

However, IID predicts yet another tidal change by 2020, as China becomes a leading proponent of Internet security in response to its own citizens and banks being increasingly victimized by cyberattacks that threaten the Chinese economy.

About IID

IID is a cybersecurity company. Its flagship product, [ActiveTrust](http://internetidentity.com/activetrust/) (<http://internetidentity.com/activetrust/>), adds clarity to cyberthreat intelligence by distilling threat data from thousands of trusted sources, and fusing it into actionable intelligence delivered to security professionals and automated infrastructure. Fortune 500 companies and U.S. government agencies leverage IID to detect and mitigate threats, making ActiveTrust one of the world’s largest commercial cyberthreat data exchange. For more go to internetidentity.com (<http://internetidentity.com/>).

Google Copyright Takedowns Have Increased About 1 Billion Percent Since 2006

By Robin Burks, Tech Times | March 7, 12:50 PM

Like Follow Share Tweet Reddit 0 Comments SUBSCRIBE

Since 2006, Google has drastically increased how many sites it has taken down from its search engine results due to complaints of copyright infringement under the Digital Millennium Copyright Act (DMCA) of 1998. (Photo : Google)

In 1998, President Bill Clinton signed the the Digital Millennium Copyright Act into law. That law makes it a criminal offense to circumvent digital rights management (DRM), which protects copyright on the Internet.

Sites like Google didn't really start enforcing the law, though, until around 2006, but since then the site **has taken down over a billion percent more links** since the law went into effect. This is due to the fact that copyright holders now have software that can search for links (generally for pirated pieces of software, music and video) at a faster rate, meaning that more links get reported.

TorrentFreak reports that, on average, Google gets around 100,000 links reported each hour. And that is twice the amount that the site received around this time last year. The site estimates that next year will see an even more drastic increase in reports.

"Data gathered by TorrentFreak from Google's Transparency Report shows that the number of links reported in DMCA notices has more than doubled compared to last year, and quadrupled in comparison to the year before," writes TorrentFreak on its website. "March 2014 Google was asked to remove roughly six million links per week, growing to eight million in 2015 and a whopping 19 million last week."

Although some of the links reported aren't violating the DMCA, most are. This means that Google stays busy in taking down links pointing to websites related to piracy, but the company still feels that it manages to stay in line with the requests it receives.

"We process more takedown notices, and faster, than any other search engine," Google told TorrentFreak. "We receive notices for a tiny fraction of everything we host and index, which nonetheless amounts to millions of copyright removal requests per week that are processed, on average, in under six hours."

However, the search engine does not go so far as to remove domain names, something most would argue supports censorship, although copyright holders argue that sites that infringe should be barred from Google's index.

One might believe that spending so much time and effort on these takedowns is useless, because it seems that for every copyright-infringing site, two more spring up in its place. Many might see Google's success in taking down links as a sign that the DMCA works, but most would probably just think it's counter-productive to waste so many resources on what is, essentially, a pointless endeavor.

GOOGLE ASKED TO REMOVE 558 MILLION "PIRATE" LINKS IN 2015

BY [ERNESTO](#) ON [DECEMBER 30, 2015](#)

C: [92](#)

Copyright holders asked Google to remove more than 560,000,000 allegedly infringing links from its search engine in 2015. The staggering number is an increase of 60% compared to the year before. According to Google the continued surge is a testament that the DMCA takedown process is working, but some copyright holders disagree.

In recent years copyright holders have overloaded Google with DMCA takedown notices, targeting links to pirated content.

The majority of these requests are sent by the music and movie industries, targeting thousands of different websites. In recent years the volume of takedown notices has increased spectacularly and this trend continued in 2015.

Google doesn't report yearly figures, but at TF we processed all the weekly reports and found that the number of URLs submitted by copyright holders last year surpassed the 558 million mark – 558,860,089 at the time of writing.

For the first time ever the number of reported URLs has surpassed half a billion in a 12-month period. This is an increase of 60 percent compared

to last year, when the search engine processed 345 million pirate links.

The majority of the links are being removed from the search results. However, Google sometimes takes “no action” if they are deemed not to be infringing or if they have been taken down previously.

This year most takedown requests were sent for the domains chomikuj.pl, rapidgator.net and uploaded.net, with more than seven million targeted URLs each. The UK Music industry group BPI is the top copyright holder of 2015, good for more than 65 million reported links.

URLs requested to be removed from Search per week

Looking at the totals for this year we further see that 329,469 different domain names were targeted by 27,035 copyright holders. Interestingly, these staggering numbers are interpreted differently by Google and various copyright holders.

A few weeks ago Google [told](#) the U.S. Intellectual Property Enforcement Coordinator that it has taken various measures to help copyright holders, including swift removals.

“We process more takedown notices, and faster, than any other search engine,” the search giant commented.

“We receive notices for a tiny fraction of everything we host and index, which nonetheless amounts to millions of copyright removal requests per week that are processed, on average, in under six hours.”

The company rejects broader actions, such as the removal of entire domain names, as this would prove counterproductive and lead to overbroad censorship.

Many copyright holders, however, don't share these concerns. Over the years groups such as the MPAA and RIAA have repeatedly argued that clearly infringing sites should be [barred](#) from Google's index. In addition, they want Google to make sure that pirated content [stays down](#).

While Google believes that the billion reported URLs are a sign that the DMCA takedown process is working properly, rightsholders see it as a signal of an unbeatable game of whack-a-mole.

As this stalemate continues we can expect the number of reported pages to continue to rise in the future, adding millions of new URLs on a daily basis. Perhaps there will be a billion reported pirate links in 2016?

GOOGLE ASKED TO REMOVE 100,000 'PIRATE LINKS' EVERY HOUR

BY ERNESTO ON MARCH 6, 2016

C: 54

Copyright holders are continuing to increase the number of pirate links they want Google to remove from its search results, which have now reached a record-breaking 100,000 reported URLs per hour. This remarkable milestone is more than double the number of pirated links that were reported around the same time last year.

In recent years copyright holders have overloaded Google with DMCA takedown notices, targeting links to pirated content.

These requests have increased dramatically over the years. In 2008, the search engine received [only a few dozen](#) takedown notices during the entire year, but today it processes two million per day on average.

Data gathered by TorrentFreak from Google's Transparency Report shows that the number of links reported in DMCA notices has more than doubled compared to last year, and quadrupled in comparison to the year before.

March 2014 Google was asked to remove roughly six million links per week, growing to eight million in 2015 and a whopping 19 million last

week.

As an illustration of the sheer volume, this means that Google is now being asked to remove well over 100,000 links to alleged copyright infringing material every hour.

The number of notices continues to increase at a rapid pace and at the current rate the search engine will have to process a billion reported links this year alone. This same milestone previously took well over a decade to reach.

The graph below illustrates this sharp rise in takedown notices.

While not all takedown requests are accurate, the majority of the reported links are. As a result many popular pirate sites are now less visible in Google's search results, since Google [downranks](#) sites for which it receives a high number of takedown requests.

In [a submission](#) to the Intellectual Property Enforcement Coordinator a few months ago Google stated that the continued removal surge doesn't influence its takedown speeds.

"We process more takedown notices, and faster, than any other search engine," the search giant commented.

"We receive notices for a tiny fraction of everything we host and index, which nonetheless amounts to millions of copyright removal requests per

week that are processed, on average, in under six hours.”

The company rejects broader actions, such as the removal of entire domain names, as this would prove counterproductive and lead to overbroad censorship.

Copyright holders, however, don't share these concerns. Over the years groups such as the MPAA and RIAA have repeatedly argued that clearly infringing sites should be barred from Google's index. In addition, they want Google to promote legal services.

While Google believes that the billion reported URLs are a sign that the DMCA takedown process is working properly, rightsholders see it as a signal of an unbeatable game of whack-a-mole.

As this stalemate continues, we can expect the number of reported pages to continue to rise in the future, adding millions of new URLs on a daily basis.

Exhibit DIDP A41

The Internet Corporation for Assigned Names and Numbers

23 June 2015

Thomas Schneider
Chair, ICANN Governmental Advisory Committee

Re: GAC advice re Category 1 Safeguards for New gTLDs

Dear Mr. Schneider:

We understand that there are ongoing discussions within the GAC regarding whether and how the Board New gTLD Program Committee (NGPC) and ICANN have accepted and implemented the GAC's Category 1 Safeguard Advice. To help inform these discussions, we thought it might be helpful to provide the following overview of the NGPC's consideration and ICANN's subsequent implementation of this advice.

In the Beijing Communiqué (April 2013), the GAC [advised](#) the Board that “strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm.”

- The GAC detailed five (5) safeguards that should apply to a list of strings linked to these sectors. See Annex 1.
- The GAC also identified three (3) additional targeted safeguards that should apply to a limited subset of strings associated with market sectors with clear and/or regulated entry requirements in multiple jurisdictions. See Annex 2.

On 29 October 2013, the NGPC sent a [letter](#) to the GAC about its proposed implementation of the Category 1 Safeguard advice in the Beijing Communiqué.

- The NGPC proposed to modify the text of the Category 1 Safeguards as appropriate to meet the spirit and intent of the advice in a manner that allowed the requirements to be implemented as Public Interest Commitments (PICs) in Specification 11 of the New gTLD Registry Agreement. See Annex 3.
- The NGPC also proposed additional PICs for strings associated with inherently governmental functions, and strings that have a risk of cyber bullying/harassment. See Annex 4.
- The NGPC also proposed to distinguish the list of strings between those that the NGPC considered to be associated with market sectors or industries that have highly-regulated entry requirements in multiple jurisdictions, and those that do not. The Category 1 Safeguards in the PIC would apply to the TLDs based on how the TLD string was categorized (i.e. the highly-regulated TLDs would have 8 additional PICs, and the others would have 3 additional PICs). See Annex 5.

<http://icann.org>

In the Buenos Aires Communiqué (November 2013), the GAC reported that, “The GAC welcomed the response of the Board to the GAC’s Beijing Communiqué advice on Category 1 and Category 2 safeguards. The GAC received useful information regarding implementation of the safeguards during its discussions with the New gTLD Program Committee. GAC members asked for clarification of a number of issues regarding Category 2 Safeguards – Restricted Access and look forward to ICANN’s response.”

On 5 February 2014, the NGPC accepted the GAC’s Category 1 Safeguard advice in an iteration of the Scorecard, and directed the President and CEO to implement the advice consistent with the [implementation framework](#) originally sent to the GAC in the NGPC’s 29 October 2013 letter.

I hope this information is helpful. Please let us know if you have any questions or concerns.

Sincerely,

A handwritten signature in black ink, appearing to read "Stephen Crocker", written in a cursive style.

Dr. Stephen Crocker
Chair, ICANN Board Of Directors

Annex 1

Beijing Communiqué - Safeguards Applicable to Category 1 Strings

1. Registry operators will include in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.
2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.
3. Registry operators will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.
4. Establish a working relationship with the relevant regulatory, or industry self-regulatory, bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.
5. Registrants must be required by the registry operators to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Annex 2

Beijing Communiqué - Targeted safeguards for a limited subset of Category 1 strings associated with market sectors with clear and/or regulated entry requirements in multiple jurisdictions.

6. At the time of registration, the registry operator must verify and validate the registrants' authorisations, charters, licenses and/or other related credentials for participation in that sector.
7. In case of doubt with regard to the authenticity of licenses or credentials, Registry Operators should consult with relevant national supervisory authorities, or their equivalents.
8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Annex 3

NGPC Proposal (29 October 2013): Category 1 Safeguards as Public Interest Commitments in Specification 11 of the New gTLD Registry Agreement

1. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.
2. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars at the time of registration to notify registrants of the requirement to comply with all applicable laws.
3. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law.
4. Registry Operators will proactively create a clear pathway for the creation of a working relationship with the relevant regulatory or industry self-regulatory bodies by publicizing a point of contact and inviting such bodies to establish a channel of communication, including for the purpose of facilitating the development of a strategy to mitigate the risks of fraudulent and other illegal activities.
5. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring registrants to provide administrative contact information, which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.
6. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring a representation that the registrant possesses any necessary authorizations, charters, licenses and/or other related credentials for participation in the sector associated with the TLD.
7. If a Registry Operator receives a complaint expressing doubt with regard to the authenticity of licenses or credentials, Registry Operators should consult with relevant national supervisory authorities, or their equivalents regarding the authenticity.

8. Registry Operators will include a provision in their Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring registrants to report any material changes to the validity of the registrants' authorizations, charters, licenses and/or other related credentials for participation in the sector associated with the TLD in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Annex 4

NGPC Proposal (29 October 2013): Additional PICs for strings associated with inherently governmental functions, and strings that have a risk of cyber bullying/harassment.

9. Registry Operator will include a provision in its Registry-Registrar Agreements that requires registrars to include in their Registration Agreements a provision requiring a representation that the registrant will take steps to ensure against misrepresenting or falsely implying that the registrant or its business is affiliated with, sponsored or endorsed by one or more country's or government's military forces if such affiliation, sponsorship or endorsement does not exist.
10. Registry Operator will develop and publish registration policies to minimize the risk of cyber bullying and/or harassment.

Copyright, the public interest, and free trade

Submitted by Terry Hart on March 25, 2014

“The public good fully coincides...with the claims of individuals,” wrote James Madison of the Constitution’s Copyright Clause, which secures the exclusive rights of creators. These rights, like any form of private property, serve as the building blocks of a free market, promoting economic growth and individual liberty. Madison’s remarks remain just as true after more than two hundred years. “The issues of authors are intertwined with the interests of the public,” [wrote Register of Copyrights Maria Pallante](#) last year. “As the first beneficiaries of the copyright law, authors are not a counterweight to the public interest but are instead at the very center of the equation.”

Pallante went on to note that “A law that does not provide for authors would be illogical—hardly a copyright law at all. And it would not deserve the respect of the public.”

Copyright benefits the public by creating a marketplace for creative and expressive works. This marketplace currently contributes [over \\$1 trillion a year to U.S. GDP](#), directly employs 5.4 million people (with average wages 33% higher than national average), and generates \$141 billion in exports. The existence of this marketplace further incentivizes the creation and dissemination of works which promote the progress of art, science, culture, and knowledge.

Consumers experience this benefit firsthand. Millions of consumers are able to enjoy films, music, books, and other creative works on numerous platforms that did not exist even a decade ago. Today, for example, there are over [70 online platforms for watching films and television shows](#), over [450 licensed online platforms for music](#) worldwide, and [countless others](#) for accessing other types of works. The public benefit is not limited to entertainment markets. Scholarly publishers, for example, have [invested hundreds of millions of dollars](#) to “create, publish, distribute and maintain scholarly articles on the Internet and in other digital formats”, making these works more accessible to the public and other scholars.

The public benefits of a robust copyright system are not solely economic. Copyright protects human rights. Article 27 of the [Universal Declaration of Human Rights](#) (UDHR), adopted in 1948 by the UN General Assembly, states:

1. Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.
2. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Copyright also advances free speech values. The [Supreme Court has said](#), “the Framers intended copyright itself to be the engine of free expression. By establishing a marketable right to the use of one’s expression, copyright supplies the economic incentive to create and disseminate ideas.” Indeed, creators and the creative communities are on the front lines defending their—and by extension everyone’s—right to free expression.

The strong economic, noneconomic, and cultural contributions of copyright make it a vital and necessary component of trade policy. As with any policy issue, there are other interests at play, but it is important to include copyright’s public interest in the conversation to see the entire picture. That is why today the Copyright Alliance filed a comment to the US Trade Advisory Committee making these points regarding the [creation of a new Public Interest Trade Advisory Committee](#). The U.S. has recognized since its very beginning that a robust copyright system engenders tremendous public benefit. The inclusion of those who could speak to this inherent public benefit of copyright on PITAC would improve the trade policy advice sought by the USTR, particularly if it comes from representatives of a diverse array of creators, who generate this public benefit through the creation and dissemination of new, expressive works.

Universal Declaration of Human Rights

Preamble

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law,

Whereas it is essential to promote the development of friendly relations between nations,

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom,

Whereas Member States have pledged themselves to achieve, in cooperation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms,

Whereas a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge,

Now, therefore,

The General Assembly,

Proclaims this Universal Declaration of Human Rights as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by

teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

Article 1

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Article 2

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

Article 3

Everyone has the right to life, liberty and security of person.

Article 4

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

Article 5

No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

Article 6

Everyone has the right to recognition everywhere as a person before the law.

Article 7

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

Article 8

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

Article 9

No one shall be subjected to arbitrary arrest, detention or exile.

Article 10

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

Article 11

1. Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defence.
2. No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier

penalty be imposed than the one that was applicable at the time the penal offence was committed.

Article 12

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

Article 13

1. Everyone has the right to freedom of movement and residence within the borders of each State.
2. Everyone has the right to leave any country, including his own, and to return to his country.

Article 14

1. Everyone has the right to seek and to enjoy in other countries asylum from persecution.
2. This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

Article 15

1. Everyone has the right to a nationality.
2. No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

Article 16

1. Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.
2. Marriage shall be entered into only with the free and full consent of the intending spouses.
3. The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

Article 17

1. Everyone has the right to own property alone as well as in association with others.
2. No one shall be arbitrarily deprived of his property.

Article 18

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

Article 19

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

Article 20

1. Everyone has the right to freedom of peaceful assembly and association.
2. No one may be compelled to belong to an association.

Article 21

1. Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.
2. Everyone has the right to equal access to public service in his country.
3. The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

Article 22

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

Article 23

1. Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.
2. Everyone, without any discrimination, has the right to equal pay for equal work.
3. Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.
4. Everyone has the right to form and to join trade unions for the protection of his interests.

Article 24

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

Article 25

1. Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.
2. Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

Article 26

1. Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.
2. Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.
3. Parents have a prior right to choose the kind of education that shall be given to their children.

Article 27

1. Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.

2. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Article 28

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

Article 29

1. Everyone has duties to the community in which alone the free and full development of his personality is possible.
2. In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.
3. These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

Article 30

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

This publication contains the "Guiding Principles on Business and Human Rights: Implementing the United Nations 'Protect, Respect and Remedy' Framework", which were developed by the Special Representative of the Secretary-General on the issue of human rights and transnational corporations and other business enterprises. The Special Representative annexed the Guiding Principles to his final report to the Human Rights Council (A/HRC/17/31), which also includes an introduction to the Guiding Principles and an overview of the process that led to their development.

The Human Rights Council endorsed the Guiding Principles in its resolution 17/4 of 16 June 2011.

GENERAL PRINCIPLES

These Guiding Principles are grounded in recognition of:

- (a) States' existing obligations to respect, protect and fulfil human rights and fundamental freedoms;
- (b) The role of business enterprises as specialized organs of society performing specialized functions, required to comply with all applicable laws and to respect human rights;
- (c) The need for rights and obligations to be matched to appropriate and effective remedies when breached.

These Guiding Principles apply to all States and to all business enterprises, both transnational and others, regardless of their size, sector, location, ownership and structure.

These Guiding Principles should be understood as a coherent whole and should be read, individually and collectively, in terms of their objective of enhancing standards and practices with regard to business and human rights so as to achieve tangible results for affected individuals and communities, and thereby also contributing to a socially sustainable globalization.

Nothing in these Guiding Principles should be read as creating new international law obligations, or as limiting or undermining any legal obligations a State may have undertaken or be subject to under international law with regard to human rights.

These Guiding Principles should be implemented in a non-discriminatory manner, with particular attention to the rights and needs of, as well as the challenges faced by, individuals from groups or populations that may be at heightened risk of becoming vulnerable or marginalized, and with due regard to the different risks that may be faced by women and men.

I. THE STATE DUTY TO PROTECT HUMAN RIGHTS

A. FOUNDATIONAL PRINCIPLES

1. **States must protect against human rights abuse within their territory and/or jurisdiction by third parties, including business enterprises. This requires taking appropriate steps to prevent, investigate, punish and redress such abuse through effective policies, legislation, regulations and adjudication.**

Commentary

States' international human rights law obligations require that they respect, protect and fulfil the human rights of individuals within their territory and/or jurisdiction. This includes the duty to protect against human rights abuse by third parties, including business enterprises.

The State duty to protect is a standard of conduct. Therefore, States are not per se responsible for human rights abuse by private actors. However, States may breach their international human rights law obligations where such abuse can be attributed to them, or where they fail to take appropriate steps to prevent, investigate, punish and redress private actors' abuse. While States generally have discretion in deciding upon these steps, they should consider the full range of permissible preventative and remedial measures, including policies, legislation, regulations and adjudication. States also have the duty to protect and promote the rule of law, including by taking measures to ensure equality before the law, fairness in its application, and by providing for adequate accountability, legal certainty, and procedural and legal transparency.

This chapter focuses on preventative measures while chapter III outlines remedial measures.

2. **States should set out clearly the expectation that all business enterprises domiciled in their territory and/or jurisdiction respect human rights throughout their operations.**

Commentary

At present States are not generally required under international human rights law to regulate the extraterritorial activities of businesses domiciled in their

territory and/or jurisdiction. Nor are they generally prohibited from doing so, provided there is a recognized jurisdictional basis. Within these parameters some human rights treaty bodies recommend that home States take steps to prevent abuse abroad by business enterprises within their jurisdiction.

There are strong policy reasons for home States to set out clearly the expectation that businesses respect human rights abroad, especially where the State itself is involved in or supports those businesses. The reasons include ensuring predictability for business enterprises by providing coherent and consistent messages, and preserving the State's own reputation.

States have adopted a range of approaches in this regard. Some are domestic measures with extraterritorial implications. Examples include requirements on "parent" companies to report on the global operations of the entire enterprise; multilateral soft-law instruments such as the Guidelines for Multinational Enterprises of the Organisation for Economic Co-operation and Development; and performance standards required by institutions that support overseas investments. Other approaches amount to direct extraterritorial legislation and enforcement. This includes criminal regimes that allow for prosecutions based on the nationality of the perpetrator no matter where the offence occurs. Various factors may contribute to the perceived and actual reasonableness of States' actions, for example whether they are grounded in multilateral agreement.

B. OPERATIONAL PRINCIPLES

GENERAL STATE REGULATORY AND POLICY FUNCTIONS

3. In meeting their duty to protect, States should:

- (a) Enforce laws that are aimed at, or have the effect of, requiring business enterprises to respect human rights, and periodically to assess the adequacy of such laws and address any gaps;**
- (b) Ensure that other laws and policies governing the creation and ongoing operation of business enterprises, such as corporate law, do not constrain but enable business respect for human rights;**
- (c) Provide effective guidance to business enterprises on how to respect human rights throughout their operations;**
- (d) Encourage, and where appropriate require, business enterprises to communicate how they address their human rights impacts.**

Commentary

States should not assume that businesses invariably prefer, or benefit from, State inaction, and they should consider a smart mix of measures – national and international, mandatory and voluntary – to foster business respect for human rights.

The failure to enforce existing laws that directly or indirectly regulate business respect for human rights is often a significant legal gap in State practice. Such laws might range from non-discrimination and labour laws to environmental, property, privacy and anti-bribery laws. Therefore, it is important for States to consider whether such laws are currently being enforced effectively, and if not, why this is the case and what measures may reasonably correct the situation.

It is equally important for States to review whether these laws provide the necessary coverage in light of evolving circumstances and whether, together with relevant policies, they provide an environment conducive to business respect for human rights. For example, greater clarity in some areas of law and policy, such as those governing access to land, including entitlements in relation to ownership or use of land, is often necessary to protect both rights-holders and business enterprises.

Laws and policies that govern the creation and ongoing operation of business enterprises, such as corporate and securities laws, directly shape business behaviour. Yet their implications for human rights remain poorly understood. For example, there is a lack of clarity in corporate and securities law regarding what companies and their officers are permitted, let alone required, to do regarding human rights. Laws and policies in this area should provide sufficient guidance to enable enterprises to respect human rights, with due regard to the role of existing governance structures such as corporate boards.

Guidance to business enterprises on respecting human rights should indicate expected outcomes and help share best practices. It should advise on appropriate methods, including human rights due diligence, and how to consider effectively issues of gender, vulnerability and/or marginalization, recognizing the specific challenges that may be faced by indigenous peoples, women, national or ethnic minorities, religious and linguistic

minorities, children, persons with disabilities, and migrant workers and their families.

National human rights institutions that comply with the Paris Principles have an important role to play in helping States identify whether relevant laws are aligned with their human rights obligations and are being effectively enforced, and in providing guidance on human rights also to business enterprises and other non-State actors.

Communication by business enterprises on how they address their human rights impacts can range from informal engagement with affected stakeholders to formal public reporting. State encouragement of, or where appropriate requirements for, such communication are important in fostering respect for human rights by business enterprises. Incentives to communicate adequate information could include provisions to give weight to such self-reporting in the event of any judicial or administrative proceeding. A requirement to communicate can be particularly appropriate where the nature of business operations or operating contexts pose a significant risk to human rights. Policies or laws in this area can usefully clarify what and how businesses should communicate, helping to ensure both the accessibility and accuracy of communications.

Any stipulation of what would constitute adequate communication should take into account risks that it may pose to the safety and security of individuals and facilities; legitimate requirements of commercial confidentiality; and variations in companies' size and structures.

Financial reporting requirements should clarify that human rights impacts in some instances may be "material" or "significant" to the economic performance of the business enterprise.

THE STATE-BUSINESS NEXUS

- 4. States should take additional steps to protect against human rights abuses by business enterprises that are owned or controlled by the State, or that receive substantial support and services from State agencies such as export credit agencies and official investment insurance or guarantee agencies, including, where appropriate, by requiring human rights due diligence.**

Commentary

States individually are the primary duty-bearers under international human rights law, and collectively they are the trustees of the international human rights regime. Where a business enterprise is controlled by the State or where its acts can be attributed otherwise to the State, an abuse of human rights by the business enterprise may entail a violation of the State's own international law obligations. Moreover, the closer a business enterprise is to the State, or the more it relies on statutory authority or taxpayer support, the stronger the State's policy rationale becomes for ensuring that the enterprise respects human rights.

Where States own or control business enterprises, they have greatest means within their powers to ensure that relevant policies, legislation and regulations regarding respect for human rights are implemented. Senior management typically reports to State agencies, and associated government departments have greater scope for scrutiny and oversight, including ensuring that effective human rights due diligence is implemented. (These enterprises are also subject to the corporate responsibility to respect human rights, addressed in chapter II.)

A range of agencies linked formally or informally to the State may provide support and services to business activities. These include export credit agencies, official investment insurance or guarantee agencies, development agencies and development finance institutions. Where these agencies do not explicitly consider the actual and potential adverse impacts on human rights of beneficiary enterprises, they put themselves at risk – in reputational, financial, political and potentially legal terms – for supporting any such harm, and they may add to the human rights challenges faced by the recipient State.

Given these risks, States should encourage and, where appropriate, require human rights due diligence by the agencies themselves and by those business enterprises or projects receiving their support. A requirement for human rights due diligence is most likely to be appropriate where the nature of business operations or operating contexts pose significant risk to human rights.

- 5. States should exercise adequate oversight in order to meet their international human rights obligations when they contract with, or legislate for, business enterprises to provide services that may impact upon the enjoyment of human rights.**

Commentary

States do not relinquish their international human rights law obligations when they privatize the delivery of services that may impact upon the enjoyment of human rights. Failure by States to ensure that business enterprises performing such services operate in a manner consistent with the State's human rights obligations may entail both reputational and legal consequences for the State itself. As a necessary step, the relevant service contracts or enabling legislation should clarify the State's expectations that these enterprises respect human rights. States should ensure that they can effectively oversee the enterprises' activities, including through the provision of adequate independent monitoring and accountability mechanisms.

- 6. States should promote respect for human rights by business enterprises with which they conduct commercial transactions.**

Commentary

States conduct a variety of commercial transactions with business enterprises, not least through their procurement activities. This provides States – individually and collectively – with unique opportunities to promote awareness of and respect for human rights by those enterprises, including through the terms of contracts, with due regard to States' relevant obligations under national and international law.

SUPPORTING BUSINESS RESPECT FOR HUMAN RIGHTS IN CONFLICT-AFFECTED AREAS

- 7. Because the risk of gross human rights abuses is heightened in conflict-affected areas, States should help ensure that business enterprises operating in those contexts are not involved with such abuses, including by:**
- (a) Engaging at the earliest stage possible with business enterprises to help them identify, prevent and mitigate the human rights-related risks of their activities and business relationships;**

- (b) Providing adequate assistance to business enterprises to assess and address the heightened risks of abuses, paying special attention to both gender-based and sexual violence;**
- (c) Denying access to public support and services for a business enterprise that is involved with gross human rights abuses and refuses to cooperate in addressing the situation;**
- (d) Ensuring that their current policies, legislation, regulations and enforcement measures are effective in addressing the risk of business involvement in gross human rights abuses.**

Commentary

Some of the worst human rights abuses involving business occur amid conflict over the control of territory, resources or a Government itself – where the human rights regime cannot be expected to function as intended. Responsible businesses increasingly seek guidance from States about how to avoid contributing to human rights harm in these difficult contexts. Innovative and practical approaches are needed. In particular, it is important to pay attention to the risk of sexual and gender-based violence, which is especially prevalent during times of conflict.

It is important for all States to address issues early before situations on the ground deteriorate. In conflict-affected areas, the “host” State may be unable to protect human rights adequately due to a lack of effective control. Where transnational corporations are involved, their “home” States therefore have roles to play in assisting both those corporations and host States to ensure that businesses are not involved with human rights abuse, while neighboring States can provide important additional support.

To achieve greater policy coherence and assist business enterprises adequately in such situations, home States should foster closer cooperation among their development assistance agencies, foreign and trade ministries, and export finance institutions in their capitals and within their embassies, as well as between these agencies and host Government actors; develop early-warning indicators to alert government agencies and business enterprises to problems; and attach appropriate consequences to any failure by enterprises to cooperate in these contexts, including by denying or withdrawing existing public support or services, or where that is not possible, denying their future provision.

States should warn business enterprises of the heightened risk of being involved with gross abuses of human rights in conflict-affected areas. They should review whether their policies, legislation, regulations and enforcement measures effectively address this heightened risk, including through provisions for human rights due diligence by business. Where they identify gaps, States should take appropriate steps to address them. This may include exploring civil, administrative or criminal liability for enterprises domiciled or operating in their territory and/or jurisdiction that commit or contribute to gross human rights abuses. Moreover, States should consider multilateral approaches to prevent and address such acts, as well as support effective collective initiatives.

All these measures are in addition to States' obligations under international humanitarian law in situations of armed conflict, and under international criminal law.

ENSURING POLICY COHERENCE

- 8. States should ensure that governmental departments, agencies and other State-based institutions that shape business practices are aware of and observe the State's human rights obligations when fulfilling their respective mandates, including by providing them with relevant information, training and support.**

Commentary

There is no inevitable tension between States' human rights obligations and the laws and policies they put in place that shape business practices. However, at times, States have to make difficult balancing decisions to reconcile different societal needs. To achieve the appropriate balance, States need to take a broad approach to managing the business and human rights agenda, aimed at ensuring both vertical and horizontal domestic policy coherence.

Vertical policy coherence entails States having the necessary policies, laws and processes to implement their international human rights law obligations. Horizontal policy coherence means supporting and equipping departments and agencies, at both the national and subnational levels, that shape business practices – including those responsible for corporate law

and securities regulation, investment, export credit and insurance, trade and labour – to be informed of and act in a manner compatible with the Governments’ human rights obligations.

- 9. States should maintain adequate domestic policy space to meet their human rights obligations when pursuing business-related policy objectives with other States or business enterprises, for instance through investment treaties or contracts.**

Commentary

Economic agreements concluded by States, either with other States or with business enterprises – such as bilateral investment treaties, free-trade agreements or contracts for investment projects – create economic opportunities for States. But they can also affect the domestic policy space of Governments. For example, the terms of international investment agreements may constrain States from fully implementing new human rights legislation, or put them at risk of binding international arbitration if they do so. Therefore, States should ensure that they retain adequate policy and regulatory ability to protect human rights under the terms of such agreements, while providing the necessary investor protection.

- 10. States, when acting as members of multilateral institutions that deal with business-related issues, should:**
- (a) Seek to ensure that those institutions neither restrain the ability of their member States to meet their duty to protect nor hinder business enterprises from respecting human rights;**
 - (b) Encourage those institutions, within their respective mandates and capacities, to promote business respect for human rights and, where requested, to help States meet their duty to protect against human rights abuse by business enterprises, including through technical assistance, capacity-building and awareness-raising;**
 - (c) Draw on these Guiding Principles to promote shared understanding and advance international cooperation in the management of business and human rights challenges.**

Commentary

Greater policy coherence is also needed at the international level, including where States participate in multilateral institutions that deal with business-related issues, such as international trade and financial institutions. States retain their international human rights law obligations when they participate in such institutions.

Capacity-building and awareness-raising through such institutions can play a vital role in helping all States to fulfil their duty to protect, including by enabling the sharing of information about challenges and best practices, thus promoting more consistent approaches.

Collective action through multilateral institutions can help States level the playing field with regard to business respect for human rights, but it should do so by raising the performance of laggards. Cooperation between States, multilateral institutions and other stakeholders can also play an important role. These Guiding Principles provide a common reference point in this regard, and could serve as a useful basis for building a cumulative positive effect that takes into account the respective roles and responsibilities of all relevant stakeholders.

II. THE CORPORATE RESPONSIBILITY TO RESPECT HUMAN RIGHTS

A. FOUNDATIONAL PRINCIPLES

- 11. Business enterprises should respect human rights. This means that they should avoid infringing on the human rights of others and should address adverse human rights impacts with which they are involved.**

Commentary

The responsibility to respect human rights is a global standard of expected conduct for all business enterprises wherever they operate. It exists independently of States' abilities and/or willingness to fulfil their own human rights obligations, and does not diminish those obligations. And it exists over and above compliance with national laws and regulations protecting human rights.

Addressing adverse human rights impacts requires taking adequate measures for their prevention, mitigation and, where appropriate, remediation.

Business enterprises may undertake other commitments or activities to support and promote human rights, which may contribute to the enjoyment of rights. But this does not offset a failure to respect human rights throughout their operations.

Business enterprises should not undermine States' abilities to meet their own human rights obligations, including by actions that might weaken the integrity of judicial processes.

- 12. The responsibility of business enterprises to respect human rights refers to internationally recognized human rights – understood, at a minimum, as those expressed in the International Bill of Human Rights and the principles concerning fundamental rights set out in the International Labour Organization's Declaration on Fundamental Principles and Rights at Work.**

Commentary

Because business enterprises can have an impact on virtually the entire spectrum of internationally recognized human rights, their responsibility to

respect applies to all such rights. In practice, some human rights may be at greater risk than others in particular industries or contexts, and therefore will be the focus of heightened attention. However, situations may change, so all human rights should be the subject of periodic review.

An authoritative list of the core internationally recognized human rights is contained in the International Bill of Human Rights (consisting of the Universal Declaration of Human Rights and the main instruments through which it has been codified: the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights), coupled with the principles concerning fundamental rights in the eight ILO core conventions as set out in the Declaration on Fundamental Principles and Rights at Work. These are the benchmarks against which other social actors assess the human rights impacts of business enterprises. The responsibility of business enterprises to respect human rights is distinct from issues of legal liability and enforcement, which remain defined largely by national law provisions in relevant jurisdictions.

Depending on circumstances, business enterprises may need to consider additional standards. For instance, enterprises should respect the human rights of individuals belonging to specific groups or populations that require particular attention, where they may have adverse human rights impacts on them. In this connection, United Nations instruments have elaborated further on the rights of indigenous peoples; women; national or ethnic, religious and linguistic minorities; children; persons with disabilities; and migrant workers and their families. Moreover, in situations of armed conflict enterprises should respect the standards of international humanitarian law.

13. The responsibility to respect human rights requires that business enterprises:

- (a) Avoid causing or contributing to adverse human rights impacts through their own activities, and address such impacts when they occur;**
- (b) Seek to prevent or mitigate adverse human rights impacts that are directly linked to their operations, products or services by their business relationships, even if they have not contributed to those impacts.**

Commentary

Business enterprises may be involved with adverse human rights impacts either through their own activities or as a result of their business relationships with other parties. Guiding Principle 19 elaborates further on the implications for how business enterprises should address these situations. For the purpose of these Guiding Principles a business enterprise's "activities" are understood to include both actions and omissions; and its "business relationships" are understood to include relationships with business partners, entities in its value chain, and any other non-State or State entity directly linked to its business operations, products or services.

- 14. The responsibility of business enterprises to respect human rights applies to all enterprises regardless of their size, sector, operational context, ownership and structure. Nevertheless, the scale and complexity of the means through which enterprises meet that responsibility may vary according to these factors and with the severity of the enterprise's adverse human rights impacts.**

Commentary

The means through which a business enterprise meets its responsibility to respect human rights will be proportional to, among other factors, its size. Small and medium-sized enterprises may have less capacity as well as more informal processes and management structures than larger companies, so their respective policies and processes will take on different forms. But some small and medium-sized enterprises can have severe human rights impacts, which will require corresponding measures regardless of their size. Severity of impacts will be judged by their scale, scope and irremediable character. The means through which a business enterprise meets its responsibility to respect human rights may also vary depending on whether, and the extent to which, it conducts business through a corporate group or individually. However, the responsibility to respect human rights applies fully and equally to all business enterprises.

- 15. In order to meet their responsibility to respect human rights, business enterprises should have in place policies and processes appropriate to their size and circumstances, including:**

- (a) A policy commitment to meet their responsibility to respect human rights;
- (b) A human rights due diligence process to identify, prevent, mitigate and account for how they address their impacts on human rights;
- (c) Processes to enable the remediation of any adverse human rights impacts they cause or to which they contribute.

Commentary

Business enterprises need to know and show that they respect human rights. They cannot do so unless they have certain policies and processes in place. Principles 16 to 24 elaborate further on these.

B. OPERATIONAL PRINCIPLES

POLICY COMMITMENT

- 16. As the basis for embedding their responsibility to respect human rights, business enterprises should express their commitment to meet this responsibility through a statement of policy that:**
- (a) Is approved at the most senior level of the business enterprise;
 - (b) Is informed by relevant internal and/or external expertise;
 - (c) Stipulates the enterprise's human rights expectations of personnel, business partners and other parties directly linked to its operations, products or services;
 - (d) Is publicly available and communicated internally and externally to all personnel, business partners and other relevant parties;
 - (e) Is reflected in operational policies and procedures necessary to embed it throughout the business enterprise.

Commentary

The term "statement" is used generically, to describe whatever means an enterprise employs to set out publicly its responsibilities, commitments, and expectations.

The level of expertise required to ensure that the policy statement is adequately informed will vary according to the complexity of the business enterprise's

operations. Expertise can be drawn from various sources, ranging from credible online or written resources to consultation with recognized experts. The statement of commitment should be publicly available. It should be communicated actively to entities with which the enterprise has contractual relationships; others directly linked to its operations, which may include State security forces; investors; and, in the case of operations with significant human rights risks, to the potentially affected stakeholders.

Internal communication of the statement and of related policies and procedures should make clear what the lines and systems of accountability will be, and should be supported by any necessary training for personnel in relevant business functions.

Just as States should work towards policy coherence, so business enterprises need to strive for coherence between their responsibility to respect human rights and policies and procedures that govern their wider business activities and relationships. This should include, for example, policies and procedures that set financial and other performance incentives for personnel; procurement practices; and lobbying activities where human rights are at stake.

Through these and any other appropriate means, the policy statement should be embedded from the top of the business enterprise through all its functions, which otherwise may act without awareness or regard for human rights.

HUMAN RIGHTS DUE DILIGENCE

17. In order to identify, prevent, mitigate and account for how they address their adverse human rights impacts, business enterprises should carry out human rights due diligence. The process should include assessing actual and potential human rights impacts, integrating and acting upon the findings, tracking responses, and communicating how impacts are addressed. Human rights due diligence:

- (a) Should cover adverse human rights impacts that the business enterprise may cause or contribute to through its own activities, or which may be directly linked to its operations, products or services by its business relationships;**

- (b) Will vary in complexity with the size of the business enterprise, the risk of severe human rights impacts, and the nature and context of its operations;**
- (c) Should be ongoing, recognizing that the human rights risks may change over time as the business enterprise's operations and operating context evolve.**

Commentary

This Principle defines the parameters for human rights due diligence, while Principles 18 through 21 elaborate its essential components.

Human rights risks are understood to be the business enterprise's potential adverse human rights impacts. Potential impacts should be addressed through prevention or mitigation, while actual impacts – those that have already occurred – should be a subject for remediation (Principle 22).

Human rights due diligence can be included within broader enterprise risk-management systems, provided that it goes beyond simply identifying and managing material risks to the company itself, to include risks to rights-holders.

Human rights due diligence should be initiated as early as possible in the development of a new activity or relationship, given that human rights risks can be increased or mitigated already at the stage of structuring contracts or other agreements, and may be inherited through mergers or acquisitions.

Where business enterprises have large numbers of entities in their value chains it may be unreasonably difficult to conduct due diligence for adverse human rights impacts across them all. If so, business enterprises should identify general areas where the risk of adverse human rights impacts is most significant, whether due to certain suppliers' or clients' operating context, the particular operations, products or services involved, or other relevant considerations, and prioritize these for human rights due diligence.

Questions of complicity may arise when a business enterprise contributes to, or is seen as contributing to, adverse human rights impacts caused by other parties. Complicity has both non-legal and legal meanings. As a non-legal matter, business enterprises may be perceived as being "complicit" in the acts of another party where, for example, they are seen to benefit from an abuse committed by that party.

As a legal matter, most national jurisdictions prohibit complicity in the commission of a crime, and a number allow for criminal liability of business enterprises in such cases. Typically, civil actions can also be based on an enterprise's alleged contribution to a harm, although these may not be framed in human rights terms. The weight of international criminal law jurisprudence indicates that the relevant standard for aiding and abetting is knowingly providing practical assistance or encouragement that has a substantial effect on the commission of a crime.

Conducting appropriate human rights due diligence should help business enterprises address the risk of legal claims against them by showing that they took every reasonable step to avoid involvement with an alleged human rights abuse. However, business enterprises conducting such due diligence should not assume that, by itself, this will automatically and fully absolve them from liability for causing or contributing to human rights abuses.

18. In order to gauge human rights risks, business enterprises should identify and assess any actual or potential adverse human rights impacts with which they may be involved either through their own activities or as a result of their business relationships. This process should:

- (a) Draw on internal and/or independent external human rights expertise;**
- (b) Involve meaningful consultation with potentially affected groups and other relevant stakeholders, as appropriate to the size of the business enterprise and the nature and context of the operation.**

Commentary

The initial step in conducting human rights due diligence is to identify and assess the nature of the actual and potential adverse human rights impacts with which a business enterprise may be involved. The purpose is to understand the specific impacts on specific people, given a specific context of operations. Typically this includes assessing the human rights context prior to a proposed business activity, where possible; identifying who may be affected; cataloguing the relevant human rights standards and issues; and projecting how the proposed activity and associated business relationships could have adverse human rights impacts on those identified.

In this process, business enterprises should pay special attention to any particular human rights impacts on individuals from groups or populations that may be at heightened risk of vulnerability or marginalization, and bear in mind the different risks that may be faced by women and men.

While processes for assessing human rights impacts can be incorporated within other processes such as risk assessments or environmental and social impact assessments, they should include all internationally recognized human rights as a reference point, since enterprises may potentially impact virtually any of these rights.

Because human rights situations are dynamic, assessments of human rights impacts should be undertaken at regular intervals: prior to a new activity or relationship; prior to major decisions or changes in the operation (e.g. market entry, product launch, policy change, or wider changes to the business); in response to or anticipation of changes in the operating environment (e.g. rising social tensions); and periodically throughout the life of an activity or relationship.

To enable business enterprises to assess their human rights impacts accurately, they should seek to understand the concerns of potentially affected stakeholders by consulting them directly in a manner that takes into account language and other potential barriers to effective engagement. In situations where such consultation is not possible, business enterprises should consider reasonable alternatives such as consulting credible, independent expert resources, including human rights defenders and others from civil society.

The assessment of human rights impacts informs subsequent steps in the human rights due diligence process.

19. In order to prevent and mitigate adverse human rights impacts, business enterprises should integrate the findings from their impact assessments across relevant internal functions and processes, and take appropriate action.

- (a) Effective integration requires that:**
 - (i) Responsibility for addressing such impacts is assigned to the appropriate level and function within the business enterprise;**

(ii) Internal decision-making, budget allocations and oversight processes enable effective responses to such impacts.

(b) Appropriate action will vary according to:

(i) Whether the business enterprise causes or contributes to an adverse impact, or whether it is involved solely because the impact is directly linked to its operations, products or services by a business relationship;

(ii) The extent of its leverage in addressing the adverse impact.

Commentary

The horizontal integration across the business enterprise of specific findings from assessing human rights impacts can only be effective if its human rights policy commitment has been embedded into all relevant business functions. This is required to ensure that the assessment findings are properly understood, given due weight, and acted upon.

In assessing human rights impacts, business enterprises will have looked for both actual and potential adverse impacts. Potential impacts should be prevented or mitigated through the horizontal integration of findings across the business enterprise, while actual impacts—those that have already occurred – should be a subject for remediation (Principle 22).

Where a business enterprise causes or may cause an adverse human rights impact, it should take the necessary steps to cease or prevent the impact.

Where a business enterprise contributes or may contribute to an adverse human rights impact, it should take the necessary steps to cease or prevent its contribution and use its leverage to mitigate any remaining impact to the greatest extent possible. Leverage is considered to exist where the enterprise has the ability to effect change in the wrongful practices of an entity that causes a harm.

Where a business enterprise has not contributed to an adverse human rights impact, but that impact is nevertheless directly linked to its operations, products or services by its business relationship with another entity, the situation is more complex. Among the factors that will enter into the determination of the appropriate action in such situations are the

enterprise's leverage over the entity concerned, how crucial the relationship is to the enterprise, the severity of the abuse, and whether terminating the relationship with the entity itself would have adverse human rights consequences.

The more complex the situation and its implications for human rights, the stronger is the case for the enterprise to draw on independent expert advice in deciding how to respond.

If the business enterprise has leverage to prevent or mitigate the adverse impact, it should exercise it. And if it lacks leverage there may be ways for the enterprise to increase it. Leverage may be increased by, for example, offering capacity-building or other incentives to the related entity, or collaborating with other actors.

There are situations in which the enterprise lacks the leverage to prevent or mitigate adverse impacts and is unable to increase its leverage. Here, the enterprise should consider ending the relationship, taking into account credible assessments of potential adverse human rights impacts of doing so.

Where the relationship is "crucial" to the enterprise, ending it raises further challenges. A relationship could be deemed as crucial if it provides a product or service that is essential to the enterprise's business, and for which no reasonable alternative source exists. Here the severity of the adverse human rights impact must also be considered: the more severe the abuse, the more quickly the enterprise will need to see change before it takes a decision on whether it should end the relationship. In any case, for as long as the abuse continues and the enterprise remains in the relationship, it should be able to demonstrate its own ongoing efforts to mitigate the impact and be prepared to accept any consequences – reputational, financial or legal – of the continuing connection.

20. In order to verify whether adverse human rights impacts are being addressed, business enterprises should track the effectiveness of their response. Tracking should:

- (a) Be based on appropriate qualitative and quantitative indicators;**
- (b) Draw on feedback from both internal and external sources, including affected stakeholders.**

Commentary

Tracking is necessary in order for a business enterprise to know if its human rights policies are being implemented optimally, whether it has responded effectively to the identified human rights impacts, and to drive continuous improvement.

Business enterprises should make particular efforts to track the effectiveness of their responses to impacts on individuals from groups or populations that may be at heightened risk of vulnerability or marginalization.

Tracking should be integrated into relevant internal reporting processes. Business enterprises might employ tools they already use in relation to other issues. This could include performance contracts and reviews as well as surveys and audits, using gender-disaggregated data where relevant. Operational-level grievance mechanisms can also provide important feedback on the effectiveness of the business enterprise's human rights due diligence from those directly affected (see Principle 29).

21. In order to account for how they address their human rights impacts, business enterprises should be prepared to communicate this externally, particularly when concerns are raised by or on behalf of affected stakeholders. Business enterprises whose operations or operating contexts pose risks of severe human rights impacts should report formally on how they address them. In all instances, communications should:

- (a) Be of a form and frequency that reflect an enterprise's human rights impacts and that are accessible to its intended audiences;**
- (b) Provide information that is sufficient to evaluate the adequacy of an enterprise's response to the particular human rights impact involved;**
- (c) In turn not pose risks to affected stakeholders, personnel or to legitimate requirements of commercial confidentiality.**

Commentary

The responsibility to respect human rights requires that business enterprises have in place policies and processes through which they can both know

and show that they respect human rights in practice. Showing involves communication, providing a measure of transparency and accountability to individuals or groups who may be impacted and to other relevant stakeholders, including investors.

Communication can take a variety of forms, including in-person meetings, online dialogues, consultation with affected stakeholders, and formal public reports. Formal reporting is itself evolving, from traditional annual reports and corporate responsibility/sustainability reports, to include online updates and integrated financial and non-financial reports.

Formal reporting by enterprises is expected where risks of severe human rights impacts exist, whether this is due to the nature of the business operations or operating contexts. The reporting should cover topics and indicators concerning how enterprises identify and address adverse impacts on human rights. Independent verification of human rights reporting can strengthen its content and credibility. Sector-specific indicators can provide helpful additional detail.

REMEDATION

22. Where business enterprises identify that they have caused or contributed to adverse impacts, they should provide for or cooperate in their remediation through legitimate processes.

Commentary

Even with the best policies and practices, a business enterprise may cause or contribute to an adverse human rights impact that it has not foreseen or been able to prevent.

Where a business enterprise identifies such a situation, whether through its human rights due diligence process or other means, its responsibility to respect human rights requires active engagement in remediation, by itself or in cooperation with other actors. Operational-level grievance mechanisms for those potentially impacted by the business enterprise's activities can be one effective means of enabling remediation when they meet certain core criteria, as set out in Principle 31.

Where adverse impacts have occurred that the business enterprise has not caused or contributed to, but which are directly linked to its operations,

products or services by a business relationship, the responsibility to respect human rights does not require that the enterprise itself provide for remediation, though it may take a role in doing so.

Some situations, in particular where crimes are alleged, typically will require cooperation with judicial mechanisms.

Further guidance on mechanisms through which remediation may be sought, including where allegations of adverse human rights impacts are contested, is included in chapter III on access to remedy.

ISSUES OF CONTEXT

23. In all contexts, business enterprises should:

- (a) Comply with all applicable laws and respect internationally recognized human rights, wherever they operate;**
- (b) Seek ways to honour the principles of internationally recognized human rights when faced with conflicting requirements;**
- (c) Treat the risk of causing or contributing to gross human rights abuses as a legal compliance issue wherever they operate.**

Commentary

Although particular country and local contexts may affect the human rights risks of an enterprise's activities and business relationships, all business enterprises have the same responsibility to respect human rights wherever they operate. Where the domestic context renders it impossible to meet this responsibility fully, business enterprises are expected to respect the principles of internationally recognized human rights to the greatest extent possible in the circumstances, and to be able to demonstrate their efforts in this regard.

Some operating environments, such as conflict-affected areas, may increase the risks of enterprises being complicit in gross human rights abuses committed by other actors (security forces, for example). Business enterprises should treat this risk as a legal compliance issue, given the expanding web of potential corporate legal liability arising from extraterritorial civil claims, and from the incorporation of the provisions of the Rome Statute of the International Criminal Court in jurisdictions that provide for corporate

criminal responsibility. In addition, corporate directors, officers and employees may be subject to individual liability for acts that amount to gross human rights abuses.

In complex contexts such as these, business enterprises should ensure that they do not exacerbate the situation. In assessing how best to respond, they will often be well advised to draw on not only expertise and cross-functional consultation within the enterprise, but also to consult externally with credible, independent experts, including from Governments, civil society, national human rights institutions and relevant multi-stakeholder initiatives.

24. Where it is necessary to prioritize actions to address actual and potential adverse human rights impacts, business enterprises should first seek to prevent and mitigate those that are most severe or where delayed response would make them irremediable.

Commentary

While business enterprises should address all their adverse human rights impacts, it may not always be possible to address them simultaneously. In the absence of specific legal guidance, if prioritization is necessary business enterprises should begin with those human rights impacts that would be most severe, recognizing that a delayed response may affect remediability. Severity is not an absolute concept in this context, but is relative to the other human rights impacts the business enterprise has identified.

III. ACCESS TO REMEDY

A. FOUNDATIONAL PRINCIPLE

- 25. As part of their duty to protect against business-related human rights abuse, States must take appropriate steps to ensure, through judicial, administrative, legislative or other appropriate means, that when such abuses occur within their territory and/or jurisdiction those affected have access to effective remedy.**

Commentary

Unless States take appropriate steps to investigate, punish and redress business-related human rights abuses when they do occur, the State duty to protect can be rendered weak or even meaningless.

Access to effective remedy has both procedural and substantive aspects. The remedies provided by the grievance mechanisms discussed in this section may take a range of substantive forms the aim of which, generally speaking, will be to counteract or make good any human rights harms that have occurred. Remedy may include apologies, restitution, rehabilitation, financial or non-financial compensation and punitive sanctions (whether criminal or administrative, such as fines), as well as the prevention of harm through, for example, injunctions or guarantees of non-repetition. Procedures for the provision of remedy should be impartial, protected from corruption and free from political or other attempts to influence the outcome.

For the purpose of these Guiding Principles, a grievance is understood to be a perceived injustice evoking an individual's or a group's sense of entitlement, which may be based on law, contract, explicit or implicit promises, customary practice, or general notions of fairness of aggrieved communities. The term grievance mechanism is used to indicate any routinized, State-based or non-State-based, judicial or non-judicial process through which grievances concerning business-related human rights abuse can be raised and remedy can be sought.

State-based grievance mechanisms may be administered by a branch or agency of the State, or by an independent body on a statutory or constitutional basis. They may be judicial or non-judicial. In some

mechanisms, those affected are directly involved in seeking remedy; in others, an intermediary seeks remedy on their behalf. Examples include the courts (for both criminal and civil actions), labour tribunals, national human rights institutions, National Contact Points under the Guidelines for Multinational Enterprises of the Organisation for Economic Co-operation and Development, many ombudsperson offices, and Government-run complaints offices.

Ensuring access to remedy for business-related human rights abuses requires also that States facilitate public awareness and understanding of these mechanisms, how they can be accessed, and any support (financial or expert) for doing so.

State-based judicial and non-judicial grievance mechanisms should form the foundation of a wider system of remedy. Within such a system, operational-level grievance mechanisms can provide early stage recourse and resolution. State-based and operational-level mechanisms, in turn, can be supplemented or enhanced by the remedial functions of collaborative initiatives as well as those of international and regional human rights mechanisms. Further guidance with regard to these mechanisms is provided in Guiding Principles 26 to 31.

B. OPERATIONAL PRINCIPLES

STATE-BASED JUDICIAL MECHANISMS

26. States should take appropriate steps to ensure the effectiveness of domestic judicial mechanisms when addressing business-related human rights abuses, including considering ways to reduce legal, practical and other relevant barriers that could lead to a denial of access to remedy.

Commentary

Effective judicial mechanisms are at the core of ensuring access to remedy. Their ability to address business-related human rights abuses depends on their impartiality, integrity and ability to accord due process.

States should ensure that they do not erect barriers to prevent legitimate cases from being brought before the courts in situations where judicial recourse is an essential part of accessing remedy or alternative sources of effective remedy are unavailable. They should also ensure that the provision

of justice is not prevented by corruption of the judicial process, that courts are independent of economic or political pressures from other State agents and from business actors, and that the legitimate and peaceful activities of human rights defenders are not obstructed.

Legal barriers that can prevent legitimate cases involving business-related human rights abuse from being addressed can arise where, for example:

- The way in which legal responsibility is attributed among members of a corporate group under domestic criminal and civil laws facilitates the avoidance of appropriate accountability;
- Where claimants face a denial of justice in a host State and cannot access home State courts regardless of the merits of the claim;
- Where certain groups, such as indigenous peoples and migrants, are excluded from the same level of legal protection of their human rights that applies to the wider population.

Practical and procedural barriers to accessing judicial remedy can arise where, for example:

- The costs of bringing claims go beyond being an appropriate deterrent to unmeritorious cases and/or cannot be reduced to reasonable levels through Government support, "market-based" mechanisms (such as litigation insurance and legal fee structures), or other means;
- Claimants experience difficulty in securing legal representation, due to a lack of resources or of other incentives for lawyers to advise claimants in this area;
- There are inadequate options for aggregating claims or enabling representative proceedings (such as class actions and other collective action procedures), and this prevents effective remedy for individual claimants;
- State prosecutors lack adequate resources, expertise and support to meet the State's own obligations to investigate individual and business involvement in human rights-related crimes.

Many of these barriers are the result of, or compounded by, the frequent imbalances between the parties to business-related human rights claims, such as in their financial resources, access to information and expertise. Moreover, whether through active discrimination or as the unintended

consequences of the way judicial mechanisms are designed and operate, individuals from groups or populations at heightened risk of vulnerability or marginalization often face additional cultural, social, physical and financial impediments to accessing, using and benefiting from these mechanisms. Particular attention should be given to the rights and specific needs of such groups or populations at each stage of the remedial process: access, procedures and outcome.

STATE-BASED NON-JUDICIAL GRIEVANCE MECHANISMS

27. States should provide effective and appropriate non-judicial grievance mechanisms, alongside judicial mechanisms, as part of a comprehensive State-based system for the remedy of business-related human rights abuse.

Commentary

Administrative, legislative and other non-judicial mechanisms play an essential role in complementing and supplementing judicial mechanisms. Even where judicial systems are effective and well-resourced, they cannot carry the burden of addressing all alleged abuses; judicial remedy is not always required; nor is it always the favoured approach for all claimants.

Gaps in the provision of remedy for business-related human rights abuses could be filled, where appropriate, by expanding the mandates of existing non-judicial mechanisms and/or by adding new mechanisms. These may be mediation-based, adjudicative or follow other culturally appropriate and rights-compatible processes – or involve some combination of these – depending on the issues concerned, any public interest involved, and the potential needs of the parties. To ensure their effectiveness, they should meet the criteria set out in Principle 31.

National human rights institutions have a particularly important role to play in this regard.

As with judicial mechanisms, States should consider ways to address any imbalances between the parties to business-related human rights claims and any additional barriers to access faced by individuals from groups or populations at heightened risk of vulnerability or marginalization.

NON-STATE-BASED GRIEVANCE MECHANISMS

28. States should consider ways to facilitate access to effective non-State-based grievance mechanisms dealing with business-related human rights harms.

Commentary

One category of non-State-based grievance mechanisms encompasses those administered by a business enterprise alone or with stakeholders, by an industry association or a multi-stakeholder group. They are non-judicial, but may use adjudicative, dialogue-based or other culturally appropriate and rights-compatible processes. These mechanisms may offer particular benefits such as speed of access and remediation, reduced costs and/or transnational reach.

Another category comprises regional and international human rights bodies. These have dealt most often with alleged violations by States of their obligations to respect human rights. However, some have also dealt with the failure of a State to meet its duty to protect against human rights abuse by business enterprises.

States can play a helpful role in raising awareness of, or otherwise facilitating access to, such options, alongside the mechanisms provided by States themselves.

29. To make it possible for grievances to be addressed early and remediated directly, business enterprises should establish or participate in effective operational-level grievance mechanisms for individuals and communities who may be adversely impacted.

Commentary

Operational-level grievance mechanisms are accessible directly to individuals and communities who may be adversely impacted by a business enterprise. They are typically administered by enterprises, alone or in collaboration with others, including relevant stakeholders. They may also be provided through recourse to a mutually acceptable external expert or body. They do not require that those bringing a complaint first access other means of recourse. They can engage the business enterprise directly in assessing the issues and seeking remediation of any harm.

Operational-level grievance mechanisms perform two key functions regarding the responsibility of business enterprises to respect human rights.

- First, they support the identification of adverse human rights impacts as a part of an enterprise's ongoing human rights due diligence. They do so by providing a channel for those directly impacted by the enterprise's operations to raise concerns when they believe they are being or will be adversely impacted. By analysing trends and patterns in complaints, business enterprises can also identify systemic problems and adapt their practices accordingly;
- Second, these mechanisms make it possible for grievances, once identified, to be addressed and for adverse impacts to be remediated early and directly by the business enterprise, thereby preventing harms from compounding and grievances from escalating.

Such mechanisms need not require that a complaint or grievance amount to an alleged human rights abuse before it can be raised, but specifically aim to identify any legitimate concerns of those who may be adversely impacted. If those concerns are not identified and addressed, they may over time escalate into more major disputes and human rights abuses.

Operational-level grievance mechanisms should reflect certain criteria to ensure their effectiveness in practice (Principle 31). These criteria can be met through many different forms of grievance mechanism according to the demands of scale, resource, sector, culture and other parameters.

Operational-level grievance mechanisms can be important complements to wider stakeholder engagement and collective bargaining processes, but cannot substitute for either. They should not be used to undermine the role of legitimate trade unions in addressing labour-related disputes, nor to preclude access to judicial or other non-judicial grievance mechanisms.

30. Industry, multi-stakeholder and other collaborative initiatives that are based on respect for human rights-related standards should ensure that effective grievance mechanisms are available.

Commentary

Human rights-related standards are increasingly reflected in commitments undertaken by industry bodies, multi-stakeholder and other collaborative initiatives, through codes of conduct, performance standards, global

framework agreements between trade unions and transnational corporations, and similar undertakings.

Such collaborative initiatives should ensure the availability of effective mechanisms through which affected parties or their legitimate representatives can raise concerns when they believe the commitments in question have not been met. The legitimacy of such initiatives may be put at risk if they do not provide for such mechanisms. The mechanisms could be at the level of individual members, of the collaborative initiative, or both. These mechanisms should provide for accountability and help enable the remediation of adverse human rights impacts.

EFFECTIVENESS CRITERIA FOR NON-JUDICIAL GRIEVANCE MECHANISMS

31. In order to ensure their effectiveness, non-judicial grievance mechanisms, both State-based and non-State-based, should be:

- (a) Legitimate: enabling trust from the stakeholder groups for whose use they are intended, and being accountable for the fair conduct of grievance processes;**
- (b) Accessible: being known to all stakeholder groups for whose use they are intended, and providing adequate assistance for those who may face particular barriers to access;**
- (c) Predictable: providing a clear and known procedure with an indicative time frame for each stage, and clarity on the types of process and outcome available and means of monitoring implementation;**
- (d) Equitable: seeking to ensure that aggrieved parties have reasonable access to sources of information, advice and expertise necessary to engage in a grievance process on fair, informed and respectful terms;**
- (e) Transparent: keeping parties to a grievance informed about its progress, and providing sufficient information about the mechanism's performance to build confidence in its effectiveness and meet any public interest at stake;**

- (f) **Rights-compatible: ensuring that outcomes and remedies accord with internationally recognized human rights;**
- (g) **A source of continuous learning: drawing on relevant measures to identify lessons for improving the mechanism and preventing future grievances and harms;**

Operational-level mechanisms should also be:

- (h) **Based on engagement and dialogue: consulting the stakeholder groups for whose use they are intended on their design and performance, and focusing on dialogue as the means to address and resolve grievances.**

Commentary

A grievance mechanism can only serve its purpose if the people it is intended to serve know about it, trust it and are able to use it. These criteria provide a benchmark for designing, revising or assessing a non-judicial grievance mechanism to help ensure that it is effective in practice. Poorly designed or implemented grievance mechanisms can risk compounding a sense of grievance amongst affected stakeholders by heightening their sense of disempowerment and disrespect by the process.

The first seven criteria apply to any State-based or non-State-based, adjudicative or dialogue-based mechanism. The eighth criterion is specific to operational-level mechanisms that business enterprises help administer.

The term “grievance mechanism” is used here as a term of art. The term itself may not always be appropriate or helpful when applied to a specific mechanism, but the criteria for effectiveness remain the same. Commentary on the specific criteria follows:

- (a) Stakeholders for whose use a mechanism is intended must trust it if they are to choose to use it. Accountability for ensuring that the parties to a grievance process cannot interfere with its fair conduct is typically one important factor in building stakeholder trust;
- (b) Barriers to access may include a lack of awareness of the mechanism, language, literacy, costs, physical location and fears of reprisal;
- (c) In order for a mechanism to be trusted and used, it should provide public information about the procedure it offers. Time frames for

- each stage should be respected wherever possible, while allowing that flexibility may sometimes be needed;
- (d) In grievances or disputes between business enterprises and affected stakeholders, the latter frequently have much less access to information and expert resources, and often lack the financial resources to pay for them. Where this imbalance is not redressed, it can reduce both the achievement and perception of a fair process and make it harder to arrive at durable solutions;
 - (e) Communicating regularly with parties about the progress of individual grievances can be essential to retaining confidence in the process. Providing transparency about the mechanism's performance to wider stakeholders, through statistics, case studies or more detailed information about the handling of certain cases, can be important to demonstrate its legitimacy and retain broad trust. At the same time, confidentiality of the dialogue between parties and of individuals' identities should be provided where necessary;
 - (f) Grievances are frequently not framed in terms of human rights and many do not initially raise human rights concerns. Regardless, where outcomes have implications for human rights, care should be taken to ensure that they are in line with internationally recognized human rights;
 - (g) Regular analysis of the frequency, patterns and causes of grievances can enable the institution administering the mechanism to identify and influence policies, procedures or practices that should be altered to prevent future harm;
 - (h) For an operational-level grievance mechanism, engaging with affected stakeholder groups about its design and performance can help to ensure that it meets their needs, that they will use it in practice, and that there is a shared interest in ensuring its success. Since a business enterprise cannot, with legitimacy, both be the subject of complaints and unilaterally determine their outcome, these mechanisms should focus on reaching agreed solutions through dialogue. Where adjudication is needed, this should be provided by a legitimate, independent third-party mechanism.

ARTICLES OF INCORPORATION OF INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

This page is available in: English العربية Español Français Русский

As Revised November 21 1998

1 The name of this corporation is **Internet Corporation for Assigned Names and Numbers** (the "Corporation")

2 The name of the Corporation's initial agent for service of process in the State of California United States of America is **ICANN Corporation System**

3 This Corporation is a nonprofit public benefit corporation and is not organized for the private gain of any person. It is organized under the California Nonprofit Public Benefit Corporation Law for charitable and public purposes. The Corporation is organized and will be operated exclusively for charitable educational and scientific purposes within the meaning of § 501 (c)(3) of the Internal Revenue Code of 1986 as amended (the "Code") or the corresponding provision of any future United States tax code. Any reference in these Articles to the Code shall include the corresponding provisions of any future United States tax code. In furtherance of the foregoing purposes and in recognition of the fact that the name is an instrumental part of the work owned by no single nation individual or organization the Corporation shall except as limited by Article 5 hereof pursue the charitable and public purposes of lessening the burdens of government and promoting the global public interest in the operational stability of the name by (i) coordinating the assignment of numerical technical parameters as needed to maintain universal connectivity on the name (ii) performing and overseeing functions related to the coordination of the name Protocol ("IP") address space (iii) performing and overseeing functions related to the coordination of the name domain name system ("DNS") including the development of policies for determining the circumstances under which new top-level domains are added to the DNS root system (iv) overseeing operation of the authoritative name DNS root server system and (v) engaging in any other related lawful activity in furtherance of items (i) through (iv)

4 The Corporation shall operate for the benefit of the name community as a whole carrying out its activities in conformity with relevant principles of international law and applicable in international conventions and local law and to the extent appropriate and consistent with these Articles and its Bylaws through open and transparent processes that enable competition and open entry in name-related markets. To this effect the Corporation shall cooperate as appropriate with relevant international organizations

5 No withdrawal of any other provision (other than Article 8) of these Articles

a The Corporation shall not carry on any other activities not permitted to be carried on (i) by a corporation exempt from United States income tax under § 501 (c)(3) of the Code or (ii) by a corporation contributions of which are deductible under § 170 (c)(2) of the Code

b No substantial part of the activities of the Corporation shall be the carrying on of propaganda or otherwise attempting to influence legislation and the Corporation shall be empowered to make the election under § 501 (h) of the Code

c The Corporation shall not participate in or intervene in (including the publishing or distribution of statements) any political campaign on behalf of or in opposition to any candidate for public office

d No part of the net earnings of the Corporation shall inure to the benefit of or be distributable to its members directors trustees or other private persons except that the Corporation shall be authorized and empowered to pay reasonable compensation for services rendered and to make payments and distributions in furtherance of the purposes set forth in Article 3 hereof

e No one shall be a director officer or trustee of the Corporation if he or she is an individual who is prohibited from serving as a director officer or trustee of the Corporation by one or more "disqualified persons" (as defined in § 4946 of the Code) or if he or she is an individual who is prohibited from serving as a director officer or trustee of the Corporation by one or more organizations described in paragraph (1) or (2) of § 509 (a) of the Code

6 To the full extent permitted by the California Nonprofit Public Benefit Corporation Law or any other applicable laws present or hereafter in effect no director or officer of the Corporation shall be personally liable to the Corporation or its members should the Corporation elect to have members in the future for or with respect to any acts or omissions in the performance of his or her duties as a director or officer of the Corporation. Any repeal or modification of this Article 6 shall not adversely affect any right or protection of a director or officer of the Corporation existing immediately prior to such repeal or modification

7 Upon the dissolution of the Corporation the Corporation's assets shall be distributed for one or more of the exempt purposes set forth in Article 3 hereof and if possible to a § 501 (c)(3) organization organized and operated exclusively to lessen the burdens of government and promote the global public interest in the operational stability of the name or shall be distributed to a governmental entity for such purposes or for such other charitable and public purposes that lessen the burdens of government by providing for the operational stability of the name. Any assets not so disposed of shall be disposed of by a court of competent jurisdiction of the country in which the principal office of the Corporation is then located exclusively for such purposes or to such organization or organizations as such court shall determine that are organized and operated exclusively for such purposes unless no such corporation exists and in such case any assets not disposed of shall be distributed to a § 501(c)(3) corporation chosen by such court

8 No withdrawal of anything or the contrary in these Articles if the Corporation determines that it will not be treated as a corporation exempt from federal income tax under § 501(c)(3) of the Code all references herein to § 501(c)(3) of the Code shall be deemed to refer to § 501(c)(6) of the Code and Article 5(a)(ii) (b) (c) and (e) shall be deemed not to be a part of these Articles

9 These Articles may be amended by the affirmative vote of a two-thirds of the directors of the Corporation

When the Corporation has members, any such amendment must be ratified by a two-thirds (2/3) majority of the members voting on any proposed amendment.

Competition, Consumer Trust and Consumer Choice Review (CCT (Competition, Consumer Choice & Consumer Trust))

Objectives of the CCT (Competition, Consumer Choice & Consumer Trust) Review

Under the [Affirmation of Commitments \(AoC\) \(https://www.icann.org/resources/pages/affirmation-of-commitments-2009-09-30-en\)](#), ICANN (Internet Corporation for Assigned Names and Numbers) is committed to ensuring that, as it contemplates expanding the top-level domain space, the various issues that are involved will be adequately addressed prior to implementation. These include issues such as competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection. The AoC also requires ICANN (Internet Corporation for Assigned Names and Numbers) to convene a community-driven review to examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as the effectiveness of:

- The application and evaluation process
- Safeguards put in place to mitigate issues involved in the introduction or expansion

Timeline of Review

- The AoC specifies that the review will be organized if and when new gTLDs have been in operation for one year
- Subsequent reviews are to be organized two years after the first review, and then no less frequently than every four years

Under this timeline, the first [CCT \(Competition, Consumer Choice & Consumer Trust\) Review](#) was launched in October 2015.

Metrics to Support the CCT (Competition, Consumer Choice & Consumer Trust) Review

ICANN (Internet Corporation for Assigned Names and Numbers) has been conducting a series of activities to prepare for this upcoming review. These activities include developing metrics and collecting data for benchmarking purposes to be available to the review team when it is selected. A comprehensive set of metrics and data were adopted by the ICANN (Internet Corporation for Assigned Names and Numbers) Board based on recommendations from the community. These metrics have been collected by ICANN (Internet Corporation for Assigned Names and Numbers) to assess various aspects of new gTLDs. For further information related to the work of the community

that proposed these metrics, please visit the [IAG-CCT \(Competition, Consumer Choice & Consumer Trust\) Wiki \(https://community.icann.org/pages/viewpage.action?pageId=42734299\)](https://community.icann.org/pages/viewpage.action?pageId=42734299).

The metrics and data collected by ICANN (Internet Corporation for Assigned Names and Numbers) to support the [CCT \(Competition, Consumer Choice & Consumer Trust\) Review](https://www.icann.org/resources/reviews/cct/metrics) are published [here \(https://www.icann.org/resources/reviews/cct/metrics\)](https://www.icann.org/resources/reviews/cct/metrics). ICANN (Internet Corporation for Assigned Names and Numbers) commissioned a global survey and economic study to gather data on some of the recommended metrics. The baseline report on [consumers \(https://www.icann.org/news/announcement-2015-05-29-en\)](https://www.icann.org/news/announcement-2015-05-29-en) and [registrants \(https://www.icann.org/news/announcement-2015-09-25-en\)](https://www.icann.org/news/announcement-2015-09-25-en) has been published, as well as the baseline [assessment of competition in the domain name marketplace \(https://www.icann.org/news/announcement-2-2015-09-28-en\)](https://www.icann.org/news/announcement-2-2015-09-28-en).

Global Consumer and Registrant (Registrant) Surveys

ICANN (Internet Corporation for Assigned Names and Numbers) commissioned a global survey to measure aspects of consumer awareness, perceived consumer choice, experience and trust related to the current generic top-level domain (gTLD (generic Top Level Domain)) landscape and the domain name system (DNS (Domain Name System)). Nielsen was retained to conduct an initial survey to create a meaningful baseline of data on Internet users' and domain name registrants' attitudes and will perform a follow-on survey, to generate a set of comparison data to inform the CCT (Competition, Consumer Choice & Consumer Trust) Review. This second survey will be conducted one year after the first survey was conducted to determine how opinions may have changed over time and as more new gTLDs are available in the domain name marketplace.

ICANN (Internet Corporation for Assigned Names and Numbers) has published the [Phase One Results from Multiyear Consumer Study of the Domain Name \(Domain Name\) Landscape \(https://www.icann.org/news/announcement-2015-05-29-en\)](https://www.icann.org/news/announcement-2015-05-29-en). The Phase One study surveyed 6,144 consumers aged 18+ representing Asia, Europe, Africa, North America and South America, and was administered in 18 languages and drawn from 24 countries. The research was conducted by Nielsen between February 2-19, 2015. The full Phase One Report is available [here \(http://newgtlds.icann.org/en/reviews/cct/global-consumer-survey-29may15-en.pdf\)](http://newgtlds.icann.org/en/reviews/cct/global-consumer-survey-29may15-en.pdf).

ICANN (Internet Corporation for Assigned Names and Numbers) also commissioned Nielsen to conduct a global survey of domain name registrants and their perceived sense of trust and choice in the domain name space. Results from the Phase One survey are available [here \(https://www.icann.org/news/announcement-2015-09-25-en\)](https://www.icann.org/news/announcement-2015-09-25-en).

Economic Study

ICANN (Internet Corporation for Assigned Names and Numbers) retained the Analysis Group to conduct an economic study examining pricing trends and other competition indicators in the global [DNS \(Domain Name System\) market](https://www.icann.org/resources/terms/glossary). The Analysis Group designed and executed an initial study to create a meaningful baseline of data on multiple factors of competition and will perform a follow-on study one year later, to generate and analyze a set of comparison data.

Results from the Phase One study are available [here \(http://newgtlds.icann.org/en/announcements-and-media/announcement-28sep15-en\)](http://newgtlds.icann.org/en/announcements-and-media/announcement-28sep15-en).

Additional Information

More information on the [CCT \(Competition, Consumer Choice & Consumer Trust\) Review](#) is available on the [CCT \(Competition, Consumer Choice & Consumer Trust\)-Wiki](#) (<https://community.icann.org/pages/viewpage.action?pageId=56135383>).

Corporation for Assigned Names and Numbers)'s Governmental Advisory Committee (Advisory Committee) (GAC (Governmental Advisory Committee)). DOC (Department of Commerce (USA)) recognizes the important role of the GAC (Governmental Advisory Committee) with respect to ICANN (Internet Corporation for Assigned Names and Numbers) decision-making and execution of tasks and of the effective consideration by ICANN (Internet Corporation for Assigned Names and Numbers) of GAC (Governmental Advisory Committee) input on the public policy aspects of the technical coordination of the Internet DNS (Domain Name System).

7. ICANN (Internet Corporation for Assigned Names and Numbers) commits to adhere to transparent and accountable budgeting processes, fact-based policy development, cross-community deliberations, and responsive consultation procedures that provide detailed explanations of the basis for decisions, including how comments have influenced the development of policy consideration, and to publish each year an annual report that sets out ICANN (Internet Corporation for Assigned Names and Numbers)'s progress against ICANN (Internet Corporation for Assigned Names and Numbers)'s bylaws, responsibilities, and strategic and operating plans. In addition, ICANN (Internet Corporation for Assigned Names and Numbers) commits to provide a thorough and reasoned explanation of decisions taken, the rationale thereof and the sources of data and information on which ICANN (Internet Corporation for Assigned Names and Numbers) relied.

8. ICANN (Internet Corporation for Assigned Names and Numbers) affirms its commitments to: (a) maintain the capacity and ability to coordinate the Internet DNS (Domain Name System) at the overall level and to work for the maintenance of a single, interoperable Internet; (b) remain a not for profit corporation, headquartered in the United States of America with offices around the world to meet the needs of a global community; and (c) to operate as a multi-stakeholder, private sector led organization with input from the public, for whose benefit ICANN (Internet Corporation for Assigned Names and Numbers) shall in all events act. ICANN (Internet Corporation for Assigned Names and Numbers) is a private organization and nothing in this Affirmation should be construed as control by any one entity.

9. Recognizing that ICANN (Internet Corporation for Assigned Names and Numbers) will evolve and adapt to fulfill its limited, but important technical mission of coordinating the DNS (Domain Name System), ICANN (Internet

Corporation for Assigned Names and Numbers) further commits to take the following specific actions together with ongoing commitment reviews specified below:

9.1 Ensuring accountability, transparency and the interests of global Internet users: ICANN (Internet Corporation for Assigned Names and Numbers) commits to maintain and improve robust mechanisms for public input, accountability, and transparency so as to ensure that the outcomes of its decision-making will reflect the public interest and be accountable to all stakeholders by: (a) continually assessing and improving ICANN (Internet Corporation for Assigned Names and Numbers) Board of Directors (Board) governance which shall include an ongoing evaluation of Board performance, the Board selection process, the extent to which Board composition meets ICANN (Internet Corporation for Assigned Names and Numbers)'s present and future needs, and the consideration of an appeal mechanism for Board decisions; (b) assessing the role and effectiveness of the GAC (Governmental Advisory Committee) and its interaction with the Board and making recommendations for improvement to ensure effective consideration by ICANN (Internet Corporation for Assigned Names and Numbers) of GAC (Governmental Advisory Committee) input on the public policy aspects of the technical coordination of the DNS (Domain Name System); (c) continually assessing and improving the processes by which ICANN (Internet Corporation for Assigned Names and Numbers) receives public input (including adequate explanation of decisions taken and the rationale thereof); (d) continually assessing the extent to which ICANN (Internet Corporation for Assigned Names and Numbers)'s decisions are embraced, supported and accepted by the public and the Internet community; and (e) assessing the policy development process to facilitate enhanced cross community deliberations, and effective and timely policy development. ICANN (Internet Corporation for Assigned Names and Numbers) will organize a review of its execution of the above commitments no less frequently than every three years, with the first such review concluding no later than December 31, 2010. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC (Governmental Advisory

Committee), the Chair of the Board of ICANN (Internet Corporation for Assigned Names and Numbers), the Assistant Secretary for Communications and Information of the DOC (Department of Commerce (USA)), representatives of the relevant ICANN (Internet Corporation for Assigned Names and Numbers) Advisory Committees (Advisory Committees) and Supporting Organizations (Supporting Organizations) and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (Governmental Advisory Committee) (in consultation with GAC (Governmental Advisory Committee) members) and the Chair of the Board of ICANN (Internet Corporation for Assigned Names and Numbers). Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations. Each of the foregoing reviews shall consider the extent to which the assessments and actions undertaken by ICANN (Internet Corporation for Assigned Names and Numbers) have been successful in ensuring that ICANN (Internet Corporation for Assigned Names and Numbers) is acting transparently, is accountable for its decision-making, and acts in the public interest. Integral to the foregoing reviews will be assessments of the extent to which the Board and staff have implemented the recommendations arising out of the other commitment reviews enumerated below.

9.2 Preserving security, stability and resiliency: ICANN (Internet Corporation for Assigned Names and Numbers) has developed a plan to enhance the operational stability, reliability, resiliency, security, and global interoperability of the DNS (Domain Name System), which will be regularly updated by ICANN (Internet Corporation for Assigned Names and Numbers) to reflect emerging threats to the DNS (Domain Name System). ICANN (Internet Corporation for Assigned Names and Numbers) will organize a review of its execution of the above commitments no less frequently than every three years. The first such review shall commence one year from the effective date of this Affirmation. Particular attention will be paid to: (a) security, stability and resiliency matters, both physical and network, relating to the secure and stable coordination of the Internet DNS (Domain Name System); (b) ensuring appropriate contingency planning; and (c) maintaining clear processes. Each of the reviews conducted under this section will

assess the extent to which ICANN (Internet Corporation for Assigned Names and Numbers) has successfully implemented the security plan, the effectiveness of the plan to deal with actual and potential challenges and threats, and the extent to which the security plan is sufficiently robust to meet future challenges and threats to the security, stability and resiliency of the Internet DNS (Domain Name System), consistent with ICANN (Internet Corporation for Assigned Names and Numbers)'s limited technical mission. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC (Governmental Advisory Committee), the CEO of ICANN (Internet Corporation for Assigned Names and Numbers), representatives of the relevant Advisory Committees (Advisory Committees) and Supporting Organizations (Supporting Organizations), and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (Governmental Advisory Committee) (in consultation with GAC (Governmental Advisory Committee) members) and the CEO of ICANN (Internet Corporation for Assigned Names and Numbers). Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.

9.3 Promoting competition, consumer trust, and consumer choice:
ICANN (Internet Corporation for Assigned Names and Numbers) will ensure that as it contemplates expanding the top-level domain space, the various issues that are involved (including competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection) will be adequately addressed prior to implementation. If and when new gTLDs (whether in ASCII or other language character sets) have been in operation for one year, ICANN (Internet Corporation for Assigned Names and Numbers) will organize a review that will examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. ICANN (Internet Corporation for Assigned Names and Numbers) will organize

a further review of its execution of the above commitments two years after the first review, and then no less frequently than every four years. The reviews will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC (Governmental Advisory Committee), the CEO of ICANN (Internet Corporation for Assigned Names and Numbers), representatives of the relevant Advisory Committees (Advisory Committees) and Supporting Organizations (Supporting Organizations), and independent experts. Composition of the review team will be agreed jointly by the Chair of the GAC (Governmental Advisory Committee) (in consultation with GAC (Governmental Advisory Committee) members) and the CEO of ICANN (Internet Corporation for Assigned Names and Numbers). Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.

9.3.1 ICANN (Internet Corporation for Assigned Names and Numbers) additionally commits to enforcing its existing policy relating to WHOIS (WHOIS (pronounced "who is"; not an acronym)), subject to applicable laws. Such existing policy requires that ICANN (Internet Corporation for Assigned Names and Numbers) implement measures to maintain timely, unrestricted and public access to accurate and complete WHOIS (WHOIS (pronounced "who is"; not an acronym)) information, including registrant, technical, billing, and administrative contact information. One year from the effective date of this document and then no less frequently than every three years thereafter, ICANN (Internet Corporation for Assigned Names and Numbers) will organize a review of WHOIS (WHOIS (pronounced "who is"; not an acronym)) policy and its implementation to assess the extent to which WHOIS (WHOIS (pronounced "who is"; not an acronym)) policy is effective and its implementation meets the legitimate needs of law enforcement and promotes consumer trust. The review will be performed by volunteer community members and the review team will be constituted and published for public comment, and will include the following (or their designated nominees): the Chair of the GAC (Governmental Advisory Committee), the CEO of ICANN (Internet Corporation for Assigned

Names and Numbers), representatives of the relevant Advisory Committees (Advisory Committees) and Supporting Organizations (Supporting Organizations), as well as experts, and representatives of the global law enforcement community, and global privacy experts.

Composition of the review team will be agreed jointly by the Chair of the GAC (Governmental Advisory Committee) (in consultation with GAC (Governmental Advisory Committee) members) and the CEO of ICANN (Internet Corporation for Assigned Names and Numbers).

Resulting recommendations of the reviews will be provided to the Board and posted for public comment. The Board will take action within six months of receipt of the recommendations.

10. To facilitate transparency and openness in ICANN (Internet Corporation for Assigned Names and Numbers)'s deliberations and operations, the terms and output of each of the reviews will be published for public comment. Each review team will consider such public comment and amend the review as it deems appropriate before it issues its final report to the Board.

11. The DOC (Department of Commerce (USA)) enters into this Affirmation of Commitments pursuant to its authority under 15 U.S.C. 1512 and 47 U.S.C. 902. ICANN (Internet Corporation for Assigned Names and Numbers) commits to this Affirmation according to its Articles of Incorporation and its Bylaws. This agreement will become effective October 1, 2009. The agreement is intended to be long-standing, but may be amended at any time by mutual consent of the parties. Any party may terminate this Affirmation of Commitments by providing 120 days written notice to the other party. This Affirmation contemplates no transfer of funds between the parties. In the event this Affirmation of Commitments is terminated, each party shall be solely responsible for the payment of any expenses it has incurred. All obligations of the DOC (Department of Commerce (USA)) under this Affirmation of Commitments are subject to the availability of funds.

¹For the purposes of this Affirmation the Internet's domain name and addressing system (DNS (Domain Name System)) is defined as: domain names; Internet protocol addresses and autonomous system numbers; protocol port and parameter numbers. ICANN (Internet Corporation for Assigned Names and Numbers) coordinates these identifiers at the overall level, consistent with its mission.

KnujOn March 2016: Internet Limbo

KnujOn Report Concerning Issues of Consumer Trust on the Internet as they apply to the Internet Corporation of Assigned Names and Numbers (ICANN), the ICANN Compliance Function, ICANN Registries, and ICANN Registrars. Any comments or questions should be sent to g_bruen@knujon.com.

Sections

- 1. Introduction**
- 2. Public Face of ICANN**
- 3. Registries and Registrars**
- 4. Conclusion and Recommendations**

Abstract

This document discusses the availability, accessibility and utility of abuse or fraud complaint resources for Internet consumers along with related high-level abuse data. This is not an official statement from the ICANN At-Large Advisory Committee (ALAC), but it is rather done in the spirit of ALAC duty number 2: *“Keeping the community of individual Internet users informed about the significant news from ICANN.”*¹ We would like to think Internet governance is a shining city on hill, but it may be more like something which languishes in the depths Tartarus. In this report we begin from the outside-in, from the lost user perspective. Section 1 analyzes ICANN’s current state and mission. Section 2 examines ICANN’s website from the perspective of a user as to how its enforcement mechanisms deal with consumers. Section 3 details how the portions of the Internet under ICANN’s management (registries and registrars) rate in terms of abuse. Section 4 provides some recommendations for improving the situation.

About the Author

Garth Bruen is an educator, researcher, policy developer, investigator and programmer. Garth specializes in automating and streamlining public policy and bureaucracy to ensure proper enforcement, extend access to the citizenry, and identify process breakpoints. Garth is the author of *WHOIS Running the Internet: Protocol, Policy and Privacy*.²

About KnujOn.com

KnujOn.com, LLC is an independent abuse handler and Internet security research organization based in Boston, Massachusetts. KnujOn processes abuse data in the form of spam and other security threats to develop a clear picture of problems facing the Internet. KnujOn builds profiles of online criminal groups, evaluates the quality of registrars and Internet Service Providers, issues WHOIS challenges, documents policy failures, develops policy initiatives, tests compliance mechanisms, issues reports to professional investigators, and educates the public about complex Internet security issues. We see our role as one of assisting the ordinary Internet user in navigating the dense technical bureaucracy of the global network and augmenting public services in the face of rampant illicit electronic traffic.

¹ <https://www.icann.org/resources/pages/governance/bylaws-en/#XI>

² <http://whois.knujon.com>

1. Introduction: Limbo

Any Internet user faced with abuse or fraud, in trying to understand the the situation, finds themselves in a dark wood having wandered off the straight path. This savage and stubborn wilderness is easy to fall into. The netherworld is not simply close to the legitimate Internet, it is integrated. Even for those well-versed in Internet technology and policy, the journey is difficult. For ordinary Internet users there is little or no hope of getting abuses addressed without relentless effort, overcoming a sharp learning curve. For those attempting to climb out of the pit and understand The Internet Corporation of Assigned Names and Numbers' approach to abuse, the words they read are cruel.

Right now the entire Internet is in Limbo. The U.S. government announced the oversight transition of the Internet number function to the global stakeholder community on 14 March 2014. The format of this proposed governance is still being defined. The U.S. Commerce Department extended the transition period for another year because the work needed more time. Several of the proposals have been rejected already, but at ICANN55 Marrakech the work of the Cross Community Working Group is moving forward.

How ICANN impacts consumers

Websites are the consumer-facing portion of the Internet. Websites are *domain names* at their root. Domain names are the province of ICANN which is the manager of the Domain Name System (DNS). This makes ICANN the ultimate point of origin for any generic (gTLD) domain name, not only in terms of policy but also money since ICANN receives indirect fees for domain names and direct fees from the registrars who sponsor them. It is primarily domain name sales which fund ICANN. This, however, does not apply to Country-Code domains (ccTLDs) which are under the management of specific sovereign governments.

What are ICANN's obligations?

ICANN has a number of policies and obligations concerning their relationship with the Internet user. These include issues such as competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection³

³ <https://www.icann.org/resources/reviews/aoc/cct>

The issue of great concern now is the transition of the Internet Assigned Numbers Authority⁴ (IANA) function from the U.S. government to ICANN, which depending on who you talk to is either the most important thing that has ever happened, the worst thing that has ever happened, or merely a symbolic milestone. Regardless, stewardship of the Internet is a critical task and the Internet community is changed with developing the best proposal for the transfer. The transition proposal must have broad community support and address the following four principles: 1) Support and **enhance the multistakeholder** model; 2) Maintain the security, stability, and resiliency of the Internet DNS; 3) Meet the needs and expectations of the **global customers** and partners of the IANA services; 4) and, Maintain the openness of the Internet.⁵ The specific portion of addressing the four items is a mandated process for Enhancing ICANN Accountability which is split into two parts:

Work Stream 1: focused on mechanisms enhancing ICANN accountability that must be in place or committed to within the time frame of the IANA Stewardship Transition;

Work Stream 2: focused on addressing accountability topics for which a timeline for developing solutions and full implementation may extend beyond the IANA Stewardship Transition.

The question asked in this paper is about whether ICANN has a comprehensive plan to address abuse and cybercrime, which falls into ICANN's mandate, in a way that reaches the ordinary consumer. How does the work being done now prepare it to earn the consumer trust? What does ICANN mean by invoking "consumer trust" and what does it really mean to the organization? Here we will try to be you guide through this nebulous underworld.

⁴ <http://www.iana.org>

⁵ <https://www.icann.org/stewardship-accountability>

2. The Public Face of ICANN to the Consumer

The first public face of ICANN to the consumer is of course <http://icann.org>. Here we examine what an Internet consumer might encounter when attempting to understand how to deal with the negative aspects of the Domain Name System. We starts in the most outer circle and slowly moves to the center.

2.1. From Page One of ICANN's website

In reading this, try to forget any depth of experience you may have and imagine you are one of the millions around the globe connecting to the Internet for the first time. There are no clear statements or links at icann.org concerning Internet abuse, fraud, criminality, etc. The word "consumer" does not appear on the front page. So, we must hunt and click through links that appear relevant. Here, we detail the most promising links first.

2.1.1. Get Started: The first link which lists a number of "Beginner's Guides" which are focused on being directly involved in the ICANN community and not so much on consumer issues. These guides are comprehensive and well-written but do to address the issues were concerned with⁶. One may wonder why ICANN should provide a specific guide for consumers, but the fact is they have created specific guides for journalists⁷ and various other parties.

2.1.2. Public Responsibility: This is a wonderful program but it is focused on *"respond(ing) to Community and Regional needs...designed to strengthen the multistakeholder model by addressing participation needs."*⁸

2.1.3. Global Support: Support sounds like a good term, but this only applies to contracted parties and the existing community⁹, it is not support in the basic sense.

2.1.4. Security Team: ICANN has a great security team, but this refers to overall structural security and not that of end users¹⁰. Should ICANN provide security for the entire Internet? No, that is not the issue here.

2.1.5. Accountability and Transparency: The sub-links are examined below, but this is a high-level view of accountability and transparency. It does not provide either

⁶ <https://www.icann.org/resources/pages/beginners-guides-2012-03-06-en>

⁷ <https://www.icann.org/resources/pages/press-2014-03-17-en>

⁸ <https://www.icann.org/development-and-public-responsibility>

⁹ <https://www.icann.org/resources/pages/customer-support-2015-06-22-en>

¹⁰ <https://www.icann.org/resources/pages/security-2012-02-25-en>

accountability or transparency to the end user in a meaningful way, and we will explain why.

2.1.5.1. Accountability Mechanisms: This provides an overview of of the specific functions¹¹ but the summaries do not provide real utility for the consumer.

2.1.5.2. Independent Review Process: All of the process here concerns commercial parties directly involved in ICANN's business.¹²

2.1.5.3. Request for Reconsideration: This refers to parties already involved in ICANN's business who are dealing with a policy decision¹³. Again, not applicable to consumers.

2.1.4.4. Ombudsman: In the common sense an ombudsman is supposed to be an impartial arbitrator in an organization who handles complaints about the organization. This is again, further down the road from the perspective of the consumer. In general, the ICANN ombudsman has an inherent conflict of interest since the office is funded by ICANN and accountable to ICANN's board. Not the ideal situation. The actual function and results of the ombudsman will be analyzed in a future report and are troubling.

2.1.6. Help: Help! The simplest of words for someone with a problem. Below we detail how this help does not address consumer problems.

2.1.6.1. Dispute Resolution: A high-level view of different issues, mostly for commercial parties¹⁴. There is one link "Spam and Viruses" which we will examine below.

2.1.6.2. Domain Name Dispute Resolution: Concerns policies of trademarks and domains, not for ordinary consumers¹⁵.

2.1.6.3. Registrar Problems: Here, we finally get some answers, but they are not good: "*ICANN does not address consumer complaints [pertaining to spam and viruses]*"¹⁶

¹¹ <https://www.icann.org/resources/pages/mechanisms-2014-03-20-en>

¹² <https://www.icann.org/resources/pages/accountability/irp-en>

¹³ <https://www.icann.org/resources/pages/accountability/reconsideration-en>

¹⁴ <https://www.icann.org/resources/pages/dispute-resolution-2012-02-25-en#spam>

¹⁵ <https://www.icann.org/resources/pages/dndr-2012-02-25-en>

¹⁶ <https://www.icann.org/news/announcement-2007-03-06-en>

2.1.7. Using **Search**: Exhausted, the consumer might turn to the search function. Using the site search yields the most promising, yet eventually most disappointing results. We search for some of the most common terms that consumers might use: phishing, spam, abuse and virus. The results are examined below.

2.1.7.1. Phishing

Multiple documents returned include some critical incident reports, most importantly “About Phishing¹⁷” which will be discussed further. The document is two years old and directs consumers to file complaints with the U.S. Federal Trade Commission¹⁸ (FTC) or the International Consumer Protection and Enforcement Network¹⁹ (ICPEN). The links do not open a new window or tab but rather in the existing browser window which completely exits the user from ICANN’s website. The FTC has a dedicated site for complains²⁰. Both sites have complaint interfaces. ICPEN has referrals to specific national consumer agencies (clicking on the U.S. brings the user back to the FTC). However, these sites are not evaluated here for their utility or effect. We are focused on what ICANN does for the consumer.

2.1.7.2. Spam

Multiple documents, two in particular: “About Whois for Spam Complaints²¹” and “About Spam, Phishing & Website Content²²” All of the pages carry the proviso “*Complaints about [malware, spam, phishing, viruses, content] are outside of ICANN's scope and authority*”. The page is also available in Arabic²³, Spanish²⁴, French²⁵, Russian²⁶ and Chinese²⁷. These translations also point to the FTC website which is problematic. The

²⁷ <https://www.icann.org/resources/pages/spam-2013-03-22-zh>

FTC website is not available in these languages and the FTC mainly accepts complaints from Americans only. The links: *Learn More* and *Take Action* lead to the same content. Most unfortunate is the rather promising result entitled: “*How can I help protect myself from spam, phishing and other Internet fraud?*” What does the consumer find at this link²⁸?

QUESTION #20: How can I help protect myself from spam, phishing and other Internet fraud?

 Lecture contents locked

Enroll In Course to Unlock

It is not helpful to hide information which might benefit the Internet consumer. It may be a useful course, but this is not a direct to consumer approach.

2.1.7.3. Abuse

The first two pages that appear direct the user to IANA’s website. There are very specific documents here about the structure of Internet Protocol addresses²⁹ (IP). IPs are behind domains, but they are not domains, they are the underlying portion of the DNS. The IANA documents go to lengths to instruct Internet users to look somewhere else for handling abuse issues³⁰.

²⁸ <http://learn.icann.org/courses/the-beginner-s-guide-to-domain-names/lectures/621022>

²⁹ <https://www.iana.org/help/abuse-answers>

³⁰ <https://www.iana.org/abuse>

In summary, there is a lack of direct communication to the consumer or Internet end user. Specific attempts to address Internet abuse lead to a direct “no” or a redirection to an external source. The next document in the search results is entitled “*Update On Steps To Combat Abuse And Illegal Activity*”³¹, a blog which will be discussed in section 2.2. Another search result is called “*Abuse Contact Data Complaint Form*”³² which is a useful form, but it does not directly relate to end-user complaints about abuse, but rather a lack of abuse contact information published by a specific registrar. This would be useful *after* the user attempts and fails to contact the registrar. However, since this process is not linked, spelled out, or mandated it would be unlikely most Internet users would even get to this point. The next search result “*Registrar Abuse Reports*”³³ actually has a good explanation of the requirement for registrars to have published abuse contact information and is linked to the Abuse Contact Data Complaint Form.³⁴ Unfortunately, since this information is not directly linked from the topic pages on Spam, Phishing, and Malware, it is unlikely the Internet user would get to this level.

2.2. From the Horse's Mouth

Domains are at the root of websites and email addresses. Domains are obtained through registrars with ICANN contracts. The contracts of registrars contain specific conditions and the sponsorship obligations of a domain owner are also stated. This makes the various types of abuses of domain names the duty of ICANN's contractual compliance department. Most Internet users would only know this if they simply read the preceding explanation. Contractual compliance is a concept completely foreign to most consumers and they would have no realization that the function of ICANN's compliance area directly impacts their safe use of the Internet. This is the first hurdle any victimized Internet user must overcome. In order to properly access domain-based abuse they must know that it is an issue of contractual compliance.

2.2.1. ICANN Compliance and Consumer Trust

The stated vision and mission of ICANN Compliance is to be a *trusted Contractual Compliance service provider by preserving the security, stability and resiliency of the Domain Name System and promoting consumer trust*³⁵. The "consumer trust" part is directly from the ICANN Affirmation of Commitments³⁶ and a requirement for a valid IANA stewardship transition. However, statements issued by ICANN Compliance (as well as its general actions) disregard the stated mission. Specifically, Compliance issued three blogs in 2015 (detailed below and editorialized) which appear, by their nature to completely contradict ICANN's mission and mandate. ICANN has documented policies concerning "*abusive registrations of domain names*"³⁷ and require registrants to "*not knowingly use the domain name in violation of any applicable laws or regulations*"³⁸. It would seem that anyone part of a such an agreement would be held to it, but the realities at ICANN are more complex.

³⁵ <https://www.icann.org/en/system/files/files/contractual-compliance-complaint-03sep15-en.pdf>

³⁸ <https://www.icann.org/resources/pages/policy-2012-02-25-en>

2.2.2. Blog 1: “Community Outreach On Interpretation and Enforcement of the 2013 RAA”³⁹

This inaugural announcement, by its virtue, is directive and not consensus based. The invocation of the word “interpretation” places all of the control concerning DNS enforcement in the hands of one department and ultimately one person. To compound this issue, ICANN Compliance has historically refused to answer questions about their process which makes it difficult if not possible to audit. The only document consumers might find describing a process is called *Compliance Process and Approach*⁴⁰ but it only applies to issues ICANN compliance takes on as formal matter, it does not show how complaints from consumers get to this level, and in fact there is no real path. The reason often cited is that open discussion of the Compliance process would *jeopardize the relationship with contracted parties*, which clearly trumps consumer trust, accountability, and transparency. ICANN policy is supposed to be consensus-driven. In this blog, the compliance director sets out to address four issues: 1) Forwarding abuse reports to the registered name holder; 2) Whether there are any circumstances in which not forwarding an abuse report to the registered name holder is justified; 3) How a registrar should respond if the registered name holder ignores the abuse report and fails to respond; 4) What should be communicated back to the party that filed the abuse report. This seems reasonable on the surface, but the details make it problematic. This blog is more of a blueprint for rejecting complaints, as do the next two blogs. The title of the blog also mentions outreach, but Compliance Outreach only refers to the regular constituency groups at ICANN like the Intellectual Property holders and the registrars themselves. Outreach is not targeting Internet consumers and did not meet with the At-Large stakeholders.

³⁹ <https://www.icann.org/news/blog/community-outreach-on-interpretation-and-enforcement-of-the-2013-rra>

⁴⁰ <https://www.icann.org/resources/pages/approach-processes-2012-02-25-en>

2.2.3. Blog 2: “ICANN Is Not the Internet Content Police”⁴¹

Yesterday, I published a blog informing the community about efforts I am making to offer greater clarity regarding ICANN's interpretation and enforcement of certain key provisions of the 2013 RAA⁴²

A brief reading of this statement reveals serious issues. The clear reading of the statement shows pains taken by compliance to explain a position, and not a blog about what they are doing to enforce policy. A contract created in consultation with by the global multi-stakeholder community should not be subject to the interpretation of a single person. The compliance director does not own the relationship between ICANN and the world's Internet users, it is not his to bargain with and dispose with at will. The illegal activity in question here concerns the fraudulent representation which occurs *inside* of contractual activity. The clear goal of the blog is to highlight things which reasonable people would not saddle ICANN with while ignoring long-term failures of ICANN to properly vet and police their commercial agents within the contractual authority. This blog is a distraction move, an attempt to push any responsibility outside of ICANN. By the compliance director using “interpretation” of the contract it is possible to push any problem outside of ICANN's remit without any opportunity to question.

What is at the core of this effort? It boils down to two points in the blog, that enforcement would either be A) “*effectively putting the website out of business*”⁴³ and/or B) “*effectively putting the registrar out of business.*”⁴⁴ This is the summary of ICANN's problem, registrants and registrars provide income to ICANN therefore enforcing the rules is a disincentive to profit. This is not a multi-stakeholder policy for a non-profit organization.

⁴¹ <https://www.icann.org/news/blog/icann-is-not-the-internet-content-police>

⁴² <https://www.icann.org/news/blog/icann-is-not-the-internet-content-police>

⁴³ <https://www.icann.org/news/blog/icann-is-not-the-internet-content-police>

⁴⁴ <https://www.icann.org/news/blog/icann-is-not-the-internet-content-police>

2.2.4. Blog 3: “Update On Steps To Combat Abuse And Illegal Activity”⁴⁵

The third compliance blog⁴⁶ appears to be a direct criticism of Internet abuse reporters. The compliance director launches this criticism of Internet users:

*Registrars also receive complaints on occasion that have been generated by automated programs. Sometimes a registrar will receive the identical complaint from an automated program multiple times on the same day or over the course of a week.*⁴⁷

There is no attempt here to explain why this might be the case. Spam containing the same domain names are sent to thousands if not millions of Internet users. Malware impacts users and servers on a massive scale. If there are multiple complaints about a site, would it not be a good idea to further examine the data instead of rejecting it?

Sometimes a complaining party who is dissatisfied with a registrar's response to a complaint keeps submitting the identical complaint over and over again.

There is a failure here to provide guidance to complaining parties or explain track which registrars have a pattern of rejecting complaints from Internet users. There are seven requirements for complaint submitters and four reasonable steps for registrars in response to the complaints. Following the apparent logic in all of this it seems that if A) the complaint in question is not about something illegal the registrar is not obligated to do anything; if B) the issue is not illegal in the registrar’s jurisdiction the registrar is not obligated to do anything; and if C) it is illegal in registrar’s jurisdiction the user should be reporting it to law enforcement and not the registrar.

The biggest failure here is that ICANN has taken itself out of the information flow - this is completely between a user and a registrar. There is a missed opportunity for ICANN to collect meaningful statistics on the nature of complaints and the parties involved. There is no way here for ICANN to become aware of consumer abuse and hence develop new strategies for combatting abuse and illegal activity.

⁴⁵ <https://www.icann.org/news/blog/update-on-steps-to-combat-abuse-and-illegal-activity>

⁴⁶ <https://www.icann.org/news/blog/update-on-steps-to-combat-abuse-and-illegal-activity>

⁴⁷ <https://www.icann.org/news/blog/update-on-steps-to-combat-abuse-and-illegal-activity>

2.2.5. Blogs Do Not Reflect Real Compliance Data

The three blogs issued by the head of compliance (detailed above) go to pains to describe the problems associated with *invalid* abuse complaints. The blogs explain that ICANN is not the content police, that ICANN cannot tackle issues of blasphemy, hate speech or pornography. The blogs have been the source of much discussion and debate with ICANN CEO Fadi Chehade referring to them frequently. The constant drumbeat is that ICANN cannot act on these abuse complaints. The attention leads one to believe that compliance is overwhelmed by invalid abuse complaints that are out of scope. However, compliance quarterly reports tell a different story. According to the most recent quarterly report 96.7% of the compliance complaints are for contractual matters⁴⁸ (mostly WHOIS inaccuracy and domain transfer issue). Only 0.7% of the complaints are for “abuse”. (below chart is from compliance report⁴⁹)

The first quarter report has more or less the same distribution with only slight fluctuation in the counts⁵⁰. So, why so much focus on an issue which does not appear to amount

⁴⁸ <https://www.icann.org/en/system/files/files/compliance-update-jun15-en.pdf>

⁴⁹ <https://www.icann.org/en/system/files/files/compliance-update-jun15-en.pdf>

⁵⁰ <https://www.icann.org/en/system/files/files/compliance-update-mar15-en.pdf>

for much? It would seem that the public flogging of the community for submitting “invalid abuse complaints” is uncalled for.

2.2.6. Direct Questions for Compliance

At ICANN’s 54th meeting this author had the opportunity to engage with the compliance director in a recorded session⁵¹. The questions were intended to define how the issue of Consumer Trust is being engendered within the organization’s critical functions.

The first question was not intended to be controversial (on Consumer Trust on ICANN’s Website), rather it was meant for ICANN to explain how it *engages* consumers through its website. The exchange that followed was unexpected and disappointing.

Bruen: ...consumer trust is a huge issue and part of your mission statement. Have you developed a consumer-centric space on ICANN’s website?

Grogan: ICANN’s mission is really the coordination of the number system for the Internet - this is what most of our resources are devoted to...we’re not focused on content and commerce...we have not created in compliance a consumer-centric space.

Bruen: Do you disagree that consumer-trust is part of your department’s mission statement?

Grogan: I’m talking about what ICANN’s overall fundamental remit is.

Bruen: Is [consumer trust] part of the Affirmation of Commitments?

Grogan: It’s mentioned

Bruen: Is consumer trust part of the IANA transition requirements?

Grogan: I am not part of that process so I don’t want to speak to it.

Bruen: But can you speak to [consumer trust] being part of your department’s mission statement?

Grogan: It’s not part our mission statement as a department as far I am aware.⁵²

⁵¹ <https://meetings.icann.org/en/dublin54/schedule/mon-naralo/ac-naralo-19oct15-en>

⁵² <https://meetings.icann.org/en/dublin54/schedule/mon-naralo/transcript-naralo-19oct15-en>

This entire dialogue is distressing since it seems to reject ICANN’s core principles in practice. Consumer trust is not merely *mentioned* in the Affirmation of Commitments, it is one of the main tenets. The title of section 9.3 is “*Promoting competition, **consumer trust**, and consumer choice*”⁵³. This section is in essence the embodiment of the commitment of ICANN. In specific detail the section defines the promotion of consumer trust as including “consumer protection” and “malicious abuse issues”. The document in particular details the requirements of ICANN to develop WHOIS policy that promotes consumer trust. In particular reference to the Grogan response, the following is the ICANN Compliance mission statement⁵⁴:

Contractual Compliance

Contracts are enforced through Contractual Compliance. The mission is to preserve the security, stability and resiliency of the Domain Name System and to promote consumer trust through prevention, transparency and enforcement.

As part of his answer in addressing consumers on ICANN’s website, Grogan pointed to a new video which was reviewed after the session. The video is not geared towards Internet consumers, the video is for domain *registrants* experiencing transfer issues. The video is important and well-produced but has little to do with Internet users.

⁵³ <https://www.icann.org/resources/pages/affirmation-of-commitments-2009-09-30-en>

⁵⁴ <https://www.icann.org/en/system/files/files/contractual-compliance-complaint-03sep15-en.pdf>

What follows are questions about compliance consulting with consumer groups:

Bruen: Have you ever met with the Better Business Bureau in the United States?

Grogan: Personally no.

Bruen: Have you ever met with the Canadian Consumers Union?

Grogan: No⁵⁵

In trying to ascertain who ICANN Compliance met with, Grogan then names FDA which is a U.S. government agency and the MPAA which is a media industry group. The next question concerned ICANN staff assignments for Consumer Safeguards

Bruen: How many staff the 25 compliance staff members are focused on consumer issues?

Grogan: There's not a single staff member that's solely committed to that.⁵⁶

The last statement turned out to be extremely problematic, because one year prior to this meeting ICANN announced the creation of a Consumer Safeguard Director:

A newly created position of Consumer Safeguards Director will also report to Grogan, and will focus specifically on implementation of those ICANN contract safeguards directed toward protecting consumers.⁵⁷

However, there is no such staff person at ICANN and to our knowledge ICANN has not posted a job opening for such a position⁵⁸.

2.2.7. Results

The data and discussions above lead to an official letter from the ICANN At-Large Advisory Council to ICANN's CEO and Board of directors⁵⁹. Issued in December 2015, this letter requests clarification on 1) the status of the hiring of a Consumer Safeguard Director, 2) ICANN's philosophy on Consumer Trust, and 3) outreach to the greater community on issues of Consumer Trust. The ICANN CEO replied quickly⁶⁰ restating the commitment to hiring a Consumer Safeguard director, embracing the philosophy of Consumer Trust and engaging the community in its development. The letter specifically states a new Consumer Safeguard should be hired by the ICANN55 meeting in March 2016. As of this publishing, we have received no further information from ICANN on this appointment.

3. The Data: Registries and Registrars

The previous section details how the Internet end user might interact with ICANN if they had problem, but most users do not know what ICANN is. The next layer of user interaction concerns Registries and Registrars. Registries sponsor top-level domain extensions (TLDs) and registrars sponsor specific domain names. Both entities are accredited by ICANN. Registries manage what is to the *right* of the dot (e.g. .com, .edu, .net, etc.), registry *customers*, as it were, are the registrars. Registrars manage what is to the *left* of the dot (e.g. yahoo.com, amazon.com, etc.). A website is built upon a domain name which is obtained from a registrar. The registrar places the domain name in the Domain Name System through a registry. Registries and Registrars are listed in the next two sections based on the *rate* of abuse reported to Knujon, in the last six months, by thousands of Internet users who submit spam samples and report domain-based malware attacks.

3.1. gTLD Registry Data

Roughly 500 of the gTLDs are empty or virtually empty. Some of these are not yet launched, some are closed or have extreme restrictions (this number does not include ccTLDs). The 25 TLDs below have particular abuse issues. The remaining 400 plus TLDs all have some level of abuse but it does not reach the same level of seriousness as exhibited by the 25 listed here. Only four (4) of the TLDs with high rates of abuse are *legacy* TLDs and not *new* gTLDs. The legacy TLDs with abuse issues are mostly there due to general *volume* of registrations; these particular TLDs have overall *lower* percentages of abused domains as compared to the abused new gTLDs. The general trend is that certain new gTLDs are rapidly replacing exiting registries for spam and abuse. It is important to note that 10 of these abused TLDs are sponsored by a single company: Famous Four Media. The TLDs rated below all have scores *lower* than 50 which indicates problems with spam and abuse. Details were sent directly to the registries before this report was released. For each TLD the registrars with the most abused sponsored domains are shown. If one registrar has the overwhelming percentage, only that registrar is shown in **bold**; registrars marked with an * are also recorded here as one of the most reported registrars for abuse in section 3.2. Parties marked with a † responded to us prior to publishing. Parties marked with a ■ responded in an automated method or were non-committal. Registrars with less than 5% of the domains are generally not shown but available upon request.

3.2. Registrar Data

All registrars with reported abuse have been scored, but not all abuse rates raise a level of concern. Many registrars have manageable situations and are proactive. Scores closer to zero indicate serious issues. The factors for scoring are varied but include the number of abused domains in contrast to the registrar's portfolio, the number of reported instances, and many other data points. 12 registrars with scores *below* 100 are listed here with details of the administrators with the most reported abused domains. These details were forwarded to each registrar prior to publishing.

3.2.1. Alpnames Limited (Score: 27) †

4. Conclusion and Recommendations

It may seem like a disconnect to some readers that this document starts with a discussion of the ICANN's website and ends with a list of the most abused registries and registrars. However, this is the core of the issue. ICANN is not connecting to consumers, but the abusive parties are connecting to consumers. So what the consumer sees is the ugly side of the Internet. The actual access to ICANN's complaint or compliance process is hidden. ICANN's website structure appears designed to avoid accepting complaints from consumers and deflecting any responsibility to external entities. Whether by design or negligence, the problem needs to be addressed immediately. Obfuscation and misdirection are not strategies for gaining consumer trust. ICANN has made a considerable effort to balance the potential influence of global governments over Internet policy. However, the constant message to consumers of "go to the police".

What ICANN needs to do is: 1) Publish an informational PDF for consumers the same way it does for journalists, lawyers and others, 2) Create and deploy an obvious and easily navigable visual workflow for guiding Internet users, 3) Conduct outreach to global consumer groups as recommended by consumer experts, 4) Dedicate a staff lead within compliance to handle consumer issues, 5) Test all their procedures and methods for from the Internet user perspective, 6) Properly link all public information, and 7) Collect and report on back Internet user abuse data.

The registries and registrars listed in this report vary wildly in their responses. Some are helpful and proactive, but this is entirely voluntary. ICANN can lead by example and truly include the Internet consumer by being proactive on serious issues that impact the entire global network. This is not outside of the remit.

ICANN (Internet Corporation for Assigned Names and Numbers) Is Not the Internet Content Police

[ICANN \(Internet Corporation for Assigned Names and Numbers\) Blog](#)

Author: Allen R. Grogan | [ICANN \(Internet Corporation for Assigned Names and Numbers\) Chief Contract Compliance Officer](#)

12 Jun 2015

Allow me to say this clearly and succinctly – ICANN (Internet Corporation for Assigned Names and Numbers) is not a global regulator of Internet content, nor should the 2013 Registry Accreditation Agreement (RAA (Registrar Accreditation Agreement)) be interpreted in such a way as to put us in that role. Our mission is to coordinate, at the overall level, the global Internet's systems of unique identifiers, and in particular, to ensure the stable and secure operation of the Internet's unique identifiers. ICANN (Internet Corporation for Assigned Names and Numbers) was never granted, nor was it ever intended that ICANN (Internet Corporation for Assigned Names and Numbers) be granted, the authority to act as a regulator of Internet content.

Institutions already exist that have political legitimacy and are charged with interpreting and enforcing laws and regulations around the world. These institutions, including law enforcement (local and national police agencies as well as intergovernmental organizations like Interpol), regulatory agencies and judicial systems, have the expertise, experience and legitimacy to police illegal activity and to address difficult questions such as jurisdiction and conflicts of law. In most countries, these institutions also offer procedural due process and mechanisms for appeal and are experienced in addressing difficult issues such as the proportionality of remedies. If content is to be policed, the burden is on these institutions, and not ICANN (Internet Corporation for Assigned Names and Numbers), to undertake such regulation.

Some members of the Internet community advocate that ICANN (Internet Corporation for Assigned Names and Numbers) should assume greater

responsibility for policing illegal activity on the Internet. Specifically, some maintain that if a website sponsored by a signatory to the 2013 [RAA \(Registrar Accreditation Agreement\)](#) is engaged in illegal activity, [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) should require that registrar to determine whether the website is engaged in illegal activity, demand that the website operator or registered domain name owner cease the illegal activity, and suspend the domain name if the website operator or registered domain name owner does not cease the illegal activity, effectively putting the website out of business. If the registrar refuses to suspend the domain name, some further maintain that [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) should terminate the registrar's accreditation under the 2013 Registrar Accreditation Agreement, effectively putting the registrar out of business.

Yesterday, I published a [blog \(/news/blog/community-outreach-on-interpretation-and-enforcement-of-the-2013-raa\)](/news/blog/community-outreach-on-interpretation-and-enforcement-of-the-2013-raa) informing the community about efforts I am making to offer greater clarity regarding [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s interpretation and enforcement of certain key provisions of the 2013 [RAA \(Registrar Accreditation Agreement\)](#). Since [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) 52, I have held discussions with members of the Registrar Stakeholder Group, representatives of the [IPC \(Intellectual Property Constituency\)](#) and intellectual property owners, members of civil society, various parties that have submitted abuse reports under the 2013 [RAA \(Registrar Accreditation Agreement\)](#) and other interested parties, to solicit their views on these matters. Perhaps not surprisingly, the views expressed by various stakeholders within the [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) community regarding interpretation of the 2013 [RAA \(Registrar Accreditation Agreement\)](#) are wide-ranging and divergent. I hope the outcome of these discussions will be for [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) to provide greater clarity on how we interpret and enforce key provisions of the 2013 [RAA \(Registrar Accreditation Agreement\)](#).

Though the appropriate interpretation of 2013 [RAA \(Registrar Accreditation Agreement\)](#) is the subject of debate, there are clear-cut boundaries between [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) enforcing its contracts and the enforcement of laws and regulations by the institutions mentioned earlier. A blanket rule requiring

suspension of any domain name alleged to be involved in illegal activity goes beyond ICANN (Internet Corporation for Assigned Names and Numbers)'s remit and would inevitably put ICANN (Internet Corporation for Assigned Names and Numbers) in the position of interpreting and enforcing laws regulating website content. At worst, it would put ICANN (Internet Corporation for Assigned Names and Numbers) squarely in the position of censoring, or requiring others to censor, Internet content.

Challenges of Regulating Illegal Activity Online

To understand why, let's consider some of the activities that are illegal in various countries. To be clear, I am not trying to single out, criticize or disparage laws enacted by any particular government. ICANN (Internet Corporation for Assigned Names and Numbers) is a multinational community with diverse stakeholders, and we always need to be mindful of differences among our community members. ICANN (Internet Corporation for Assigned Names and Numbers) and the ICANN (Internet Corporation for Assigned Names and Numbers) community have great respect for cultural, religious and political diversity and recognize that the values of one country or religion may not be shared with another.

- **Blasphemy and Religious Defamation**

More than two-dozen countries, found everywhere from Western Europe to Asia to Africa, have laws or policies that penalize blasphemy, i.e., remarks or actions considered to be contemptuous of God.

- **Hate Speech**

Laws and regulations prohibiting hate speech are common and the enactment of such laws has been increasing in recent years.

Nearly 100 countries have laws, rules or policies forbidding defamation of religion or hate speech against members of religious groups.

More than a dozen countries have instituted laws under which holocaust denial is a punishable offense.

In some instances a website operator attempting to comply with the law regulating content in one country could run afoul of a conflicting law in another country. For example, hate speech laws in a number of countries have been interpreted to prohibit incitement of hatred or exposing a person to detestation and vilification on the basis of his or her sexual orientation. In contrast, laws enacted in other countries have prohibited use of the Internet to promote homosexuality or have outlawed content that promotes the attractiveness or normalcy of LGBT relationships.

- **Pornography**

Laws banning sexually explicit material are common. However, in some countries nude photographs or even photographs of uncovered legs and arms of women may run afoul of the law, while in other countries the same content would be considered protected free speech or artistic expression.

- **Laws Targeting Political Dissidents**

Many countries have laws targeted toward suppressing peaceful and legitimate domestic political opposition. In some countries it is illegal to spread "false news" about the government or public officials, produce caricatures of or make derogatory statements about public officials online, or incite dissatisfaction with the government via Internet posts. In the light of mass public protests that have brought down or destabilized governments in recent years, many countries have enacted legislation prohibiting the use of websites and social media to organize "unlawful" demonstrations and street protests.

Implications for ICANN (Internet Corporation for Assigned Names and Numbers)

The simple fact is that many laws in effect in numerous countries render content itself illegal. However the 2013 RAA (Registrar Accreditation Agreement) is interpreted, it cannot mean that ICANN (Internet Corporation for Assigned Names and Numbers) is responsible for making

factual and legal determinations as to whether content violates the law. ICANN (Internet Corporation for Assigned Names and Numbers) cannot be put in the position of requiring suspension of domain names on the basis of allegations of blasphemy, hate speech, holocaust denial, political organizing, full or partial nudity or a host of other content that may be illegal somewhere in the world. That would be inconsistent with ICANN (Internet Corporation for Assigned Names and Numbers)'s mission, ICANN (Internet Corporation for Assigned Names and Numbers)'s limited remit and ICANN (Internet Corporation for Assigned Names and Numbers)'s responsibility to operate in accordance with a consensus-driven multistakeholder model.

ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission

I am not suggesting that ICANN (Internet Corporation for Assigned Names and Numbers) abdicate any of its responsibilities. Rather, I am suggesting that ICANN (Internet Corporation for Assigned Names and Numbers) needs to remain within the scope of its limited responsibilities, remit and authority, and not step outside those boundaries. ICANN (Internet Corporation for Assigned Names and Numbers)'s mission and mandate, as set forth in its bylaws, is "to coordinate, at the overall level, the global Internet's systems of unique identifiers, and in particular, to ensure the stable and secure operation of the Internet's unique identifiers." ICANN (Internet Corporation for Assigned Names and Numbers)'s mission statement sets forth a limited remit that is largely technical in nature. It says nothing about ICANN (Internet Corporation for Assigned Names and Numbers) being empowered to act as a global regulator of content and illegal activity throughout the world.

The Role of Other Institutions

If a website is alleged to violate a law governing content in a particular country, the institutions that have the legitimacy and authority to decide whether the content in fact violates the law, and to impose appropriate remedies, are local law enforcement, regulators, prosecutors and courts, not ICANN (Internet Corporation for Assigned Names and Numbers). No one has vested in ICANN (Internet Corporation for Assigned Names and Numbers) the authority to act as judge and jury, to make factual and legal determinations and to impose remedies for violations of laws or

regulations in every country around the world. ICANN (Internet Corporation for Assigned Names and Numbers) does not have the authority, expertise or resources to do so.

The regulation of content by governments raises complex substantive and procedural issues. Consider website content, such as pornography or banned political speech, that may violate content laws in Country X. If the domain name owner is located in Country A, the website operator in Country J and the web hosting company in Country Z, all of them may assert that they are not subject to the laws of Country X and not subject to the jurisdiction of its courts. Judicial systems are the institutions equipped to deal with these difficult issues, not ICANN (Internet Corporation for Assigned Names and Numbers).

Note, also, that the suspension of a domain name is tantamount to injunctive relief and may put a website operator out of business. Legal systems in many countries consider this an extraordinary remedy that would only be imposed after an adversarial hearing, procedural and substantive due process, and cautious assessment by the court of whether it is an appropriate and proportionate remedy for the alleged violation of law, or whether a less onerous remedy would sufficiently address the violation. It is neither reasonable nor appropriate for ICANN (Internet Corporation for Assigned Names and Numbers) to bypass the institutions that are charged with making these determinations and to impose unilaterally a remedy that might or might not be available through the judicial system, particularly where ICANN (Internet Corporation for Assigned Names and Numbers) has no direct contractual relationship with the impacted domain name registrant or website operator.

Significantly, the institutions charged with investigating violations of the law also have substantial resources, expertise and personnel to undertake these activities: the F.B.I. in the United States has approximately 35,000 employees, and India and China each has more than 1.5 million people in their respective police forces.

In contrast, ICANN (Internet Corporation for Assigned Names and Numbers) has total staff of slightly more than 300 people, and only about two-dozen involved in contractual compliance. ICANN (Internet Corporation for Assigned Names and Numbers) has no contractual relationship with registrants or website operators and no investigatory or subpoena power over them. Neither ICANN (Internet Corporation for

Assigned Names and Numbers) nor registrars have any ability to edit or remove content from websites. It is simply unrealistic to place the worldwide burden of policing illegal content on websites on [ICANN](#) (Internet Corporation for Assigned Names and Numbers).

Are Some Illegal Activities Different Than Others?

In blogs I will publish in the coming weeks, I intend to address whether the nature of certain illegal activities makes them different from those cited above. Some in the [ICANN](#) (Internet Corporation for Assigned Names and Numbers) community contend that a distinction should be made where laws are not directed purely at regulating content per se, but at other illegal activities that are engaged in by a website operator. Some in the community advocate that illegal activities that pose a substantial and imminent threat to safety, health or human life be treated differently than other classes of illegal activities. Others in the community assert that there are areas of the law relating to illegal activity on websites that are sufficiently uniform throughout the world that they should be treated differently, for example, where the law in virtually every country recognizes the activity in question to be illegal and there is international consensus reflected in multinational treaties. In practice, many in the Internet community treat certain illegal activities such as child pornography or human trafficking in a class by themselves.

I hope this blog has helped to clarify why [ICANN](#) (Internet Corporation for Assigned Names and Numbers) is not and cannot be a content regulator. My goal is for this and future postings to be catalysts for ongoing discussion among the [ICANN](#) (Internet Corporation for Assigned Names and Numbers) multistakeholder community, and I welcome all of your thoughts. [ICANN](#) (Internet Corporation for Assigned Names and Numbers)'s contractual compliance department will be conducting a number of sessions at [ICANN](#) (Internet Corporation for Assigned Names and Numbers) 53 in Buenos Aires. I encourage you to attend, and please reach out to me at one of these sessions, in the hallway, or after [ICANN](#) (Internet Corporation for Assigned Names and Numbers) 53 if you would like to discuss any of these issues.

Complaints regarding copyright infringement due to Internet and website content are outside of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s scope and authority. For these types of complaints, please refer to one of the options listed below:

1. You may want to contact the website owner directly.
2. You may want to retain legal counsel to determine what rights and remedies are available to you.

Exhibit DIDP A51

UNITED STATES OF AMERICA
FEDERAL TRADE COMMISSION
WASHINGTON, D.C. 20580

December 16, 2011

Dr. Stephen D. Crocker
Chairman of the Board of Directors
Internet Corporation for Assigned Names and Numbers
1101 New York Avenue N.W.
Suite 930
Washington, D.C. 20005

Rod Beckstrom
President and CEO
Internet Corporation for Assigned Names and Numbers
325 Lytton Avenue, Suite 300
Palo Alto, California 94301

Re: Consumer Protection Concerns Regarding New gTLDs

Dear Dr. Crocker and Mr. Beckstrom:

We write in reference to the Internet Corporation for Assigned Names and Numbers' (ICANN) plan to open the application period for new generic top-level domains (new gTLDs) on January 12, 2012. As you know, the Federal Trade Commission ("FTC" or "Commission") expressed concerns about the need for more consumer protection safeguards during the Board's consideration of the gTLD program's expansion. The FTC has also long urged for the improvement of ICANN policies that affect consumers engaged in e-commerce or that frustrate law enforcement efforts to identify and locate bad actors.

We write now to highlight again the potential for significant consumer harm resulting from the unprecedented increase in new gTLDs. Before approving any new gTLD applications, we urge ICANN to take the steps described below to mitigate the risk of serious consumer injury and to improve the accuracy of Whois data.

We also urge ICANN to take immediate steps to address the FTC's and the Governmental Advisory Committee's (GAC) longstanding concerns with various ICANN policies and procedures. The exponential expansion of the number of gTLDs will only increase the challenge of developing and implementing solutions to the problems the FTC and the GAC have previously brought to ICANN's attention. In the Affirmation of Commitments, ICANN pledged to ensure that various issues involved in the expansion of the gTLD space—including consumer protection and malicious abuse issues—would "be adequately addressed prior to

implementation.”¹ We look forward to working with ICANN as it honors these commitments to ensure that the new gTLD program benefits both consumers and businesses alike.

1. Federal Trade Commission

The FTC is an independent agency of the United States government that enforces competition and consumer protection laws.² The FTC fulfills its consumer protection mission in a variety of ways—through civil enforcement actions, policy development, rulemaking, and consumer and business education.

The principal consumer protection statute that the FTC enforces is the FTC Act, which prohibits “unfair or deceptive acts or practices.”³ The FTC has used its authority to take action against a wide variety of Internet-related threats, including bringing a substantial number of cases involving online consumer fraud and almost 100 spam and spyware cases.⁴ In addition, the FTC has made a high priority of protecting consumers’ privacy and improving the security of their sensitive personal information, both online and offline.⁵

¹ See Affirmation of Commitments, at 9.3, available at <http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm>.

² The Commission is headed by five Commissioners, nominated by the President and confirmed by the Senate, each serving a seven-year term. The President chooses one Commissioner to act as Chairman. No more than three Commissioners can be of the same political party.

³ See 15 U.S.C. § 45. The FTC also enforces several other consumer protection statutes. See, e.g., Restore Online Shopper’s Confidence Act, Pub. L. 111-345, 124 Stat. 3618 (2010); Children’s Online Privacy Protection Act, 15 U.S.C. §§ 6501-6506; CAN-SPAM Act, 15 U.S.C. § 7701-7713; Truth in Lending Act, 15 U.S.C. §§ 1601-1667f; Fair Credit Reporting Act, 15 U.S.C. §§ 1681-1681u; Fair Debt Collection Practices Act, 15 U.S.C. §§ 1692-1692o; Telemarketing and Consumer Fraud and Abuse Prevention Act, 15 U.S.C. §§ 6101-6108.

⁴ See, e.g., *FTC v. Flora*, No. SACV11-00299-AG-(JEMx) (C.D. Cal., filed Feb. 22, 2011), press release available at <http://www.ftc.gov/opa/2011/02/loan.shtm>; *FTC v. Johnson*, No. 2:10-cv-02203 (D. Nev., filed Dec. 21, 2010), press release available at <http://www.ftc.gov/opa/2011/01/iworks.shtm>; *FTC v. Infusion Media, Inc.*, No. 09-CV-01112 (D. Nev., filed June 22, 2009), press release available at <http://www.ftc.gov/opa/2010/10/googlemoney.shtm>; *FTC v. Pricewert LLC*, No. 09-CV-2407 (N.D. Cal., filed June 1, 2009), press release available at <http://www.ftc.gov/opa/2010/05/perm.shtm>; *FTC v. Innovative Mktg., Inc.*, No. 08-CV-3233-RDB (D. Md., filed Dec. 2, 2008), press release available at <http://www.ftc.gov/opa/2011/01/winsoftware.shtm>; *FTC v. CyberSpy Software, LLC*, No. 08-CV-0187 (M.D. Fla., filed Nov. 5, 2008), press release available at <http://www.ftc.gov/opa/2008/11/cyberspy.shtm>; *FTC v. Spear Sys., Inc.*, No. 07C-5597 (N.D. Ill., filed Oct. 3, 2007), press release available at <http://www.ftc.gov/opa/2009/07/spear.shtm>; *FTC v. ERG Ventures, LLC*, No. 3:06-CV-00578-LRH-VPC (D. Nev., filed Oct. 30, 2006), press release available at <http://www.ftc.gov/opa/2006/11/mediamotor.shtm>; *FTC v. Enternet Media*, No. CV 05-7777 CAS (C.D. Cal., filed Nov. 1, 2005), press release available at <http://www.ftc.gov/opa/2006/09/enternet.shtm>; *FTC v. Cleverlink Trading Ltd*, No. 05C 2889 (N.D. Ill., filed May 16, 2005), press release available at <http://www.ftc.gov/opa/2006/09/spammers.shtm>.

2. Federal Trade Commission Investigations

Our ability to protect consumers in cases involving unfair or deceptive practices online often depends on navigating an environment in which scam artists easily manipulate the domain name system to evade detection. We routinely consult Whois services in Internet investigations to identify website operators. However, the Whois information often contains incomplete or inaccurate data or, increasingly, proxy registrations, which shield the contact information for the underlying domain name registrant. To give just one example, in a case against illegal spammers promoting pornography websites, false Whois data slowed down our ability to identify and locate the individuals behind the operation,⁶ requiring the FTC investigators to spend additional time consulting multiple other sources. In other instances, we have encountered Whois information with facially false address and contact information, including websites registered to “God,” “Bill Clinton,” and “Mickey Mouse.”⁷ In Internet investigations, identifying domain name registrants immediately is especially important, as fraudsters often change sites frequently to evade detection.

The FTC has highlighted these concerns about Whois with ICANN and other stakeholders for more than a decade.⁸ In particular, we have testified before Congress on Whois

⁵ See, e.g., *In the Matter of Facebook, Inc.*, FTC File No. 092-3184 (proposed settlement posted for public comment on Nov. 29, 2011), *press release available at* <http://www.ftc.gov/opa/2011/11/privacysettlement.shtm>; *In the Matter of ScanScout, Inc.*, FTC File No. 102-3185 (proposed settlement posted for public comment on Nov. 8, 2011), *press release available at* <http://www.ftc.gov/opa/2011/11/scanscout.shtm>; *In the Matter of Google, Inc.*, FTC Docket No. C-4336 (Oct. 13, 2011), *press release available at* <http://www.ftc.gov/opa/2011/10/buzz.shtm>; *U.S. v. information several times, issued a Commission statement on Whois services, delivered presentations to the GAC, participated as a panelist in joint sessions organized by the GAC and the Generic Names Supporting Organization (GNSO), provided briefings to the ICANN Board, and worked directly with a wide range of stakeholders to develop pragmatic solutions to this difficult problem.

The FTC has not been alone in highlighting the importance of this issue or in its effort to urge ICANN to develop effective solutions to Whois problems. In 2003, the Organization for Economic Co-operation and Development's Committee on Consumer Policy issued a policy paper unequivocally stating that for commercial registrants, all contact data "should be accurate and publicly available via Whois."⁹ In 2007, the GAC issued policy principles urging ICANN stakeholders to "improve the accuracy of Whois data, and in particular, to reduce the incidence of deliberately false Whois data."¹⁰ In 2009, global law enforcement agencies, led by the U.S. Federal Bureau of Investigation and the UK Serious Organized Crime Agency, issued a set of law enforcement recommendations to improve a wide range of ICANN policies, including the accuracy of Whois data. In October 2011, the GAC reiterated its previous requests for the Board to address the law enforcement recommendations.¹¹ Last week, ICANN's own Whois Review Team issued its draft report, acknowledging the "very real truth that the current system is broken

¹¹ See Governmental Advisory Committee, GAC Communiqué-Dakar, at III (Oct. 27, 2011), available at <https://gacweb.icann.org/download/attachments/4816912/Communique+Dakar+-+27+October+2011.pdf?version=1&modificationDate=1319796551000>.

and needs to be repaired.”¹² ICANN has failed to adequately address this problem for over a decade.

A rapid, exponential expansion of gTLDs has the potential to magnify both the abuse of the domain name system and the corresponding challenges we encounter in tracking down Internet fraudsters. In particular, the proliferation of existing scams, such as phishing, is likely to become a serious challenge given the infinite opportunities that scam artists will now have at their fingertips. Fraudsters will be able to register misspellings of businesses, including financial institutions, in each of the new gTLDs, create copycat websites, and obtain sensitive consumer data with relative ease before shutting down the site and launching a new one. The potential for consumer confusion in other variations of these types of scams is significant. As an example, “ABC bank” could be registered in .com, but another entity could register “ABC” in a new .bank gTLD, and a different entity could register “ABC” in a new .finance gTLD. Scam artists could easily take advantage of this potential for confusion to defraud consumers.

In addition, the number of individuals with access to the Internet infrastructure will substantially increase. This creates an increased possibility that malefactors, or others who lack the interest or capacity to comply with contractual obligations, will operate registries. It is inevitable that malefactors may still pass a background screening due to inadequate or incomplete records. Or, malefactors could use straw men to assist them and be the party “on record” with ICANN. Either way, a registry operated by a bad actor would be a haven for malicious conduct. As discussed below, ICANN’s contractual compliance office has encountered tremendous challenges trying to secure compliance under the current framework, and the unprecedented increase in domain registries only increases the risk of a lawless frontier in which bad actors violate contractual provisions with impunity, resulting in practices that ultimately harm consumers. The gTLD expansion will also increase the number of entities in foreign jurisdictions with relevant data on registrants. This will likely cause further delays in obtaining registrant data in investigations of global fraud schemes. In short, the potential for consumer harm is great, and ICANN has the responsibility both to assess and mitigate these risks.¹³

¹² See Whois Review Team, Final Report (Draft), at 5 (Dec. 5, 2011), *available at* <http://www.icann.org/en/reviews/affirmation/whois-rt-draft-final-report-05dec11-en.pdf>.

¹³ As the U.S. government, the GAC, and several other stakeholders have urged, ICANN should conduct a more thorough economic study to assess the costs and benefits of introducing a significant number of new gTLDs. See Letter from Assistant Secretary Strickling to Rod Beckstrom, President and CEO, ICANN (Dec. 2, 2010), *available at* <http://forum.icann.org/lists/5gtld-guide/pdf3Ep9MhQVGO.pdf>; Governmental Advisory Committee, GAC Communiqué—Cartagena, at 5 (Dec. 9, 2010), *available at* https://gacweb.icann.org/download/attachments/1540144/GAC_39_Cartagena_Communique.pdf?version=1&modificationDate=1312225168000; Letter from Janis Karklins, (former) Chairman, Governmental Advisory Committee to Peter Dengate Thrush, (former) Chairman, ICANN Board of Directors (Aug. 18, 2009), *available at* <http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf> (“The GAC remains concerned that the threshold question has not been answered whether the introduction of new gTLDs provides potential benefits to consumers that will not be outweighed by the potential harms.”).

3. Recommended Changes to the New gTLD Program

In light of the dramatically increased opportunity for consumer fraud, distribution of malware, and proliferation of other malicious activity, it is critical that ICANN take immediate steps to ensure that consumer protection is not compromised by the introduction of new gTLDs. Accordingly, we urge ICANN to: (1) implement the new gTLD program as a pilot program and substantially reduce the number of gTLDs that are introduced in the first application round, (2) strengthen ICANN's contractual compliance program, in particular by hiring additional compliance staff, (3) develop a new ongoing program to monitor consumer issues that arise during the first round of implementing the new gTLD program, (4) conduct an assessment of each new proposed gTLD's risk of consumer harm as part of the evaluation and approval process, and (5) improve the accuracy of Whois data, including by imposing a registrant verification requirement. We strongly believe that ICANN should address these issues before it approves any new gTLD applications. If ICANN fails to address these issues responsibly, the introduction of new gTLDs could pose a significant threat to consumers and undermine consumer confidence in the Internet.¹⁴

As you know, the GAC and several other stakeholders in the ICANN Community urged the Board to revise the gTLD applicant guidebook, which sets forth the new gTLD evaluation and approval process. Stakeholders urged ICANN to address the potential for malicious conduct and implement certain consumer protection safeguards before authorizing the launch of the new gTLD program.¹⁵ Although changes were made to the guidebook to include some safeguards,

¹⁴ We are aware that a wide range of stakeholders has expressed concern about potential conflicts of interest on the ICANN Board. *See, e.g.,* Eric Engleman, *ICANN Departures After Web Suffix Vote Draw Criticism*, Wash. Post, August 20, 2011, available at http://www.washingtonpost.com/business/icann-departures-draw-criticism/2011/08/19/gIQAzpeDTJ_story_1.html. According to these critics, several members of the Board have affiliations with entities that have a financial stake in the expansion of new gTLDs. *See* Esther Dyson, *What's in a Domain Name?* (Aug. 25, 2011), <http://globalpublicsquare.blogs.cnn.com/2011/08/25/whats-in-a-domain-name/>.

In light of the potential for the appearance of impropriety to exist, we believe that ICANN should promote transparency, accountability, and confidence in its decision-making processes by developing a more comprehensive conflict of interest and ethics policy that prevents individuals with actual and potential conflicts of interest from participating in the deliberations and decisions for which the conflict exists or which raise an appearance of impropriety. We are aware of the Board's ongoing effort to review and revise its current conflict of interest policies. *See* Board Member Rules on Conflicts of Interest for New gTLDs (Dec. 8, 2011), <http://www.icann.org/en/minutes/resolutions-08dec11-en.htm#4>. The implementation of a more robust and comprehensive conflict of interest policy is especially important in light of the public interests that ICANN is charged with protecting, and the substantial impact the Board's decisions has on consumers operating in the online world. Accordingly, we encourage ICANN to complete the ongoing reviews of its conflict of interest and ethics practices and implement a revised Board conflict of interest policy before approving any new gTLD applications.

¹⁵ These safeguards included imposing an obligation on new gTLD registry operators to respond to law enforcement requests; maintaining a requirement that new gTLD registry operators maintain a "thick" Whois service; expanding the categories of criminal offenses screened during the vetting process, which could serve as a basis for disqualifying new gTLD applicants; adding civil consumer protection decisions

ICANN failed to respond effectively to all of the concerns that were raised, did not implement some of its commitments to improve the new gTLD program, and did not provide adequate solutions to widely documented problems in the existing gTLD marketplace. Indeed, despite offering some protections, the safeguards now in place do not provide comprehensive solutions to the problems likely to arise as a result of the introduction of new gTLDs. For example, while registries will be required to maintain “thick” Whois services, the lack of meaningful obligations to ensure Whois accuracy, such as registrant verification, still hampers the ability of law enforcement agencies to track down Internet fraudsters quickly. We recognize that ICANN has taken some of the GAC’s concerns into account, but we urge ICANN to do more to protect consumers and adequately address law enforcement concerns.

A. Implement New gTLDs as a Pilot Program

Despite the modest improvements to the new gTLD program, overarching consumer protection concerns persist. As an initial matter, the potential number of expected new gTLDs is itself a serious challenge. The initial estimate for expected applications was 500, but recent estimates have suggested that there could be more than 1500 applications. If the number of approved new gTLDs reaches even the minimum estimate, the Internet landscape will change dramatically. Indeed, an increase from 22 existing gTLDs to 500 gTLDs would be an unprecedented expansion of the domain name system. Among other things, the number of registered websites is likely to increase exponentially, the number of registry operators and other actors with an operational role in the Internet ecosystem will expand, and the ability to locate and identify bad actors will be frustrated significantly due to a likely increase in the number of registries located in different countries and limited ability to obtain relevant data maintained abroad.

We understand that ICANN is currently considering batching applications in the event that the number of new gTLD applications exceeds initial expectations, and that it has set a maximum of 1,000 gTLDs to be introduced per year. We strongly believe that ICANN should substantially reduce the maximum number of new gTLDs that could be introduced in the initial round to a much smaller number. Indeed, doubling the number of existing gTLDs in one year would be an aggressive increase. The imposition of a more reasonable limit is necessary to curb

to the background screening process; publicly disclosing the names of the principal officers associated with the new gTLD application; and adding an extra point in the scoring criteria for applicants that include measures to promote Whois accuracy.

The U.S. Department of Commerce’s National Telecommunications and Information Administration, which serves as the U.S. representative to the GAC, contributed significantly to the GAC’s efforts to enhance protections for consumers and implement recommendations from law enforcement agencies. FTC staff provided input on these issues both as part of the U.S. delegation to the GAC and directly to ICANN. The Department of Commerce has worked extensively to enhance ICANN’s accountability and ensure that ICANN develops consensus-based policies in a fair, open, and transparent manner. We believe that ICANN represents an important multi-stakeholder model for Internet governance, which has been critical to keeping the Internet open and innovative, and we encourage ICANN to enhance its efficacy by implementing comprehensive solutions to these consumer protection issues.

the risks inherent in expanding the number of gTLDs, including the proliferation of malicious conduct. We recommend that ICANN use this round as a limited pilot program, as it has done in previous rounds, assess the organization's ability to evaluate, introduce, and manage additional gTLDs, conduct an assessment of the increased risks posed by the program, and then consider whether a more significant expansion would be appropriate.

B. Strengthen ICANN's Contractual Compliance Program

Currently, ICANN is ill-equipped to handle the contract enforcement for the 22 existing gTLDs and several hundred accredited registrars. In particular, ICANN lacks an adequate number of compliance staff, has failed to close contractual loopholes that limit the existing compliance staff's ability to take action against registrars and registries, and needs to implement a more rigorous enforcement program.¹⁶ The likely effect of introducing large numbers of new gTLDs is that it will significantly increase the number of entities that operate pursuant to registry contracts with ICANN. In addition, the number of registered domain names will increase as Internet users begin to register domains in new gTLDs. This will likely increase the number of complaints the compliance office receives, including those related to Whois data accuracy. Thus, the expansion of the gTLD space will require a substantial increase in resources devoted to contract enforcement and improvement of policies that hold both registries and registrars accountable.

During the GAC-Board consultations earlier this year, the Board announced its commitment to augment ICANN's contractual compliance function with additional resources. The GAC, in unambiguous terms, emphasized that a "strengthened contract compliance function must be in place prior to the launch of new gTLDs."¹⁷ Specifically, the GAC highlighted the

¹⁶ In the registrar context, despite its knowledge of proposed law enforcement recommendations to amend the Registrar Accreditation Agreement that were presented in October 2009, the Board only recently took action to ensure that these concerns would be addressed in contractual negotiations between the Board and the registrars. See <http://www.icann.org/en/minutes/resolutions-28oct11-en.htm#7>.

¹⁷ See GAC comments on the ICANN Board's response to the GAC Scorecard, at 9 (Apr. 12, 2011), available at <http://www.icann.org/en/topics/new-gtlds/gac-comments-board-response-gac-scorecard-12apr11-en.pdf>. The GAC stated:

The GAC appreciates the Board's agreement to strengthen ICANN's contractual compliance function. The GAC respectfully requests ICANN, in the coming weeks, to identify the amount of personnel it intends to hire to support the compliance function and the timeline for hiring. In particular, the GAC would like to know how many staff ICANN intends to have in place prior to the expected launch of new gTLDs. As ICANN adds new resources to its compliance program, the GAC encourages ICANN to ensure that it is staffed globally, perhaps using regional compliance officers consistent with the five RIR regions. The GAC believes that a robust compliance program is necessary to enforce registry and registrar contracts and that a strengthened contract compliance function must be in place prior to the launch of new gTLDs.

Id. (emphasis added).

need to hire enough staff to address contractual compliance issues for hundreds of new registry contracts. However, contrary to the Board’s commitment, ICANN has not yet hired additional compliance staff to support the registry contract support program. It is also unclear whether ICANN has taken any other steps to improve its contract enforcement program, and whether those steps are adequate to handle the myriad issues that will arise with such a dramatic increase in the number of registries. In FY12, ICANN budgeted only a 25 percent increase for all contractual compliance resources, despite the likelihood that the number of new gTLD contracts could increase in 2013 by over 2000 percent.¹⁸ Further, the total expected staffing level for contractual compliance in FY12 is equal to the staffing level in FY10,¹⁹ lacking the substantial increase necessary to respond to additional compliance issues resulting from the introduction of new gTLDs. Notably, ICANN’s own Whois Review Team has highlighted the lack of compliance resources available to address existing gTLD contractual concerns, recommending that ICANN should allocate “sufficient resources, through the budget process, to ensure that ICANN compliance staff is fully resourced to take a proactive regulatory role and encourage a culture of compliance.”²⁰

In addition to adequately staffing its contractual compliance program, ICANN should strengthen its contracts to ensure that registries and registrars are obligated to adhere to stringent policies that promote consumer trust and enhance security. In particular, these contracts should require verification of domain name registrants, impose further obligations on registrars for maintaining accurate Whois data, and hold domain name resellers accountable. ICANN should also ensure that the contracts provide adequate sanctions for noncompliance. In 2008, then-FTC Commissioner Leibowitz highlighted in his letter to ICANN that: “The FTC frequently has observed that transparent enforcement mechanisms are an essential element of effective private sector self-regulation and that there must be *meaningful consequences* for noncompliance.”²¹ ICANN’s Whois Review Team recently advocated for a similar approach, recommending in its draft final report that “ICANN should ensure that clear, enforceable and graduated sanctions apply to registries, registrars and registrants that do not comply with its Whois policies.”²² Significantly, ICANN must also ensure that its compliance team vigorously enforces these contracts.

¹⁸ See ICANN FY12 Operating Plan and Budget Fiscal Year Ending 30 June 2012, at 14, available at <http://www.icann.org/en/financials/adopted-opplan-budget-fy12-09sep11-en.pdf>.

¹⁹ *Id.* at 45.

²⁰ See Whois Review Team, Final Report (Draft), at 9 (Dec. 5, 2011), available at <http://www.icann.org/en/reviews/affirmation/whois-rt-draft-final-report-05dec11-en.pdf>.

²¹ See Whois and RAA Letter, *supra* note 5, at 5 (emphasis in original). The letter addressed issues relating to registrar contracts, which were amended in 2009 to provide some intermediate sanctions, but the principle applies equally to registry contracts.

²² See Whois Review Team, Final Report (Draft), at 9 (Dec. 5, 2011), available at <http://www.icann.org/en/reviews/affirmation/whois-rt-draft-final-report-05dec11-en.pdf>.

As the GAC and other stakeholders have emphasized, ICANN must adequately strengthen its contractual compliance program before it approves any new gTLD applications to ensure that consumers' interests are protected and the commitments made by gTLD registries are enforced.

C. Develop Program to Monitor Consumer Issues During New gTLD Implementation

Further, in light of the substantial impact the introduction of new gTLDs will likely have on consumers, the investment of additional resources into the contractual compliance program is really just the first step in developing an overall more effective approach. To address the issue in a comprehensive manner, we recommend that ICANN create a new program under its compliance framework that monitors consumer issues arising during the implementation of the new gTLD program, reviews the feasibility of existing mechanisms for addressing consumer issues, applies current contractual enforcement tools to resolve these issues, identifies areas where new policies may be needed, and outlines a plan for working with ICANN's supporting organizations on policy development processes that address these issues. We are aware that the compliance office has operated a C-Ticket System that captures and tracks complaints, many of which relate to consumer issues, and that ICANN follows up on complaints that fall within its purview. However, we believe that ICANN should supplement this work, and that the Board should provide more direction by approaching consumer issues more systematically and developing a dedicated program that is well resourced and that proactively addresses these issues.

ICANN should act now to ensure that consumer interests are protected in the gTLD implementation process. We understand that, pursuant to the Affirmation of Commitments, ICANN will conduct a review of the new gTLD program one year after it has been in operation, followed by subsequent reviews, and that the issue of consumer trust and consumer choice will be a key focus of that review.²³ We intend to participate actively in this review process.²⁴

²³ See Affirmation of Commitments, available at <http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm>. The Affirmation of Commitments states, in relevant part:

9.3 Promoting competition, consumer trust, and consumer choice: ICANN will ensure that as it contemplates expanding the top-level domain space, the various issues that are involved (including competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection) will be adequately addressed prior to implementation. If and when new gTLDs (whether in ASCII or other language character sets) have been in operation for one year, ICANN will organize a review that will examine the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. ICANN will organize a further review of its execution of the above commitments two years after the first review, and then no less frequently than every four years.

Id.

However, in advance of the competition, consumer trust, and consumer choice review, ICANN should create a program that monitors and addresses consumer issues on an ongoing basis to ensure that the potential for consumer harm resulting from the introduction of new gTLDs is addressed effectively and timely.

D. Evaluate Proposed gTLDs' Potential Harm to Consumers

Attention to consumer issues should not be relegated to an external review process but rather function as an integral part of the new gTLD evaluation process. During the GAC-Board new gTLD consultations, the GAC recommended that proposed gTLDs implicating regulated industries or gTLDs that were otherwise particularly susceptible to abuse (e.g., .kids, .bank) should receive additional vetting and scrutiny. The Board rejected this proposal and did not provide an alternative that adequately addresses this concern.²⁵ ICANN should conduct its own evaluation of the potential consumer risks associated with each proposed new gTLD, especially those that will inherently raise heightened concern among stakeholders. Accordingly, we urge ICANN to reconsider its decision not to apply additional vetting or scrutiny to proposed gTLDs associated with regulated industries or gTLDs that are particularly susceptible to abuse and pose an increased risk of consumer fraud, or to otherwise incorporate the risk of consumer harm into the evaluation process for each proposed gTLD.

E. Improve Whois Accuracy

As we have advocated for more than a decade, and as discussed earlier in this letter, ICANN should improve the accuracy of Whois data.²⁶ A wide range of stakeholders has strongly urged ICANN to address this problem, including the GAC, which noted in its 2007

²⁴ We are aware that a cross-constituency working group has been formed to address preliminary matters related to this review. We are also aware that ICANN will be reviewing aspects of new gTLD implementation as a result of concerns raised by the GAC.

²⁵ The Board supplemented the evaluation and approval process with a GAC early warning mechanism, which allows individual governments to notify applicants via the GAC that they have concerns about a proposed gTLD, as well as preserving the ability of the GAC to provide consensus advice on a particular application. Certainly, these mechanisms allow governments an important opportunity to communicate their views about proposed gTLDs, but they do not obviate the need for ICANN to conduct its own assessment of potential consumer harm during the evaluation process.

²⁶ *See supra* note 8. We recognize, as we have done in the past, that ICANN's Whois policies should protect the privacy of individual registrants. *See* FTC, Prepared Statement of the Federal Trade Commission before the ICANN Meeting Concerning Whois Databases, at 9 (June 2006) ("The FTC, as the primary enforcement agency for U.S. consumer privacy and data security laws, is very concerned about protecting consumers' privacy. Thus, the Commission has always recognized that non-commercial registrants may require some privacy protection from *public* access to their contact information, without compromising appropriate real-time access by law enforcement agencies.").

Whois principles, that “stakeholders should work to improve the accuracy of Whois data, and in particular, to reduce the incidence of deliberately false Whois data.”²⁷

The violations of Whois data accuracy requirements are pervasive, and ICANN’s response to this persistent problem has been woefully inadequate. As ICANN’s own Whois Review Team recognized,

Cyber security and cybercrime experts make extensive use of WHOIS to thwart and respond to a varied set of threats. Information contained within WHOIS is invaluable in these efforts and practitioners have conveyed to us their frustration at the continuing high levels of inaccuracy of WHOIS data. **We find that ICANN has neglected to respond to the needs of this community both in the accuracy of WHOIS data and in response times for access and action.**²⁸

We believe, as law enforcement agencies from around the world have advocated, that registrars should be required to implement verification procedures when registering domain names. Such efforts could significantly reduce the incidence of completely inaccurate data. In addition to imposing verification requirements, ICANN should adopt any other appropriate measures to reduce the amount of inaccurate Whois data.²⁹ We urge ICANN to develop and to implement a plan to address the problem of Whois inaccuracy before new gTLDs are introduced, which will likely exacerbate these problems.

In sum, the dramatic introduction of new gTLDs poses significant risks to consumers, and ICANN should take the steps described above to reduce the potential for consumer injury before approving any new gTLD applications. We look forward to working with ICANN to ensure that adequate consumer protection safeguards are implemented in the new—and existing—gTLD marketplace.

²⁷ See Governmental Advisory Committee, GAC Principles Regarding gTLD Whois Services, at 4.1 (Mar. 28, 2007), *available at* https://gacweb.icann.org/download/attachments/1540132/WHOIS_principles.pdf?version=1&modificationDate=1312460331000.

²⁸ See Whois Review Team, Final Report (Draft), at 7 (Dec. 5, 2011), *available at* <http://www.icann.org/en/reviews/affirmation/whois-rt-draft-final-report-05dec11-en.pdf> (emphasis added). In March, an Interpol representative delivered a blistering critique of the Whois system during ICANN’s Forum on DNS Abuse, noting that “Accurate WHOIS is a joke. It just doesn't happen. We don't see it. We never get it. Even if we do see something within it that might give us indications, it's -- it's always a dead end and it's a waste of time even trying. And for me, what's the point in having a WHOIS database if it can't be accurate? Somebody has to be responsible for having that accurate. Somebody has to be. I'm sorry. And whoever that “somebody” is, can you please step up to the plate and do your work?” See Transcript: Forum on DNS Abuse (Mar. 14, 2011), *available at* <http://svsf40.icann.org/node/22219>.

FEDERAL TRADE COMMISSION
 PROTECTING AMERICA'S CONSUMERS

FTC Warns That Rapid Expansion of Internet Domain Name System Could Leave Consumers More Vulnerable to Online Fraud

Letter Urges ICANN to Implement Pilot Program, Take New Steps to Protect Consumers

FOR RELEASE

December 16, 2011

TAGS: [Internet Corporation for Assigned Names and Numbers \(ICANN\)](#) | [Technology](#) | [Commissioners](#) | [Consumer Protection](#) | [Advertising and Marketing](#) | [Online Advertising and Marketing](#) | [Imposter](#)

The Federal Trade Commission today sent a letter to the Internet Corporation for Assigned Names and Numbers (ICANN), the organization that oversees Internet domain names, expressing concern that the organization's plan to dramatically expand the domain name system could leave consumers more vulnerable to online fraud and undermine law enforcers' ability to track down online scammers.

In its [letter to ICANN](#), the Commission warned that rapid expansion of the number of generic top-level domain names (gTLDs) – the part of the domain name to the right of the dot, such as ".com," ".net" and ".org" – could create a "dramatically increased opportunity for consumer fraud," and make it easier for scam artists to manipulate the system to avoid being detected by law enforcement authorities. The Commission urged ICANN – before approving any new gTLD applications – to take additional steps to protect consumers, including starting with a pilot program to work out potential problems.

"A rapid, exponential expansion of gTLDs has the potential to magnify both the abuse of the domain name system and the corresponding challenges we encounter in tracking down Internet fraudsters," the Commission's letter states.

ICANN intends to allow website operators to apply for new gTLDs starting on January 12, 2012.

The Commission letter noted that the FTC has raised consumer protection issues with ICANN for more than a decade. The Commission stated that the FTC and other law enforcement agencies need to navigate the domain name system in order to investigate cases of unfair or deceptive practices online, and the existing system already is open to manipulation by scam artists seeking to avoid detection. The FTC routinely consults the "Whois" service, which lists the identities and contact information of website operators. However, the Commission explained that the Whois service often contains incomplete or inaccurate data or, increasingly, proxy registrations, which shields contact information even for domain name registrants engaged in commercial activities.

The increase in website names that could be registered in the new gTLDs would put "infinite opportunities" at the fingertips of scam artists, who take advantage of consumers through tactics such as using misspelled names to create copycat websites, the Commission's letter states.

"In short, the potential for consumer harm is great, and ICANN has the responsibility both to assess and mitigate these risks,"

the letter states.

Before approving any new gTLD applications, the FTC urged ICANN to:

- implement the new program as a pilot program and substantially reduce the number of generic top level domains that are introduced as a result of the first application round;
- strengthen ICANN's contractual compliance program, in particular by hiring additional compliance staff;
- develop a new ongoing program to monitor consumer issues that arise during the first round of implementing the new gTLD program;
- assess each new proposed generic top level domain's risk of consumer harm as part of the evaluation and approval process;
- improve the accuracy of Whois data, including by imposing a registrant verification requirement.

The Commission letter warned "If ICANN fails to address these issues responsibly, the introduction of new gTLDs could pose a significant threat to consumers and undermine consumer confidence in the Internet."

The Federal Trade Commission works for consumers to prevent fraudulent, deceptive, and unfair business practices and to provide information to help spot, stop, and avoid them. To file a complaint in English or Spanish, visit the FTC's online [Complaint Assistant](#) or call 1-877-FTC-HELP (1-877-382-4357). The FTC enters complaints into Consumer Sentinel, a secure, online database available to more than 2,000 civil and criminal law enforcement agencies in the U.S. and abroad. The FTC's Web site provides free information on a variety of [consumer topics](#). Like the FTC on [Facebook](#) and follow us on [Twitter](#).

New gTLD Application Change Request Process and Criteria

Requests for changes to applications may be submitted to the [New gTLD Customer Service Center \(CSC\)](#) (<http://web/20120912074616/https://gtldapp.icann.org/vpn/index.html>) by following these 2 steps:

1. Download and complete a [gTLD Application Change Request Form](#) (<http://web/20120912074616/http://newgtlds.icann.org/en/applicants/customer-service/change-requests/form-05sep12-en.docx>) [DOCX, 632 KB].
2. Log into the [CSC portal](#) (<http://web/20120912074616/https://gtldapp.icann.org/vpn/index.html>) with the primary contact's credentials and submit the Form.

ICANN will evaluate the requested changes against the 7 criteria below and inform the applicant whether the changes are approved or denied. ICANN will post all approved changes in a change log on the gTLD microsite. Relevant changes made to public portions of the application will be posted. Changes made to confidential portions of the application will not be posted, but only summarized to protect confidentiality of the applicant. Posting will occur once the applicant confirms that changes made are correct as requested. The change log is currently under development and will be made available soon.

Amended applications will be held for at least 30 days before passing on to the next phase in evaluation process to allow for public comment on that revised application. For example, an application in initial evaluation will not be identified as passing for at least 30 days until time for public comment enables an assessment of whether re-evaluation of the change is required.

Decision Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

Note that per section 1.2.7 of the Applicant Guidebook, if at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

1. ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.
2. Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

NEW GTLD APPLICATION CHANGE REQUEST PROCESS AND CRITERIA

Requests for changes to applications may be submitted to the [New gTLD Customer Service Center \(CSC\) \(/web/20130421111822/https://myicann.secure.force.com/\)](http://web/20130421111822/https://myicann.secure.force.com/) by following these 2 steps:

1. Download and complete a [gTLD Application Change Request Form \(/web/20130421111822/http://newgtlds.icann.org/en/applicants/customer-service/change-requests/form-05sep12-en.docx\)](http://web/20130421111822/http://newgtlds.icann.org/en/applicants/customer-service/change-requests/form-05sep12-en.docx) [DOCX, 632 KB].
2. Log into the [CSC portal \(/web/20130421111822/https://myicann.secure.force.com/\)](http://web/20130421111822/https://myicann.secure.force.com/) with the primary contact's credentials and submit the Form.

ICANN will evaluate the requested changes against the 7 criteria below and inform the applicant whether the changes are approved or denied. ICANN will post all approved changes in a change log on the gTLD microsite. Relevant changes made to public portions of the application will be posted. Changes made to confidential portions of the application will not be posted, but only summarized to protect confidentiality of the applicant. Posting will occur once the applicant confirms that changes made are correct as requested. The change log is currently under development and will be made available soon.

Amended applications will be held for at least 30 days before passing on to the next phase in evaluation process to allow for public comment on that revised application. For example, an application in initial evaluation will not be identified as passing for at least 30 days until time for public comment enables an assessment of whether re-evaluation of the change is required.

Decision Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

Note that per section 1.2.7 of the Applicant Guidebook, if at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

1. ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.
2. Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

Announcement: 30 September 2014 – [ICANN Updates Application Change Request Process \(web/20141009072805/http://newgtlds.icann.org/en/announcements-and-media/announcement-30sep14-en\)](#)

Announcement: 30 September 2014 – Change Request Advisory

Change Request Overview

Per section 1.2.7 of the Applicant Guidebook:

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

This section of the Applicant Guidebook further states:

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

The Application Change Request ("ACR") process was created during the application window in order to allow applicants to notify ICANN of changes to application materials.

Change Request Determination Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?

reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

Explanation – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

Evidence that original submission was in error – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

Other third parties affected – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

Precedents – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

Fairness to applicants – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related to the "Other third parties affected" criterion, and if a change request is found to materially impact other third parties, it will likely be found to cause issues of unfairness.

Materiality – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

Timing – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request is found to impact these criteria, it will be heavily weighted.

How to Submit a Change Request

Requests for changes to application materials may be submitted to the [New gTLD Customer Service Center \(CSC\) \(/web/20141009072805/https://myicann.secure.force.com/\)](http://web/20141009072805/https://myicann.secure.force.com/) by following these 2 steps:

1. Download and complete a [gTLD Application Change Request Form \(/web/20141009072805/http://newgtlds.icann.org/en/applicants/customer-service/change-requests/form-12mar14-en.docx\)](http://web/20141009072805/http://newgtlds.icann.org/en/applicants/customer-service/change-requests/form-12mar14-en.docx) [DOCX, 569 KB].
2. Log into the [CSC portal \(/web/20141009072805/https://myicann.secure.force.com/\)](http://web/20141009072805/https://myicann.secure.force.com/) with the primary contact's credentials and submit the Form, along with redlines of the changes being requested. An example of a redline document can be viewed [here](#).

The standard change request process requires that any change to the application, including changes to the Primary Contact, be initiated by the Primary Contact and submitted via the appropriate login in the [CSC Portal \(/web/20141009072805/https://myicann.secure.force.com/\)](http://web/20141009072805/https://myicann.secure.force.com/). If the Primary Contact is no longer available to initiate the change, then the Secondary Contact may contact the CSC at [newgtld@icann.org \(mailto:newgtld@icann.org\)](mailto:newgtld@icann.org) to submit the change request.

Change Request Process

Below is a graphic depicting the change request process.

[/http://newgtlds.icann.org/sites/default/files/main-images/change-request-process-900x161-30sep14-en.png](http://newgtlds.icann.org/sites/default/files/main-images/change-request-process-900x161-30sep14-en.png)

Verification & Validation – In this step, ICANN verifies the applicant's credentials in order to ensure that only those authorized to make changes to the application are able to do so. Additionally, ICANN reviews the change request materials submitted by the applicant to ensure that a completed Change Request Form, appropriate redline documents, as well as all relevant supporting documentations are provided. This step is not counted in the 4-6 week SLA for change requests, because the amount of time to complete this step is highly dependent upon the applicant providing the required information. ICANN's work during this step is minimal. ICANN typically performs its work within 2 business days of receiving the requests or information from the applicant. Submission of incomplete information, and non-response to ICANN's request for required information are typical causes of delay in this step. ICANN will inform the applicant once this step is completed.

ICANN Review – Once verification and validation of the change request is completed, ICANN reviews the change request materials against the seven criteria above. In the event that additional information is required before a determination can be made, ICANN will reach out to the applicant to request the information. The SLA for this step of the process is 2-4 weeks, depending on the complexity of the change request and whether additional information is required.

Notification of Determination – Once ICANN completes its review of the change request, the applicant will be informed of the determination. Possible determinations include approval of the change request, denial of the change request, or deferral of the change request to a later time. The SLA for this step is one week to account for the drafting of denial or deferral letters if the change request is denied or deferred.

Changes Made and Posted – In this step, ICANN makes the requested and approved changes to the application. Changes that require a 30-day comment window will be posted on the [Application Status page \(/web/20141009072805/http://gtldresult.icann.org/application-result/applicationstatus\)](http://newgtlds.icann.org/sites/default/files/main-images/change-request-process-900x161-30sep14-en.png) of the New gTLD Microsite. Changes that do not require a 30-day comment window will not be posted. Refer to the "Change Requests Requiring 30-day Comment Window" section below for information on which changes will be posted for comments and which ones will not. Applicants will be notified once the changes are made. The notification will also inform applicants whether the changes are posted for comments, and whether application re-evaluation will be required.

Re-evaluation – This step is applicable to those change requests that require re-evaluation of the application. Once ICANN notifies the applicant that the changes are made and that re-evaluation is required, the change request case will be closed and a new re-evaluation case will be opened to assist the applicant through the re-evaluation process. Under the re-evaluation step, the applicant will be sent an invoice for the re-evaluation fee. Once payment is made, ICANN will proceed with the re-evaluation of the application. The re-evaluation will follow the same process and timelines as Extended Evaluation:

- 3 weeks: evaluators review the updated application, and issue Clarifying Questions if required.
- 6 weeks: applicants respond to Clarifying Questions.
- 2 weeks: evaluators review response to Clarifying Questions and deliver results to ICANN.
- 1 week: ICANN reviews and processes the results for publication. Note that if the re-evaluation results in any scoring changes, ICANN will update either the Initial or Extended Evaluation report and post it on the [Application Status page \(/web/20141009072805/https://gtldresult.icann.org/application-result/applicationstatus\)](http://newgtlds.icann.org/sites/default/files/main-images/change-request-process-900x161-30sep14-en.png) of the New gTLD Microsite. If the re-evaluation does not result in any scoring changes, no updates will be made.

Change Requests That Do Not Require A 30-day Comment Window

In the interest of allowing applicants to expeditiously move forward in the New gTLD Program, effective 1 October 2014, the following types of change requests will generally not be posted for comments for 30 days:

- Changes to confidential portions of the application
- Changes to primary and secondary contacts of the application
- Changes to the applicant's contact information (address, phone, fax, web address)
- Changes to applicant's stock symbol
- Changes to applicant's business/tax ID
- Changes to applicant's officers/directors
- Changes to name of applying entity*

INTERNET ARCHIVE **Wayback Machine** Go JUL 2013
 24 captures 12 Sep 12 - 11 Oct 15

* This item refers to a simple name change of the applying entity only. It does not apply to changes in the applying entity itself such as the case of the application being assigned from a parent entity to a wholly-owned subsidiary.

How Change Requests Impact Other New gTLD Program Processes

Contracting – If an applicant is eligible to be invited to Contracting, but there is a pending change request on the application, the applicant will not be invited until the change request completes processing. If the applicant has been invited to contracting and is progressing through the contracting process, a pending change request will cause delays and may impact the applicant’s ability to execute the Registry Agreement in a timely manner. If the applicant anticipates not being able to execute the Registry Agreement by the Registry Agreement execution deadline, ICANN recommends that the applicant [submit an extension request \(/web/20141009072805/http://newgtlds.icann.org/en/announcements-and-media/announcement-03sep14-en\)](http://newgtlds.icann.org/en/announcements-and-media/announcement-03sep14-en) in order to avoid missing the Registry Agreement execution deadline. Applicants will not receive a Registry Agreement until the change request completes processing, and the 30-comment window (if required) has concluded.

Contention Resolution – For Community Priority Evaluation, the applicant will only be invited once the change request completes processing and the 30-day comment window (if required) has concluded. For Auction, a pending change request will not prevent an Auction from being scheduled, but in some circumstances, the Auction may be delayed.

Statistics

Below are monthly change request statistics that will be updated on the first of every month.

	December-13	January-14	February-14	March-14	April-14	May-14	June-14	July-14	August-14	September-14	October-14	November-14	December-14

New Generic Top-Level Domains

CHANGE REQUESTS

New gTLD Advisory

Advisory number: R1-A01-CR

Publication date: 5 September 2014

Change Request Criteria

As per the change request process posted at [http://newgtlds.icann.org/en/applicants/customer-service/change-requests \(/en/applicants/customer-service/change-requests\)](http://newgtlds.icann.org/en/applicants/customer-service/change-requests (/en/applicants/customer-service/change-requests)), ICANN evaluates change requests against 7 criteria:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

Explanation – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

Evidence that original submission was in error – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

Other third parties affected – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

Precedents – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

Fairness to applicants – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related to the "Other third parties affected" criterion and if a change request is found to materially impact other third parties, it will likely be found to cause issues of unfairness.

Materiality – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

Timing – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request is found to impact these criteria, it will be heavily weighted.

Implications on Community Applications

ICANN has received inquiries regarding why requested changes to community definition and registration policies are deferred until after the completion of CPE.

In considering these types of change requests, the most relevant criteria are criteria three through seven. Criteria three, five, six, and seven are related and are considered together.

A change to update a community's definition and registration policies prior to contracting is material because: (1) other parties' decisions on whether to file an community objection to the application were made on the basis of what was in the application at the time of the objection window; (2) the community definition and registration policies serve as the basis for determining the merits of a community objection; and (3) they are evaluated during CPE.

Approval of a change request to update a community definition and registration policies would allow a CPE applicant to update its application based on learnings from previously posted CPE results. This causes issues of unfairness to the first applicants that went through CPE and did not have the benefit of learning from others. Allowing such a change request would also improve the CPE applicant's chances to prevail in CPE, negatively impacting the other applicants in the same contention set. Therefore, although viewed as necessary from the CPE applicant's perspective to maximize its ability to pass CPE, approval of a change request to update a community's definition and registration policies prior to the completion of CPE would cause issues of unfairness to other applicants in the same contention set.

As ICANN's responsibilities are to ensure fair and equitable treatment for all applicants, all change requests of these types have been deferred until after CPE. If an applicant successfully prevails in CPE and enters into contracting, ICANN will consider approving a change request to update the community definition and registration policies prior to execution of the Registry Agreement, provided there are no pending issues impacting the application (i.e., a pending accountability mechanism triggered on the string).

Implications on Exclusive-Generic Applications

On 28 September 2013, the New gTLD Program Committee ("NGPC") passed a [resolution \(http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-28sep13-en.htm#2.a\)](http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-28sep13-en.htm#2.a) directing ICANN staff "to move forward with the contracting process for applicants for strings identified in the Category 2 Safeguard Advice that are prepared to enter into the Registry Agreement as approved." On 9 October 2013, ICANN [announced \(http://newgtlds.icann.org/en/applicants/advisories/gac-cat2-advice-19mar14-en\)](http://newgtlds.icann.org/en/applicants/advisories/gac-cat2-advice-19mar14-en) an implementation plan per the NGPC's direction. Applicants subjected to Category 2 Safeguard Advice were asked to provide responses to the following three questions:

1. Will the TLD be operated as an exclusive access registry?
2. Does the current applicant state that the TLD will be operated as an exclusive registry?
3. Does the applicant have a pending change request regarding exclusive access?

Some applicants answered "No" to question one, "Yes" to question two, and "No" to question three, which means that although their applications state that the applied-for TLDs will be operated as exclusive access registries they will not operate them as such. For these

applicants, the implementation plan allows for them to submit change requests to align their applications with their intent. Once the change requests complete processing, these applications may move forward to contracting if all other eligibility criteria are met. Allowing applicants to change from being an exclusive to a non-exclusive registry does not create unfairness because exclusiveness is not an evaluation criterion and has no bearing on contention resolution.

In line with the announced GAC Category 2 implementation plan, ICANN has approved change requests from applicants wishing to address GAC Category 2 Advice by making their applications non-exclusive access registries and will continue to do so.

Announcement: 30 September 2014 – [ICANN Updates Application Change Request Process \(http://newgtlds.icann.org/en/announcements-and-media/announcement-30sep14-en\)](http://newgtlds.icann.org/en/announcements-and-media/announcement-30sep14-en)

Announcement: 30 September 2014 – [Change Request Advisory \(http://newgtlds.icann.org/en/applicants/advisories/change-request-set-05sep14-en\)](http://newgtlds.icann.org/en/applicants/advisories/change-request-set-05sep14-en)

Change Request Overview

Per section 1.2.7 of the Applicant Guidebook:

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

This section of the Applicant Guidebook further states:

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

The Application Change Request ("ACR") process was created during the application window in order to allow applicants to notify ICANN of changes to application materials.

Change Request Determination Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?

3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

Explanation – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

Evidence that original submission was in error – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

Other third parties affected – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

Precedents – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

Fairness to applicants – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related to the "Other third parties affected" criterion, and if a change request is found to materially impact other third parties, it will likely be found to cause issues of unfairness.

Materiality – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

Timing – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request is found to impact these criteria, it will be heavily weighted.

How to Submit a Change Request

Requests for changes to application materials may be submitted to the [New gTLD Customer Service Center \(CSC\)](#) (<https://myicann.secure.force.com/>) by following these 2 steps:

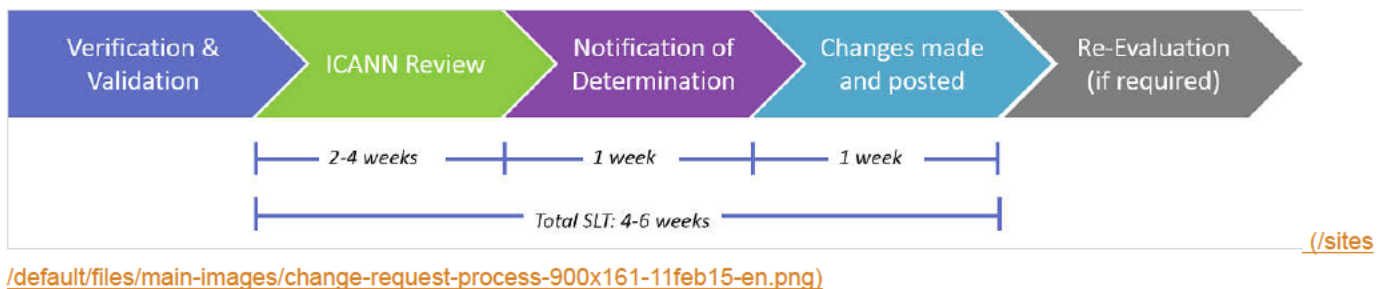

1. Download and complete a [gTLD Application Change Request Form \(/en/applicants/customer-service/change-requests/form-12mar14-en.docx\)](#) [DOCX, 569 KB].

2. Log into the [CSC portal \(https://myicann.secure.force.com/\)](https://myicann.secure.force.com/) with the primary contact's credentials and submit the Form, along with redlines of the changes being requested. An example of a redline document can be viewed [here](#).

The standard change request process requires that any change to the application, including changes to the Primary Contact, be initiated by the Primary Contact and submitted via the appropriate login in the [CSC Portal \(https://myicann.secure.force.com/\)](https://myicann.secure.force.com/). If the Primary Contact is no longer available to initiate the change, then the Secondary Contact may contact the CSC at newgtld@icann.org (<mailto:newgtld@icann.org>) to submit the change request.

Change Request Process

Below is a graphic depicting the change request process.

Verification & Validation – In this step, ICANN verifies the applicant's credentials in order to ensure that only those authorized to make changes to the application are able to do so. Additionally, ICANN reviews the change request materials submitted by the applicant to ensure that a completed Change Request Form, appropriate redline documents, as well as all relevant supporting documentations are provided. This step is not counted in the 4-6 week Service Level Target ("SLT") for change requests, because the amount of time to complete this step is highly dependent upon the applicant providing the required information. ICANN's work during this step is minimal. ICANN typically performs its work within 2 business days of receiving the requests or information from the applicant. Submission of incomplete information, and non-response to ICANN's request for required information are typical causes of delay in this step. ICANN will inform the applicant once this step is completed.

ICANN Review – Once verification and validation of the change request is completed, ICANN reviews the change request materials against the seven criteria above. In the event that additional information is required before a determination can be made, ICANN will reach out to the applicant to request the information. The SLT for this step of the process is 2-4 weeks, depending on the complexity of the change request and whether additional information is required.

Notification of Determination – Once ICANN completes its review of the change request, the applicant will be informed of the determination. Possible determinations include approval of the change request, denial of the change request, or deferral of the change request to a later time. The SLT for this step is one week to account for the drafting of denial or deferral letters if the change request is denied or deferred.

Changes Made and Posted – In this step, ICANN makes the requested and approved changes to the application. Changes that require a 30-day comment window will be posted on the [Application Status page \(http://gtldresult.icann.org/application-result/applicationstatus\)](http://gtldresult.icann.org/application-result/applicationstatus) of the New gTLD Microsite. Changes that do not require a 30-day comment window will not be posted. Refer to the "Change Requests Requiring 30-day Comment Window" section below for information on which changes will be posted for comments and which ones will not. Applicants will be notified once the changes are made. The notification will also inform applicants whether the changes are posted for comments, and whether application re-evaluation will be required.

Re-evaluation – This step is applicable to those change requests that require re-evaluation of the application. Once ICANN notifies the applicant that the changes are made and that re-evaluation is required, the change request case will be closed and a new re-evaluation case will be opened to assist the applicant through the re-evaluation process. Under the re-evaluation step, the applicant will be sent an invoice for the re-evaluation fee. Once payment is made, ICANN will proceed with the re-evaluation of the application. The re-evaluation will follow the same process and timelines as Extended Evaluation:

- 3 weeks: evaluators review the updated application, and issue Clarifying Questions if required.
- 6 weeks: applicants respond to Clarifying Questions.
- 2 weeks: evaluators review response to Clarifying Questions and deliver results to ICANN.
- 1 week: ICANN reviews and processes the results for publication. Note that if the re-evaluation results in any scoring changes, ICANN will update either the Initial or Extended Evaluation report and post it on the [Application Status page](https://gtldresult.icann.org/application-result/applicationstatus) (<https://gtldresult.icann.org/application-result/applicationstatus>) of the New gTLD Microsite. If the re-evaluation does not result in any scoring changes, no updates will be made.

Change Requests That Do Not Require A 30-day Comment Window

In the interest of allowing applicants to expeditiously move forward in the New gTLD Program, effective 1 October 2014, the following types of change requests will generally not be posted for comments for 30 days:

- Changes to confidential portions of the application
- Changes to primary and secondary contacts of the application
- Changes to the applicant's contact information (address, phone, fax, web address)
- Changes to applicant's stock symbol
- Changes to applicant's business/tax ID
- Changes to applicant's officers/directors
- Changes to name of applying entity*
- Changes to parent entity

Although these types of change requests generally will not be posted for comments, ICANN reserves the right to make exceptions in ICANN's discretion.

* This item refers to a simple name change of the applying entity only. It does not apply to changes in the applying entity itself such as the case of the application being assigned from a parent entity to a wholly-owned subsidiary.

How Change Requests Impact Other New gTLD Program Processes

Contracting – If an applicant is eligible to be invited to Contracting, but there is a pending change request on the application, the applicant will not be invited until the change request completes processing. If the applicant has been invited to contracting and is progressing through the contracting process, a pending change request will cause delays and may impact the applicant's ability to execute the Registry Agreement in a timely manner. If the applicant anticipates not being able to execute the Registry Agreement by the Registry Agreement execution deadline, ICANN recommends that the applicant [submit an extension request \(/en/announcements-and-media/announcement-03sep14-en\)](#) in order to avoid missing the Registry Agreement execution deadline. Applicants will not receive a Registry Agreement until the change request completes processing, and the 30-comment window (if required) has concluded.

Contention Resolution – For Community Priority Evaluation, the applicant will only be invited once the change request completes processing and the 30-day comment window (if required) has concluded. For Auction, a pending change request will not prevent an Auction from being scheduled, but in some circumstances, the Auction may be delayed.

Statistics

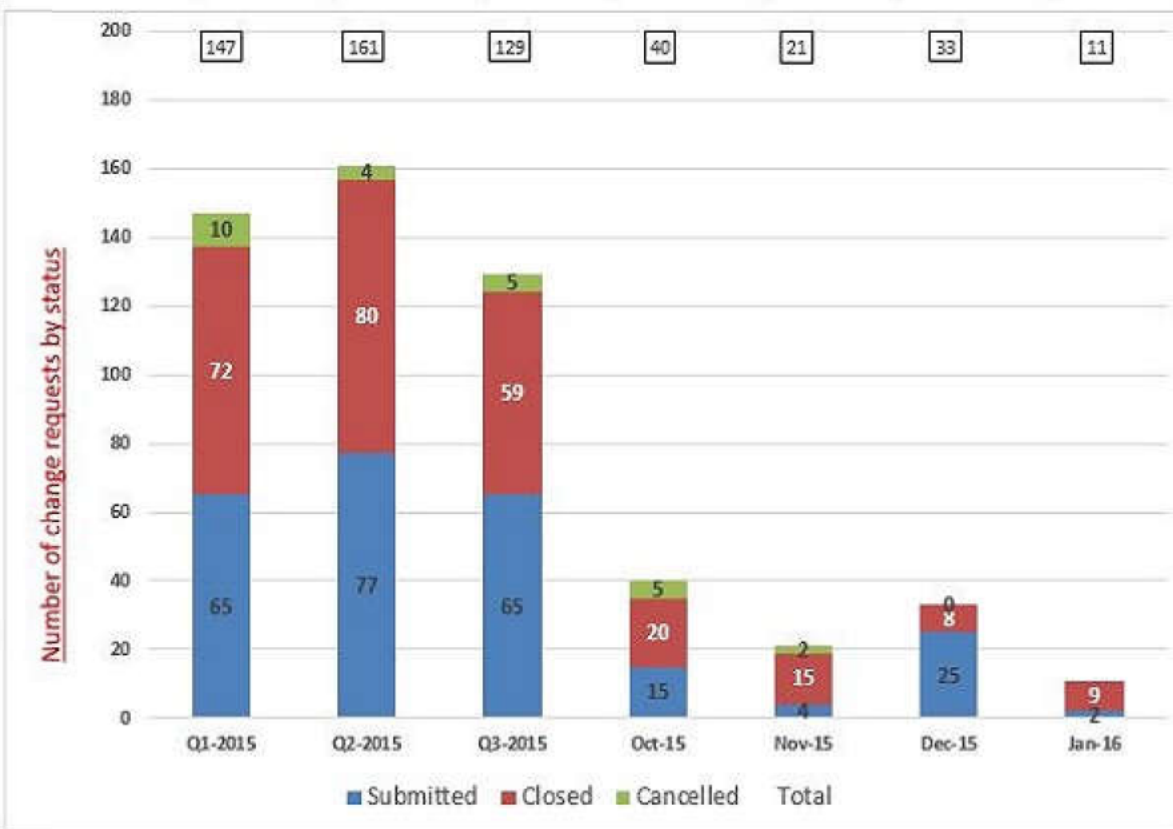

Below are monthly change request statistics that will be updated on the first Thursday of every month.

YTD: Monthly

	Q1-2015	Q2-2015	Q3-2015	Oct-15	Nov-15	Dec-15	Jan-16
Submitted	65	77	65	15	4	25	2

Copyright Information

What is copyright?

Copyright is a property right that gives the creators of certain kinds of material rights to control the ways in which such material can be used. These rights are established as soon as the material has been created, with no need for official registration.

Copyright applies globally and is regulated by a number of international treaties and conventions (including the Berne Convention, the Universal Copyright Convention, the Rome Convention and the Geneva Convention).

What does "syndication" mean?

Syndication means supplying content to clients for republication in their own newspapers, magazines or books. We are happy to discuss any individual query that you might have about re-using our copyrighted material.

What does "licensing" mean?

A licensing agreement is in essence a legal permission granted by the rights owner allowing a third party to exploit the intellectual property rights on certain contractual terms. *The Economist Group* licenses its publications *The World In...* and *Intelligent Life* in their entirety to publishers around the world.

How do I obtain permission to reproduce copyrighted work?

You need to contact the copyright owner or the organisation to which rights have been assigned. Everyone writing for *The Economist* assigns the copyright of their work to us so please **contact us** to seek permission. Please note that we do not own copyright to any of the photographs and most of the cartoons published in *The Economist*.

Who are our main clients?

Our diverse range of global clients includes newspapers, magazines, books and film-production companies, as well as private businesses and educational institutions.

Can I reproduce an article I have translated into another language?

You will need to seek permission to translate and republish the article as you would do if you were planning to reproduce an article in English. We will grant you permission to republish our material in your chosen language but you will have to ensure that the translation of all material from *The Economist* will be carried out to the highest possible standards and that such translation shall not change the content, meaning, spirit or tone of the original material in English nor any opinion directly or indirectly contained therein. The translator shall be liable for any mistake or inaccuracy in the translation.

Can I reproduce the "Letters to the Editor"?

No, all "Letters to the Editor" remain the copyright of the letter writer and therefore we cannot grant permission to reproduce them.

Am I allowed to photocopy articles for classroom use?

You will need a licence to photocopy articles to use as teaching material. Please contact the **Newspaper Licensing Agency** or the **Copyright Clearance Center** (in the US) for more information and a licence.

I am a student and would like to quote a section from an article in my thesis. Is this allowed?

We are usually happy for students to quote text from *The Economist* for their educational coursework free of charge. Acknowledgement should be given as: "© The Economist Newspaper Ltd, London (issue date)". Permission should be sought if the work is to be published.

I want to reproduce a cartoon from a recent issue.

We do not hold the copyright to any of the cartoons or photographs that appear in *The Economist*. Permission will need to be sought from the copyright holder. However, we might be able to provide contact details so please contact us to enquire.

I need to trace an article from last year.

You can search for an article on our website www.economist.com. Articles dating back to 1997 are available on our online archive, together with some selected articles from previous years. However, you will not be able to read them unless you are a subscriber to either Economist.com or the print edition of *The*

"To source my stories, I read a tremendous amount of books and papers, I subscribe to research services, and I read *The Economist* religiously."

Jim Leitner

Founder of Falcon Management

Economist. Sadly, due to the vast volume of emails we receive seeking advice, we cannot email or suggest specific articles.

Where can I buy copies of the most recent special report?

Orders for Special Report can be made through Fosters printing. Please contact Jill Kaletha at Foster Printing. Telephone 00 (1) 219-879-9144 or e-mail jillk@fosterprinting.com

For orders over 100 copies, the Rights & Syndication team would be happy to discuss customisation options for your special report order. Please see the Reprints and Permissions page on this website for more information.

Exhibit DIDP A54

Community Priority Evaluation (CPE) Guidelines

Prepared by The Economist Intelligence Unit

Interconnection between Community Priority Evaluation (CPE) Guidelines and the Applicant Guidebook (AGB)

The CPE Guidelines are an accompanying document to the AGB, and are meant to provide additional clarity around the process and scoring principles outlined in the AGB. This document does not modify the AGB framework, nor does it change the intent or standards laid out in the AGB. The Economist Intelligence Unit (EIU) is committed to evaluating each applicant under the criteria outlined in the AGB. The CPE Guidelines are intended to increase transparency, fairness and predictability around the assessment process.

Criterion #1: Community Establishment

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not considered here, but taken into account when scoring Criterion #2, “Nexus between Proposed String and Community.”)

Measured by

1-A Delineation

1-B Extension

A maximum of 4 points is possible on the Community Establishment criterion, and each sub-criterion has a maximum of 2 possible points.

1-A Delineation

AGB Criteria	Evaluation Guidelines
Scoring	
<p>2= Clearly delineated, organized, and pre-existing community.</p> <p>1= Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.</p> <p>0= Insufficient delineation and pre-existence for a score of 1.</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the community clearly delineated?</i></p> <p><i>Is there at least one entity mainly dedicated to the community?</i></p> <p><i>Does the entity (referred to above) have documented evidence of community activities?</i></p> <p><i>Has the community been active since at least September 2007?</i></p>
Definitions	
<p>“Community” - Usage of the expression “community” has evolved considerably from its Latin origin – “communitas” meaning “fellowship” – while still implying more of cohesion than a mere commonality of interest. Notably, as “community” is used throughout the application, there should be: (a) an awareness and recognition of a community among its members; (b) some</p>	<p>The “community,” as it relates to Criterion #1, refers to the stated community in the application.</p> <p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Was the entity established to administer the community?</i> • <i>Does the entity’s mission statement clearly identify the community?</i>

<p>understanding of the community’s existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.</p>	<p>Additional research may need to be performed to establish that there is documented evidence of community activities. Research may include reviewing the entity’s web site, including mission statements, charters, reviewing websites of community members (pertaining to groups), if applicable, etc.</p>
<p>"Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.</p>	<p>“Delineation” also refers to the extent to which a community has the requisite awareness and recognition from its members.</p> <p>The following non-exhaustive list denotes elements of straight-forward member definitions: fees, skill and/or accreditation requirements, privileges or benefits entitled to members, certifications aligned with community goals, etc.</p>
<p>"Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.</p>	
<p>"Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.</p>	<p>“Mainly” could imply that the entity administering the community may have additional roles/functions beyond administering the community, but one of the key or primary purposes/functions of the entity is to administer a community or a community organization.</p> <p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Was the entity established to administer the community?</i> • <i>Does the entity’s mission statement clearly identify the community?</i>
<p>Criterion 1-A guidelines</p>	
<p>With respect to “Delineation” and “Extension,” it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the</p>	<p>With respect to the Community, consider the following:</p> <ul style="list-style-type: none"> • <i>Are community members aware of the existence of the community as defined by the applicant?</i> • <i>Do community members recognize the community as defined by the applicant?</i>

<p>community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both “Delineation” and “Extension.”</p> <p>With respect to “Delineation,” if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.</p>	<ul style="list-style-type: none"> • <i>Is there clear evidence of such awareness and recognition?</i>
--	---

1-B Extension

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Extension:</p> <p>2=Community of considerable size and longevity</p> <p>1=Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.</p> <p>0=Community of neither considerable size nor longevity</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the community of considerable size?</i></p> <p><i>Does the community demonstrate longevity?</i></p>
Definitions	
<p>“Extension” relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.</p>	
<p>"Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Is the designated community large in terms of membership and/or geographic dispersion?</i>

<p>"Longevity" means that the pursuits of a community are of a lasting, non-transient nature.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Is the community a relatively short-lived congregation (e.g. a group that forms to represent a one-off event)?</i> • <i>Is the community forward-looking (i.e. will it continue to exist in the future)?</i>
<p>Criterion 1-B Guidelines</p>	
<p>With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."</p> <p>With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.</p>	

Criterion #2: Nexus between Proposed String and Community

This section evaluates the relevance of the string to the specific community that it claims to represent.

Measured by

2-A Nexus

2-B Uniqueness

A maximum of 4 points is possible on the Nexus criterion, and with the Nexus sub-criterion having a maximum of 3 possible points, and the Uniqueness sub-criterion having a maximum of 1 possible point.

2-A Nexus

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Nexus:</p> <p>3= The string matches the name of the community or is a well-known short-form or abbreviation of the community</p> <p>2= String identifies the community, but does not qualify for a score of 3</p> <p>0= String nexus does not fulfill the requirements for a score of 2</p>	<p>The following question must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Does the string match the name of the community or is it a well-known short-form or abbreviation of the community name? The name may be, but does not need to be, the name of an organization dedicated to the community.</i></p>
Definitions	
<p>“Name” of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.</p>	<p>“Others” refers to individuals outside of the community itself, as well as the most knowledgeable individuals in the wider geographic and language environment of direct relevance. It also refers to recognition from other organization(s), such as quasi-official, publicly recognized institutions, or other peer groups.</p>
<p>“Identify” means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.</p>	<p>“Match” is of a higher standard than “identify” and means ‘corresponds to’ or ‘is equal to’.</p> <p>“Identify” does not simply mean ‘describe’, but means ‘closely describes the community’.</p> <p>“Over-reaching substantially” means that the string indicates a wider geographical or thematic remit than the community has.</p>

	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Does the string identify a wider or related community of which the applicant is a part, but is not specific to the applicant’s community?</i> • <i>Does the string capture a wider geographical/thematic remit than the community has? The “community” refers to the community as defined by the applicant.</i> • <i>An Internet search should be utilized to help understand whether the string identifies the community and is known by others.</i> • <i>Consider whether the application mission statement, community responses, and websites align.</i>
<p>Criterion 2-A Guidelines</p>	
<p>With respect to “Nexus,” for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.</p> <p>With respect to “Nexus,” for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for “.TENNIS”) then it would not qualify for a 2.</p>	

2-B Uniqueness

<p>AGB Criteria</p>	<p>Evaluation Guidelines</p>
<p>Scoring</p>	
<p>Uniqueness: 1=String has no other significant meaning beyond</p>	<p>The following question must be scored when evaluating the application:</p>

<p>identifying the community described in the application. 0=String does not fulfill the requirement for a score of 1.</p>	<p><i>Does the string have any other significant meaning (to the public in general) beyond identifying the community described in the application?</i></p>
<p>Definitions</p>	
<p>“Identify” means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.</p>	<p>“Over-reaching substantially” means that the string indicates a wider geographical or thematic remit than the community has.</p>
<p>“Significant meaning” relates to the public in general, with consideration of the community language context added</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Will the public in general immediately think of the applying community when thinking of the applied-for string?</i> • <i>If the string is unfamiliar to the public in general, it may be an indicator of uniqueness.</i> • <i>Is the geography or activity implied by the string?</i> • <i>Is the size and delineation of the community inconsistent with the string?</i> • <i>An internet search should be utilized to find out whether there are repeated and frequent references to legal entities or communities other than the community referenced in the application.</i>
<p>Criterion 2-B Guidelines</p>	
<p>"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores</p>	

2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the meaning of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

Criterion #3: Registration Policies

This section evaluates the applicant’s registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

Measured by

3-A Eligibility

3-B Name Selection

3-C Content and Use

3-D Enforcement

A maximum of 4 points is possible on the Registration Policies criterion and each sub-criterion has a maximum of 1 possible point.

3-A Eligibility

AGB Criteria	Evaluation Guidelines
Scoring	
Eligibility: 1= Eligibility restricted to community members 0= Largely unrestricted approach to eligibility	The following question must be scored when evaluating the application: <i>Is eligibility for being allowed as a registrant restricted?</i>
Definitions	
“Eligibility” means the qualifications that organizations or individuals must have in order to be allowed as registrants by the registry.	
Criterion 3-A Guidelines	
With respect to “eligibility” the limitation to community “members” can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant’s physical address be within the boundaries of the location.	

3-B Name Selection

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Name selection: 1= Policies include name selection rules consistent with the articulated community-based purpose of the applied-for TLD 0= Policies do not fulfill the requirements for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Do the applicant’s policies include name selection rules?</i></p> <p style="text-align: center;"><i>Are name selection rules consistent with the articulated community-based purpose of the applied-for gTLD?</i></p>
Definitions	
<p>“Name selection” means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Are the name selection rules consistent with the entity’s mission statement?</i>
Criterion 3-B Guidelines	
<p>With respect to “Name selection,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.</p>	

3-C Content and Use

AGB Criteria	Evaluation Guidelines
--------------	-----------------------

Scoring	
<p>Content and use: 1= Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for TLD 0= Policies do not fulfill the requirements for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Do the applicant’s policies include content and use rules?</i></p> <p><i>If yes, are content and use rules consistent with the articulated community-based purpose of the applied-for gTLD?</i></p>
Definitions	
<p>“Content and use” means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> <i>Are the content and use rules consistent with the applicant’s mission statement?</i>
Criterion 3-C Guidelines	
<p>With respect to “Content and Use,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.</p>	

3-D Enforcement

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Enforcement 1= Policies include specific enforcement measures</p>	<p>The following question must be scored when evaluating the application:</p>

<p>(e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms 0= Policies do not fulfill the requirements for a score of 1</p>	<p><i>Do the policies include specific enforcement measures constituting a coherent set with appropriate appeal mechanisms?</i></p>
---	---

Definitions

<p>“Enforcement” means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.</p>	<p>“Coherent set” refers to enforcement measures that ensure continued accountability to the named community, and can include investigation practices, penalties, and takedown procedures with appropriate appeal mechanisms. This includes screening procedures for registrants, and provisions to prevent and remedy any breaches of its terms by registrants.</p> <p>Consider the following: Do the enforcement measures include:</p> <ul style="list-style-type: none"> • <i>Investigation practices</i> • <i>Penalties</i> • <i>Takedown procedures (e.g., removing the string)</i> • <i>Whether such measures are aligned with the community-based purpose of the TLD</i> • <i>Whether such measures demonstrate continuing accountability to the community named in the application</i>
--	---

Criterion 3-D Guidelines

<p>With respect to “Enforcement,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement</p>

mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.	
--	--

Criterion #4: Community Endorsement

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed in the application, with due regard for communities implicitly addressed by the string.

Measured by

4-A Support

4-B Opposition

A maximum of 4 points is possible on the Community Endorsement criterion and each sub-criterion (Support and Opposition) has a maximum of 2 possible points.

4-A Support

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Support:</p> <p>2= Applicant is, or has documented support from, the recognized community institution(s)/member organization(s), or has otherwise documented authority to represent the community</p> <p>1= Documented support from at least one group with relevance, but insufficient support for a score of 2</p> <p>0= Insufficient proof of support for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the applicant the recognized community institution or member organization?</i></p> <p>To assess this question please consider the following:</p> <p><i>a. Consider whether the community institution or member organization is the clearly recognized representative of the community.</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If it does not, or if there is more than one recognized community institution or member organization (and the applicant is one of them), consider the following:</p> <p><i>Does the applicant have documented</i></p>

	<p><i>support from the recognized community institution(s)/member organization(s) to represent the community?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If not, consider the following:</p> <p><i>Does the applicant have documented authority to represent the community?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If not, consider the following:</p> <p><i>Does the applicant have support from at least one group with relevance?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification.</p> <p>➤ Instructions on letter(s) of support requirements are located below, in Letter(s) of support and their verification</p>
Definitions	
<p>“Recognized” means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of that community.</p>	
<p>“Relevance” and “relevant” refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied for string would be considered relevant.</p>	<p>The institution(s)/organization(s) could be deemed relevant when not identified in the application but has an association to the applied-for string.</p>
Criterion 4-A Guidelines	
<p>With respect to “Support,” it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.</p>	<p>Letter(s) of support and their verification: Letter(s) of support must be evaluated to determine both the relevance of the organization and the validity of the documentation and must meet the criteria spelled out below. The letter(s) of support is an input used to determine the relevance of the organization and the validity of</p>

<p>Also with respect to “Support,” the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.</p> <p>The applicant will score a 1 for “Support” if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on “Support” if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.</p> <p>To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.</p>	<p>the documentation.</p> <p>Consider the following:</p> <p>Are there multiple institutions/organizations supporting the application, with documented support from institutions/organizations representing a majority of the overall community addressed?</p> <p>Does the applicant have support from the majority of the recognized community institution/member organizations?</p> <p>Has the applicant provided full documentation that it has authority to represent the community with its application?</p> <p>A majority of the overall community may be determined by, but not restricted to, considerations such as headcount, the geographic reach of the organizations, or other features such as the degree of power of the organizations.</p> <p><u>Determining relevance and recognition</u></p> <p><i>Is the organization relevant and/or recognized as per the definitions above?</i></p> <p><u>Letter requirements & validity</u></p> <p><i>Does the letter clearly express the organization’s support for the community-based application?</i></p> <p><i>Does the letter demonstrate the organization’s understanding of the string being requested?</i></p> <p><i>Is the documentation submitted by the applicant valid (i.e. the organization exists and the letter is authentic)?</i></p> <p>To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or</p>
--	--

	expressions of support received.
--	----------------------------------

4-B Opposition

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Opposition:</p> <p>2= No opposition of relevance</p> <p>1= Relevant opposition from one group of non-negligible size</p> <p>0= Relevant opposition from two or more groups of non-negligible size</p>	<p>The following question must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Does the application have any opposition that is deemed relevant?</i></p>
Definitions	
<p>“Relevance” and “relevant” refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied for string would be considered relevant.</p>	<p>Consider the following:</p> <p>For “non-negligible” size, “relevant” and “relevance” consider:</p> <ul style="list-style-type: none"> • <i>If the application has opposition from communities that are deemed to be relevant.</i> • <i>If a web search may help determine relevance and size of the objecting organization(s).</i> • <i>If there is opposition by some other reputable organization(s), such as a quasi-official, publicly recognized organization(s) or a peer organization(s)?</i> • <i>If there is opposition from a part of the community explicitly or implicitly addressed?</i>
Criterion 4-B Guidelines	
<p>When scoring “Opposition,” previous objections to the application as well as public comments during the same application round will be taken into account and assessed in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or</p>	<p>Letter(s) of opposition and their verification: Letter(s) of opposition should be evaluated to determine both the relevance of the organization and the validity of the documentation and should meet the criteria spelled out below.</p> <p><u>Determining relevance and recognition</u> <i>Is the organization relevant and/or</i></p>

<p>comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.</p>	<p><i>recognized as per the definitions above?</i></p> <p><u>Letter requirements & validity</u></p> <p><i>Does the letter clearly express the organization's opposition to the applicant's application?</i></p> <p><i>Does the letter demonstrate the organization's understanding of the string being requested?</i></p> <p><i>Is the documentation submitted by the organization valid (i.e. the organization exists and the letter is authentic)?</i></p> <p>To be considered relevant opposition, such documentation should contain a description of the process and rationale used in arriving at the expression of opposition. Consideration of opposition is not based merely on the number of comments or expressions of opposition received.</p>
---	---

Verification of letter(s) of support and opposition

Additional information on the verification of letter(s) of support and opposition:

- Changes in governments may result in new leadership at government agencies. As such, the signatory need only have held the position as of the date the letter was signed or sealed.
- A contact name should be provided in the letter(s) of support or opposition.
- The contact must send an email acknowledging that the letter is authentic, as a verbal acknowledgement is not sufficient.
- In cases where the letter was signed or sealed by an individual who is not currently holding that office or a position of authority, the letter is valid only if the individual was the appropriate authority at the time that the letter was signed or sealed.

About the Community Priority Evaluation Panel and its Processes

The Economist Intelligence Unit (EIU) is the business information arm of The Economist Group, publisher of The Economist. Through a global network of more than 900 analysts and contributors, the EIU continuously assesses political, economic, and business conditions in more than 200 countries. As the world's leading provider of country intelligence, the EIU helps executives, governments, and institutions by providing timely, reliable, and impartial analysis.

The EIU was selected as a Panel Firm for the gTLD evaluation process based on a number of criteria, including:

- The panel will be an internationally recognized firm or organization with significant demonstrated expertise in the evaluation and assessment of proposals in which the relationship of the proposal to a defined public or private community plays an important role.
- The provider must be able to convene a linguistically and culturally diverse panel capable, in the aggregate, of evaluating Applications from a wide variety of different communities.
- The panel must be able to exercise consistent and somewhat subjective judgment in making its evaluations in order to reach conclusions that are compelling and defensible, and
- The panel must be able to document the way in which it has done so in each case.

The evaluation process will respect the principles of fairness, transparency, avoiding potential conflicts of interest, and non-discrimination. Consistency of approach in scoring Applications will be of particular importance.

The following principles characterize the EIU evaluation process for gTLD applications:

- All EIU evaluators must ensure that no conflicts of interest exist.
- All EIU evaluators must undergo training and be fully cognizant of all CPE requirements as listed in the Applicant Guidebook. This process will include a pilot testing process.
- EIU evaluators are selected based on their knowledge of specific countries, regions and/or industries, as they pertain to Applications.
- Language skills will also be considered in the selection of evaluators and the assignment of specific Applications.
- All applications will be evaluated and scored, in the first instance by two evaluators, working independently.
- All Applications will subsequently be reviewed by members of the core project team to verify accuracy and compliance with the AGB, and to ensure consistency of approach across all applications.

- The EIU will work closely with ICANN when questions arise and when additional information may be required to evaluate an application.
- The EIU will fully cooperate with ICANN's quality control process.

Appendix K

CPE Panel Process

August 7, 2014

COMMUNITY PRIORITY EVALUATION PANEL AND ITS PROCESSES

Overview

At the time of submitting the new gTLD application, applicants had the opportunity to designate themselves as a community-based application, as prescribed in the section 1.2.3 of the Applicant Guidebook (AGB).

Community Priority Evaluation (CPE) is defined in section 4.2 of the AGB, and allows a community based-application to undergo an evaluation against the criteria as defined in section 4.2.3 of the AGB, to determine if the application warrants the minimum score of 14 points (out of a maximum of 16 points) to earn priority and thus win the contention set.

Only community-based applicants are eligible to participate in a community priority evaluation. A determination by a community priority panel, appointed by ICANN, must be made before a community name is awarded to an applicant. This determination will be based on the string and the completeness and validity of supporting documentation.

There are two possible outcomes to a Community Priority Evaluation:

- Determination that the application met the CPE requirements specified in the Applicant Guidebook (Section 4.2.2) to receive priority over other applications for the same or confusingly similar string = Prevalled.
- Determination that the application did not meet the CPE requirements specified in the Applicant Guidebook (Section 4.2.2) to receive priority over other applications for the same or confusingly similar string = Did not prevail.

Section 4.2.2 of the AGB prescribes that the Community Priority Evaluations will be conducted by an independent panel. ICANN selected the Economist Intelligence Unit (EIU) as the panel firm for Community Priority Evaluations.

The Economist Intelligence Unit

The Economist Intelligence Unit (EIU) was selected as a Panel Firm for the gTLD evaluation process. The EIU is the business information arm of The Economist Group, publisher of The Economist. Through a global network of more than 500 analysts and contributors, the EIU continuously assesses political, economic, and business conditions in more than 200 countries. As the world's leading provider of country intelligence, the EIU helps executives, governments, and institutions by providing timely, reliable, and impartial analysis.

The evaluation process respects the principles of fairness, transparency, avoidance of potential conflicts of interest, and non-discrimination. Consistency of approach in scoring applications is of particular importance. In this regard, the Economist Intelligence Unit has more than six decades of experience building evaluative frameworks and benchmarking models for its clients, including governments, corporations, academic institutions and NGOs. Applying scoring systems to complex questions is a core competence.

EIU evaluators and core team

The Community Priority Evaluation panel comprises a core team, in addition to several independent¹ evaluators. The core team comprises a Project Manager, who oversees the Community Priority Evaluation project, a Project Coordinator, who is in charge of the day-to-day management of the project and provides guidance to the independent evaluators, and other senior staff members, including The Economist Intelligence Unit's Executive Editor and Global Director of Public Policy. Together, this team assesses the evaluation results. Each application is assessed by seven individuals: two independent evaluators, and the core team, which comprises five people.

The following principles characterize the EIU evaluation process for gTLD applications:

- All EIU evaluators, including the core team, have ensured that no conflicts of interest exist.
- All EIU evaluators undergo regular training to ensure full understanding of all CPE requirements as listed in the Applicant Guidebook, as well as to ensure consistent judgment. This process included a pilot training process, which has been followed by regular training sessions to ensure that all evaluators have the same understanding of the evaluation process and procedures.
- EIU evaluators are highly qualified, they speak several languages and have expertise in applying criteria and standardized methodologies across a broad variety of issues in a consistent and systematic manner.
- Language skills and knowledge of specific regions are also considered in the selection of evaluators and the assignment of specific applications.

CPE Evaluation Process

The EIU evaluates applications for gTLDs once they become eligible for review under CPE.

The evaluation process as described in section 4.2.3 of the Applicant Guidebook and discussed in the CPE Guidelines document is described below:

- The Panel Firm's Project Manager is notified by ICANN that an application for a gTLD is ready for CPE, and the application ID and public comments are delivered to the EIU. The EIU is responsible for gathering the application materials and other documentation, including letter(s) of support and relevant correspondence, from the public ICANN website. The EIU Project Manager reviews the application and associated materials, in conjunction with the EIU Project Coordinator. The Project Coordinator assigns the application to each of two evaluators, who work independently to assess and score the application.
- Each evaluator reviews the application and accompanying documentation, such as letter(s) of support and opposition. Based on this information and additional independent research, the evaluators assign scores to the four CPE criteria as defined in the Applicant Guidebook.
- As part of this process, one of the two evaluators assigned to assess the same string is asked to verify the letters of support and opposition. (Please see "Verification of letter(s) of support and opposition" section for further details.)
- When evaluating an application the CPE Panel also considers the public application comments. The public comments are provided to EIU by ICANN following the close of the 14-day window associated with the CPE invitation. For every comment of support/opposition received, the designated evaluator assesses the relevance of the organization of the poster along with the content of the comment. A separate verification of the comment author is not performed as the Application Comments

¹ The term "independent" means that the evaluators do not have any conflict of interest with CPE applicants. It also means that the evaluators sit outside the core EIU team; they provide individual evaluation results based on their assessment of the AGB criteria, application materials, and secondary research without any influence from core team members.

system requires that users register themselves with an active email account before they are allowed to post any comments. However, the evaluator will check the affiliated website to ascertain if the person sending the comment(s) is at that entity/organization named, unless the comment has been sent in an individual capacity.

- Once the two evaluators have completed this process, the evaluation results are reviewed by the Project Coordinator, who checks them for completeness and consistency with the procedures of the Applicant Guidebook.
- If the two evaluators disagree on one or more of the scores, the Project Coordinator mediates and works to achieve consensus, where possible.
- The Project Director and Project Coordinator, along with other members of the core team, meet to discuss the evaluators' results and to verify compliance with the Applicant Guidebook. Justifications for the scores are further refined and articulated in this phase.
- If the core team so decides, additional research may be carried out to answer questions that arise during the review, especially as they pertain to the qualitative aspects of the Applicant Guidebook scoring procedures.
- If the core team so decides, the EIU may provide a clarifying question (CQ) to be issued via ICANN to the applicant to clarify statements in the application materials and/or to inform the applicant that letter(s) of support could not be verified.
- When the core team achieves consensus on the scores for each application, an explanation, or justification, for each score is prepared. A final document with all scores and justifications for a given application, including a determination of whether the application earned the requisite 14 points for prevailing, is presented to ICANN.
- The Economist Intelligence Unit works with ICANN when questions arise or when additional process information may be required to evaluate an application.
- The Panel Firm exercises consistent judgment in making its evaluations in order to reach conclusions that are compelling and defensible, and documents the way in which it has done so in each case.

Verification of letter(s) of support and opposition

As part of this CPE evaluation process, one of the two evaluators assigned to assess the same string verifies the letters of support and opposition. This process is outlined below:

- On a regular basis, the EIU reviews ICANN's public correspondence page (<http://newgtlds.icann.org/en/program-status/correspondence>) for recently received correspondence to assess whether it is relevant to an ongoing evaluation. If it is relevant, the public correspondence is provided to the evaluators assigned to the evaluation for review.
- For every letter of support/opposition received, the designated evaluator assesses both the relevance of the organization and the validity of the documentation. Only one of the two evaluators is responsible for the letter verification process.
- With few exceptions, verification emails are sent to every entity that has sent a letter(s) of support or opposition to validate their identity and authority.
- The exceptions noted above regarding sending verification letter(s) include but may not be limited to:
 - If there are no contact details included in the letter(s). However, the evaluator will attempt to obtain this information through independent research.
 - If the person sending the letters(s) does not represent an organization. However, if the content of the letter(s) suggests that the individual sending a letter has sent this letter(s) on behalf of an organization/entity the evaluator will attempt to validate this affiliation.
- The verification email for letter(s) of support/opposition requests the following information from the author of the letter:
 - Confirmation of the authenticity of the organization(s) letter.
 - Confirmation that the sender of the letter has the authority to indicate the organization(s) support/opposition for the application.
 - In instances where the letter(s) of support do not clearly and explicitly endorse the applicant, the verification email asks for confirmation as to whether or not the organization(s) explicitly supports the community based application.
- To provide every opportunity for a response, the evaluator regularly contacts the organization for a response by email and phone for a period of at least a month.
- A verbal acknowledgement is not sufficient. The contacted individual must send an email to the EIU acknowledging that the letter is authentic.

Appendix L

CPE FAQ, Version 1.2

August 13, 2014

Community Priority Evaluation (CPE) Frequently Asked Questions

Version 1.2

Note: This version of the FAQ was updated on 13 August 2014. Several new questions have been added to the document, and some existing answers have also been updated to reflect changes to the process resulting from lessons learned during the past nine months of CPE operations.

Early Election

Q: Is early election required to participate in CPE?

A: No. Early election of CPE is optional and at the discretion of the applicant. Early election is, however, not a guarantee of eligibility to proceed with CPE. Early election status will be reflected on an Applicant's status on the New gTLD Application Status Page (<https://gtldresult.icann.org/application-result/applicationstatus/viewstatus>). Applicants will be invited to CPE once they are eligible, regardless of whether early election was made.

Timeline and Processing

Q: What are the eligibility requirements to begin CPE?

A: To begin CPE, there are eligibility requirements for both the application and the contention set. These requirements are listed below.

To begin CPE, an application must:

- be a self-designated Community Application per section 1.2.3 of the AGB
- be in a string contention set
- not have a pending change request
- not be in the 30-day application comment window for an approved changed request

Additionally, an applicant may only begin CPE if all members of the contention set (including the community applicant(s)) meet the following eligibility criteria:

- have completed evaluation
- have no pending objections
- have no unresolved GAC Advice
- are not classified in the "High-Risk" category of the New gTLD Collision Occurrence Management Plan, available here:
<http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-annex-1-07oct13-en.pdf>

Q: When will CPE start?

A: Invitations to begin CPE started in early October 2013 to eligible applicants. On an ongoing basis, applicants will be invited to begin CPE as each becomes eligible based on the eligibility requirements listed in the prior question. The evaluation will begin approximately 2-3 weeks after an invitation is sent. However, in order to allow sufficient time for the submission of Application Comments and Letters of Support/Opposition, CPE will begin no earlier than 14 days after an invitation is sent. The date that the invitation is sent will be posted on the CPE page of the New gTLD Microsite (<http://newgtlds.icann.org/en/applicants/cpe>).

Q: What is the fee for CPE?

A: The deposit fee for CPE is USD 22,000. An applicant who scores at or above the threshold for CPE will be refunded the full USD 22,000 deposit.

Q: What is the process to elect CPE?

A: One week before an application becomes eligible for CPE, a pre-invitation notice is sent to those applications that are likely to become eligible. The purpose of the pre-invitation is to verify payer information before the actual invitation is sent.

Once an application becomes eligible for CPE, ICANN will send an official invitation to the applicant via a case in the Customer Portal. If the Applicant wishes to pursue CPE, the Applicant must respond to the case within 21 days with the following: declaration that they are electing to pursue CPE, the CPE deposit payment form with the required details, and the CPE deposit payment itself (USD 22,000).

Q: How will I know when an application has been invited to elect CPE?

A: The CPE landing page on the New gTLD Microsite (<http://newgtlds.icann.org/en/applicants/cpe>) will be updated regularly to inform the community of each invitation date, election date and evaluation result for CPE. Additionally, the members of the contention set will be notified via Customer Portal when a member of their contention set is invited to CPE.

Q: What is the due date for submitting an application comment or letters of support or opposition to ensure the CPE Panel takes them into consideration?

A: Application comments and letters of support or opposition must be received within 14 days of the CPE invitation date posted on the CPE landing page on the New gTLD Microsite (<http://newgtlds.icann.org/en/applicants/cpe>). Application comments may be submitted at <http://newgtlds.icann.org/en/program-status/comments>. Letters of support or

opposition may be submitted via the methods described in the Letters of Support and Opposition section of the FAQs below. It is not guaranteed, however, that Application Comments and letters of support/opposition submitted after the 14 day period will be considered in the CPE Panel's evaluation of the the application.

Q: What is the Accelerated Invitation to CPE?

A: Accelerated Invitation to CPE is a process where the applicant can elect to start CPE earlier than the typical conditions would normally allow. An applicant may request early invitation to CPE in situations where outstanding eligibility criteria do not have the potential to directly impact the community applicant's membership in a contention set.

Q: What are the eligibility requirements to receive an Accelerated Invitation to CPE?

A: The application requesting CPE must have completed the following pre-requisites:

To be eligible for an accelerated invitation, an application must:

- be a self-designated Community Application per section 1.2.3 of the AGB
- be in an unresolved string contention set (Contention Set status is not Resolved)
- not have a pending change request
- not be in the 30-day application comment window for an approved changed request
- not be classified in the "High Risk" category of the Name Collisions Risk Management Plan, available here:
<http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-annex-1-07oct13-en.pdf>
- not have filed any pending Accountability Mechanism

Additionally, all applications in the contention set must have:

- completed evaluation
- no pending objections
- resolved all applicable GAC Advice

Q: When will I receive an Accelerated Invitation to CPE?

A: Once a community application has met the requirements listed above, ICANN will notify the applicant of the option to request an Accelerated Invitation to Elect CPE. Once an Applicant has requested the Accelerated Invitation, the standard CPE Invitation process will commence as described above, including notification to other members of the contention set and posting to the CPE status page (<http://newgtlds.icann.org/en/applicants/cpe>).

Q: Is there a deadline to request an Accelerated Invitation to CPE? How long do I have in order to decide to participate in CPE once I receive the Accelerated Invitation?

A: There is no deadline for requesting the Accelerated Invitation to CPE. A request can be made at any time while outstanding eligibility criteria are being resolved for other members of the contention set. Once the Accelerated Invitation has been requested, however, a response (i.e. decision to participate in CPE) must be received within 21 days.

Evaluation Panel

Q: What will be reviewed by the CPE Panel?

A: As part of its evaluation and in accordance with the AGB criteria in section 4.2.3 and the CPE Panel's guidelines (<http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>), the CPE Panel will review publicly available information such as the publicly available portions of the application, application comments on the application, objection determinations, and correspondence (letters of support or objection related to the application). The CPE Panel will also conduct any additional research as it sees fit.

Q: How will the CPE guidelines be used in performing evaluations?

A: The CPE guidelines are an accompanying document to the AGB and are intended to provide additional clarity around process and scoring principles as defined in the AGB. The CPE guidelines do not change the AGB framework or change the intent or standards established in the AGB.

Q: Where can I find out more about the CPE process?

A: More information about the process followed by the CPE panel can be found in the CPE Panel Process document (<http://newgtlds.icann.org/en/applicants/cpe/Community Priority Evaluation Panel Process.06AUG2014.pdf>).

Q: Will the CPE Panel ask clarifying questions?

A: Prior to the start of CPE evaluation, the CPE Panel may, but is not obligated to, request additional information from applicants if the CPE Panel feels that additional information is required to evaluate the application. If during the evaluation additional information is needed, the expectation is that clarifying questions will be issued by the CPE Panel to applicants in order to provide the opportunity to:

- Address any application comments that may impact the scoring of their application.
- Address any objection determinations not in their favor.
- Address any letters of opposition.
- Contact supporting organizations and ask them to respond to the CPE Panel's request for validation of letters of support or objection.

Applicants will be contacted via the Customer Service Portal if additional information is

required, and will be provided 28 days to respond to clarifying questions.

Q: Once CPE has started, approximately how long will the CPE Panel take to perform the evaluation?

A: The evaluation is expected to take approximately three to four months¹, depending on the number of letters of support or opposition requiring validation and the need for clarifying questions.

Q: In what order will applicants be invited and evaluated in CPE?

A: The order is firstly determined by the eligibility requirements as defined above. The priority number may be used as a secondary method to determine evaluation ordering in the unlikely event that volume exceeds the CPE Panel's capacity.

Letters of Support and Opposition

Q: How should additional letters of support/opposition be sent to ICANN?

A: Organizations that would like to submit letters of support or opposition for an application may send these letters to ICANN either electronically at newgtld@icann.org or by physical mail to ICANN's Los Angeles office. If these letters are addressed to ICANN, they will be treated as correspondence and posted on the New gTLD Correspondence page (<http://newgtlds.icann.org/en/program-status/correspondence>).

If the letters are addressed to the applicant, the applicant may send the letters to ICANN electronically at newgtld@icann.org to be posted as correspondence, with the following requirements:

- Include a cover letter to ICANN requesting that the letters be posted as correspondence. This cover letter should contain, at a minimum: application ID, string, and the applicant name for the application that they are supporting or opposing.
- Attach letters of support or opposition to the correspondence request. If such a request is received, ICANN will post the cover letter and the attachments as a single item of correspondence.

If an applicant submits letters of support via the change request process posted at <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>, the letters of support will be processed as a change request and subject to the 30-day application comment period.

Q: Will the CPE Panel contact the person referenced in the letters of support and

¹ The prior version of the FAQ stated two to three months, but, as mentioned at the start of this document, lessons learned over the past nine months have showed that a better estimate for the length of the process is three to four months.

opposition?

A: The CPE Panel will attempt to validate all letters of support and opposition to ensure that the individuals who have signed the documents are in fact the sender, have the authority to speak on behalf of their institution, and that the panel clearly understands the intentions of the letter. This is similar to the Geographic Names Panel process of validating letters of support or non-objection. More information about the letter validation process can be found in the CPE Panel Process document ([http://newgtlds.icann.org/en/applicants/cpe/Community Priority Evaluation Panel Process.06AUG2014.pdf](http://newgtlds.icann.org/en/applicants/cpe/Community%20Priority%20Evaluation%20Panel%20Process.06AUG2014.pdf)).

As some of the contact information from the letters included in the application may no longer be accurate, it is suggested, but not required, that CPE applicants provide current contact information for the individuals who authored the letters of support for their application. This updated contact information can be submitted via the Customer Service Portal. The use of such information is at the discretion of the CPE Panel.

Appendix M

CPE FAQ, Version 1.3

September 10, 2014

Community Priority Evaluation (CPE) Frequently Asked Questions

Version 1.3

Note: This version of the FAQ was updated on 10 September 2014. No new questions have been added, but existing answers have been updated to reflect changes put forth in the “Update on Application Status and Contention Sets” Advisory.

Early Election

Q: Is early election required to participate in CPE?

A: No. Early election of CPE is optional and at the discretion of the applicant. Early election is, however, not a guarantee of eligibility to proceed with CPE. Early election status will be reflected on an Applicant’s status on the New gTLD Application Status Page (<https://gtldresult.icann.org/application-result/applicationstatus/viewstatus>). Applicants will be invited to CPE once they are eligible, regardless of whether early election was made.

Timeline and Processing

Q: What are the eligibility requirements to begin Standard CPE?

A: To be eligible to begin Standard CPE Processing, an application must:

- be a self-designated Community Application per section 1.2.3 of the AGB
- have an application status of “Active”
- be in an unresolved contention set (contention set status is either “Active” or “On-Hold” and at least one other application in the set has a status of either “Active or On-Hold”
- not have a pending change request
- not be in an active comment window for a recently approved changed request

Additionally, as per section 4.2 of the AGB, all remaining members of the contention set must have completed all previous stages of the process. All remaining applications in the contention set must:

- have completed evaluation
- have no pending objections
- have addressed all applicable GAC Advice
- not be classified in the “High Risk” category of the Name Collision Occurrence Management Framework

The Name Collision Occurrence Management Framework is available here:
<https://www.icann.org/en/system/files/files/name-collision-framework-30jul14-en.pdf>

Q: When will CPE start?

A: Invitations to begin CPE started in early October 2013 to eligible applicants. On an ongoing basis, applicants will be invited to begin CPE as each becomes eligible based on the eligibility requirements listed in the prior question. The evaluation will begin approximately 2-3 weeks after an invitation is sent. However, in order to allow sufficient time for the submission of Application Comments and Letters of Support/Opposition, CPE will begin no earlier than 14 days after an invitation is sent. The date that the invitation is sent will be posted on the CPE page of the New gTLD Microsite (<http://newgtlds.icann.org/en/applicants/cpe>).

Q: What is the fee for CPE?

A: The deposit fee for CPE is USD 22,000. An applicant that prevails in CPE will be refunded their full deposit amount.

Q: What is the process to elect CPE?

A: One week before an application becomes eligible for CPE, a pre-invitation notice is sent to those applications that are likely to become eligible. The purpose of the pre-invitation is to verify payer information before the actual invitation is sent.

Once an application becomes eligible for CPE, ICANN will send an official invitation to the applicant via a case in the Customer Portal. If the Applicant wishes to pursue CPE, the Applicant must respond to the case within 21 days with the following: declaration that they are electing to pursue CPE, the CPE deposit payment form with the required details, and the CPE deposit payment itself (USD 22,000).

Q: How will I know when an application has been invited to elect CPE?

A: The CPE landing page on the New gTLD Microsite (<http://newgtlds.icann.org/en/applicants/cpe>) will be updated regularly to inform the community of each invitation date, election date and evaluation result for CPE. Additionally, the members of the contention set will be notified via Customer Portal when a member of their contention set is invited to CPE.

Q: What is the due date for submitting an application comment or letters of support or opposition to ensure the CPE Panel takes them into consideration?

A: Application comments and letters of support or opposition must be received within 14 days of the CPE invitation date posted on the CPE landing page on the New gTLD

Microsite (<http://newgtlds.icann.org/en/applicants/cpe>). Application comments may be submitted at <http://newgtlds.icann.org/en/program-status/comments>. Letters of support or opposition may be submitted via the methods described in the Letters of Support and Opposition section of the FAQs below. It is not guaranteed, however, that Application Comments and letters of support/opposition submitted after the 14 day period will be considered in the CPE Panel's evaluation of the the application.

Q: What is the Accelerated Invitation to CPE?

A: Accelerated Invitation to CPE is a process where the applicant can elect to start CPE earlier than the typical conditions would normally allow. An applicant is able to request an Accelerated Invitation to CPE when outstanding eligibility criteria do not have the potential to impact the community applicant's membership in a contention set and/or when the contention set as a whole may not have met all eligibility requirements for the standard CPE Invitation process.

Q: What are the eligibility requirements to receive an Accelerated Invitation to CPE?

A: To be eligible for an Accelerated Invitation to CPE, an application must:

- be a self-designated Community Application per section 1.2.3 of the AGB
- have a status of "Active" or "On-Hold"
- be in an unresolved contention set (contention set status is either "Active" or "On-Hold" and at least one other application in the set has a status of either "Active or On-Hold")
- not have a pending change request
- not be in an active application comment window for an approved changed request
- have addressed all applicable GAC Advice

Additionally, as per section 4.2 of the AGB, all remaining members of the contention set must have completed all previous stages of the process. All remaining applications in the contention set must:

- have completed evaluation
- have no pending objections
- not be classified in the "High Risk" category of the Name Collision Occurrence Management Framework

Q: When will I receive an Accelerated Invitation to CPE?

A: Once a community application has met the requirements listed above, ICANN will notify the applicant of the option to request an Accelerated Invitation to Elect CPE. After an Applicant has requested the Accelerated Invitation, the standard CPE Invitation process will

commence as described above, including notification to other members of the contention set and posting to the CPE status page (<http://newgtlds.icann.org/en/applicants/cpe>).

Q: Is there a deadline to request an Accelerated Invitation to CPE? How long do I have in order to decide to participate in CPE once I receive the Accelerated Invitation?

A: There is no deadline for requesting the Accelerated Invitation to CPE. A request can be made at any time while outstanding eligibility criteria are being resolved for other members of the contention set. Once the Accelerated Invitation has been requested, however, a response (i.e. decision to participate in CPE) must be received within 21 days.

Evaluation Panel

Q: What will be reviewed by the CPE Panel?

A: As part of its evaluation and in accordance with the AGB criteria in section 4.2.3 and the CPE Panel's guidelines (<http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>), the CPE Panel will review publicly available information such as the publicly available portions of the application, application comments on the application, objection determinations, and correspondence (letters of support or objection related to the application). The CPE Panel will also conduct any additional research as it sees fit.

Q: How will the CPE guidelines be used in performing evaluations?

A: The CPE guidelines are an accompanying document to the AGB and are intended to provide additional clarity around process and scoring principles as defined in the AGB. The CPE guidelines do not change the AGB framework or change the intent or standards established in the AGB.

Q: Where can I find out more about the CPE process?

A: More information about the process followed by the CPE panel can be found in the CPE Panel Process document (<http://newgtlds.icann.org/en/applicants/cpe/Community Priority Evaluation Panel Process.06AUG2014.pdf>).

Q: Will the CPE Panel ask clarifying questions?

A: Prior to the start of CPE evaluation, the CPE Panel may, but is not obligated to, request additional information from applicants if the CPE Panel feels that additional information is required to evaluate the application. If during the evaluation additional information is needed, the expectation is that clarifying questions will be issued by the CPE Panel to applicants in order to provide the opportunity to:

- Address any application comments that may impact the scoring of their application.
- Address any objection determinations not in their favor.
- Address any letters of opposition.
- Contact supporting organizations and ask them to respond to the CPE Panel's request for validation of letters of support or objection.

Applicants will be contacted via the Customer Service Portal if additional information is required, and will be provided 28 days to respond to clarifying questions.

Q: Once CPE has started, approximately how long will the CPE Panel take to perform the evaluation?

A: The evaluation is expected to take approximately three to four months¹, depending on the number of letters of support or opposition requiring validation and the need for clarifying questions.

Q: In what order will applicants be invited and evaluated in CPE?

A: The order is firstly determined by the eligibility requirements as defined above. The priority number may be used as a secondary method to determine evaluation ordering in the unlikely event that volume exceeds the CPE Panel's capacity.

Letters of Support and Opposition

Q: How should additional letters of support/opposition be sent to ICANN?

A: Organizations that would like to submit letters of support or opposition for an application may send these letters to ICANN either electronically at newgtld@icann.org or by physical mail to ICANN's Los Angeles office. If these letters are addressed to ICANN, they will be treated as correspondence and posted on the New gTLD Correspondence page (<http://newgtlds.icann.org/en/program-status/correspondence>).

If the letters are addressed to the applicant, the applicant may send the letters to ICANN electronically at newgtld@icann.org to be posted as correspondence, with the following requirements:

- Include a cover letter to ICANN requesting that the letters be posted as correspondence. This cover letter should contain, at a minimum: application ID, string, and the applicant name for the application that they are supporting or opposing.
- Attach letters of support or opposition to the correspondence request. If such a request is received, ICANN will post the cover letter and the

¹ This number was changed in the 13 August 2014 version of the FAQs to reflect lessons learned.
10 September 2014 CPE FAQ v1.3

attachments as a single item of correspondence.

If an applicant submits letters of support via the change request process posted at <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>, the letters of support will be processed as a change request and subject to the 30-day application comment period.

Q: Will the CPE Panel contact the person referenced in the letters of support and opposition?

A: The CPE Panel will attempt to validate all letters of support and opposition to ensure that the individuals who have signed the documents are in fact the sender, have the authority to speak on behalf of their institution, and that the panel clearly understands the intentions of the letter. This is similar to the Geographic Names Panel process of validating letters of support or non-objection. More information about the letter validation process can be found in the CPE Panel Process document (<http://newgtlds.icann.org/en/applicants/cpe/Community Priority Evaluation Panel Process.06AUG2014.pdf>).

As some of the contact information from the letters included in the application may no longer be accurate, it is suggested, but not required, that CPE applicants provide current contact information for the individuals who authored the letters of support for their application. This updated contact information can be submitted via the Customer Service Portal. The use of such information is at the discretion of the CPE Panel.

Should the CPE Panel be unable to contact or get a response from a material amount of relevant supporters such that it is impacting the scoring of the evaluation, they will issue a clarifying question to the applicant, requesting both updated contact information for those they have been unable to complete the verification with, and they will also request the applicant's assistance in getting a response from the supporter to the panel. These clarification questions will come from ICANN to the applicant via the customer portal, as indicated in previous questions on this FAQ page.

TABLE OF CONTENTS*

<i>Article 1:</i>	<i>Establishment of a Union</i>
<i>Article 2:</i>	<i>Protected Works:</i> 1. "Literary and artistic works"; 2. Possible requirement of fixation; 3. Derivative works; 4. Official texts; 5. Collections; 6. Obligation to protect; beneficiaries of protection; 7. Works of applied art and industrial designs; 8. News
<i>Article 2bis:</i>	<i>Possible Limitation of Protection of Certain Works:</i> 1. Certain speeches; 2. Certain uses of lectures and addresses; 3. Right to make collections of such works
<i>Article 3:</i>	<i>Criteria of Eligibility for Protection:</i> 1. Nationality of author; place of publication of work; 2. Residence of author; 3. "Published" works; 4. "Simultaneously published" works
<i>Article 4:</i>	<i>Criteria of Eligibility for Protection of Cinematographic Works, Works of Architecture and Certain Artistic Works</i>
<i>Article 5:</i>	<i>Rights Guaranteed:</i> 1. and 2. Outside the country of origin; 3. In the country of origin; 4. "Country of origin"
<i>Article 6:</i>	<i>Possible Restriction of Protection in Respect of Certain Works of Nationals of Certain Countries Outside the Union:</i> 1. In the country of the first publication and in other countries; 2. No retroactivity; 3. Notice
<i>Article 6bis:</i>	<i>Moral Rights:</i> 1. To claim authorship; to object to certain modifications and other derogatory actions; 2. After the author's death; 3. Means of redress
<i>Article 7:</i>	<i>Term of Protection:</i> 1. Generally; 2. For cinematographic works; 3. For anonymous and pseudonymous works; 4. For photographic works and works of applied art; 5. Starting date of computation; 6. Longer terms; 7. Shorter terms; 8. Applicable law; "comparison" of terms
<i>Article 7bis:</i>	<i>Term of Protection for Works of Joint Authorship</i>
<i>Article 8:</i>	<i>Right of Translation</i>

* This Table of Contents is added for the convenience of the reader. It does not appear in the original (English) text of the Convention.

Article 9:	<i>Right of Reproduction:</i> 1. Generally; 2. Possible exceptions; 3. Sound and visual recordings
Article 10:	<i>Certain Free Uses of Works:</i> 1. Quotations; 2. Illustrations for teaching; 3. Indication of source and author
Article 10bis:	<i>Further Possible Free Uses of Works:</i> 1. Of certain articles and broadcast works; 2. Of works seen or heard in connection with current events
Article 11:	<i>Certain Rights in Dramatic and Musical Works:</i> 1. Right of public performance and of communication to the public of a performance; 2. In respect of translations
Article 11bis:	<i>Broadcasting and Related Rights:</i> 1. Broadcasting and other wireless communications, public communication of broadcast by wire or rebroadcast, public communication of broadcast by loudspeaker or analogous instruments; 2. Compulsory licenses; 3. Recording; ephemeral recordings
Article 11ter:	<i>Certain Rights in Literary Works:</i> 1. Right of public recitation and of communication to the public of a recitation; 2. In respect of translations
Article 12:	<i>Right of Adaptation, Arrangement and Other Alteration</i>
Article 13:	<i>Possible Limitation of the Right of Recording of Musical Works and Any Words Pertaining Thereto:</i> 1. Compulsory licenses; 2. Transitory measures; 3. Seizure on importation of copies made without the author's permission
Article 14:	<i>Cinematographic and Related Rights:</i> 1. Cinematographic adaptation and reproduction; distribution; public performance and public communication by wire of works thus adapted or reproduced; 2. Adaptation of cinematographic productions; 3. No compulsory licenses
Article 14bis:	<i>Special Provisions Concerning Cinematographic Works:</i> 1. Assimilation to "original" works; 2. Ownership; limitation of certain rights of certain contributors; 3. Certain other contributors
Article 14ter:	<i>"Droit de suite" in Works of Art and Manuscripts:</i> 1. Right to an interest in resales; 2. Applicable law; 3. Procedure
Article 15:	<i>Right to Enforce Protected Rights:</i> 1. Where author's name is indicated or where pseudonym leaves no doubt as to author's identity; 2. In the case of cinematographic works; 3. In the case of anonymous and pseudonymous works; 4. In the case of certain unpublished works of unknown authorship
Article 16:	<i>Infringing Copies:</i> 1. Seizure; 2. Seizure on importation; 3. Applicable law
Article 17:	<i>Possibility of Control of Circulation, Presentation and Exhibition of Works</i>
Article 18:	<i>Works Existing on Convention's Entry Into Force:</i> 1. Protectable where protection not yet expired in country of origin; 2. Non-protectable where protection already expired in country where it is claimed; 3. Application of these principles; 4. Special cases
Article 19:	<i>Protection Greater than Resulting from Convention</i>
Article 20:	<i>Special Agreements Among Countries of the Union</i>
Article 21:	<i>Special Provisions Regarding Developing Countries:</i> 1. Reference to Appendix; 2. Appendix part of Act
Article 22:	<i>Assembly:</i> 1. Constitution and composition; 2. Tasks; 3. Quorum, voting, observers; 4. Convocation; 5. Rules of procedure
Article 23:	<i>Executive Committee:</i> 1. Constitution; 2. Composition; 3. Number of members; 4. Geographical distribution; special agreements; 5. Term, limits of re-eligibility, rules of election; 6. Tasks; 7. Convocation; 8. Quorum, voting; 9. Observers; 10. Rules of procedure
Article 24:	<i>International Bureau:</i> 1. Tasks in general, Director General; 2. General information; 3. Periodical; 4. Information to countries; 5. Studies and services; 6. Participation in meetings; 7. Conferences of revision; 8. Other tasks

- Article 25:* *Finances:* 1. Budget; 2. Coordination with other Unions; 3. Resources; 4. Contributions; possible extension of previous budget; 5. Fees and charges; 6. Working capital fund; 7. Advances by host Government; 8. Auditing of accounts
- Article 26:* *Amendments:* 1. Provisions susceptible of amendment by the Assembly; proposals; 2. Adoption; 3. Entry into force
- Article 27:* *Revision:* 1. Objective; 2. Conferences; 3. Adoption
- Article 28:* *Acceptance and Entry Into Force of Act for Countries of the Union:* 1. Ratification, accession; possibility of excluding certain provisions; withdrawal of exclusion; 2. Entry into force of Articles 1 to 21 and Appendix; 3. Entry into force of Articles 22 to 38
- Article 29:* *Acceptance and Entry Into Force for Countries Outside the Union:* 1. Accession; 2. Entry into force
- Article 29bis:* *Effect of Acceptance of Act for the Purposes of Article 14(2) of the WIPO Convention*
- Article 30:* *Reservations:* 1. Limits of possibility of making reservations; 2. Earlier reservations; reservation as to the right of translation; withdrawal of reservation
- Article 31:* *Applicability to Certain Territories:* 1. Declaration; 2. Withdrawal of declaration; 3. Effective date; 4. Acceptance of factual situations not implied
- Article 32:* *Applicability of this Act and of Earlier Acts:* 1. As between countries already members of the Union; 2. As between a country becoming a member of the Union and other countries members of the Union; 3. Applicability of the Appendix in Certain Relations
- Article 33:* *Disputes:* 1. Jurisdiction of the International Court of Justice; 2. Reservation as to such jurisdiction; 3. Withdrawal of reservation
- Article 34:* *Closing of Certain Earlier Provisions:* 1. Of earlier Acts; 2. Of the Protocol to the Stockholm Act
- Article 35:* *Duration of the Convention; Denunciation:* 1. Unlimited duration; 2. Possibility of denunciation; 3. Effective date of denunciation; 4. Moratorium on denunciation
- Article 36:* *Application of the Convention:* 1. Obligation to adopt the necessary measures; 2. Time from which obligation exists
- Article 37:* *Final Clauses:* 1. Languages of the Act; 2. Signature; 3. Certified copies; 4. Registration; 5. Notifications
- Article 38:* *Transitory Provisions:* 1. Exercise of the “five-year privilege”; 2. Bureau of the Union, Director of the Bureau; 3. Succession of Bureau of the Union

Appendix

SPECIAL PROVISIONS REGARDING DEVELOPING COUNTRIES

- Article I:* *Faculties Open to Developing Countries:* 1. Availability of certain faculties; declaration; 2. Duration of effect of declaration; 3. Cessation of developing country status; 4. Existing stocks of copies; 5. Declarations concerning certain territories; 6. Limits of reciprocity
- Article II:* *Limitations on the Right of Translation:* 1. Licenses grantable by competent authority; 2 to 4. Conditions allowing the grant of such licenses; 5. Purposes for which licenses may be granted; 6. Termination of licenses; 7. Works composed mainly of illustrations; 8. Works withdrawn from circulation; 9. Licenses for broadcasting organizations
- Article III:* *Limitation on the Right of Reproduction:* 1. Licenses grantable by competent authority; 2 to 5. Conditions allowing the grant of such licenses; 6. Termination of licenses; 7. Works to which this Article applies

<i>Article IV:</i>	Provisions Common to Licenses Under Articles II and III: 1 and 2. Procedure; 3. Indication of author and title of work; 4. Exportation of copies; 5. Notice; 6. Compensation
<i>Article V:</i>	Alternative Possibility for Limitation of the Right of Translation: 1. Regime provided for under the 1886 and 1896 Acts; 2. No possibility of change to regime under Article II; 3. Time limit for choosing the alternative possibility
<i>Article VI:</i>	Possibilities of applying, or admitting the application of, certain provisions of the Appendix before becoming bound by it: 1. Declaration; 2. Depository and effective date of declaration

The countries of the Union, being equally animated by the desire to protect, in as effective and uniform a manner as possible, the rights of authors in their literary and artistic works,

Recognizing the importance of the work of the Revision Conference held at Stockholm in 1967,

Have resolved to revise the Act adopted by the Stockholm Conference, while maintaining without change Articles 1 to 20 and 22 to 26 of that Act.

Consequently, the undersigned Plenipotentiaries, having presented their full powers, recognized as in good and due form, have agreed as follows:

Article 1

[*Establishment of a Union*]¹

The countries to which this Convention applies constitute a Union for the protection of the rights of authors in their literary and artistic works.

Article 2

[*Protected Works*: 1. “Literary and artistic works”; 2. Possible requirement of fixation; 3. Derivative works; 4. Official texts; 5. Collections; 6. Obligation to protect; beneficiaries of protection; 7. Works of applied art and industrial designs; 8. News]

(1) The expression “literary and artistic works” shall include every production in the literary, scientific and artistic domain, whatever may be the mode or form of its expression, such as books, pamphlets and other writings; lectures, addresses, sermons and other works of the same nature; dramatic or dramatico-musical works; choreographic works and entertainments in dumb show; musical compositions with or without words; cinematographic works to which are assimilated works expressed by a process analogous to cinematography; works of drawing, painting, architecture, sculpture, engraving and lithography; photographic works to which are assimilated works expressed by a process analogous to photography; works of applied art; illustrations, maps, plans, sketches and three-dimensional works relative to geography, topography, architecture or science.

(2) It shall, however, be a matter for legislation in the countries of the Union to prescribe that works in general or any specified categories of works shall not be protected unless they have been fixed in some material form.

(3) Translations, adaptations, arrangements of music and other alterations of a literary or artistic work shall be protected as original works without prejudice to the copyright in the original work.

(4) It shall be a matter for legislation in the countries of the Union to determine the protection to be granted to official texts of a legislative, administrative and legal nature, and to official translations of such texts.

(5) Collections of literary or artistic works such as encyclopaedias and anthologies which, by reason of the selection and arrangement of their contents, constitute intellectual creations shall be protected as such, without prejudice to the copyright in each of the works forming part of such collections.

¹ Each Article and the Appendix have been given titles to facilitate their identification. There are no titles in the signed (English) text.

(6) The works mentioned in this Article shall enjoy protection in all countries of the Union. This protection shall operate for the benefit of the author and his successors in title.

(7) Subject to the provisions of Article 7(4) of this Convention, it shall be a matter for legislation in the countries of the Union to determine the extent of the application of their laws to works of applied art and industrial designs and models, as well as the conditions under which such works, designs and models shall be protected. Works protected in the country of origin solely as designs and models shall be entitled in another country of the Union only to such special protection as is granted in that country to designs and models; however, if no such special protection is granted in that country, such works shall be protected as artistic works.

(8) The protection of this Convention shall not apply to news of the day or to miscellaneous facts having the character of mere items of press information.

Article 2^{bis}

[Possible Limitation of Protection of Certain Works: 1. Certain speeches; 2. Certain uses of lectures and addresses; 3. Right to make collections of such works]

(1) It shall be a matter for legislation in the countries of the Union to exclude, wholly or in part, from the protection provided by the preceding Article political speeches and speeches delivered in the course of legal proceedings.

(2) It shall also be a matter for legislation in the countries of the Union to determine the conditions under which lectures, addresses and other works of the same nature which are delivered in public may be reproduced by the press, broadcast, communicated to the public by wire and made the subject of public communication as envisaged in Article 11^{bis}(1) of this Convention, when such use is justified by the informatory purpose.

(3) Nevertheless, the author shall enjoy the exclusive right of making a collection of his works mentioned in the preceding paragraphs.

Article 3

[Criteria of Eligibility for Protection: 1. Nationality of author; place of publication of work; 2. Residence of author; 3. "Published" works; 4. "Simultaneously published" works]

(1) The protection of this Convention shall apply to:

- (a) authors who are nationals of one of the countries of the Union, for their works, whether published or not;
- (b) authors who are not nationals of one of the countries of the Union, for their works first published in one of those countries, or simultaneously in a country outside the Union and in a country of the Union.

(2) Authors who are not nationals of one of the countries of the Union but who have their habitual residence in one of them shall, for the purposes of this Convention, be assimilated to nationals of that country.

(3) The expression "published works" means works published with the consent of their authors, whatever may be the means of manufacture of the copies, provided that the availability of such copies has been such as to satisfy the reasonable requirements of the public, having regard to the nature of the work. The performance of a dramatic, dramatico-musical, cinematographic or musical work, the public recitation of a literary work, the communication by wire or the broadcasting of literary or artistic works, the exhibition of a work of art and the construction of a work of architecture shall not constitute publication.

(4) A work shall be considered as having been published simultaneously in several countries if it has been published in two or more countries within thirty days of its first publication.

Article 4

[*Criteria of Eligibility for Protection of Cinematographic Works, Works of Architecture and Certain Artistic Works*]

The protection of this Convention shall apply, even if the conditions of Article 3 are not fulfilled, to:

- (a) authors of cinematographic works the maker of which has his headquarters or habitual residence in one of the countries of the Union;
- (b) authors of works of architecture erected in a country of the Union or of other artistic works incorporated in a building or other structure located in a country of the Union.

Article 5

[*Rights Guaranteed: 1. and 2. Outside the country of origin; 3. In the country of origin; 4. "Country of origin"*]

(1) Authors shall enjoy, in respect of works for which they are protected under this Convention, in countries of the Union other than the country of origin, the rights which their respective laws do now or may hereafter grant to their nationals, as well as the rights specially granted by this Convention.

(2) The enjoyment and the exercise of these rights shall not be subject to any formality; such enjoyment and such exercise shall be independent of the existence of protection in the country of origin of the work. Consequently, apart from the provisions of this Convention, the extent of protection, as well as the means of redress afforded to the author to protect his rights, shall be governed exclusively by the laws of the country where protection is claimed.

(3) Protection in the country of origin is governed by domestic law. However, when the author is not a national of the country of origin of the work for which he is protected under this Convention, he shall enjoy in that country the same rights as national authors.

(4) The country of origin shall be considered to be:

- (a) in the case of works first published in a country of the Union, that country; in the case of works published simultaneously in several countries of the Union which grant different terms of protection, the country whose legislation grants the shortest term of protection;
- (b) in the case of works published simultaneously in a country outside the Union and in a country of the Union, the latter country;
- (c) in the case of unpublished works or of works first published in a country outside the Union, without simultaneous publication in a country of the Union, the country of the Union of which the author is a national, provided that:
 - (i) when these are cinematographic works the maker of which has his headquarters or his habitual residence in a country of the Union, the country of origin shall be that country, and
 - (ii) when these are works of architecture erected in a country of the Union or other artistic works incorporated in a building or other structure located in a country of the Union, the country of origin shall be that country.

Article 6

[*Possible Restriction of Protection in Respect of Certain Works of Nationals of Certain Countries Outside the Union: 1. In the country of the first publication and in other countries; 2. No retroactivity; 3. Notice*]

(1) Where any country outside the Union fails to protect in an adequate manner the works of authors who are nationals of one of the countries of the Union, the latter country may restrict the protection given to the works of authors who are, at the date of the first publication thereof, nationals of the other country and are not habitually resident in one of the countries of the Union. If the country of first publication avails itself of this right, the other countries of the Union shall not be required to grant to works thus subjected to special treatment a wider protection than that granted to them in the country of first publication.

(2) No restrictions introduced by virtue of the preceding paragraph shall affect the rights which an author may have acquired in respect of a work published in a country of the Union before such restrictions were put into force.

(3) The countries of the Union which restrict the grant of copyright in accordance with this Article shall give notice thereof to the Director General of the World Intellectual Property Organization (hereinafter designated as “the Director General”) by a written declaration specifying the countries in regard to which protection is restricted, and the restrictions to which rights of authors who are nationals of those countries are subjected. The Director General shall immediately communicate this declaration to all the countries of the Union.

Article 6^{bis}

[*Moral Rights*: 1. To claim authorship; to object to certain modifications and other derogatory actions; 2. After the author’s death; 3. Means of redress]

(1) Independently of the author’s economic rights, and even after the transfer of the said rights, the author shall have the right to claim authorship of the work and to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honor or reputation.

(2) The rights granted to the author in accordance with the preceding paragraph shall, after his death, be maintained, at least until the expiry of the economic rights, and shall be exercisable by the persons or institutions authorized by the legislation of the country where protection is claimed. However, those countries whose legislation, at the moment of their ratification of or accession to this Act, does not provide for the protection after the death of the author of all the rights set out in the preceding paragraph may provide that some of these rights may, after his death, cease to be maintained.

(3) The means of redress for safeguarding the rights granted by this Article shall be governed by the legislation of the country where protection is claimed.

Article 7

[*Term of Protection*: 1. Generally; 2. For cinematographic works; 3. For anonymous and pseudonymous works; 4. For photographic works and works of applied art; 5. Starting date of computation; 6. Longer terms; 7. Shorter terms; 8. Applicable law; “comparison” of terms]

(1) The term of protection granted by this Convention shall be the life of the author and fifty years after his death.

(2) However, in the case of cinematographic works, the countries of the Union may provide that the term of protection shall expire fifty years after the work has been made available to the public with the consent of the author, or, failing such an event within fifty years from the making of such a work, fifty years after the making.

(3) In the case of anonymous or pseudonymous works, the term of protection granted by this Convention shall expire fifty years after the work has been lawfully made available to the public. However, when the pseudonym adopted by the author leaves no doubt as to his identity, the term of protection shall be that provided in paragraph (1). If the author of an anonymous or pseudonymous work discloses his identity during the above-mentioned period, the term of protection applicable shall be that provided in paragraph (1). The countries of the Union shall not be required to protect anonymous or pseudonymous works in respect of which it is reasonable to presume that their author has been dead for fifty years.

(4) It shall be a matter for legislation in the countries of the Union to determine the term of protection of photographic works and that of works of applied art in so far as they are protected as artistic works; however, this term shall last at least until the end of a period of twenty-five years from the making of such a work.

(5) The term of protection subsequent to the death of the author and the terms provided by paragraphs (2), (3) and (4) shall run from the date of death or of the event referred to in those paragraphs, but such terms shall always be deemed to begin on the first of January of the year following the death or such event.

(6) The countries of the Union may grant a term of protection in excess of those provided by the preceding paragraphs.

(7) Those countries of the Union bound by the Rome Act of this Convention which grant, in their national legislation in force at the time of signature of the present Act, shorter terms of protection than those provided for in the preceding paragraphs shall have the right to maintain such terms when ratifying or acceding to the present Act.

(8) In any case, the term shall be governed by the legislation of the country where protection is claimed; however, unless the legislation of that country otherwise provides, the term shall not exceed the term fixed in the country of origin of the work.

Article 7^{bis}

[Term of Protection for Works of Joint Authorship]

The provisions of the preceding Article shall also apply in the case of a work of joint authorship, provided that the terms measured from the death of the author shall be calculated from the death of the last surviving author.

Article 8

[Right of Translation]

Authors of literary and artistic works protected by this Convention shall enjoy the exclusive right of making and of authorizing the translation of their works throughout the term of protection of their rights in the original works.

Article 9

[Right of Reproduction: 1. Generally; 2. Possible exceptions; 3. Sound and visual recordings]

(1) Authors of literary and artistic works protected by this Convention shall have the exclusive right of authorizing the reproduction of these works, in any manner or form.

(2) It shall be a matter for legislation in the countries of the Union to permit the reproduction of such works in certain special cases, provided that such reproduction does not conflict with a normal exploitation of the work and does not unreasonably prejudice the legitimate interests of the author.

(3) Any sound or visual recording shall be considered as a reproduction for the purposes of this Convention.

Article 10

[Certain Free Uses of Works: 1. Quotations; 2. Illustrations for teaching; 3. Indication of source and author]

(1) It shall be permissible to make quotations from a work which has already been lawfully made available to the public, provided that their making is compatible with fair practice, and their extent does not exceed that justified by the purpose, including quotations from newspaper articles and periodicals in the form of press summaries.

(2) It shall be a matter for legislation in the countries of the Union, and for special agreements existing or to be concluded between them, to permit the utilization, to the extent justified by the purpose, of literary or artistic works by way of illustration in publications, broadcasts or sound or visual recordings for teaching, provided such utilization is compatible with fair practice.

(3) Where use is made of works in accordance with the preceding paragraphs of this Article, mention shall be made of the source, and of the name of the author if it appears thereon.

Article 10^{bis}

[*Further Possible Free Uses of Works*: 1. Of certain articles and broadcast works; 2. Of works seen or heard in connection with current events]

(1) It shall be a matter for legislation in the countries of the Union to permit the reproduction by the press, the broadcasting or the communication to the public by wire of articles published in newspapers or periodicals on current economic, political or religious topics, and of broadcast works of the same character, in cases in which the reproduction, broadcasting or such communication thereof is not expressly reserved. Nevertheless, the source must always be clearly indicated; the legal consequences of a breach of this obligation shall be determined by the legislation of the country where protection is claimed.

(2) It shall also be a matter for legislation in the countries of the Union to determine the conditions under which, for the purpose of reporting current events by means of photography, cinematography, broadcasting or communication to the public by wire, literary or artistic works seen or heard in the course of the event may, to the extent justified by the informatory purpose, be reproduced and made available to the public.

Article 11

[*Certain Rights in Dramatic and Musical Works*: 1. Right of public performance and of communication to the public of a performance; 2. In respect of translations]

(1) Authors of dramatic, dramatico-musical and musical works shall enjoy the exclusive right of authorizing:

- (i) the public performance of their works, including such public performance by any means or process;
- (ii) any communication to the public of the performance of their works.

(2) Authors of dramatic or dramatico-musical works shall enjoy, during the full term of their rights in the original works, the same rights with respect to translations thereof.

Article 11^{bis}

[*Broadcasting and Related Rights*: 1. Broadcasting and other wireless communications, public communication of broadcast by wire or rebroadcast, public communication of broadcast by loudspeaker or analogous instruments; 2. Compulsory licenses; 3. Recording; ephemeral recordings]

(1) Authors of literary and artistic works shall enjoy the exclusive right of authorizing:

- (i) the broadcasting of their works or the communication thereof to the public by any other means of wireless diffusion of signs, sounds or images;
- (ii) any communication to the public by wire or by rebroadcasting of the broadcast of the work, when this communication is made by an organization other than the original one;
- (iii) the public communication by loudspeaker or any other analogous instrument transmitting, by signs, sounds or images, the broadcast of the work.

(2) It shall be a matter for legislation in the countries of the Union to determine the conditions under which the rights mentioned in the preceding paragraph may be exercised, but these conditions shall apply only in the countries where they have been prescribed. They shall not in any circumstances be prejudicial to the moral rights of the author, nor to his right to obtain equitable remuneration which, in the absence of agreement, shall be fixed by competent authority.

(3) In the absence of any contrary stipulation, permission granted in accordance with paragraph (1) of this Article shall not imply permission to record, by means of instruments recording sounds or images, the work broadcast. It shall, however, be a matter for legislation in the countries of the Union to determine the regulations for ephemeral recordings made by a broadcasting organization by means of its own facilities and used for its own broadcasts. The preservation of these recordings in official archives may, on the ground of their exceptional documentary character, be authorized by such legislation.

Article 11^{ter}

[*Certain Rights in Literary Works*: 1. Right of public recitation and of communication to the public of a recitation; 2. In respect of translations]

- (1) Authors of literary works shall enjoy the exclusive right of authorizing:
 - (i) the public recitation of their works, including such public recitation by any means or process;
 - (ii) any communication to the public of the recitation of their works.
- (2) Authors of literary works shall enjoy, during the full term of their rights in the original works, the same rights with respect to translations thereof.

Article 12

[*Right of Adaptation, Arrangement and Other Alteration*]

Authors of literary or artistic works shall enjoy the exclusive right of authorizing adaptations, arrangements and other alterations of their works.

Article 13

[*Possible Limitation of the Right of Recording of Musical Works and Any Words Pertaining Thereto*:

1. Compulsory licenses; 2. Transitory measures; 3. Seizure on importation of copies made without the author's permission]

(1) Each country of the Union may impose for itself reservations and conditions on the exclusive right granted to the author of a musical work and to the author of any words, the recording of which together with the musical work has already been authorized by the latter, to authorize the sound recording of that musical work, together with such words, if any; but all such reservations and conditions shall apply only in the countries which have imposed them and shall not, in any circumstances, be prejudicial to the rights of these authors to obtain equitable remuneration which, in the absence of agreement, shall be fixed by competent authority.

(2) Recordings of musical works made in a country of the Union in accordance with Article 13(3) of the Conventions signed at Rome on June 2, 1928, and at Brussels on June 26, 1948, may be reproduced in that country without the permission of the author of the musical work until a date two years after that country becomes bound by this Act.

(3) Recordings made in accordance with paragraphs (1) and (2) of this Article and imported without permission from the parties concerned into a country where they are treated as infringing recordings shall be liable to seizure.

Article 14

[*Cinematographic and Related Rights*: 1. Cinematographic adaptation and reproduction; distribution; public performance and public communication by wire of works thus adapted or reproduced; 2. Adaptation of cinematographic productions; 3. No compulsory licenses]

- (1) Authors of literary or artistic works shall have the exclusive right of authorizing:
 - (i) the cinematographic adaptation and reproduction of these works, and the distribution of the works thus adapted or reproduced;
 - (ii) the public performance and communication to the public by wire of the works thus adapted or reproduced.
- (2) The adaptation into any other artistic form of a cinematographic production derived from literary or artistic works shall, without prejudice to the authorization of the author of the cinematographic production, remain subject to the authorization of the authors of the original works.
- (3) The provisions of Article 13(1) shall not apply.

Article 14^{bis}

[*Special Provisions Concerning Cinematographic Works*: 1. Assimilation to “original” works; 2. Ownership; limitation of certain rights of certain contributors; 3. Certain other contributors]

(1) Without prejudice to the copyright in any work which may have been adapted or reproduced, a cinematographic work shall be protected as an original work. The owner of copyright in a cinematographic work shall enjoy the same rights as the author of an original work, including the rights referred to in the preceding Article.

(2)

(a) Ownership of copyright in a cinematographic work shall be a matter for legislation in the country where protection is claimed.

(b) However, in the countries of the Union which, by legislation, include among the owners of copyright in a cinematographic work authors who have brought contributions to the making of the work, such authors, if they have undertaken to bring such contributions, may not, in the absence of any contrary or special stipulation, object to the reproduction, distribution, public performance, communication to the public by wire, broadcasting or any other communication to the public, or to the subtitling or dubbing of texts, of the work.

(c) The question whether or not the form of the undertaking referred to above should, for the application of the preceding subparagraph (b), be in a written agreement or a written act of the same effect shall be a matter for the legislation of the country where the maker of the cinematographic work has his headquarters or habitual residence. However, it shall be a matter for the legislation of the country of the Union where protection is claimed to provide that the said undertaking shall be in a written agreement or a written act of the same effect. The countries whose legislation so provides shall notify the Director General by means of a written declaration, which will be immediately communicated by him to all the other countries of the Union.

(d) By “contrary or special stipulation” is meant any restrictive condition which is relevant to the aforesaid undertaking.

(3) Unless the national legislation provides to the contrary, the provisions of paragraph (2)(b) above shall not be applicable to authors of scenarios, dialogues and musical works created for the making of the cinematographic work, or to the principal director thereof. However, those countries of the Union whose legislation does not contain rules providing for the application of the said paragraph (2)(b) to such director shall notify the Director General by means of a written declaration, which will be immediately communicated by him to all the other countries of the Union.

Article 14^{ter}

[*“Droit de suite” in Works of Art and Manuscripts*:

1. Right to an interest in resales; 2. Applicable law; 3. Procedure]

(1) The author, or after his death the persons or institutions authorized by national legislation, shall, with respect to original works of art and original manuscripts of writers and composers, enjoy the inalienable right to an interest in any sale of the work subsequent to the first transfer by the author of the work.

(2) The protection provided by the preceding paragraph may be claimed in a country of the Union only if legislation in the country to which the author belongs so permits, and to the extent permitted by the country where this protection is claimed.

(3) The procedure for collection and the amounts shall be matters for determination by national legislation.

Article 15

[Right to Enforce Protected Rights: 1. Where author's name is indicated or where pseudonym leaves no doubt as to author's identity; 2. In the case of cinematographic works; 3. In the case of anonymous and pseudonymous works; 4. In the case of certain unpublished works of unknown authorship]

(1) In order that the author of a literary or artistic work protected by this Convention shall, in the absence of proof to the contrary, be regarded as such, and consequently be entitled to institute infringement proceedings in the countries of the Union, it shall be sufficient for his name to appear on the work in the usual manner. This paragraph shall be applicable even if this name is a pseudonym, where the pseudonym adopted by the author leaves no doubt as to his identity.

(2) The person or body corporate whose name appears on a cinematographic work in the usual manner shall, in the absence of proof to the contrary, be presumed to be the maker of the said work.

(3) In the case of anonymous and pseudonymous works, other than those referred to in paragraph (1) above, the publisher whose name appears on the work shall, in the absence of proof to the contrary, be deemed to represent the author, and in this capacity he shall be entitled to protect and enforce the author's rights. The provisions of this paragraph shall cease to apply when the author reveals his identity and establishes his claim to authorship of the work.

(4)

(a) In the case of unpublished works where the identity of the author is unknown, but where there is every ground to presume that he is a national of a country of the Union, it shall be a matter for legislation in that country to designate the competent authority which shall represent the author and shall be entitled to protect and enforce his rights in the countries of the Union.

(b) Countries of the Union which make such designation under the terms of this provision shall notify the Director General by means of a written declaration giving full information concerning the authority thus designated. The Director General shall at once communicate this declaration to all other countries of the Union.

Article 16

[Infringing Copies: 1. Seizure; 2. Seizure on importation; 3. Applicable law]

(1) Infringing copies of a work shall be liable to seizure in any country of the Union where the work enjoys legal protection.

(2) The provisions of the preceding paragraph shall also apply to reproductions coming from a country where the work is not protected, or has ceased to be protected.

(3) The seizure shall take place in accordance with the legislation of each country.

Article 17

[Possibility of Control of Circulation, Presentation and Exhibition of Works]

The provisions of this Convention cannot in any way affect the right of the Government of each country of the Union to permit, to control, or to prohibit, by legislation or regulation, the circulation, presentation, or exhibition of any work or production in regard to which the competent authority may find it necessary to exercise that right.

Article 18

[Works Existing on Convention's Entry Into Force: 1. Protectable where protection not yet expired in country of origin; 2. Non-protectable where protection already expired in country where it is claimed; 3. Application of these principles; 4. Special cases]

(1) This Convention shall apply to all works which, at the moment of its coming into force, have not yet fallen into the public domain in the country of origin through the expiry of the term of protection.

(2) If, however, through the expiry of the term of protection which was previously granted, a work has fallen into the public domain of the country where protection is claimed, that work shall not be protected anew.

(3) The application of this principle shall be subject to any provisions contained in special conventions to that effect existing or to be concluded between countries of the Union. In the absence of such provisions, the respective countries shall determine, each in so far as it is concerned, the conditions of application of this principle.

(4) The preceding provisions shall also apply in the case of new accessions to the Union and to cases in which protection is extended by the application of Article 7 or by the abandonment of reservations.

Article 19

[Protection Greater than Resulting from Convention]

The provisions of this Convention shall not preclude the making of a claim to the benefit of any greater protection which may be granted by legislation in a country of the Union.

Article 20

[Special Agreements Among Countries of the Union]

The Governments of the countries of the Union reserve the right to enter into special agreements among themselves, in so far as such agreements grant to authors more extensive rights than those granted by the Convention, or contain other provisions not contrary to this Convention. The provisions of existing agreements which satisfy these conditions shall remain applicable.

Article 21

[Special Provisions Regarding Developing Countries: 1. Reference to Appendix; 2. Appendix part of Act]

- (1) Special provisions regarding developing countries are included in the Appendix.
- (2) Subject to the provisions of Article 28(1)(b), the Appendix forms an integral part of this Act.

Article 22

[Assembly: 1. Constitution and composition; 2. Tasks; 3. Quorum, voting, observers; 4. Convocation; 5. Rules of procedure]

(1)
(a) The Union shall have an Assembly consisting of those countries of the Union which are bound by Articles 22 to 26.

(b) The Government of each country shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(2)

(a) The Assembly shall:

(i) deal with all matters concerning the maintenance and development of the Union and the implementation of this Convention;

(ii) give directions concerning the preparation for conferences of revision to the International Bureau of Intellectual Property (hereinafter designated as "the International Bureau") referred to in the Convention Establishing the World Intellectual Property Organization (hereinafter designated as "the Organization"), due account being taken of any comments made by those countries of the Union which are not bound by Articles 22 to 26;

- (iii) review and approve the reports and activities of the Director General of the Organization concerning the Union, and give him all necessary instructions concerning matters within the competence of the Union;
- (iv) elect the members of the Executive Committee of the Assembly;
- (v) review and approve the reports and activities of its Executive Committee, and give instructions to such Committee;
- (vi) determine the program and adopt the biennial budget of the Union, and approve its final accounts;
- (vii) adopt the financial regulations of the Union;
- (viii) establish such committees of experts and working groups as may be necessary for the work of the Union;
- (ix) determine which countries not members of the Union and which intergovernmental and international non-governmental organizations shall be admitted to its meetings as observers;
- (x) adopt amendments to Articles 22 to 26;
- (xi) take any other appropriate action designed to further the objectives of the Union;
- (xii) exercise such other functions as are appropriate under this Convention;
- (xiii) subject to its acceptance, exercise such rights as are given to it in the Convention establishing the Organization.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Assembly shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(3)

(a) Each country member of the Assembly shall have one vote.

(b) One-half of the countries members of the Assembly shall constitute a quorum.

(c) Notwithstanding the provisions of subparagraph (b), if, in any session, the number of countries represented is less than one-half but equal to or more than one-third of the countries members of the Assembly, the Assembly may make decisions but, with the exception of decisions concerning its own procedure, all such decisions shall take effect only if the following conditions are fulfilled. The International Bureau shall communicate the said decisions to the countries members of the Assembly which were not represented and shall invite them to express in writing their vote or abstention within a period of three months from the date of the communication. If, at the expiration of this period, the number of countries having thus expressed their vote or abstention attains the number of countries which was lacking for attaining the quorum in the session itself, such decisions shall take effect provided that at the same time the required majority still obtains.

(d) Subject to the provisions of Article 26(2), the decisions of the Assembly shall require two-thirds of the votes cast.

(e) Abstentions shall not be considered as votes.

(f) A delegate may represent, and vote in the name of, one country only.

(g) Countries of the Union not members of the Assembly shall be admitted to its meetings as observers.

(4)

(a) The Assembly shall meet once in every second calendar year in ordinary session upon convocation by the Director General and, in the absence of exceptional circumstances, during the same period and at the same place as the General Assembly of the Organization.

(b) The Assembly shall meet in extraordinary session upon convocation by the Director General, at the request of the Executive Committee or at the request of one-fourth of the countries members of the Assembly.

(5) The Assembly shall adopt its own rules of procedure.

Article 23

[*Executive Committee*: 1. Constitution; 2. Composition; 3. Number of members; 4. Geographical distribution; special agreements; 5. Term, limits of re-eligibility, rules of election; 6. Tasks; 7. Convocation; 8. Quorum, voting; 9. Observers; 10. Rules of procedure]

(1) The Assembly shall have an Executive Committee.

(2)

(a) The Executive Committee shall consist of countries elected by the Assembly from among countries members of the Assembly. Furthermore, the country on whose territory the Organization has its headquarters shall, subject to the provisions of Article 25(7)(b), have an ex officio seat on the Committee.

(b) The Government of each country member of the Executive Committee shall be represented by one delegate, who may be assisted by alternate delegates, advisors, and experts.

(c) The expenses of each delegation shall be borne by the Government which has appointed it.

(3) The number of countries members of the Executive Committee shall correspond to one-fourth of the number of countries members of the Assembly. In establishing the number of seats to be filled, remainders after division by four shall be disregarded.

(4) In electing the members of the Executive Committee, the Assembly shall have due regard to an equitable geographical distribution and to the need for countries party to the Special Agreements which might be established in relation with the Union to be among the countries constituting the Executive Committee.

(5)

(a) Each member of the Executive Committee shall serve from the close of the session of the Assembly which elected it to the close of the next ordinary session of the Assembly.

(b) Members of the Executive Committee may be re-elected, but not more than two-thirds of them.

(c) The Assembly shall establish the details of the rules governing the election and possible re-election of the members of the Executive Committee.

(6)

(a) The Executive Committee shall:

(i) prepare the draft agenda of the Assembly;

(ii) submit proposals to the Assembly respecting the draft program and biennial budget of the Union prepared by the Director General;

(iii) [*deleted*]

(iv) submit, with appropriate comments, to the Assembly the periodical reports of the Director General and the yearly audit reports on the accounts;

(v) in accordance with the decisions of the Assembly and having regard to circumstances arising between two ordinary sessions of the Assembly, take all necessary measures to ensure the execution of the program of the Union by the Director General;

(vi) perform such other functions as are allocated to it under this Convention.

(b) With respect to matters which are of interest also to other Unions administered by the Organization, the Executive Committee shall make its decisions after having heard the advice of the Coordination Committee of the Organization.

(7)

(a) The Executive Committee shall meet once a year in ordinary session upon convocation by the Director General, preferably during the same period and at the same place as the Coordination Committee of the Organization.

(b) The Executive Committee shall meet in extraordinary session upon convocation by the Director General, either on his own initiative, or at the request of its Chairman or one-fourth of its members.

(8)

(a) Each country member of the Executive Committee shall have one vote.

(b) One-half of the members of the Executive Committee shall constitute a quorum.

(c) Decisions shall be made by a simple majority of the votes cast.

(d) Abstentions shall not be considered as votes.

(e) A delegate may represent, and vote in the name of, one country only.

(9) Countries of the Union not members of the Executive Committee shall be admitted to its meetings as observers.

(10) The Executive Committee shall adopt its own rules of procedure.

Article 24

[*International Bureau*: 1. Tasks in general, Director General; 2. General information; 3. Periodical; 4. Information to countries; 5. Studies and services; 6. Participation in meetings; 7. Conferences of revision; 8. Other tasks]

(1)

(a) The administrative tasks with respect to the Union shall be performed by the International Bureau, which is a continuation of the Bureau of the Union united with the Bureau of the Union established by the International Convention for the Protection of Industrial Property.

(b) In particular, the International Bureau shall provide the secretariat of the various organs of the Union.

(c) The Director General of the Organization shall be the chief executive of the Union and shall represent the Union.

(2) The International Bureau shall assemble and publish information concerning the protection of copyright. Each country of the Union shall promptly communicate to the International Bureau all new laws and official texts concerning the protection of copyright.

(3) The International Bureau shall publish a monthly periodical.

(4) The International Bureau shall, on request, furnish information to any country of the Union on matters concerning the protection of copyright.

(5) The International Bureau shall conduct studies, and shall provide services, designed to facilitate the protection of copyright.

(6) The Director General and any staff member designated by him shall participate, without the right to vote, in all meetings of the Assembly, the Executive Committee and any other committee of experts or working group. The Director General, or a staff member designated by him, shall be ex officio secretary of these bodies.

(7)

(a) The International Bureau shall, in accordance with the directions of the Assembly and in cooperation with the Executive Committee, make the preparations for the conferences of revision of the provisions of the Convention other than Articles 22 to 26.

(b) The International Bureau may consult with intergovernmental and international non-governmental organizations concerning preparations for conferences of revision.

(c) The Director General and persons designated by him shall take part, without the right to vote, in the discussions at these conferences.

(8) The International Bureau shall carry out any other tasks assigned to it.

Article 25

[*Finances*: 1. Budget; 2. Coordination with other Unions; 3. Resources; 4. Contributions; possible extension of previous budget; 5. Fees and charges; 6. Working capital fund; 7. Advances by host Government; 8. Auditing of accounts]

(1)

(a) The Union shall have a budget.

(b) The budget of the Union shall include the income and expenses proper to the Union, its contribution to the budget of expenses common to the Unions, and, where applicable, the sum made available to the budget of the Conference of the Organization.

(c) Expenses not attributable exclusively to the Union but also to one or more other Unions administered by the Organization shall be considered as expenses common to the Unions. The share of the Union in such common expenses shall be in proportion to the interest the Union has in them.

(2) The budget of the Union shall be established with due regard to the requirements of coordination with the budgets of the other Unions administered by the Organization.

(3) The budget of the Union shall be financed from the following sources:

- (i) contributions of the countries of the Union;
- (ii) fees and charges due for services performed by the International Bureau in relation to the Union;
- (iii) sale of, or royalties on, the publications of the International Bureau concerning the Union;
- (iv) gifts, bequests, and subventions;
- (v) rents, interests, and other miscellaneous income.

(4)

(a) For the purpose of establishing its contribution towards the budget, each country of the Union shall belong to a class, and shall pay its annual contributions on the basis of a number of units fixed as follows:

Class I	25
Class II	20
Class III	15
Class IV	10
Class V	5
Class VI	3
Class VII	1

(b) Unless it has already done so, each country shall indicate, concurrently with depositing its instrument of ratification or accession, the class to which it wishes to belong. Any country may change class. If it chooses a lower class, the country must announce it to the Assembly at one of its ordinary sessions. Any such change shall take effect at the beginning of the calendar year following the session.

(c) The annual contribution of each country shall be an amount in the same proportion to the total sum to be contributed to the annual budget of the Union by all countries as the number of its units is to the total of the units of all contributing countries.

(d) Contributions shall become due on the first of January of each year.

(e) A country which is in arrears in the payment of its contributions shall have no vote in any of the organs of the Union of which it is a member if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. However, any organ of the Union may allow such a country to continue to exercise its vote in that organ if, and as long as, it is satisfied that the delay in payment is due to exceptional and unavoidable circumstances.

(f) If the budget is not adopted before the beginning of a new financial period, it shall be at the same level as the budget of the previous year, in accordance with the financial regulations.

(5) The amount of the fees and charges due for services rendered by the International Bureau in relation to the Union shall be established, and shall be reported to the Assembly and the Executive Committee, by the Director General.

(6)

(a) The Union shall have a working capital fund which shall be constituted by a single payment made by each country of the Union. If the fund becomes insufficient, an increase shall be decided by the Assembly.

(b) The amount of the initial payment of each country to the said fund or of its participation in the increase thereof shall be a proportion of the contribution of that country for the year in which the fund is established or the increase decided.

(c) The proportion and the terms of payment shall be fixed by the Assembly on the proposal of the Director General and after it has heard the advice of the Coordination Committee of the Organization.

(7)

(a) In the headquarters agreement concluded with the country on the territory of which the Organization has its headquarters, it shall be provided that, whenever the working capital fund is insufficient, such country shall grant advances. The amount of these advances and the conditions on which they are granted shall be the subject of separate agreements, in each case, between such country and the Organization. As long as it remains under the obligation to grant advances, such country shall have an ex officio seat on the Executive Committee.

(b) The country referred to in subparagraph (a) and the Organization shall each have the right to denounce the obligation to grant advances, by written notification. Denunciation shall take effect three years after the end of the year in which it has been notified.

(8) The auditing of the accounts shall be effected by one or more of the countries of the Union or by external auditors, as provided in the financial regulations. They shall be designated, with their agreement, by the Assembly.

Article 26

[Amendments: 1. Provisions susceptible of amendment by the Assembly; proposals; 2. Adoption; 3. Entry into force]

(1) Proposals for the amendment of Articles 22, 23, 24, 25, and the present Article, may be initiated by any country member of the Assembly, by the Executive Committee, or by the Director General. Such proposals shall be communicated by the Director General to the member countries of the Assembly at least six months in advance of their consideration by the Assembly.

(2) Amendments to the Articles referred to in paragraph (1) shall be adopted by the Assembly. Adoption shall require three-fourths of the votes cast, provided that any amendment of Article 22, and of the present paragraph, shall require four-fifths of the votes cast.

(3) Any amendment to the Articles referred to in paragraph (1) shall enter into force one month after written notifications of acceptance, effected in accordance with their respective constitutional processes, have been received by the Director General from three-fourths of the countries members of the Assembly at the time it adopted the amendment. Any amendment to the said Articles thus accepted shall bind all the countries which are members of the Assembly at the time the amendment enters into force, or which become members thereof at a subsequent date, provided that any amendment increasing the financial obligations of countries of the Union shall bind only those countries which have notified their acceptance of such amendment.

Article 27

[Revision: 1. Objective; 2. Conferences; 3. Adoption]

(1) This Convention shall be submitted to revision with a view to the introduction of amendments designed to improve the system of the Union.

(2) For this purpose, conferences shall be held successively in one of the countries of the Union among the delegates of the said countries.

(3) Subject to the provisions of Article 26 which apply to the amendment of Articles 22 to 26, any revision of this Act, including the Appendix, shall require the unanimity of the votes cast.

Article 28

[Acceptance and Entry Into Force of Act for Countries of the Union: 1. Ratification, accession; possibility of excluding certain provisions; withdrawal of exclusion; 2. Entry into force of Articles 1 to 21 and Appendix; 3. Entry into force of Articles 22 to 38]

(1)

(a) Any country of the Union which has signed this Act may ratify it, and, if it has not signed it, may accede to it. Instruments of ratification or accession shall be deposited with the Director General.

(b) Any country of the Union may declare in its instrument of ratification or accession that its ratification or accession shall not apply to Articles 1 to 21 and the Appendix, provided that, if such country has previously made a declaration under Article VI(1) of the Appendix, then it may declare in the said instrument only that its ratification or accession shall not apply to Articles 1 to 20.

(c) Any country of the Union which, in accordance with subparagraph (b), has excluded provisions therein referred to from the effects of its ratification or accession may at any later time declare that it extends the effects of its ratification or accession to those provisions. Such declaration shall be deposited with the Director General.

(2)

(a) Articles 1 to 21 and the Appendix shall enter into force three months after both of the following two conditions are fulfilled:

(i) at least five countries of the Union have ratified or acceded to this Act without making a declaration under paragraph (1)(b),

(ii) France, Spain, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, have become bound by the Universal Copyright Convention as revised at Paris on July 24, 1971.

(b) The entry into force referred to in subparagraph (a) shall apply to those countries of the Union which, at least three months before the said entry into force, have deposited instruments of ratification or accession not containing a declaration under paragraph (1)(b).

(c) With respect to any country of the Union not covered by subparagraph (b) and which ratifies or accedes to this Act without making a declaration under paragraph (1)(b), Articles 1 to 21 and the Appendix shall enter into force three months after the date on which the Director General has notified the deposit of the relevant instrument of ratification or accession, unless a subsequent date has been indicated in the instrument deposited. In the latter case, Articles 1 to 21 and the Appendix shall enter into force with respect to that country on the date thus indicated.

(d) The provisions of subparagraphs (a) to (c) do not affect the application of Article VI of the Appendix.

(3) With respect to any country of the Union which ratifies or accedes to this Act with or without a declaration made under paragraph (1)(b), Articles 22 to 38 shall enter into force three months after the date on which the Director General has notified the deposit of the relevant instrument of ratification or accession, unless a subsequent date has been indicated in the instrument deposited. In the latter case, Articles 22 to 38 shall enter into force with respect to that country on the date thus indicated.

Article 29

[Acceptance and Entry Into Force for Countries Outside the Union: 1. Accession; 2. Entry into force]

(1) Any country outside the Union may accede to this Act and thereby become party to this Convention and a member of the Union. Instruments of accession shall be deposited with the Director General.

(2)

(a) Subject to subparagraph (b), this Convention shall enter into force with respect to any country outside the Union three months after the date on which the Director General has notified the deposit of its instrument of accession, unless a subsequent date has been indicated in the instrument deposited. In the latter case, this Convention shall enter into force with respect to that country on the date thus indicated.

(b) If the entry into force according to subparagraph (a) precedes the entry into force of Articles 1 to 21 and the Appendix according to Article 28(2)(a), the said country shall, in the meantime, be bound, instead of by Articles 1 to 21 and the Appendix, by Articles 1 to 20 of the Brussels Act of this Convention.

Article 29^{bis}

[*Effect of Acceptance of Act for the Purposes of Article 14(2) of the WIPO Convention*]

Ratification of or accession to this Act by any country not bound by Articles 22 to 38 of the Stockholm Act of this Convention shall, for the sole purposes of Article 14(2) of the Convention establishing the Organization, amount to ratification of or accession to the said Stockholm Act with the limitation set forth in Article 28(1)(b)(i) thereof.

Article 30

[*Reservations: 1. Limits of possibility of making reservations; 2. Earlier reservations; reservation as to the right of translation; withdrawal of reservation*]

(1) Subject to the exceptions permitted by paragraph (2) of this Article, by Article 28(1)(b), by Article 33(2), and by the Appendix, ratification or accession shall automatically entail acceptance of all the provisions and admission to all the advantages of this Convention.

(2)

(a) Any country of the Union ratifying or acceding to this Act may, subject to Article V(2) of the Appendix, retain the benefit of the reservations it has previously formulated on condition that it makes a declaration to that effect at the time of the deposit of its instrument of ratification or accession.

(b) Any country outside the Union may declare, in acceding to this Convention and subject to Article V(2) of the Appendix, that it intends to substitute, temporarily at least, for Article 8 of this Act concerning the right of translation, the provisions of Article 5 of the Union Convention of 1886, as completed at Paris in 1896, on the clear understanding that the said provisions are applicable only to translations into a language in general use in the said country. Subject to Article I(6)(b) of the Appendix, any country has the right to apply, in relation to the right of translation of works whose country of origin is a country availing itself of such a reservation, a protection which is equivalent to the protection granted by the latter country.

(c) Any country may withdraw such reservations at any time by notification addressed to the Director General.

Article 31

[*Applicability to Certain Territories: 1. Declaration; 2. Withdrawal of declaration; 3. Effective date; 4. Acceptance of factual situations not implied*]

(1) Any country may declare in its instrument of ratification or accession, or may inform the Director General by written notification at any time thereafter, that this Convention shall be applicable to all or part of those territories, designated in the declaration or notification, for the external relations of which it is responsible.

(2) Any country which has made such a declaration or given such a notification may, at any time, notify the Director General that this Convention shall cease to be applicable to all or part of such territories.

(3)

(a) Any declaration made under paragraph (1) shall take effect on the same date as the ratification or accession in which it was included, and any notification given under that paragraph shall take effect three months after its notification by the Director General.

(b) Any notification given under paragraph (2) shall take effect twelve months after its receipt by the Director General.

(4) This Article shall in no way be understood as implying the recognition or tacit acceptance by a country of the Union of the factual situation concerning a territory to which this Convention is made applicable by another country of the Union by virtue of a declaration under paragraph (1).

Article 32

[*Applicability of this Act and of Earlier Acts:* 1. As between countries already members of the Union; 2. As between a country becoming a member of the Union and other countries members of the Union; 3. Applicability of the Appendix in Certain Relations]

(1) This Act shall, as regards relations between the countries of the Union, and to the extent that it applies, replace the Berne Convention of September 9, 1886, and the subsequent Acts of revision. The Acts previously in force shall continue to be applicable, in their entirety or to the extent that this Act does not replace them by virtue of the preceding sentence, in relations with countries of the Union which do not ratify or accede to this Act.

(2) Countries outside the Union which become party to this Act shall, subject to paragraph (3), apply it with respect to any country of the Union not bound by this Act or which, although bound by this Act, has made a declaration pursuant to Article 28(1)(b). Such countries recognize that the said country of the Union, in its relations with them:

- (i) may apply the provisions of the most recent Act by which it is bound, and
- (ii) subject to Article I(6) of the Appendix, has the right to adapt the protection to the level provided for by this Act.

(3) Any country which has availed itself of any of the faculties provided for in the Appendix may apply the provisions of the Appendix relating to the faculty or faculties of which it has availed itself in its relations with any other country of the Union which is not bound by this Act, provided that the latter country has accepted the application of the said provisions.

Article 33

[*Disputes:* 1. Jurisdiction of the International Court of Justice; 2. Reservation as to such jurisdiction; 3. Withdrawal of reservation]

(1) Any dispute between two or more countries of the Union concerning the interpretation or application of this Convention, not settled by negotiation, may, by any one of the countries concerned, be brought before the International Court of Justice by application in conformity with the Statute of the Court, unless the countries concerned agree on some other method of settlement. The country bringing the dispute before the Court shall inform the International Bureau; the International Bureau shall bring the matter to the attention of the other countries of the Union.

(2) Each country may, at the time it signs this Act or deposits its instrument of ratification or accession, declare that it does not consider itself bound by the provisions of paragraph (1). With regard to any dispute between such country and any other country of the Union, the provisions of paragraph (1) shall not apply.

(3) Any country having made a declaration in accordance with the provisions of paragraph (2) may, at any time, withdraw its declaration by notification addressed to the Director General.

Article 34

[*Closing of Certain Earlier Provisions:* 1. Of earlier Acts; 2. Of the Protocol to the Stockholm Act]

(1) Subject to Article 29^{bis} no country may ratify or accede to earlier Acts of this Convention once Articles 1 to 21 and the Appendix have entered into force.

(2) Once Articles 1 to 21 and the Appendix have entered into force, no country may make a declaration under Article 5 of the Protocol Regarding Developing Countries attached to the Stockholm Act.

Article 35

[*Duration of the Convention; Denunciation:* 1. Unlimited duration; 2. Possibility of denunciation; 3. Effective date of denunciation; 4. Moratorium on denunciation]

(1) This Convention shall remain in force without limitation as to time.

(2) Any country may denounce this Act by notification addressed to the Director General. Such denunciation shall constitute also denunciation of all earlier Acts and shall affect only the country making it, the Convention remaining in full force and effect as regards the other countries of the Union.

(3) Denunciation shall take effect one year after the day on which the Director General has received the notification.

(4) The right of denunciation provided by this Article shall not be exercised by any country before the expiration of five years from the date upon which it becomes a member of the Union.

Article 36

[Application of the Convention: 1. Obligation to adopt the necessary measures; 2. Time from which obligation exists]

(1) Any country party to this Convention undertakes to adopt, in accordance with its constitution, the measures necessary to ensure the application of this Convention.

(2) It is understood that, at the time a country becomes bound by this Convention, it will be in a position under its domestic law to give effect to the provisions of this Convention.

Article 37

[Final Clauses: 1. Languages of the Act; 2. Signature; 3. Certified copies; 4. Registration; 5. Notifications]

(1)

(a) This Act shall be signed in a single copy in the French and English languages and, subject to paragraph (2), shall be deposited with the Director General.

(b) Official texts shall be established by the Director General, after consultation with the interested Governments, in the Arabic, German, Italian, Portuguese and Spanish languages, and such other languages as the Assembly may designate.

(c) In case of differences of opinion on the interpretation of the various texts, the French text shall prevail.

(2) This Act shall remain open for signature until January 31, 1972. Until that date, the copy referred to in paragraph (1)(a) shall be deposited with the Government of the French Republic.

(3) The Director General shall certify and transmit two copies of the signed text of this Act to the Governments of all countries of the Union and, on request, to the Government of any other country.

(4) The Director General shall register this Act with the Secretariat of the United Nations.

(5) The Director General shall notify the Governments of all countries of the Union of signatures, deposits of instruments of ratification or accession and any declarations included in such instruments or made pursuant to Articles 28(1)(c), 30(2)(a) and (b), and 33(2), entry into force of any provisions of this Act, notifications of denunciation, and notifications pursuant to Articles 30(2)(c), 31(1) and (2), 33(3), and 38(1), as well as the Appendix.

Article 38

[Transitory Provisions: 1. Exercise of the "five-year privilege"; 2. Bureau of the Union, Director of the Bureau; 3. Succession of Bureau of the Union]

(1) Countries of the Union which have not ratified or acceded to this Act and which are not bound by Articles 22 to 26 of the Stockholm Act of this Convention may, until April 26, 1975, exercise, if they so desire, the rights provided under the said Articles as if they were bound by them. Any country desiring to exercise such rights shall give written notification to this effect to the Director General; this notification shall be effective on the date of its receipt. Such countries shall be deemed to be members of the Assembly until the said date.

(2) As long as all the countries of the Union have not become Members of the Organization, the International Bureau of the Organization shall also function as the Bureau of the Union, and the Director General as the Director of the said Bureau.

(3) Once all the countries of the Union have become Members of the Organization, the rights, obligations, and property, of the Bureau of the Union shall devolve on the International Bureau of the Organization.

APPENDIX

[SPECIAL PROVISIONS REGARDING DEVELOPING COUNTRIES]

Article I

[Faculties Open to Developing Countries: 1. Availability of certain faculties; declaration: 2. Duration of effect of declaration, 3. Cessation of developing country status; 4. Existing stocks of copies; 5. Declarations concerning certain territories; 6. Limits of reciprocity]

(1) Any country regarded as a developing country in conformity with the established practice of the General Assembly of the United Nations which ratifies or accedes to this Act, of which this Appendix forms an integral part, and which, having regard to its economic situation and its social or cultural needs, does not consider itself immediately in a position to make provision for the protection of all the rights as provided for in this Act, may, by a notification deposited with the Director General at the time of depositing its instrument of ratification or accession or, subject to Article V(1)(c), at any time thereafter, declare that it will avail itself of the faculty provided for in Article II, or of the faculty provided for in Article III, or of both of those faculties. It may, instead of availing itself of the faculty provided for in Article II, make a declaration according to Article V(1)(a).

(2)

(a) Any declaration under paragraph (1) notified before the expiration of the period of ten years from the entry into force of Articles 1 to 21 and this Appendix according to Article 28(2) shall be effective until the expiration of the said period. Any such declaration may be renewed in whole or in part for periods of ten years each by a notification deposited with the Director General not more than fifteen months and not less than three months before the expiration of the ten-year period then running.

(b) Any declaration under paragraph (1) notified after the expiration of the period of ten years from the entry into force of Articles 1 to 21 and this Appendix according to Article 28(2) shall be effective until the expiration of the ten-year period then running. Any such declaration may be renewed as provided for in the second sentence of subparagraph (a).

(3) Any country of the Union which has ceased to be regarded as a developing country as referred to in paragraph (1) shall no longer be entitled to renew its declaration as provided in paragraph (2), and, whether or not it formally withdraws its declaration, such country shall be precluded from availing itself of the faculties referred to in paragraph (1) from the expiration of the ten-year period then running or from the expiration of a period of three years after it has ceased to be regarded as a developing country, whichever period expires later.

(4) Where, at the time when the declaration made under paragraph (1) or (2) ceases to be effective, there are copies in stock which were made under a license granted by virtue of this Appendix, such copies may continue to be distributed until their stock is exhausted.

(5) Any country which is bound by the provisions of this Act and which has deposited a declaration or a notification in accordance with Article 31(1) with respect to the application of this Act to a particular territory, the situation of which can be regarded as analogous to that of the countries referred to in paragraph (1), may, in respect of such territory, make the declaration referred to in paragraph (1) and the notification of renewal referred to in paragraph (2). As long as such declaration or notification remains in effect, the provisions of this Appendix shall be applicable to the territory in respect of which it was made.

(6)

(a) The fact that a country avails itself of any of the faculties referred to in paragraph (1) does not permit another country to give less protection to works of which the country of origin is the former country than it is obliged to grant under Articles 1 to 20.

(b) The right to apply reciprocal treatment provided for in Article 30(2)(b), second sentence, shall not, until the date on which the period applicable under Article I(3) expires, be exercised in respect of works the country of origin of which is a country which has made a declaration according to Article V(1)(a).

Article II

[*Limitations on the Right of Translation:* 1. Licenses grantable by competent authority; 2. to 4. Conditions allowing the grant of such licenses; 5. Purposes for which licenses may be granted; 6. Termination of licenses; 7. Works composed mainly of illustrations; 8. Works withdrawn from circulation; 9. Licenses for broadcasting organizations]

(1) Any country which has declared that it will avail itself of the faculty provided for in this Article shall be entitled, so far as works published in printed or analogous forms of reproduction are concerned, to substitute for the exclusive right of translation provided for in Article 8 a system of non-exclusive and non-transferable licenses, granted by the competent authority under the following conditions and subject to Article IV.

(2)

(a) Subject to paragraph (3), if, after the expiration of a period of three years, or of any longer period determined by the national legislation of the said country, commencing on the date of the first publication of the work, a translation of such work has not been published in a language in general use in that country by the owner of the right of translation, or with his authorization, any national of such country may obtain a license to make a translation of the work in the said language and publish the translation in printed or analogous forms of reproduction.

(b) A license under the conditions provided for in this Article may also be granted if all the editions of the translation published in the language concerned are out of print.

(3)

(a) In the case of translations into a language which is not in general use in one or more developed countries which are members of the Union, a period of one year shall be substituted for the period of three years referred to in paragraph (2)(a).

(b) Any country referred to in paragraph (1) may, with the unanimous agreement of the developed countries which are members of the Union and in which the same language is in general use, substitute, in the case of translations into that language, for the period of three years referred to in paragraph (2)(a) a shorter period as determined by such agreement but not less than one year. However, the provisions of the foregoing sentence shall not apply where the language in question is English, French or Spanish. The Director General shall be notified of any such agreement by the Governments which have concluded it.

(4)

(a) No license obtainable after three years shall be granted under this Article until a further period of six months has elapsed, and no license obtainable after one year shall be granted under this Article until a further period of nine months has elapsed

(i) from the date on which the applicant complies with the requirements mentioned in Article IV(1), or

(ii) where the identity or the address of the owner of the right of translation is unknown, from the date on which the applicant sends, as provided for in Article IV(2), copies of his application submitted to the authority competent to grant the license.

(b) If, during the said period of six or nine months, a translation in the language in respect of which the application was made is published by the owner of the right of translation or with his authorization, no license under this Article shall be granted.

(5) Any license under this Article shall be granted only for the purpose of teaching, scholarship or research.

(6) If a translation of a work is published by the owner of the right of translation or with his authorization at a price reasonably related to that normally charged in the country for comparable works, any license granted under this Article shall terminate if such translation is in the same language and with substantially the same content as the translation published under the license. Any copies already made before the license terminates may continue to be distributed until their stock is exhausted.

(7) For works which are composed mainly of illustrations, a license to make and publish a translation of the text and to reproduce and publish the illustrations may be granted only if the conditions of Article III are also fulfilled.

(8) No license shall be granted under this Article when the author has withdrawn from circulation all copies of his work.

(9)

(a) A license to make a translation of a work which has been published in printed or analogous forms of reproduction may also be granted to any broadcasting organization having its headquarters in a country referred to in paragraph (1), upon an application made to the competent authority of that country by the said organization, provided that all of the following conditions are met:

- (i) the translation is made from a copy made and acquired in accordance with the laws of the said country;
- (ii) the translation is only for use in broadcasts intended exclusively for teaching or for the dissemination of the results of specialized technical or scientific research to experts in a particular profession;
- (iii) the translation is used exclusively for the purposes referred to in condition (ii) through broadcasts made lawfully and intended for recipients on the territory of the said country, including broadcasts made through the medium of sound or visual recordings lawfully and exclusively made for the purpose of such broadcasts;
- (iv) all uses made of the translation are without any commercial purpose.

(b) Sound or visual recordings of a translation which was made by a broadcasting organization under a license granted by virtue of this paragraph may, for the purposes and subject to the conditions referred to in subparagraph (a) and with the agreement of that organization, also be used by any other broadcasting organization having its headquarters in the country whose competent authority granted the license in question.

(c) Provided that all of the criteria and conditions set out in subparagraph (a) are met, a license may also be granted to a broadcasting organization to translate any text incorporated in an audio-visual fixation where such fixation was itself prepared and published for the sole purpose of being used in connection with systematic instructional activities.

(d) Subject to subparagraphs (a) to (c), the provisions of the preceding paragraphs shall apply to the grant and exercise of any license granted under this paragraph.

Article III

[Limitation on the Right of Reproduction: 1. Licenses grantable by competent authority; 2. to 5. Conditions allowing the grant of such licenses; 6. Termination of licenses; 7. Works to which this Article applies]

(1) Any country which has declared that it will avail itself of the faculty provided for in this Article shall be entitled to substitute for the exclusive right of reproduction provided for in Article 9 a system of non-exclusive and non-transferable licenses, granted by the competent authority under the following conditions and subject to Article IV.

(2)

(a) If, in relation to a work to which this Article applies by virtue of paragraph (7), after the expiration of

- (i) the relevant period specified in paragraph (3), commencing on the date of first publication of a particular edition of the work, or
- (ii) any longer period determined by national legislation of the country referred to in paragraph (1), commencing on the same date,

copies of such edition have not been distributed in that country to the general public or in connection with systematic instructional activities, by the owner of the right of reproduction or with his authorization, at a price reasonably related to that normally charged in the country for comparable works, any national of such country may obtain a license to reproduce and publish such edition at that or a lower price for use in connection with systematic instructional activities.

(b) A license to reproduce and publish an edition which has been distributed as described in subparagraph (a) may also be granted under the conditions provided for in this Article if, after the expiration of the applicable period, no authorized copies of that edition have been on sale for a period of six months in

the country concerned to the general public or in connection with systematic instructional activities at a price reasonably related to that normally charged in the country for comparable works.

- (3) The period referred to in paragraph (2)(a)(i) shall be five years, except that
- (i) for works of the natural and physical sciences, including mathematics, and of technology, the period shall be three years;
 - (ii) for works of fiction, poetry, drama and music, and for art books, the period shall be seven years.

(4)

(a) No license obtainable after three years shall be granted under this Article until a period of six months has elapsed

- (i) from the date on which the applicant complies with the requirements mentioned in Article IV(1), or
- (ii) where the identity or the address of the owner of the right of reproduction is unknown, from the date on which the applicant sends, as provided for in Article IV(2), copies of his application submitted to the authority competent to grant the license.

(b) Where licenses are obtainable after other periods and Article IV(2) is applicable, no license shall be granted until a period of three months has elapsed from the date of the dispatch of the copies of the application.

(c) If, during the period of six or three months referred to in subparagraphs (a) and (b), a distribution as described in paragraph (2)(a) has taken place, no license shall be granted under this Article.

(d) No license shall be granted if the author has withdrawn from circulation all copies of the edition for the reproduction and publication of which the license has been applied for.

(5) A license to reproduce and publish a translation of a work shall not be granted under this Article in the following cases:

- (i) where the translation was not published by the owner of the right of translation or with his authorization, or
- (ii) where the translation is not in a language in general use in the country in which the license is applied for.

(6) If copies of an edition of a work are distributed in the country referred to in paragraph (1) to the general public or in connection with systematic instructional activities, by the owner of the right of reproduction or with his authorization, at a price reasonably related to that normally charged in the country for comparable works, any license granted under this Article shall terminate if such edition is in the same language and with substantially the same content as the edition which was published under the said license. Any copies already made before the license terminates may continue to be distributed until their stock is exhausted.

(7)

(a) Subject to subparagraph (b), the works to which this Article applies shall be limited to works published in printed or analogous forms of reproduction.

(b) This Article shall also apply to the reproduction in audio-visual form of lawfully made audio-visual fixations including any protected works incorporated therein and to the translation of any incorporated text into a language in general use in the country in which the license is applied for, always provided that the audio-visual fixations in question were prepared and published for the sole purpose of being used in connection with systematic instructional activities.

Article IV

[Provisions Common to Licenses Under Articles II and III: 1 and 2. Procedure; 3. Indication of author and title of work; 4. Exportation of copies; 5. Notice; 6. Compensation]

(1) A license under Article II or Article III may be granted only if the applicant, in accordance with the procedure of the country concerned, establishes either that he has requested, and has been denied, authorization by the owner of the right to make and publish the translation or to reproduce and publish the

edition, as the case may be, or that, after due diligence on his part, he was unable to find the owner of the right. At the same time as making the request, the applicant shall inform any national or international information center referred to in paragraph (2).

(2) If the owner of the right cannot be found, the applicant for a license shall send, by registered airmail, copies of his application, submitted to the authority competent to grant the license, to the publisher whose name appears on the work and to any national or international information center which may have been designated, in a notification to that effect deposited with the Director General, by the Government of the country in which the publisher is believed to have his principal place of business.

(3) The name of the author shall be indicated on all copies of the translation or reproduction published under a license granted under Article II or Article III. The title of the work shall appear on all such copies. In the case of a translation, the original title of the work shall appear in any case on all the said copies.

(4)

(a) No license granted under Article II or Article III shall extend to the export of copies, and any such license shall be valid only for publication of the translation or of the reproduction, as the case may be, in the territory of the country in which it has been applied for.

(b) For the purposes of subparagraph (a), the notion of export shall include the sending of copies from any territory to the country which, in respect of that territory, has made a declaration under Article I(5).

(c) Where a governmental or other public entity of a country which has granted a license to make a translation under Article II into a language other than English, French or Spanish sends copies of a translation published under such license to another country, such sending of copies shall not, for the purposes of subparagraph (a), be considered to constitute export if all of the following conditions are met:

- (i) the recipients are individuals who are nationals of the country whose competent authority has granted the license, or organizations grouping such individuals;
- (ii) the copies are to be used only for the purpose of teaching, scholarship or research;
- (iii) the sending of the copies and their subsequent distribution to recipients is without any commercial purpose; and
- (iv) the country to which the copies have been sent has agreed with the country whose competent authority has granted the license to allow the receipt, or distribution, or both, and the Director General has been notified of the agreement by the Government of the country in which the license has been granted.

(5) All copies published under a license granted by virtue of Article II or Article III shall bear a notice in the appropriate language stating that the copies are available for distribution only in the country or territory to which the said license applies.

(6)

(a) Due provision shall be made at the national level to ensure

- (i) that the license provides, in favour of the owner of the right of translation or of reproduction, as the case may be, for just compensation that is consistent with standards of royalties normally operating on licenses freely negotiated between persons in the two countries concerned, and
- (ii) payment and transmittal of the compensation: should national currency regulations intervene, the competent authority shall make all efforts, by the use of international machinery, to ensure transmittal in internationally convertible currency or its equivalent.

(b) Due provision shall be made by national legislation to ensure a correct translation of the work, or an accurate reproduction of the particular edition, as the case may be.

Article V

[*Alternative Possibility for Limitation of the Right of Translation*: 1. Regime provided for under the 1886 and 1896 Acts; 2. No possibility of change to regime under Article II; 3. Time limit for choosing the alternative possibility]

(1)

(a) Any country entitled to make a declaration that it will avail itself of the faculty provided for in Article II may, instead, at the time of ratifying or acceding to this Act:

- (i) if it is a country to which Article 30(2)(a) applies, make a declaration under that provision as far as the right of translation is concerned;
- (ii) if it is a country to which Article 30(2)(a) does not apply, and even if it is not a country outside the Union, make a declaration as provided for in Article 30(2)(b), first sentence.

(b) In the case of a country which ceases to be regarded as a developing country as referred to in Article I(1), a declaration made according to this paragraph shall be effective until the date on which the period applicable under Article I(3) expires.

(c) Any country which has made a declaration according to this paragraph may not subsequently avail itself of the faculty provided for in Article II even if it withdraws the said declaration.

(2) Subject to paragraph (3), any country which has availed itself of the faculty provided for in Article II may not subsequently make a declaration according to paragraph (1).

(3) Any country which has ceased to be regarded as a developing country as referred to in Article I(1) may, not later than two years prior to the expiration of the period applicable under Article I(3), make a declaration to the effect provided for in Article 30(2)(b), first sentence, notwithstanding the fact that it is not a country outside the Union. Such declaration shall take effect at the date on which the period applicable under Article I(3) expires.

Article VI

[Possibilities of applying, or admitting the application of, certain provisions of the Appendix before becoming bound by it: 1. Declaration; 2. Depository and effective date of declaration]

(1) Any country of the Union may declare, as from the date of this Act, and at any time before becoming bound by Articles 1 to 21 and this Appendix:

- (i) if it is a country which, were it bound by Articles 1 to 21 and this Appendix, would be entitled to avail itself of the faculties referred to in Article I(1), that it will apply the provisions of Article II or of Article III or of both to works whose country of origin is a country which, pursuant to (ii) below, admits the application of those Articles to such works, or which is bound by Articles 1 to 21 and this Appendix; such declaration may, instead of referring to Article II, refer to Article V;
- (ii) that it admits the application of this Appendix to works of which it is the country of origin by countries which have made a declaration under (i) above or a notification under Article I.

(2) Any declaration made under paragraph (1) shall be in writing and shall be deposited with the Director General. The declaration shall become effective from the date of its deposit.

Use of Economist Content

All Economist content is strictly for personal, non-commercial use only.

You may retrieve and display Economist Content from the Site on a computer screen or mobile device, print individual pages on paper (but not photocopy them) and store such pages in electronic form on your computer or mobile device for your personal, non-commercial use. You may use Digital Applications only on devices for which they were intended, for your personal, non-commercial use and on no more than five separate devices. Except as expressly permitted above, you may not reproduce, modify or in any way commercially exploit any Economist Content. In particular, but without limiting the general application of the restrictions in the previous sentence, you may not do any of the following without prior written permission from The Economist:

- reproduce or store in or transmit to any other website, newsgroup, mailing list, electronic bulletin board, server or other storage device connected to a network or regularly or systematically store in electronic or print form, all or any part of the Economist Content; or
- modify, publish, transmit, participate in the transfer or sale of, reproduce, create derivative works from, distribute, perform, display, or in any way exploit all or any part of the Economist Content (including as part of any library, archive or similar service) without the prior written consent of The Economist; or
- remove the copyright or trade mark notice from any copies of Economist Content made under these Terms.

Any use of Economist Content not specifically permitted above is expressly prohibited. Requests for permission for other uses may be sent to the Rights and Syndication department, 20 Cabot Square, London E14 4QW and may be subject to a fee.

Registration, Passwords and Responsibilities

You are responsible for keeping your information and passwords up to date and confidential.

Certain areas or features of the Site and/or Digital Applications may only be open to registered users. You are solely responsible for the confidentiality and use of and access to Economist Content and the Site and/or Digital Applications using your user name and/or password. You agree to immediately notify The Economist if you become aware of the loss, theft or unauthorised use of any password, user ID or e-mail address or of any Economist Content. You will provide The Economist with accurate, complete registration information and inform The Economist of any changes to such information. For the purpose of confirming your compliance with these Terms, The Economist reserves the right to monitor and record activity on the Site and Digital Applications, including access to Economist Content.

Each registration and subscription is for the personal use of the registered user or subscriber only. You may not share your log-in details or password with any other person. You may not share or transfer your subscription. The Economist does not allow multiple users (networked or otherwise) to access the Site and/or any Digital Application through a single name and password and may cancel or suspend your access to the Site and/or a Digital Application if you do this, or breach any of these Terms without further obligation to you.

Subscription and Cancellation

Subscriptions

The Economist offers different types of subscriptions ("Subscriptions") including, for example, subscriptions to print issues of *The Economist* ("Print Subscriptions"), access to Digital Applications and the Site ("Digital Subscriptions") and print and digital bundles. The Economist reserves the right to vary the amount of content and types of service that it makes available to different categories of users at any time.

Digital Subscriptions to customers in Relevant Countries are supplied by EDSL and EDSL sets the general terms and conditions for such supply. ENL supplies and sets the general terms and conditions that apply to all other Digital Subscriptions, and all Print Subscriptions. The Relevant Countries are Norway, Switzerland and all countries in the European Union from time to time.

The Economist will try to process your Subscription promptly but does not guarantee that your Subscription will be activated by any specified time. By submitting your payment and other subscription details, you are making an offer to us to buy a Subscription. Your offer will only be accepted by us and a contract formed when we have successfully verified your

payment and contact details, at which point we will provide you (or, in the case of a gift Subscription, the recipient of the gift) with access to the Subscription. You will receive written confirmation when your Subscription offer has been accepted (beginning the fulfilment of a Subscription does not signify acceptance).

Renewal

Unless specifically stated in any Subscription [offer or promotion](#) when you place your Subscription order with us, if you choose an auto-renew payment option, including direct debit, you agree that at the end of the initial subscription period (and of each renewal period thereafter), your Subscription will automatically renew for the same subscription period at the then prevailing renewal rate, which may be changed from time to time. If you do not choose an auto-renew payment option, we will contact you at the end of the initial subscription period with an offer to renew your subscription at the then prevailing renewal rate, which may be changed from time to time. You may cancel your Subscription at any time as set out below.

Cancellation

Unless specifically stated in any Subscription [offer or promotion](#) when you place your Subscription order, you have the right to cancel your Subscription at any time. Please note that if your Subscription includes a digital element, by placing your order you agree that we may start your Digital Subscription immediately and you acknowledge that you will lose your right to a refund in relation to any issues that have been published before you cancelled.

If you exercise your right to cancel, unless the terms of any Subscription [offer or promotion](#) state otherwise, we will reimburse all payments received from you, less a pro-rated amount for each issue delivered (if your Subscription contains a print element) or published (if your Subscription is a Digital Subscription only) before you cancelled.

In this section references to "published" includes publication on the Site, any Digital Application and/or otherwise made available digitally to customers.

If applicable, any reimbursement will be settled as described in the "Fees and Payments" section below.

How to cancel

You may notify us of your wish to cancel your subscription by contacting our customer service centre for your region. Details can be found on our [customer service page](#). If you prefer, you may, but are not obliged to, complete the form below and send it to us by e-mail to the relevant customer service address for your region.

- To: The Economist Group
- Tel no: [insert tel no if applicable]
- I/we hereby give notice that I/we cancel my/our Subscription contract
- Purchased on: [insert date of Subscription]
- Customer Reference Number: [insert relevant Customer reference number]
[What's this?](#)
- Your name (or the customer's name if different):
- Your address (or the customer's address if different):
- Date:

Contract and Disputes

The Economist shall provide your Subscription in accordance with these Terms (and the terms of any [offer or promotion](#) that may apply to your Subscription). As further detailed above you have legal rights with regards to your subscription including the right to cancel. Should you have any queries please contact our [customer service centre](#) for your region. For EU users, should you have any issues with your Subscription or our services and do not wish to contact our [customer service centre](#), you are entitled to use the EU managed and operated Online Dispute Resolution Platform at <http://ec.europa.eu/odr>.

Fees and Payments

You are responsible for any fees that are payable.

The price to be paid for your Subscription will be made clear to you on the Subscription order pages or otherwise during the order process and may vary from time to time. You agree to pay the fees at the rates notified to you at the time you purchase your Subscription. Eligibility for any discounts is ascertained at the time you subscribe and

cannot be changed during the term of your Subscription. We will always inform you in advance of any increase in the price of your Subscription and offer you an opportunity to cancel it if you do not wish to pay the new price.

As well as Subscriptions, access to some Economist Content may be subject to a fee. All payments (including any applicable taxes) must be made in advance in US Dollars or other currency specified by The Economist. You are responsible for the payment of all charges associated with the use, by you or someone else, of the Site and/or a Digital Application using your ID.

When you purchase a Subscription or access to any other Economist Content, you must provide us with complete and accurate payment information. By submitting payment details you confirm that you are entitled to use those payment details for this purpose. If we do not receive payment authorisation or any authorisation is subsequently cancelled, we may immediately terminate or suspend your access to your Subscription or Economist Content and in suspicious circumstances we may contact the issuing bank/payment provider and/or law enforcement authorities or other appropriate third parties.

If your use of the Site or any Subscription is terminated by The Economist, you will be entitled to receive a refund of any credits or pre-payments which remain unused at the time of termination unless such use is terminated because you are in breach of these Terms (which will be determined solely by The Economist). You will continue to be responsible for any fees or other charges you have incurred prior to such termination.

You may be able to use the Site to purchase products or services from The Economist's third party partners. In that event, your contract for such products will be with the third party partner and not with The Economist.

If you are entitled to a refund under these Terms, refunds can only be made to the credit/debit/charge card that was used for the original purchase, unless it has expired in which case we will contact you.

User-Created Content

You are responsible for all content you post.

The Site and any Digital Applications may include comments capability, bulletin boards, discussion groups and other public areas or features that allow feedback to The Economist and interaction between users and The Economist representatives ("Forums"). While The Economist does not control the information/materials posted to Forums by users (the "Messages"), it reserves the right (which it may exercise at its sole discretion without notice) to delete, move or edit the Messages and to terminate your access to and use of the Forums.

You are solely responsible for the content of your Messages. You must comply with any rules posted by The Economist on a Forum. You may not:

- Post, link to or otherwise publish any Messages containing material that is obscene, racist, homophobic or sexist or that contains any form of hate speech;
- Post, link to or otherwise publish any Messages that infringe copyright;
- Post, link to or otherwise publish any Messages that are illegal, libellous, defamatory or may prejudice ongoing legal proceedings or breach a court injunction or other order;
- Post, link to or otherwise publish any Messages that are abusive, threatening or make any form of personal attack on another user or an employee of The Economist;
- Post Messages in any language other than English;
- Post the same Message, or a very similar Message, repeatedly;
- Post or otherwise publish any Messages unrelated to the Forum or the Forum's topic;
- Post, link to or otherwise publish any Messages containing any form of advertising or promotion for goods and services or any chain Messages or "spam";
- Post, link to or otherwise publish any Messages with recommendations to buy or refrain from buying a particular security or which contain confidential information of another party or which otherwise have the purpose of affecting the price or value of any security;
- Disguise the origin of any Messages;
- Impersonate any person or entity (including The Economist employees or Forum guests or hosts) or misrepresent any affiliation with any person or entity;
- Post or transmit any Messages that contain software viruses, files or code designed to interrupt, destroy or limit the functionality of the Site or any computer software or equipment, or any other harmful component;
- Collect or store other users' personal data; and/or
- Restrict or inhibit any other user from using the Forums.

By submitting Messages to any Forum you agree to indemnify and hold harmless The Economist from all claims, costs and expenses (including legal expenses) arising out of any Messages posted or published by you that are in breach of this section.

The Economist has no control over individuals posting Messages on any Forum. The Economist cannot guarantee the accuracy, integrity or quality of any Messages. Some users may breach these terms and post Messages that are misleading, untrue or offensive. You must bear all risk associated with your use of the Forum and should not rely on Messages when you make (or refrain from making) any specific investment or other decision.

By submitting a Message to a Forum you are granting The Economist a perpetual, irrevocable, royalty free non-exclusive licence to reproduce, modify, translate, make available, distribute and sub-license the Message in whole or in part, and in any form. This may include personal information such as your user or pen name and your expressions of opinion. The Economist reserves the right to contact you by e-mail about your use of the Forums. You waive any moral rights that you may have in regard to the Messages you submit.

It is not possible for The Economist to fully and effectively monitor Messages infringement of third-party rights. If you believe that any content infringes your legal rights, you should notify The Economist immediately by contacting our [customer service centre](#) for your region or by using the "Report Abuse" function on reader comments. Repeated misuse of the "Report Abuse" function will result in your access to the Forums being terminated.

Privacy Policy and Cookies info

The Economist respects your privacy.

The information that you provide about yourself to The Economist will be used in accordance with The Economist's [Privacy Policy](#). For more information on how we use cookies and to manage your preferences see [Cookies info](#).

By visiting our website with cookies enabled, you agree to the use of cookies as explained in [Cookies info](#).

Changes to the Site and Digital Applications

The Economist reserves the right, in its discretion and at any time, to suspend, change, modify, add or remove portions of Economist Content available on the Site and/or on a Digital Application at any time and to restrict the use and accessibility of the Site and its Digital Applications.

Gift Subscriptions

The Economist allows Subscriptions to be purchased as gifts. The person responsible for payments and fees is the person who initially purchased the gift Subscription and only that person may receive any refunds or other payments that may be due in respect of the gift Subscription. Apart from that, these Terms will apply to the beneficiary of any gift Subscription, who may therefore use the Site and access any Economist Content only in accordance with these Terms, and all references to "your" or "you" (other than in relation to renewal, payment, fees, refunds and cancellations) shall be read as references to the beneficiary of the gift Subscription.

Liability and Indemnity

All Economist Content and services are provided 'as is'. You indemnify us for breaches of these Terms.

Although we endeavour to ensure the high quality and accuracy of the Site and Digital Applications, The Economist makes no warranty, express or implied concerning Economist Content, any Digital Application, the Site or any software that are made available through the Site (the "Services"), which are provided "as is". The Economist expressly disclaims all warranties, including but not limited to warranties of fitness for a particular purpose and warranties of merchantability. In no event will The Economist, its affiliates, agents, suppliers or licensors be liable for indirect, special, incidental, and/or consequential damages (including, without limitation, damages for loss of business profits, business interruption, loss of business information or other pecuniary loss) that may arise directly or indirectly from the use of (or failure to use) or reliance on the Services, even if The

Economist has been advised of the possibility that such damages may arise. The Economist does not guarantee the accuracy, content, or timeliness of the Services or that they are free from viruses or other contaminating or destructive properties.

In no event will any liability of The Economist or its affiliates, agents, suppliers and licensors to you (and/or any third party) that may arise out of any kind of legal claim (whether in contract, tort, or otherwise) in any way connected with the Services or in breach of these Terms by The Economist exceed the amount, if any, paid by you to The Economist for the particular Service to which the claim relates.

Upon The Economist's request, you agree to defend, indemnify and hold harmless The Economist, its affiliates, agents, suppliers and licensors from any claims and expenses, including reasonable legal fees, related to any breach of these Terms by you or your use of any Services.

Force Majeure

The Economist will not be held responsible for circumstances beyond its control.

The Economist, its affiliates and its information providers will not be liable or deemed to be in default for any delay or failure in performance or interruption of the delivery of the Economist Content that may result directly or indirectly from any cause or circumstance beyond its or their reasonable control, including but not limited to failure of electronic or mechanical equipment or communication lines, telephone or other interconnect problems, computer viruses, unauthorised access, theft, operator errors, severe weather, earthquakes or natural disasters, strikes or other labour problems, wars, or governmental restrictions.

Miscellaneous

Additional Terms apply to your use of Economist Content.

Changes to these Terms. The Economist may, in its discretion, change these Terms (including those that relate to your use of the Site, Digital Applications and/or Economist Content). Whenever the Terms are changed, The Economist will notify you by e-mail or by publishing the revised terms on the website. If you use the Site and/or a Digital Application after The Economist has published or notified you of the changes, you are agreeing to be bound by those changes. If you do not agree to be bound by those changes, you should not use the Site or a Digital Application any further after they are published. Access to certain the Economist Content may be subject to additional terms and conditions.

Advertising, Third Party Content and other Web Sites. Parts of the Site and/or Digital Applications may contain advertising or other third party content. Advertisers and other content providers are responsible for ensuring that such material complies with international and national law. The Economist is not responsible for any third party content or error, or for any omission or inaccuracy in any advertising material. The Site and/or Digital Applications may also contain links to other web sites. The Economist is not responsible for the availability of these websites or their content.

Assignment of Agreement. This agreement is personal to you and your rights and obligations under these Terms may not be assigned, sub-licensed or otherwise transferred. This agreement may be assigned to a third party by The Economist.

Non-Waiver. No delay or omission on the part of either party in requiring performance by the other party of its obligations will operate as a waiver of any right.

Notices. Notices to The Economist must be given in writing, by letter, and sent to The Economist Group, 25 St James's Street, London, SW1A 1HG (for the attention of the Group General Counsel).

Severability/Survival/Statute of Limitations. If any provision of these Terms is invalid or unenforceable, such will not render all the Terms unenforceable or invalid. Rather, the Terms will then be read and construed as if the invalid or unenforceable provision(s) are not contained therein. Any cause of action of yours with respect to these Terms must be filed in a court of competent jurisdiction in London, England, within one year after the cause of action has arisen, or such cause will be barred, invalid and void.

Whole Agreement. Save as expressly referred to herein, any representation, warranty, term or condition not expressly set out in these Terms shall not apply.

Headings. Headings in these Terms are for convenience only and have no legal meaning or effect, nor shall they be taken into account in interpreting these Terms.

Term and Termination

The Economist may terminate or suspend your access to Economist Content at any time.

The Economist may, in its discretion, terminate or suspend your access to and/or use of all or part of the Site and/or a Digital Application (including any Economist Content) with or without cause by delivering notice to you.

These rights of termination are in addition to all other rights and remedies available to The Economist under these Terms or by law.

Governing Law and Jurisdiction

These Terms shall be governed by, and construed in accordance with, English law. The parties irrevocably agree that the courts of England shall (subject to the paragraph below) have exclusive jurisdiction to settle any dispute which may arise out of, under, or in connection with these Terms or the legal relationship established by them, and for those purposes irrevocably submit all disputes to the jurisdiction of the English courts.

For the exclusive benefit of The Economist, The Economist shall also retain the right to bring proceedings as to the substance of the matter in the courts of the country of your residence or, where these Terms are entered into in the course of your trade or profession, the country of your principal place of business.

New gTLD Program
Community Priority Evaluation Report
Report Date: 11 June 2014

Application ID:	1-1032-95136
Applied-for String:	HOTEL
Applicant Name:	HOTEL Top-Level-Domain s.a.r.l

Overall Community Priority Evaluation Summary

Community Priority Evaluation Result	Prevailed
<p>Thank you for your participation in the New gTLD Program. After careful consideration and extensive review of the information provided in your application, including documents of support, the Community Priority Evaluation panel determined that the application met the requirements specified in the Applicant Guidebook. Your application prevailed in Community Priority Evaluation.</p>	

Panel Summary

Overall Scoring	15 Point(s)	
<u>Criteria</u>	<u>Earned</u>	<u>Achievable</u>
#1: Community Establishment	4	4
#2: Nexus between Proposed String and Community	3	4
#3: Registration Policies	4	4
#4: Community Endorsement	4	4
Total	15	16
Minimum Required Total Score to Pass 14		

Criterion #1: Community Establishment	4/4 Point(s)
1-A Delineation	2/2 Point(s)
<p>The Community Priority Evaluation panel determined that the community as identified in the application met the criterion for Delineation as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the community is clearly delineated, organized and pre-existing. The application received the maximum score of 2 points under criterion 1-A: Delineation.</p> <p><u>Delineation</u> Two conditions must be met to fulfill the requirements for delineation: there must be a clear, straightforward membership definition, and there must be awareness and recognition of a community (as defined by the applicant) among its members.</p> <p>The community defined in the application (“HOTEL”) is:</p>	

The .hotel namespace will exclusively serve the global Hotel Community. The string “Hotel” is an internationally agreed word that has a clear definition of its meaning: According to DIN EN ISO 18513:2003, “A hotel is an establishment with services and additional facilities where accommodation and in most cases meals are available.” Therefore only entities which fulfil this definition are members of the Hotel Community and eligible to register a domain name under .hotel. .hotel domains will be available for registration to all companies which are member of the Hotel Community on a local, national and international level. The registration of .hotel domain names shall be dedicated to all entities and organizations representing such entities which fulfil the ISO definition quoted above:

1. Individual Hotels
2. Hotel Chains
3. Hotel Marketing organizations representing members from 1. and/or 2.
4. International, national and local Associations representing Hotels and Hotel Associations representing members from 1. and/or 2.
5. Other Organizations representing Hotels, Hotel Owners and other solely Hotel related organizations representing on members from 1. and/or 2.

These categories are a logical alliance of members, with the associations and the marketing organizations maintaining membership lists, directories and registers that can be used, among other public lists, directories and registers, to verify eligibility against the .hotel Eligibility requirements.

This community definition shows a clear and straightforward membership. The community is clearly defined because membership requires entities/associations to fulfill the ISO criterion for what constitutes a hotel. Furthermore, association with the hotel sector can be verified through membership lists, directories and registers.

In addition, the community as defined in the application has awareness and recognition among its members. This is because the community is defined in terms of its association with the hotel industry and the provision of specific hotel services.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both the conditions to fulfill the requirements for Delineation.

Organization

Two conditions need to be met to fulfill the requirements for organization: there must be at least one entity mainly dedicated to the community, and there must be documented evidence of community activities.

The community as defined in the application has at least one entity mainly dedicated to the community. There are, in fact, several entities that are mainly dedicated to the community, such as the International Hotel and Restaurant Association (IH&RA), Hospitality Europe (HOTREC), the American Hotel & Lodging Association (AH&LA) and China Hotel Association (CHA), among others. According to the application,

Among those associations the International Hotel and Restaurant Association (IH&RA) is the oldest one, which was founded in 1869/1946, is the only global business organization representing the hotel industry worldwide and it is the only global business organization representing the hospitality industry (hotels and restaurants) worldwide. Officially recognized by United Nations as the voice of the private sector globally, IH&RA monitors and lobbies all international agencies on behalf of this industry. Its members represent more than 300,000 hotels and thereby the majority of hotels worldwide.

The community as defined in the application has documented evidence of community activities. This is confirmed by detailed information on IH&RA’s website, as well as information on other hotel association websites.

The Community Priority Evaluation panel determined that the community as defined in the application

satisfies both the conditions to fulfill the requirements for Organization.

Pre-existence

To fulfill the requirements for pre-existence, the community must have been active prior to September 2007 (when the new gTLD policy recommendations were completed).

The community as defined in the application was active prior to September 2007. Hotels have existed in their current form since the 19th century, and the oldest hotel association is IH&RA, which, according to the entity's website, was first established in 1869 as the All Hotelmen Alliance. The organization has been operating under its present name since 1997.

The Community Priority Evaluation panel determined that the community as defined in the application fulfills the requirements for Pre-existence.

1-B Extension

2/2 Point(s)

The Community Priority Evaluation panel determined that the community as identified in the application met the criterion for Extension specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application demonstrates considerable size and longevity for the community. The application received a maximum score of 2 points under criterion 1-B: Extension.

Size

Two conditions must be met to fulfill the requirements for size: the community must be of considerable size and must display an awareness and recognition of a community among its members.

The community as defined in the application is of a considerable size. The community for .HOTEL as defined in the application is large in terms of the number of members. According to the applicant, "the global Hotel Community consists of more than 500,000 hotels and their associations".

In addition, the community as defined in the application has awareness and recognition among its members because the community is defined in terms of association with the provision of hotel services.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both the conditions to fulfill the requirements for Size.

Longevity

Two conditions must be met to fulfill the requirements for longevity: the community must demonstrate longevity and must display an awareness and recognition of a community among its members.

The community as defined in the application demonstrates longevity. The pursuits of the .HOTEL community are of a lasting, non-transient nature.

In addition, the community as defined in the application has awareness and recognition among its members because the community is defined in terms of association with the provision of hotel services.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both the conditions to fulfill the requirements for Longevity.

Criterion #2: Nexus between Proposed String and Community

3/4 Point(s)

2-A Nexus

2/3 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Nexus as

specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook. The string identifies the name of the community, without over-reaching substantially beyond the community. The application received a score of 2 out of 3 points under criterion 2-A: Nexus.

To receive the maximum score for Nexus, the applied-for string must match the name of the community or be a well-known short-form or abbreviation of the community name. To receive a partial score for Nexus, the applied-for string must identify the community. “Identify” means that the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community.

The applied-for string (.HOTEL) identifies the name of the community. According to the applicant,

The proposed top-level domain name, “HOTEL”, is a widely accepted and recognized string that globally identifies the Hotel Community and especially its members, the hotels.

The string nexus closely describes the community, without overreaching substantially beyond the community. The string identifies the name of the core community members (i.e. hotels and associations representing hotels). However, the community also includes some entities that are related to hotels, such as hotel marketing associations that represent hotels and hotel chains and which may not be automatically associated with the gTLD. However, these entities are considered to comprise only a small part of the community. Therefore, the string identifies the community, but does not over-reach substantially beyond the community, as the general public will generally associate the string with the community as defined by the applicant.

The Community Priority Evaluation panel determined that the applied-for string identifies the name of the community as defined in the application. It therefore partially meets the requirements for Nexus.

2-B Uniqueness

1 / 1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Uniqueness as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the string has no other significant meaning beyond identifying the community described in the application. The application received a maximum score of 1 point under criterion 2-B: Uniqueness.

To fulfill the requirements for Uniqueness, the string .HOTEL must have no other significant meaning beyond identifying the community described in the application. The Community Priority Evaluation panel determined that the applied-for string satisfies the condition to fulfill the requirements for Uniqueness.

Criterion #3: Registration Policies

4/4 Point(s)

3-A Eligibility

1 / 1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Eligibility, as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as eligibility is restricted to community members. The application received a maximum score of 1 point under criterion 3-A: Eligibility.

To fulfill the requirements for Eligibility, the registration policies must restrict the eligibility of prospective registrants to community members. The application demonstrates adherence to this requirement by restricting eligibility to the narrow category of hotels and their organizations as defined by ISO 18513, and verifying this association through membership lists, directories and registries. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Eligibility.

3-B Name Selection	<i>1/1 Point(s)</i>
<p>The Community Priority Evaluation panel determined that the application met the criterion for Name Selection as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as name selection rules are consistent with the articulated community-based purpose of the applied-for gTLD. The application received a maximum score of 1 point under criterion 3-B: Name Selection.</p> <p>To fulfill the requirements for Name Selection, the registration policies for name selection for registrants must be consistent with the articulated community-based purpose of the applied-for gTLD. The application demonstrates adherence to this requirement by specifying that eligible applicants will be entitled to register any domain name that is not reserved or registered at the time of their registration submission. Furthermore, the registry has set aside a list of domain names that will be reserved for the major hotel industry brands and sub-brands. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Name Selection.</p>	
3-C Content and Use	<i>1/1 Point(s)</i>
<p>The Community Priority Evaluation panel determined that the application met the criterion for Content and Use as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the rules for content and use are consistent with the articulated community-based purpose of the applied-for TLD. The application received a maximum score of 1 point under criterion 3-C: Content and Use.</p> <p>To fulfill the requirements for Content and Use, the registration policies must include rules for content and use for registrants that are consistent with the articulated community-based purpose of the applied-for gTLD. The application demonstrates adherence to this requirement by specifying that each domain name must display hotel community-related content relevant to the domain name, etc. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Content and Use.</p>	
3-D Enforcement	<i>1/1 Point(s)</i>
<p>The Community Priority Evaluation panel determined that the application met the criterion for Enforcement as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application provided specific enforcement measures as well as appropriate appeal mechanisms. The application received a maximum score of 1 point under criterion 3-D: Enforcement.</p> <p>Two conditions must be met to fulfill the requirements for Enforcement: the registration policies must include specific enforcement measures constituting a coherent set, and there must be appropriate appeals mechanisms. The applicant outlined policies that include specific enforcement measures constituting a coherent set. The applicant's registry will establish a process for questions and challenges that could arise from registrations and will conduct random checks on registered domains. There is also an appeals mechanism, whereby a registrant has the right to request a review of a decision to revoke its right to hold a domain name. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies both conditions to fulfill the requirements for Enforcement.</p>	

Criterion #4: Community Endorsement	4/4 Point(s)
4-A Support	<i>2/2 Point(s)</i>
<p>The Community Priority Evaluation panel determined that the application fully met the criterion for Support</p>	

specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the applicant had documented support from the recognized community institution(s)/member organization(s). The application received a maximum score of 2 points under criterion 4-A: Support.

To receive the maximum score for Support, the applicant is, or has documented support from, the recognized community institution(s)/member organization(s), or has otherwise documented authority to represent the community. “Recognized” means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of the community. To receive a partial score for Support, the applicant must have documented support from at least one group with relevance. “Relevance” refers to the communities explicitly and implicitly addressed.

The Community Priority Evaluation panel determined that the applicant was not the recognized community institution(s)/member organization(s). However, the applicant possesses documented support from the recognized community institution(s)/member organization(s), and this documentation contained a description of the process and rationale used in arriving at the expression of support. These groups constitute the recognized institutions to represent the community, and represent a majority of the overall community as defined by the applicant. The Community Priority Evaluation Panel determined that the applicant fully satisfies the requirements for Support.

4-B Opposition

2/2 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Opposition specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application did not receive any relevant opposition. The application received the maximum score of 2 points under criterion 4-B: Opposition.

To receive the maximum score for Opposition, the application must not have received any opposition of relevance. To receive a partial score for Opposition, the application must have received relevant opposition from, at most, one group of non-negligible size. According to the Applicant Guidebook, “To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant”. “Relevance” and “relevant” refers to the communities explicitly and implicitly addressed.

The application received letters of opposition, which were determined not to be relevant, as they were either from groups of negligible size, or were from entities/communities that do not have an association with the applied for string. The Community Priority Evaluation Panel determined that these letters therefore were not relevant because they are not from the recognized community institutions/member organizations, nor were they from communities/entities that have an association with the hotel community. In addition, some letters were filed for the purpose of obstruction, and were therefore not considered relevant. The Community Priority Evaluation Panel determined that the applicant satisfies the requirements for Opposition.

Disclaimer: Please note that these Community Priority Evaluation results do not necessarily determine the final result of the application. In limited cases the results might be subject to change. These results do not constitute a waiver or amendment of any provision of the Applicant Guidebook or the Registry Agreement. For updated application status and complete details on the program, please refer to the Applicant Guidebook and the ICANN New gTLDs microsite at <newgtlds.icann.org>.

Exhibit DIDP A58

New gTLD Program
Community Priority Evaluation Report
 Report Date: 10 September 2014

Application ID:	1-1083-39123
Applied-for String:	RADIO
Applicant Name:	European Broadcasting Union

Overall Community Priority Evaluation Summary

Community Priority Evaluation Result	Prevailed
<p>Thank you for your participation in the New gTLD Program. After careful consideration and extensive review of the information provided in your application, including documents of support, the Community Priority Evaluation panel determined that the application met the requirements specified in the Applicant Guidebook. Your application prevailed in Community Priority Evaluation.</p>	

Panel Summary

Overall Scoring	14 Point(s)	
<u>Criteria</u>	<u>Earned</u>	<u>Achievable</u>
#1: Community Establishment	3	4
#2: Nexus between Proposed String and Community	3	4
#3: Registration Policies	4	4
#4: Community Endorsement	4	4
Total	14	16
Minimum Required Total Score to Pass <u>14</u>		

Criterion #1: Community Establishment	3/4 Point(s)
1-A Delineation	1/2 Point(s)
<p>The Community Priority Evaluation panel determined that the community as defined in the application partially met the criterion for Delineation as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as it is clearly delineated and pre-existing, but, as defined, is not sufficiently organized. The application received a score of 1 out of 2 points under criterion 1-A: Delineation.</p> <p><u>Delineation</u> Two conditions must be met to fulfill the requirements for delineation: there must be a clear, straightforward membership definition and there must be awareness and recognition of a community (as defined by the applicant) among its members.</p> <p>The community defined in the application (“RADIO”) is, as follows:</p> <p style="padding-left: 40px;">The Radio industry is composed of a huge number of very diverse radio broadcasters: public and private; international and local; commercial or community-oriented; general purpose, or sector-</p>	

specific; talk or music; big and small. All licensed radio broadcasters are part of the .radio community, and so are the associations, federations and unions they have created (such as the EBU, applicant for the .radio TLD with the support of its sister Unions; see below for more details on Radio industry representativeness). Also included are the radio professionals, those making radio the fundamental communications tool that it is.

However, the Radio industry keeps evolving and today, many stations are not only broadcasting in the traditional sense, but also webcasting and streaming their audio content via the Internet. Some are not broadcasters in the traditional sense: Internet radios are also part of the Radio community, and as such will be acknowledged by .radio TLD, as will podcasters. In all cases certain minimum standards on streaming or updating schedules will apply.

The .radio community also comprises the often overlooked amateur radio, which uses radio frequencies for communications to small circles of the public. Licensed radio amateurs and their clubs will also be part of the .radio community.

Finally, the community includes a variety of companies providing specific services or products to the Radio industry.

This community definition shows a clear and straightforward membership and is therefore well defined. Association with, and membership in, the radio community can be verified through licenses held by professional and amateur radio broadcasters; membership in radio-related associations, clubs and unions; internet radios that meet certain minimum standards; radio-related service providers that can be identified through trademarks; and radio industry partners and providers.

In addition, the community as defined in the application has awareness and recognition among its members. This is because the community as defined consists of entities and individuals that are in the radio industry¹, and as participants in this clearly defined industry, they have an awareness and recognition of their inclusion in the industry community. In addition, membership in the (industry) community is sufficiently structured, as the requirements listed in the community definition above show.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both of the conditions to fulfill the requirements for Delineation.

Organization

Two conditions need to be met to fulfill the requirements for organization: there must be at least one entity mainly dedicated to the community, and there must be documented evidence of community activities.

The community as defined in the application does not have one entity mainly dedicated to the community. There are several entities that represent parts of the radio community, such as the World Broadcasting Unions (WBU), the Association for International Broadcasting, the Association of European Radios, the Association Mondiale des Radiodiffuseurs Communautaires, the European Association of Television and Radio Sales Houses, the Union Radiophonique et Télévisuelle Internationale, and the Internet Media Device Alliance. Based on the Panel's research, these entities only represent certain segments of the community as defined by the applicant. For example, the WBU is the umbrella organization for eight regional broadcasting unions, but does not represent amateur radio. There is no entity that represents all of the radio member categories outlined by the applicant. According to the application:

¹ The radio industry is included in the North American Industrial Classification System (NAICS). It defines this industry as, "Establishments primarily engaged in broadcasting aural programs by radio to the public. Included in this industry are commercial, religious, educational, and other radio stations. Also included here are establishments primarily engaged in radio broadcasting and which produce radio program materials." This definition of the industry includes the vast majority of entities included in the defined community.

The Radio community is structured mainly under 8 world broadcasting Unions which represent radio broadcasting interests at the World Radio Frequencies Conferences and coordinate their work through the WBU, as described in response to Question 11H.

The WBU works through a number of permanent working commissions, such as the Technical Committee, which deals with technical standardization; the Sports Committee, dealing with the coverage of world sports events (such as Olympic Games and football world championships); ISOG (International Satellite Operations Group), dealing with satellite contribution circuit issues. Besides the WBU, other specialized broadcasting associations represent specific radio interests, such as the already mentioned AMARC and AER.

According to the AGB, "organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities." As described above, there is no entity(ies) that represents all of the radio member categories outlined by the applicant. An "organized" community is one that is represented by at least one entity that encompasses the entire community as defined by the applicant. For example, there should be at least one entity that encompasses and organizes: "radio broadcasters, the associations, federations and unions they have created, radio professionals, Internet radios, podcasters, amateur radio (and their clubs), and companies providing specific services or products to the Radio industry." Based on information provided in the application materials and the Panel's research, there is no such entity that organizes the community defined in the application. Therefore, as there is no entity that is mainly dedicated to the community as defined in the .RADIO application, as the Panel has determined, there cannot be documented evidence of community activities.

The Community Priority Evaluation panel determined that the community as defined in the application does not satisfy either of the two conditions to fulfill the requirements for organization.

Pre-existence

To fulfill the requirements for pre-existence, the community must have been active prior to September 2007 (when the new gTLD policy recommendations were completed).

The community as defined in the application was active prior to September 2007. Radio broadcast technologies have existed in one form or another for nearly a century. As the industry has evolved² through the uptake of new technologies, so too has industry membership. For example, in the early years of the industry, members of the radio industry included radio professionals, broadcasters and companies providing products to the industry, amongst others. With the advent of the internet and other radio technologies, the community has expanded to include Internet radios, podcasters and others. The Panel acknowledges that not all elements of the community defined in the application have been in existence since the dawn of the industry; however, the proposed community segments have been active prior to September 2007.

The Community Priority Evaluation panel determined that the community as defined in the application fulfills the requirements for Pre-existence.

1-B Extension

2/2 Point(s)

The Community Priority Evaluation panel determined that the community as identified in the application met the criterion for Extension specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application demonstrates considerable size and longevity for the community. The application received a maximum score of 2 points under criterion 1-B: Extension.

² According to the US Federal Communications Commission, in 1906 the first program including speech and music was transmitted over the radio; by 1912 the US government put in place regulations for radio stations and operators. See http://transition.fcc.gov/omd/history/radio/documents/short_history.pdf

Size

Two conditions must be met to fulfill the requirements for size: the community must be of considerable size, and it must display an awareness and recognition of a community among its members.

The community as defined in the application is of a considerable size. The community for .RADIO as defined in the application is large in terms of the number of members. According to the application:

Currently, there are about 50,000 radio stations worldwide, according to the figure published by CIA World Facts on their website. In addition, there are at least another 50,000 web radios.

Moreover, the community as defined in the application has awareness and recognition among its members. This is because the community as defined consists of entities and individuals that are in the radio industry³, and as participants in this clearly defined industry, they have an awareness and recognition of their inclusion in the industry community.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both the conditions to fulfill the requirements for Size.

Longevity

Two conditions must be met to fulfill the requirements for longevity: the community must demonstrate longevity and it must display an awareness and recognition of a community among its members.

The community as defined in the application demonstrates longevity. The pursuits of the .RADIO community are of a lasting, non-transient nature. Radio services have, as noted, existed for more than a century and are likely to continue, although technological advances may change form and function.

Moreover, as mentioned previously, the community as defined in the application has awareness and recognition among its members. This is because the community as defined consists of entities and individuals that are in the radio industry⁴, and as participants in this clearly defined industry, they have an awareness and recognition of their inclusion in the industry community.

The Community Priority Evaluation panel determined that the community as defined in the application satisfies both the conditions to fulfill the requirements for Longevity.

Criterion #2: Nexus between Proposed String and Community

3/4 Point(s)

2-A Nexus

2/3 Point(s)

The Community Priority Evaluation panel determined that the application partially met the criterion for Nexus as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook. The string “identifies” the name of the community as defined in the application, without over-reaching substantially beyond the community, but it does not “match” the name of the community as defined. The application received a score of 2 out of 3 points under criterion 2-A: Nexus.

To receive the maximum score for Nexus, the applied-for string must “match” the name of the community or be a well-known short-form or abbreviation of the community name. To receive a partial score for Nexus, the applied-for string must “identify” the community. “Identify” means that the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community.

The applied-for string (.RADIO) identifies the name of the community. According to the applicant:

³ Ibid

⁴ Ibid

Radio means the operators, services and technologies defined here as the Radio community. Radio also means, and is, audio broadcasting. The station broadcasting or streaming that audio content is radio, and the company performing the audio broadcasting is radio. A radio is the receiver used by the listener. Radio is the name everybody uses to refer to the entire industry, and the whole community.

With the advent of streaming via the Internet and the continuous delivery of audio content to broad groups of listeners, we now often refer to the new services as web, net or Internet radio.

The Radio community could not find any other name, even vaguely appropriate, to designate the TLD for its community. .radio is the TLD for the Radio community and could not be anything else. It is perfectly tuned.

The string closely describes the community, without overreaching substantially beyond the community. The string identifies the name of the core community members (i.e. licensed professional and amateur radio broadcasters and their associated unions and clubs, and Internet radio). However, the community, as defined in the application, also includes some entities that are only tangentially related to radio, such as companies providing specific services or products to radio broadcasting organizations and which may not be automatically associated with the gTLD string. For example, network interface equipment and software providers to the industry, based on the Panel's research, would not likely be associated with the word RADIO⁵. However, these entities are considered to comprise only a small part of the community. Since only a small part of the community as defined by the applicant extends beyond the reference of the string, it is not a substantial over-reach. Therefore, the string identifies the community, as the public will generally associate the string with the community as defined by the applicant.

The Community Priority Evaluation panel determined that the applied-for string identifies the name of the community as defined in the application. It therefore partially meets the requirements for Nexus.

2-B Uniqueness

1/1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Uniqueness as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the string has no other significant meaning beyond identifying the community described in the application. The application received a maximum score of 1 point under criterion 2-B: Uniqueness.

To fulfill the requirements for Uniqueness, the string must have no other significant meaning beyond identifying the community described in the application. The string as defined in the application demonstrates uniqueness, as the string does not have any other meaning beyond identifying the community described in the application. The Community Priority Evaluation panel determined that the applied-for string satisfies the condition to fulfill the requirements for Uniqueness.

Criterion #3: Registration Policies

4/4 Point(s)

3-A Eligibility

1/1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Eligibility as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as eligibility

⁵ There are numerous definitions of the word radio. These include: (a) the transmission and reception of electromagnetic waves of radio frequency, especially those carrying sound messages; (b) the activity or industry of broadcasting sound programs to the public; (c) an apparatus for receiving radio programs. Definition (b) closely reflects the core community as defined by the applicant, which includes: radio broadcasters, the associations, federations and unions they have created, radio professionals, Internet radios, podcasters, and amateur radio (and their clubs). However, the community members that provide "specific services or products to the Radio industry", such as software or interface equipment, would not be associated with the term "radio" by the general public.

is restricted to community members. The application received a maximum score of 1 point under criterion 3-A: Eligibility.

To fulfill the requirements for Eligibility, the registration policies must restrict the eligibility of prospective registrants to community members. The application demonstrates adherence to this requirement by restricting eligibility to the community categories mentioned in Delineation, and additionally requiring that the registered domain name be “accepted as legitimate; and beneficial to the cause and values of the radio industry; and commensurate with the role and importance of the registered domain name; and in good faith at the time of registration and thereafter.” (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Eligibility.

3-B Name Selection

1/1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Name Selection as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as name selection rules are consistent with the articulated community-based purpose of the applied-for TLD. The application received a maximum score of 1 point under criterion 3-B: Name Selection.

To fulfill the requirements for Name Selection, the registration policies for name selection for registrants must be consistent with the articulated, community-based purpose of the applied-for gTLD. The application demonstrates adherence to this requirement by specifying that the registrant’s nexus with the radio community and use of the domain must be commensurate with the role of the registered domain, and with the role and importance of the domain name based on the meaning an average user would reasonably assume in the context of the domain name. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Name Selection.

3-C Content and Use

1/1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Content and Use as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the rules for content and use are consistent with the articulated community-based purpose of the applied-for TLD. The application received a maximum score of 1 point under criterion 3-C: Content and Use.

To fulfill the requirements for Content and Use, the registration policies must include rules for content and use for registrants that are consistent with the articulated community-based purpose of the applied-for gTLD. The application demonstrates adherence to this requirement by specifying that use of the domain name must be beneficial to the cause and values of the radio industry, and commensurate with the role and importance of the registered domain name, etc. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies the condition to fulfill the requirements for Content and Use.

3-D Enforcement

1/1 Point(s)

The Community Priority Evaluation panel determined that the application met the criterion for Enforcement as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application provided specific enforcement measures as well as appropriate appeal mechanisms. The application received a maximum score of 1 point under criterion 3-D: Enforcement.

Two conditions must be met to fulfill the requirements for Enforcement: the registration policies must include specific enforcement measures constituting a coherent set, and there must be appropriate appeals mechanisms. The applicant outlined policies that include specific enforcement measures constituting a coherent set. The enforcement program is based on random checks, and if the content or use of an existing domain name shows bad faith, it will be suspended. There is also an appeals mechanism, which is managed in

the first instance by the registry, with appeals heard by an independent, alternative dispute resolution provider. (Comprehensive details are provided in Section 20e of the applicant documentation). The Community Priority Evaluation panel determined that the application satisfies both conditions to fulfill the requirements for Enforcement.

Criterion #4: Community Endorsement	4/4 Point(s)
4-A Support	2/2 Point(s)
<p>The Community Priority Evaluation panel determined that the application fully met the criterion for Support specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the applicant had documented support from the recognized community institution(s)/member organization(s). The application received a maximum score of 2 points under criterion 4-A: Support.</p> <p>To receive the maximum score for Support, the applicant is, or has documented support from, the recognized community institution(s)/member organization(s), or has otherwise documented authority to represent the community. “Recognized” means those institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of the community. To receive a partial score for Support, the applicant must have documented support from at least one group with relevance. “Relevance” refers to the communities explicitly and implicitly addressed.</p> <p>The Community Priority Evaluation panel determined that the applicant was not the recognized community institution(s)/member organization(s). However, the applicant possesses documented support from institutions/organizations representing a majority of the community addressed, and this documentation contained a description of the process and rationale used in arriving at the expression of support. The applicant received support from a broad range of recognized community institutions/member organizations, which represented different segments of the community as defined by the applicant. These entities represented a majority of the overall community. The Community Priority Evaluation Panel determined that the applicant fully satisfies the requirements for Support.</p>	
4-B Opposition	2/2 Point(s)
<p>The Community Priority Evaluation panel determined that the application met the criterion for Opposition specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application did not receive any relevant opposition. The application received the maximum score of 2 points under criterion 4-B: Opposition.</p> <p>To receive the maximum score for Opposition, the application must not have received any opposition of relevance. To receive a partial score for Opposition, the application must have received opposition from, at most, one group of non-negligible size.</p> <p>The application received letters of opposition, which were determined not to be relevant, as they were (1) from individuals or groups of negligible size, or (2) were not from communities either explicitly mentioned in the application nor from those with an implicit association to such communities. The Community Priority Evaluation Panel determined that the applicant satisfies the requirements for Opposition.</p>	

Disclaimer: Please note that these Community Priority Evaluation results do not necessarily determine the final result of the application. In limited cases the results might be subject to change. These results do not constitute a waiver or amendment of any provision of the Applicant Guidebook or the Registry Agreement. For updated application status and complete details on the program, please refer to the Applicant Guidebook and the ICANN New gTLDs microsite at <newgtlds.icann.org>.

Exhibit DIDP A59

SINGAPORE – ICANN Public Forum
Thursday, February 12, 2015 – 13:30 to 17:00
SGT ICANN – Singapore, Singapore

KUO-WEI WU: Thank you for your question. I think that we give the next person have a chance.

Next one. Sorry I speak in Chinese.

CONSTANTINE ROUSSOS: No problem. This is Constantine Roussos with .MUSIC. Page 22 of the final CPE guidelines state, "The evaluation process will respect the principles of fairness, transparency, avoiding potential conflicts of interest and non-discrimination."

We have some serious concerns. The chairman of Google, Eric Schmidt, is on the Board of "The Economist." Google is an applicant for .MUSIC. "The Economist" grades our CPE. This is a serious conflict of interest.

Secondly, as you may be aware, one of our competitors strategically rallied one of their supporters, which, again, is 100% conflict of interest, to file a spurious opposition letter to obstruct our application to benefit themselves. The basis of their claim was rooted on discrimination not compatible with competition objectives claiming that .MUSIC should be reserved to only select members of select organizations, an eligibility policy which is anti-competitive.

Both the EIU and ICANN agreed with this fact in recent CPE and reconsideration determinations that such a policy overreaches and that the majority of the community does not belong to these select organizations. This conflicted organization's opposition letter purposely singled us out. If this opposition was authentic, why did this organization not oppose Google or other open applicants who applied for .MUSIC, especially since these open applicants lack the restricted music tailored enhanced safeguards that our community application possesses to show the global music community and protect intellectual property?

Such scare tactics are prevalent at ICANN, especially for community applicants filed to game the CPE process and obstruct community applications to benefit their competing applications. Another clear conflict of interest.

Naturally, we expect ICANN and "The Economist" to receive letters from some portfolio competitors attacking our application aimed at similar obstruction as soon as we are invited to CPE.

How will ICANN ensure "The Economist" follows the CPE guidelines which state that the evaluation process will respect principles of fairness, transparency, avoiding potential conflicts of interest and non-discrimination? We will proceed with CPE but with disclosed prejudice. Thank you.

KUO-WEI WU: Any comment or thanks?

[Applause]

FADI CHEHADE: Thank you, Constantine, for your eloquent kind of layout of the issues. I appreciate it.

May I suggest, given the sensitivity of what you shared, that you send us a formal letter with -- explaining these conflicts and any concerns you have? And I can assure you that you can trust our process to deal with these things without prejudice as we always have.

CONSTANTINE ROUSSOS: Thank you, sir.

Exhibit DIDP A60

CPE Applicant Comparison: .MUSIC CPE vs .HOTEL CPE

	.MUSIC	Score	.HOTEL	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"a logical alliance of members, with the associations and the marketing organizations maintaining membership lists, directories and registers that can be used, among other public lists, directories and registers, to verify eligibility against the .hotel Eligibility requirements" (20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion is <u>considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	"[T]he community is defined in terms of its association with the hotel industry and the provision of specific hotel services" (.HOTEL CPE Report, p.2). Conversely, ICANN disregarded DotMusic's "logical alliance" community definition, which is also similarly defined in terms of its association with a cohesive logical alliance. The .HOTEL definition was also a "logical alliance of members."	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No	China Hotel Association ("CHA") (.HOTEL CPE Report, p.2). ICANN determined that CHA representing hotels in one country, China, is a recognized organization mainly dedicated to the hotel community in its entirety. Conversely, ICANN penalized DotMusic giving zero points because "there is no single entity that serves all of these categories in all their geographic breadth." (.MUSIC CPE Report, p.5) DotMusic has many such entities	Yes
Preexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance of communities that relate to music</u> " (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4	Yes.	4/4
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). ICANN <u>disregarded</u> the established name of the community given in DotMusic's Application that entirely matches the string: "The name of the community served is the "Music Community" ("Community")... "MUSIC" matches the name of the Community entirely...The "MUSIC" string matches the name ("Name") of the Community and is the established name by which the Community is commonly known by others." (20A). "The .MUSIC string relates to the Community by [c]ompletely representing the entire Community" (20D)	3/4		
Support	DotMusic has support from organizations with members that represent over 95% of music consumed globally in its community defined. DotMusic meets the criterion of having " <u>support from institutions/organizations representing a majority of the community addressed</u> ," which ICANN disregarded and did <u>not</u> apply (that would have awarded DotMusic a total of 2 points).	1/2	"[T]hese groups constitute... <u>a majority of the overall community</u> as described by the applicant" (.HOTEL CPE Report, p.6).	2/2
Application	Link		Link	

CPE Applicant Comparison: .MUSIC CPE vs .RADIO CPE

	.MUSIC	Score	.RADIO	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"The Radio industry is composed of a huge number of very diverse radio broadcasters: public and private; international and local; commercial or community-oriented; general purpose, or sector-specific; talk or music; big and small. All licensed radio broadcasters are part of the .radio community, and so are the associations, federations and unions they have created. Also included are the radio professionals, those making radio the fundamental communications tool that it is." (20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion <u>is considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	ICANN established that the radio community had cohesion solely on the basis of being "participants in ...[radio] industry" (.RADIO CPE Report, p.2). Conversely, DotMusic was not given any points even though its music community members in its delineated member music categories and music subsets participate in the music industry as well, yet ICANN penalized DotMusic with zero points.	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No		
Preexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance</u> of communities that relate to music" (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4		
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). ICANN <u>disregarded the established name</u> of the community given in DotMusic's Application that entirely matches the string: "The name of the community served is the "Music Community" ("Community")... "MUSIC" matches the name of the Community entirely...The "MUSIC" string matches the name ("Name") of the Community and is the established name by which the Community is commonly known by others." (20A). "The .MUSIC string relates to the Community by [c]ompletely representing the entire Community" (20D)	3/4		
Support	DotMusic has support from organizations with members that represent over 95% of music consumed globally in its community defined. DotMusic meets the criterion of having " <u>support from institutions/organizations representing a majority of the community addressed</u> ," which ICANN disregarded and did <u>not</u> apply (that would have awarded DotMusic a total of 2 points).	1/2	"[T]he applicant possesses documented support from institutions/organizations representing a majority of the community addressed" (.RADIO CPE Report, p.7).	2/2
Application	Link		Link	

CPE Applicant Comparison: .MUSIC CPE vs .SPA CPE

	.MUSIC	Score	.SPA	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"The spa community primarily includes: Spa operators, professionals and practitioners; Spa associations and their members around the world; Spa products and services manufacturers and distributors. The <u>secondary community generally</u> also includes holistic and personal wellness centers and organizations. While <u>these secondary community organizations do not relate directly to...spas</u> , they nevertheless <u>often overlap</u> with and participate in the spa community and <u>may share certain benefits</u> for the utilization of the .spa domain" (20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion is <u>considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	"Members...recognize themselves as part of the spa community as evidenced...by their <u>inclusion</u> in industry organizations and <u>participation</u> in their events" (.SPA CPE Report, p.2). In contrast, ICANN rejected DotMusic's membership music categories and music subsets as not having the requisite awareness even though, similar to the spa community, all Music Community members also "participate" in music-related events and are included in music groups or music subsets.	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No	International Spa Association (.SPA CPE Report, p.2)	Yes
Prexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance</u> of communities that relate to music" (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4	Yes.	4/4
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). ICANN <u>disregarded the established name</u> of the community given in DotMusic's Application that entirely matches the string: "The name of the community served is the "Music Community" ("Community")... "MUSIC" matches the name of the Community entirely...The "MUSIC" string matches the name ("Name") of the Community and is the established name by which the Community is commonly known by others." (20A). "The .MUSIC string relates to the Community by [c]ompletely representing the entire Community" (20D)	3/4	The "secondary community" that "do[es] not relate directly to...spas" (20A) subset of the community, along with the principal spa community..."meets the requirement for "match" with regard to Nexus" (.SPA CPE Report, p.5)	4/4
Support	DotMusic has support from organizations with members that represent over 95% of music consumed globally in its community defined. DotMusic meets the criterion of having " <u>support from institutions/organizations representing a majority of the community addressed</u> ," which ICANN disregarded and did <u>not</u> apply (that would have awarded DotMusic a total of 2 points).	1/2		
Application	Link		Link	

CPE Applicant Comparison: .MUSIC CPE vs .ECO CPE

	.MUSIC	Score	.ECO	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"Members of the [environmental] Community are delineated from Internet users <u>generally</u> by community-recognized memberships, accreditations, registrations, and certifications that <u>demonstrate active commitment, practice and reporting</u> " (20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion is <u>considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	"Cohesion and awareness is founded in... <u>demonstrable involvement in environmental activities</u> " which " <u>may vary among member categories</u> " (.ECO CPE Report, p.2). Conversely, the EIU penalized DotMusic with a grade of zero based on similar category variance and members that also have demonstrable involvement in music-related activities.	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No	Global Reporting Initiative (.ECO CPE Report, p.3)	Yes
Prexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance of communities that relate to music</u> " (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4	Yes.	4/4
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). ICANN <u>disregarded the established name</u> of the community given in DotMusic's Application that entirely matches the string: "The name of the community served is the "Music Community" ("Community")... "MUSIC" matches the name of the Community entirely...The "MUSIC" string matches the name ("Name") of the Community and is the established name by which the Community is commonly known by others." (20A). "The .MUSIC string relates to the Community by [c]ompletely representing the entire Community" (20D)	3/4		
Support	DotMusic has support from organizations with members that represent over 95% of music consumed globally in its community defined. DotMusic meets the criterion of having " <u>support from institutions/organizations representing a majority of the community addressed</u> ," which ICANN disregarded and did <u>not</u> apply (that would have awarded DotMusic a total of 2 points).	1/2		
Application	Link		Link	

CPE Applicant Comparison: .MUSIC CPE vs .OSAKA CPE

	.MUSIC	Score	.OSAKA	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"Members of the community are defined as those who are within the Osaka geographical area as well as those who self identify as having a tie to Osaka, or the culture of Osaka. Major participants of the community include, <u>but are not limited to</u> the following: Legal entities; Citizens; Governments and public sectors; Entities, including natural <u>persons who have a legitimate purpose in addressing the community</u> "(20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion <u>is considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	ICANN determined the Osaka community defined had "cohesion" because members " <u>self identify as having a tie to Osaka, or the culture of Osaka</u> " (.OSAKA CPE Report, p.2). Similarly, DotMusic's "logical alliance" is "related to music" (i.e. has a tie to music) but its Application was penalized with zero points.	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No		
Preexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance</u> of communities that relate to music" (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4	Yes.	4/4
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). ICANN <u>disregarded the established name</u> of the community given in DotMusic's Application that entirely matches the string: "The name of the community served is the "Music Community" ("Community")... "MUSIC" matches the name of the Community entirely...The "MUSIC" string matches the name ("Name") of the Community and is the established name by which the Community is commonly known by others." (20A). "The .MUSIC string relates to the Community by [c]ompletely representing the entire Community" (20D)	3/4	"The string, ".osaka", <u>directly represents the Osaka community</u> " (.OSAKA CPE Report, p.2). Similarly, the string " <u>.music</u> " <u>directly represents the "Music Community</u> ," the established name in DotMusic's Application for the community. Yet, ICANN penalized DotMusic with a loss of a point.	4/4
Support	DotMusic has support from organizations with members that represent over 95% of music consumed globally in its community defined. DotMusic meets the criterion of having " <u>support from institutions/organizations representing a majority of the community addressed</u> ," which ICANN disregarded and did <u>not</u> apply (that would have awarded DotMusic a total of 2 points).	1/2		
Application	Link		Link	

CPE Applicant Comparison: .MUSIC CPE vs .GAY CPE

	.MUSIC	Score	.GAY	Score
Definition	Strictly delineated and organized, <u>logical alliance</u> of communities of similar nature that relate to music (20A)		"The Gay Community includes individuals who identify themselves as male or female homosexuals, bisexual, transgender, queer, intersex, ally." (20A)	
Cohesion / Awareness	The .MUSIC CPE Report states: "While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion <u>is considerable enough</u> that the community defined as a whole cannot be said to have the cohesion" (.MUSIC CPE Report, p.3). All music categories and subsets have cohesion because they all operate under a regulated sector and united under international law and international conventions. The ICANN Board approved GAC Category 1 Advice Safeguards accepting that the .MUSIC string has <u>cohesion under a regulated sector</u> . Further, DotMusic notes that the <u>vast majority</u> of the "logical alliance" Music Community defined <u>are musicians and artists</u> , who are clearly defined. As such, ICANN's subjective measure of "not considerable enough" is statistically insignificant. ICANN does not document nor substantiate its "conclusion" with any "compelling and defensible" evidence as required by the Guidelines.	No	ICANN determined that stronger cohesion than DotMusic based on "an <u>implicit</u> recognition and awareness of belonging to a community of others who have <u>come out</u> as having non-normative sexual orientations or gender identities, or as their <u>allies</u> " (<u>emphasis added</u>) (.GAY CPE Report, p.2). In contradiction, ICANN determined DotMusic's "logical <u>alliance</u> " operating under a regulated sector that is united by copyright lacked any "cohesion" of belonging to a community and was penalized with zero points.	Yes
Mainly Dedicated Organisation	Globally-Recognized organizations include the International Federation of Musicians (has United Nations consultative status), the International Federation of the Phonographic Industry (has United Nations consultative status and administers the <u>ISRC international standard code</u> for uniquely identifying sound recordings and music video recordings under <u>ISO 3901</u>), the International Federation of Arts Councils and Culture Agencies (IFACCA) and ReverbNation (<u>representing all music categories and music subsets in their entirety in over 100 countries</u>)	No	International Lesbian, Gay, Bisexual, Trans and Intersex Association (.GAY CPE Report, p.3)	Yes
Prexistence and Longevity	"The community as defined in the application was <u>not active prior to September 2007</u> " (.MUSIC CPE Report). The " <u>logical alliance</u> of communities that relate to music" (the defined community in 20A) existed before 2007. The string's cohesive regulated sector and copyright existed before 2007. DotMusic's supporting organizations, the IFPI and the FIM were founded in <u>1933</u> and <u>1948</u> respectively.	No	Yes.	Yes
Community Establishment	No.	0/4	Yes.	4/4
Nexus	"[t]here is no "established name" for the applied-for string to match...for a full score on Nexus" (.MUSIC CPE Report, p.5). Application	Link		Link	

Exhibit DIDP A61

§ 452. Courts always open; powers unrestricted by expiration of sessions

All courts of the United States shall be deemed always open for the purpose of filing proper papers, issuing and returning process, and making motions and orders.

The continued existence or expiration of a session of a court in no way affects the power of the court to do any act or take any proceeding.

(June 25, 1948, ch. 646, 62 Stat. 907; Pub. L. 88 139, § 2, Oct. 16, 1963, 77 Stat. 248.)

HISTORICAL AND REVISION NOTES

Based on title 28, U.S.C., 1940 ed., §§13 and 302 (Mar. 3, 1911, ch. 231, §§9, 189, 36 Stat. 1088, 1143; Mar. 2, 1929, ch. 488, §1, 45 Stat. 1475).

Sections 13 and 302 of title 28, U.S.C., 1940 ed., related only to district courts and the Court of Customs and Patent Appeals, and this section has been written to cover all other courts of the United States.

Other provisions of said section 302 of title 28, U.S.C., 1940 ed., are incorporated in sections 214, 456, and 604 of this title.

The phrase "always open" means "never closed" and signifies the time when a court can exercise its functions. With respect to matters enumerated by statute or rule as to which the court is "always open," there is no time when the court is without power to act. (Ex parte Branch, 63 Ala. 383, 387.)

Section 13 of title 28, U.S.C., 1940 ed., provided that "The district courts, as courts of admiralty and as courts of equity, shall be deemed always open * * *" for enumerated purposes, and that the judge "at chambers or in the clerk's office, and in vacation as well as in term," may make orders and issue process. The revised section omits all reference to the nature of the action or proceeding and enumeration of the acts which may be performed by the court. This is in accord with Rules 45(c) and 56 of the new Federal Rules of Criminal Procedure which contain similar provisions with respect to criminal procedure both in the courts of appeals and in the district courts.

Rules 6(c) and 77(a) of the Federal Rules of Civil Procedure contain provisions similar to the second and first paragraphs, respectively, of this section with respect to civil actions in district courts.

AMENDMENTS

1963 Pub. L. 88 139 substituted "expiration of sessions" for "terms" in section catchline, and "session" for "term" in text.

§ 453. Oaths of justices and judges

Each justice or judge of the United States shall take the following oath or affirmation before performing the duties of his office: "I, _____, do solemnly swear (or affirm) that I will administer justice without respect to persons, and do equal right to the poor and to the rich, and that I will faithfully and impartially discharge and perform all the duties incumbent upon me as _____ under the Constitution and laws of the United States. So help me God."

(June 25, 1948, ch. 646, 62 Stat. 907; Pub. L. 101 650, title IV, §404, Dec. 1, 1990, 104 Stat. 5124.)

HISTORICAL AND REVISION NOTES

Based on title 28, U.S.C., 1940 ed., §§241, 372, and District of Columbia Code, 1940 ed., §§11 203, 11 303 (R.S.D.C., §752, 18 Stat. pt. II, 90; Feb. 9, 1893, ch. 74, §3, 27 Stat. 435; Mar. 3, 1901, ch. 854, §223, 31 Stat. 1224; Mar. 3, 1911, ch. 231, §§136, 137, 257, 36 Stat. 1135, 1161; Feb. 25, 1919, ch. 29, §4, 40 Stat. 1157).

This section consolidates sections 11 203 and 11 303 of District of Columbia Code, 1940 ed., and section 372 of

title 28, U.S.C., 1940 ed., with that portion of section 241 of said title 28 providing that judges of the Court of Claims shall take an oath of office. The remainder of said section 241 comprises sections 171 and 173 of this title.

The phrase "justice or judge of the United States" was substituted for "justices of the Supreme Court, the circuit judges, and the district judges" appearing in said section 372, in order to extend the provisions of this section to judges of the Court of Claims, Customs Court, and Court of Customs and Patent Appeals and to all judges of any court which may be created by enactment of Congress. See definition in section 451 of this title.

The Attorney General has ruled that the expression "any judge of any court of the United States" applied to the Chief Justice and all judges of the Court of Claims. (21 Op. Atty. Gen. 449.)

AMENDMENTS

1990—Pub. L. 101-650 substituted "under the Constitution" for "according to the best of my abilities and understanding, agreeably to the Constitution".

EFFECTIVE DATE OF 1990 AMENDMENT

Amendment by Pub. L. 101 650 effective 90 days after Dec. 1, 1990, see section 407 of Pub. L. 101 650, set out as a note under section 332 of this title.

§ 454. Practice of law by justices and judges

Any justice or judge appointed under the authority of the United States who engages in the practice of law is guilty of a high misdemeanor.

(June 25, 1948, ch. 646, 62 Stat. 908.)

HISTORICAL AND REVISION NOTES

Based on title 28, U.S.C., 1940 ed., §373 (Mar. 3, 1911, ch. 231, §258, 36 Stat. 1161).

Changes in phraseology were made.

§ 455. Disqualification of justice, judge, or magistrate judge

(a) Any justice, judge, or magistrate judge of the United States shall disqualify himself in any proceeding in which his impartiality might reasonably be questioned.

(b) He shall also disqualify himself in the following circumstances:

(1) Where he has a personal bias or prejudice concerning a party, or personal knowledge of disputed evidentiary facts concerning the proceeding;

(2) Where in private practice he served as lawyer in the matter in controversy, or a lawyer with whom he previously practiced law served during such association as a lawyer concerning the matter, or the judge or such lawyer has been a material witness concerning it;

(3) Where he has served in governmental employment and in such capacity participated as counsel, adviser or material witness concerning the proceeding or expressed an opinion concerning the merits of the particular case in controversy;

(4) He knows that he, individually or as a fiduciary, or his spouse or minor child residing in his household, has a financial interest in the subject matter in controversy or in a party to the proceeding, or any other interest that could be substantially affected by the outcome of the proceeding;

(5) He or his spouse, or a person within the third degree of relationship to either of them, or the spouse of such a person:

- (i) Is a party to the proceeding, or an officer, director, or trustee of a party;
- (ii) Is acting as a lawyer in the proceeding;
- (iii) Is known by the judge to have an interest that could be substantially affected by the outcome of the proceeding;
- (iv) Is to the judge's knowledge likely to be a material witness in the proceeding.

(c) A judge should inform himself about his personal and fiduciary financial interests, and make a reasonable effort to inform himself about the personal financial interests of his spouse and minor children residing in his household.

(d) For the purposes of this section the following words or phrases shall have the meaning indicated:

- (1) "proceeding" includes pretrial, trial, appellate review, or other stages of litigation;
- (2) the degree of relationship is calculated according to the civil law system;
- (3) "fiduciary" includes such relationships as executor, administrator, trustee, and guardian;
- (4) "financial interest" means ownership of a legal or equitable interest, however small, or a relationship as director, adviser, or other active participant in the affairs of a party, except that:

- (i) Ownership in a mutual or common investment fund that holds securities is not a "financial interest" in such securities unless the judge participates in the management of the fund;
- (ii) An office in an educational, religious, charitable, fraternal, or civic organization is not a "financial interest" in securities held by the organization;
- (iii) The proprietary interest of a policy holder in a mutual insurance company, of a depositor in a mutual savings association, or a similar proprietary interest, is a "financial interest" in the organization only if the outcome of the proceeding could substantially affect the value of the interest;
- (iv) Ownership of government securities is a "financial interest" in the issuer only if the outcome of the proceeding could substantially affect the value of the securities.

(e) No justice, judge, or magistrate judge shall accept from the parties to the proceeding a waiver of any ground for disqualification enumerated in subsection (b). Where the ground for disqualification arises only under subsection (a), waiver may be accepted provided it is preceded by a full disclosure on the record of the basis for disqualification.

(f) Notwithstanding the preceding provisions of this section, if any justice, judge, magistrate judge, or bankruptcy judge to whom a matter has been assigned would be disqualified, after substantial judicial time has been devoted to the matter, because of the appearance or discovery, after the matter was assigned to him or her, that he or she individually or as a fiduciary, or his or her spouse or minor child residing in his or her household, has a financial interest in a party (other than an interest that could be substantially affected by the outcome), disqualification is not required if the justice, judge,

magistrate judge, bankruptcy judge, spouse or minor child, as the case may be, divests himself or herself of the interest that provides the grounds for the disqualification.

(June 25, 1948, ch. 646, 62 Stat. 908; Pub. L. 93 512, §1, Dec. 5, 1974, 88 Stat. 1609; Pub. L. 95-598, title II, §214(a), (b), Nov. 6, 1978, 92 Stat. 2661; Pub. L. 100 702, title X, §1007, Nov. 19, 1988, 102 Stat. 4667; Pub. L. 101 650, title III, §321, Dec. 1, 1990, 104 Stat. 5117.)

HISTORICAL AND REVISION NOTES

Based on title 28, U.S.C., 1940 ed., §24 (Mar. 3, 1911, ch. 231, §20, 36 Stat. 1090).

Section 24 of title 28, U.S.C., 1940 ed., applied only to district judges. The revised section is made applicable to all justices and judges of the United States.

The phrase "in which he has a substantial interest" was substituted for "concerned in interest in any suit."

The provision of section 24 of title 28, U.S.C., 1940 ed., as to giving notice of disqualification to the "senior circuit judge," and words "and thereupon such proceedings shall be had as are provided in sections 17 and 18 of this title," were omitted as unnecessary and covered by section 291 et seq. of this title relating to designation and assignment of judges. Such provision is not made by statute in case of disqualification or incapacity, for other cause. See sections 140, 143, and 144 of this title. If a judge or clerk of court is remiss in failing to notify the chief judge of the district or circuit, the judicial council of the circuit has ample power under section 332 of this title to apply a remedy.

Relationship to a party's attorney is included in the revised section as a basis of disqualification in conformity with the views of judges cognizant of the grave possibility of undesirable consequences resulting from a less inclusive rule.

Changes were made in phraseology.

AMENDMENTS

1988 Subsec. (f). Pub. L. 100 702 added subsec. (f).

1978 Pub. L. 95 598 struck out references to referees in bankruptcy in section catchline and in subsecs. (a) and (e).

1974 Pub. L. 93 512 substituted "Disqualification of justice, judge, magistrate, or referee in bankruptcy" for "Interest of justice or judge" in section catchline, reorganized structure of provisions, and expanded applicability to include magistrates and referees in bankruptcy and grounds for which disqualification may be based, and inserted provisions relating to waiver of disqualification.

CHANGE OF NAME

Words "magistrate judge" substituted for "magistrate" in section catchline and wherever appearing in subsecs. (a), (e), and (f) pursuant to section 321 of Pub. L. 101 650, set out as a note under section 631 of this title.

EFFECTIVE DATE OF 1978 AMENDMENT

Amendment by Pub. L. 95 598 effective Oct. 1, 1979, see section 402(c) of Pub. L. 95 598, set out as an Effective Date note preceding section 101 of Title 11, Bankruptcy. For procedures relating to Bankruptcy matters during transition period see note preceding section 151 of this title.

EFFECTIVE DATE OF 1974 AMENDMENT

Section 3 of Pub. L. 93 512 provided that: "This Act [amending this section] shall not apply to the trial of any proceeding commenced prior to the date of this Act [Dec. 5, 1974], nor to appellate review of any proceeding which was fully submitted to the reviewing court prior to the date of this Act."

§ 456. Traveling expenses of justices and judges; official duty stations

(a) The Director of the Administrative Office of the United States Courts shall pay each justice or judge of the United States, and each retired justice or judge recalled or designated and assigned to active duty, while attending court or transacting official business at a place other than his official duty station for any continuous period of less than thirty calendar days (1) all necessary transportation expenses certified by the justice or judge; and (2) payments for subsistence expenses at rates or in amounts which the Director establishes, in accordance with regulations which the Director shall prescribe with the approval of the Judicial Conference of the United States and after considering the rates or amounts set by the Administrator of General Services and the President pursuant to section 5702 of title 5. The Director of the Administrative Office of the United States Courts shall also pay each justice or judge of the United States, and each retired justice or judge recalled or designated and assigned to active duty, while attending court or transacting official business under an assignment authorized under chapter 13 of this title which exceeds in duration a continuous period of thirty calendar days, all necessary transportation expenses and actual and necessary expenses of subsistence actually incurred, notwithstanding the provisions of section 5702 of title 5, in accordance with regulations which the Director shall prescribe with the approval of the Judicial Conference of the United States.

(b) The official duty station of the Chief Justice of the United States, the Justices of the Supreme Court of the United States, and the judges of the United States Court of Appeals for the District of Columbia Circuit, the United States Court of Appeals for the Federal Circuit, and the United States District Court for the District of Columbia shall be the District of Columbia.

(c) The official duty station of the judges of the United States Court of International Trade shall be New York City.

(d) The official duty station of each district judge shall be that place where a district court holds regular sessions at or near which the judge performs a substantial portion of his judicial work, which is nearest the place where he maintains his actual abode in which he customarily lives.

(e) The official duty station of a circuit judge shall be that place where a circuit or district court holds regular sessions at or near which the judge performs a substantial portion of his judicial work, or that place where the Director provides chambers to the judge where he performs a substantial portion of his judicial work, which is nearest the place where he maintains his actual abode in which he customarily lives.

(f) The official duty station of a retired judge shall be established in accordance with section 374 of this title.

(g) Each circuit or district judge whose official duty station is not fixed expressly by this section shall notify the Director of the Administrative Office of the United States Courts in writ-

ing of his actual abode and official duty station upon his appointment and from time to time thereafter as his official duty station may change.

HISTORICAL AND REVISION NOTES

Based on section 1102(d) of title 26, U.S.C., 1940 ed., Internal Revenue Code, and title 28, U.S.C., 1940 ed., §§218, 270, 296, 296a, 302, 374, 449 (Mar. 3, 1911, ch. 231, §§189, 259, 36 Stat. 1143, 1161, and §187(a) as added Oct. 10, 1940, ch. 843, §1, 54 Stat. 1101; and section 307 as added Aug. 7, 1939, ch. 501, §1, 53 Stat. 1224; Sept. 14, 1922, ch. 306, §2, 42 Stat. 838; Feb. 24, 1925, ch. 301, §2, 43 Stat. 965; May 29, 1928, ch. 852, §711, 45 Stat. 882; Mar. 2, 1929, ch. 485, §1, 45 Stat. 1475; June 23, 1930, ch. 573, §1, 46 Stat. 799; Feb. 10, 1939, ch. 2, §1102(d), 53 Stat. 159; Apr. 22, 1940, ch. 126, 54 Stat. 149; May 3, 1945, ch. 106, title I, §1, 59 Stat. 127; May 21, 1945, ch. 129, title IV, 59 Stat. 197; July 5, 1946, ch. 541, title IV, 60 Stat. 477).

Section 270 of title 28, U.S.C., 1940 ed., related to the Chief Justice and each judge of the Court of Claims and provided for payment of expenses on order of court.

Sections 296, 296a of title 28, U.S.C., 1940 ed., provided for payment of such expenses of the Customs Court judges.

Section 302 of title 28, U.S.C., 1940 ed., provided for the payment of expenses of a judge of the Court of Customs and Patent Appeals upon his certificate. It contained no \$10 limitation upon his daily subsistence expense and in addition authorized the necessary expenses for travel and attendance of one stenographic clerk who accompanied him. This latter provision is the basis for section 834 of this title. Other provisions of said section 302 of title 28, U.S.C., 1940 ed., are incorporated in sections 214 and 452 of this title.

Section 374 of title 28, U.S.C., 1940 ed., related to circuit justices, circuit judges and district judges, including district judges in Alaska, Hawaii, and Puerto Rico. References to these territories is omitted as unnecessary. Provision for Alaska judges is covered by section 460 of this title, and section 114 of title 48, U.S.C., 1940 ed., Territories and Insular Possessions, as amended by a separate section in the bill to enact this revision. Hawaii and Puerto Rico are included as districts by sections 91 and 119 of this title, and judges thereof are "judges of the United States" as defined in section 451 of this title.

The inconsistent provision of said section 270 of title 28, U.S.C., 1940 ed., with reference to payment on order of court was omitted to permit payment to every judge on his certificate.

The \$10 per day subsistence limitation applicable to all other judges was extended to the judges of the Court of Customs and Patent Appeals.

The provision of said section 270 of title 28, U.S.C., 1940 ed., relating to traveling expenses of commissioners and stenographers is incorporated in sections 792 and 794 of this title.

The provisions of said section 296 of title 28, U.S.C., 1940 ed., relating to organization of the Customs Court are the basis of sections 251, 252, 253, and 254 of this title. Other provisions of said section 296 are incorporated in sections 1581, 2071, 2639, and 2640 of this title, and the retirement provisions of that section are covered by sections 371 and 372 of this title.

The provision of section 296 of title 28, U.S.C., 1940 ed., expenses of retired judges was made applicable to all judges.

The provision of section 218 of title 28, U.S.C., 1940 ed., for payment of travel expenses of judges attending

Syllabus

LITEKY ET AL. *v.* UNITED STATESCERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR
THE ELEVENTH CIRCUIT

No. 92–6921. Argued November 3, 1993—Decided March 7, 1994

Before and during petitioners' 1991 trial on federal criminal charges, the District Judge denied defense motions that he recuse himself pursuant to 28 U. S. C. § 455(a), which requires a federal judge to "disqualify himself in any proceeding in which his impartiality might reasonably be questioned." The first motion was based on rulings and statements this same judge made, which allegedly displayed impatience, disregard, and animosity toward the defense, during and after petitioner Bourgeois' 1983 bench trial on similar charges. The second motion was founded on the judge's admonishment of Bourgeois' counsel and co-defendants in front of the jury at the 1991 trial. In affirming petitioners' convictions, the Court of Appeals agreed with the District Judge that matters arising from judicial proceedings are not a proper basis for recusal.

Held: Required recusal under § 455(a) is subject to the limitation that has come to be known as the "extrajudicial source" doctrine. Pp. 543–556.

(a) The doctrine—see *United States v. Grinnell Corp.*, 384 U. S. 563, 583—applies to § 455(a). It was developed under § 144, which requires disqualification for "personal bias or prejudice." That phrase is repeated as a recusal ground in § 455(b)(1), and § 455(a), addressing disqualification for appearance of partiality, also covers "bias or prejudice." The absence of the word "personal" in § 455(a) does not preclude the doctrine's application, since the textual basis for the doctrine is the pejorative connotation of the words "bias or prejudice," which indicate a judicial predisposition that is *wrongful* or *inappropriate*. Similarly, because the term "partiality" refers only to such favoritism as is, for some reason, wrongful or inappropriate, § 455(a)'s requirement of recusal *whenever* there exists a genuine question concerning a judge's impartiality does not preclude the doctrine's application. A contrary finding would cause the statute, in a significant sense, to contradict itself, since (petitioners acknowledge) § 455(b)(1) embodies the doctrine, and § 455(a) duplicates § 455(b)'s protection with regard to "bias and prejudice." Pp. 543–553.

(b) However, it is better to speak of the existence of an "extrajudicial source" *factor*, than of a *doctrine*, because the presence of such a source does not necessarily establish bias, and its absence does not necessarily

Opinion of the Court

preclude bias. The consequences of that factor are twofold for purposes of this case. First, judicial rulings alone almost never constitute valid basis for a bias or partiality recusal motion. See *Grinnell, supra*, at 583. Apart from surrounding comments or accompanying opinion, they cannot possibly show reliance on an extrajudicial source; and, absent such reliance, they require recusal only when they evidence such deep-seated favoritism or antagonism as would make fair judgment impossible. Second, opinions formed by the judge on the basis of facts introduced or events occurring during current or prior proceedings are not grounds for a recusal motion unless they display a similar degree of favoritism or antagonism. Pp. 554–556.

(c) Application of the foregoing principles to the facts of this case demonstrates that none of the grounds petitioners assert required disqualification. They all consist of judicial rulings, routine trial administration efforts, and ordinary admonishments (whether or not legally supportable) to counsel and to witnesses. All occurred in the course of judicial proceedings, *and* neither (1) relied upon knowledge acquired outside such proceedings nor (2) displayed deep-seated and unequivocal antagonism that would render fair judgment impossible. P. 556.

973 F. 2d 910, affirmed.

SCALIA, J., delivered the opinion of the Court, in which REHNQUIST, C. J., and O’CONNOR, THOMAS, and GINSBURG, JJ., joined. KENNEDY, J., filed an opinion concurring in the judgment, in which BLACKMUN, STEVENS, and SOUTER, JJ., joined, *post*, p. 557.

Peter Thompson, by appointment of the Court, 509 U. S. 920, argued the cause and filed briefs for petitioners.

Thomas G. Hungar argued the cause for the United States. With him on the brief were *Solicitor General Days*, *Acting Assistant Attorney General Keeney*, *Deputy Solicitor General Bryson*, and *Joel M. Gershowitz*.

JUSTICE SCALIA delivered the opinion of the Court.

Section 455(a) of Title 28 of the United States Code requires a federal judge to “disqualify himself in any proceeding in which his impartiality might reasonably be questioned.” This case presents the question whether required recusal under this provision is subject to the limitation that has come to be known as the “extrajudicial source” doctrine.

Opinion of the Court

I

In the 1991 trial at issue here, petitioners were charged with willful destruction of property of the United States in violation of 18 U. S. C. § 1361. The indictment alleged that they had committed acts of vandalism, including the spilling of human blood on walls and various objects, at the Fort Benning Military Reservation. Before trial petitioners moved to disqualify the District Judge pursuant to 28 U. S. C. § 455(a). The motion relied on events that had occurred during and immediately after an earlier trial, involving petitioner Bourgeois, before the same District Judge.

In the 1983 bench trial, Bourgeois, a Catholic priest of the Maryknoll order, had been tried and convicted of various misdemeanors committed during a protest action, also on the federal enclave of Fort Benning. Petitioners claimed that recusal was required in the present case because the judge had displayed “impatience, disregard for the defense and animosity” toward Bourgeois, Bourgeois’ codefendants, and their beliefs. The alleged evidence of that included the following words and acts by the judge: stating at the outset of the trial that its purpose was to try a criminal case and not to provide a political forum; observing after Bourgeois’ opening statement (which described the purpose of his protest) that the statement ought to have been directed toward the anticipated evidentiary showing; limiting defense counsel’s cross-examination; questioning witnesses; periodically cautioning defense counsel to confine his questions to issues material to trial; similarly admonishing witnesses to keep answers responsive to actual questions directed to material issues; admonishing Bourgeois that closing argument was not a time for “making a speech” in a “political forum”; and giving Bourgeois what petitioners considered to be an excessive sentence. The final asserted ground for disqualification—and the one that counsel for petitioners described at oral argument as the most serious—was the judge’s interruption of the closing argument of one of Bourgeois’ codefendants,

Opinion of the Court

instructing him to cease the introduction of new facts, and to restrict himself to discussion of evidence already presented.

The District Judge denied petitioners' disqualification motion, stating that matters arising from judicial proceedings were not a proper basis for recusal. At the outset of the trial, Bourgeois' counsel informed the judge that he intended to focus his defense on the political motivation for petitioners' actions, which was to protest United States Government involvement in El Salvador. The judge said that he would allow petitioners to state their political purposes in opening argument and to testify about them as well, but that he would not allow long speeches or discussions concerning Government policy. When, in the course of opening argument, Bourgeois' counsel began to explain the circumstances surrounding certain events in El Salvador, the prosecutor objected, and the judge stated that he would not allow discussion about events in El Salvador. He then instructed defense counsel to limit his remarks to what he expected the evidence to show. At the close of the prosecution's case, Bourgeois renewed his disqualification motion, adding as grounds for it the District Judge's "admonishing [him] in front of the jury" regarding the opening statement, and the District Judge's unspecified "admonishing [of] others," in particular Bourgeois' two *pro se* codefendants. The motion was again denied. Petitioners were convicted of the offense charged.

Petitioners appealed, claiming that the District Judge violated 28 U. S. C. § 455(a) in refusing to recuse himself. The Eleventh Circuit affirmed the convictions, agreeing with the District Court that "matters arising out of the course of judicial proceedings are not a proper basis for recusal." 973 F. 2d 910 (1992). We granted certiorari. 508 U. S. 939 (1993).

II

Required judicial recusal for bias did not exist in England at the time of Blackstone. 3 W. Blackstone, Commentaries

Opinion of the Court

*361. Since 1792, federal statutes have compelled district judges to recuse themselves when they have an interest in the suit, or have been counsel to a party. See Act of May 8, 1792, ch. 36, § 11, 1 Stat. 278. In 1821, the basis of recusal was expanded to include all judicial relationship or connection with a party that would in the judge's opinion make it improper to sit. Act of Mar. 3, 1821, ch. 51, 3 Stat. 643. Not until 1911, however, was a provision enacted requiring district-judge recusal for bias *in general*. In its current form, codified at 28 U.S.C. § 144, that provision reads as follows:

“Whenever a party to any proceeding in a district court makes and files a timely and sufficient affidavit that the judge before whom the matter is pending has a personal bias or prejudice either against him or in favor of any adverse party, such judge shall proceed no further therein, but another judge shall be assigned to hear such proceeding.

“The affidavit shall state the facts and the reasons for the belief that bias or prejudice exists, and shall be filed not less than ten days before the beginning of the term at which the proceeding is to be heard, or good cause shall be shown for failure to file it within such time. A party may file only one such affidavit in any case. It shall be accompanied by a certificate of counsel of record stating that it is made in good faith.”

Under § 144 and its predecessor, there came to be generally applied in the courts of appeals a doctrine, more standard in its formulation than clear in its application, requiring—to take its classic formulation found in an oft-cited opinion by Justice Douglas for this Court—that “[t]he alleged bias and prejudice to be disqualifying [under § 144] must stem from an extrajudicial source.” *United States v. Grinnell Corp.*, 384 U.S. 563, 583 (1966). We say that the doctrine was less than entirely clear in its application for

Opinion of the Court

several reasons. First, *Grinnell* (the only opinion of ours to recite the doctrine) clearly meant by “extrajudicial source” a source outside the judicial proceeding at hand—which would include as extrajudicial sources earlier judicial proceedings conducted by the same judge (as are at issue here).¹ Yet many, perhaps most, Courts of Appeals considered knowledge (and the resulting attitudes) that a judge properly acquired in an earlier proceeding *not* to be “extrajudicial.” See, e. g., *Lyons v. United States*, 325 F. 2d 370, 376 (CA9), cert. denied, 377 U. S. 969 (1964); *Craven v. United States*, 22 F. 2d 605, 607–608 (CA1 1927). Secondly, the doctrine was often quoted as justifying the refusal to consider trial *rulings* as the basis for §144 recusal. See, e. g., *Toth v. Trans World Airlines, Inc.*, 862 F. 2d 1381, 1387–1388 (CA9 1988); *Liberty Lobby, Inc. v. Dow Jones & Co.*, 838 F. 2d 1287, 1301 (CA DC), cert. denied, 488 U. S. 825 (1988). But trial *rulings* have a judicial *expression* rather than a judicial *source*. They may well be based upon extrajudicial knowledge or motives. Cf. *In re International Business Machines Corp.*, 618 F. 2d 923, 928, n. 6 (CA2 1980). And finally, even in cases in which the “source” of the bias or prejudice was clearly the proceedings themselves (for example, testimony introduced or an event occurring at trial which produced unsuppressible judicial animosity), the supposed doctrine would not necessarily be applied. See, e. g., *Davis v. Board of School Comm’rs of Mobile County*, 517 F. 2d 1044, 1051 (CA5 1975) (doctrine has “pervasive bias” exception), cert. denied, 425 U. S. 944 (1976);

¹That is clear when the language from *Grinnell* excerpted above is expanded to include its entire context: “The alleged bias and prejudice to be disqualifying must stem from an extrajudicial source and result in an opinion on the merits on some basis other than what the judge learned from his participation in the case. *Berger v. United States*, 255 U. S. 22, 31. Any adverse attitudes that [the district judge in the present case] evinced toward the defendants were based on his study of the depositions and briefs which the parties had requested him to make.” 384 U. S., at 583. The cited case, *Berger*, had found recusal required on the basis of judicial remarks made in an earlier proceeding.

Opinion of the Court

Rice v. McKenzie, 581 F. 2d 1114, 1118 (CA4 1978) (doctrine “has always had limitations”).

Whatever the precise contours of the “extrajudicial source” doctrine (a subject to which we will revert shortly), it is the contention of petitioners that the doctrine has no application to § 455(a). Most Courts of Appeals to consider the matter have rejected this contention, see *United States v. Barry*, 961 F. 2d 260, 263 (CAD9 1992); *United States v. Sammons*, 918 F. 2d 592, 599 (CA6 1990); *McWhorter v. Birmingham*, 906 F. 2d 674, 678 (CA11 1990); *United States v. Mitchell*, 886 F. 2d 667, 671 (CA4 1989); *United States v. Merkt*, 794 F. 2d 950, 960 (CA5 1986), cert. denied, 480 U. S. 946 (1987); *Johnson v. Trueblood*, 629 F. 2d 287, 290–291 (CA3 1980), cert. denied, 450 U. S. 999 (1981); *United States v. Sibla*, 624 F. 2d 864, 869 (CA9 1980). Some, however, have agreed with it, see *United States v. Chantal*, 902 F. 2d 1018, 1023–1024 (CA1 1990); cf. *United States v. Coven*, 662 F. 2d 162, 168–169 (CA2 1981) (semble), cert. denied, 456 U. S. 916 (1982). To understand the arguments pro and con it is necessary to appreciate the major changes in prior law effected by the revision of § 455 in 1974.

Before 1974, § 455 was nothing more than the then-current version of the 1821 prohibition against a judge’s presiding who has an interest in the case or a relationship to a party. It read, quite simply:

“Any justice or judge of the United States shall disqualify himself in any case in which he has a substantial interest, has been of counsel, is or has been a material witness, or is so related to or connected with any party or his attorney as to render it improper, in his opinion, for him to sit on the trial, appeal, or other proceeding therein.” 28 U. S. C. § 455 (1970 ed.).

The 1974 revision made massive changes, so that § 455 now reads as follows:

Opinion of the Court

“(a) Any justice, judge, or magistrate of the United States shall disqualify himself in any proceeding in which his impartiality might reasonably be questioned.

“(b) He shall also disqualify himself in the following circumstances:

“(1) Where he has a personal bias or prejudice concerning a party, or personal knowledge of disputed evidentiary facts concerning the proceeding;

“(2) Where in private practice he served as lawyer in the matter in controversy, or a lawyer with whom he previously practiced law served during such association as a lawyer concerning the matter, or the judge or such lawyer has been a material witness concerning it;

“(3) Where he has served in governmental employment and in such capacity participated as counsel, adviser or material witness concerning the proceeding or expressed an opinion concerning the merits of the particular case in controversy;

“(4) He knows that he, individually or as a fiduciary, or his spouse or minor child residing in his household, has a financial interest in the subject matter in controversy or in a party to the proceeding, or any other interest that could be substantially affected by the outcome of the proceeding;

“(5) He or his spouse, or a person within the third degree of relationship to either of them, or the spouse of such a person:

“(i) Is a party to the proceeding, or an officer, director, or trustee of a party;

“(ii) Is acting as a lawyer in the proceeding;

“(iii) Is known by the judge to have an interest that could be substantially affected by the outcome of the proceeding;

“(iv) Is to the judge’s knowledge likely to be a material witness in the proceeding.”

Opinion of the Court

Almost all of the revision (paragraphs (b)(2) through (b)(5)) merely rendered objective and spelled out in detail the “interest” and “relationship” grounds of recusal that had previously been covered by § 455. But the other two paragraphs of the revision brought into § 455 elements of general “bias and prejudice” recusal that had previously been addressed only by § 144. Specifically, paragraph (b)(1) entirely duplicated the grounds of recusal set forth in § 144 (“bias or prejudice”), but (1) made them applicable to *all* justices, judges, and magistrates (and not just district judges), and (2) placed the obligation to identify the existence of those grounds upon the judge himself, rather than requiring recusal only in response to a party affidavit.

Subsection (a), the provision at issue here, was an entirely new “catchall” recusal provision, covering both “interest or relationship” and “bias or prejudice” grounds, see *Liljeberg v. Health Services Acquisition Corp.*, 486 U. S. 847 (1988)—but requiring them *all* to be evaluated on an *objective* basis, so that what matters is not the reality of bias or prejudice but its appearance. Quite simply and quite universally, recusal was required whenever “impartiality might reasonably be questioned.”

What effect these changes had upon the “extrajudicial source” doctrine—whether they in effect render it obsolete, of continuing relevance only to § 144, which seems to be properly invocable only when § 455(a) can be invoked anyway—depends upon what the basis for that doctrine was. Petitioners suggest that it consisted of the limitation of § 144 to “*personal* bias or prejudice,” bias or prejudice officially acquired being different from “personal” bias or prejudice. And, petitioners point out, while § 455(b)(1) retains the phrase “personal bias or prejudice,” § 455(a) proscribes all partiality, not merely the “personal” sort.

It is true that a number of Courts of Appeals have relied upon the word “personal” in restricting § 144 to extrajudicial sources, see, *e. g.*, *Craven v. United States*, 22 F. 2d 605, 607–

Opinion of the Court

608 (CA1 1927); *Ferrari v. United States*, 169 F. 2d 353, 355 (CA9 1948). And several cases have cited the absence of that word as a reason for excluding that restriction from § 455(a), see *United States v. Coven*, *supra*, at 168, cert. denied, 456 U. S. 916 (1982); *Panzardi-Alvarez v. United States*, 879 F. 2d 975, 983–984, and n. 6 (CA1), cert. denied, 493 U. S. 1082 (1989). It seems to us, however, that that mistakes the basis for the “extrajudicial source” doctrine. Petitioners’ suggestion that we relied upon the word “personal” in our *Grinnell* opinion is simply in error. The only reason *Grinnell* gave for its “extrajudicial source” holding was citation of our opinion almost half a century earlier in *Berger v. United States*, 255 U. S. 22 (1921). But that case, and the case which it in turn cited, *Ex parte American Steel Barrel Co.*, 230 U. S. 35 (1913), relied not upon the word “personal” in § 144, but upon its provision requiring the recusal affidavit to be filed 10 days before the beginning of the court term. That requirement was the reason we found it obvious in *Berger* that the affidavit “must be based upon facts antedating the trial, not those occurring during the trial,” 255 U. S., at 34; and the reason we said in *American Steel Barrel* that the recusal statute “was never intended to enable a discontented litigant to oust a judge because of adverse rulings made, . . . but to prevent his future action in the pending cause,” 230 U. S., at 44.

In our view, the proper (though unexpressed) rationale for *Grinnell*, and the basis of the modern “extrajudicial source” doctrine, is not the statutory term “personal”—for several reasons. First and foremost, that explanation is simply not the semantic success it pretends to be. Bias and prejudice seem to us not divided into the “personal” kind, which is offensive, and the official kind, which is perfectly all right. As generally used, these are pejorative terms, describing dispositions that are *never* appropriate. It is common to speak of “personal bias” or “personal prejudice” without meaning the adjective to do anything except emphasize the

Opinion of the Court

idiosyncratic nature of bias and prejudice, and certainly without implying that there is some other “nonpersonal,” benign category of those mental states. In a similar vein, one speaks of an individual’s “personal preference,” without implying that he could also have a “nonpersonal preference.” Secondly, interpreting the term “personal” to create a complete dichotomy between court-acquired and extrinsically acquired bias produces results so intolerable as to be absurd. Imagine, for example, a lengthy trial in which the presiding judge for the first time learns of an obscure religious sect, and acquires a passionate hatred for all its adherents. This would be “official” rather than “personal” bias, and would provide no basis for the judge’s recusing himself.

It seems to us that the origin of the “extrajudicial source” doctrine, and the key to understanding its flexible scope (or the so-called “exceptions” to it), is simply the pejorative connotation of the words “bias or prejudice.” Not *all* unfavorable disposition towards an individual (or his case) is properly described by those terms. One would not say, for example, that world opinion is biased or prejudiced against Adolf Hitler. The words connote a favorable or unfavorable disposition or opinion that is somehow *wrongful* or *inappropriate*, either because it is undeserved, or because it rests upon knowledge that the subject ought not to possess (for example, a criminal juror who has been biased or prejudiced by receipt of inadmissible evidence concerning the defendant’s prior criminal activities), or because it is excessive in degree (for example, a criminal juror who is so inflamed by properly admitted evidence of a defendant’s prior criminal activities that he will vote guilty regardless of the facts). The “extrajudicial source” doctrine is one application of this pejorativeness requirement to the terms “bias” and “prejudice” as they are used in §§144 and 455(b)(1) with specific reference to the work of judges.

The judge who presides at a trial may, upon completion of the evidence, be exceedingly ill disposed towards the defend-

Opinion of the Court

ant, who has been shown to be a thoroughly reprehensible person. But the judge is not thereby recusable for bias or prejudice, since his knowledge and the opinion it produced were properly and necessarily acquired in the course of the proceedings, and are indeed sometimes (as in a bench trial) necessary to completion of the judge's task. As Judge Jerome Frank pithily put it: "Impartiality is not gullibility. Disinterestedness does not mean child-like innocence. If the judge did not form judgments of the actors in those court-house dramas called trials, he could never render decisions." *In re J. P. Linahan, Inc.*, 138 F. 2d 650, 654 (CA2 1943). Also not subject to deprecatory characterization as "bias" or "prejudice" are opinions held by judges as a result of what they learned in earlier proceedings. It has long been regarded as normal and proper for a judge to sit in the same case upon its remand, and to sit in successive trials involving the same defendant.

It is wrong in theory, though it may not be too far off the mark as a practical matter, to suggest, as many opinions have, that "extrajudicial source" is the *only* basis for establishing disqualifying bias or prejudice. It is the *only common* basis, but not the exclusive one, since it is not the *exclusive* reason a predisposition can be wrongful or inappropriate. A favorable or unfavorable predisposition can also deserve to be characterized as "bias" or "prejudice" because, even though it springs from the facts adduced or the events occurring at trial, it is so extreme as to display clear inability to render fair judgment. (That explains what some courts have called the "pervasive bias" exception to the "extrajudicial source" doctrine. See, e. g., *Davis v. Board of School Comm'rs of Mobile County*, 517 F. 2d 1044, 1051 (CA5 1975), cert. denied, 425 U. S. 944 (1976).)

With this understanding of the "extrajudicial source" limitation in §§144 and 455(b)(1), we turn to the question whether it appears in §455(a) as well. Petitioners' argument for the negative based upon the mere absence of the

Opinion of the Court

word “personal” is, for the reasons described above, not persuasive. Petitioners also rely upon the categorical nature of § 455’s language: Recusal is required *whenever* there exists a genuine question concerning a judge’s impartiality, and not merely when the question arises from an extrajudicial source. A similar “plain-language” argument could be made, however, with regard to §§ 144 and 455(b)(1): They apply *whenever* bias or prejudice exists, and not merely when it derives from an extrajudicial source. As we have described, the latter argument is invalid because the pejorative connotation of the terms “bias” and “prejudice” demands that they be applied only to judicial predispositions that go beyond what is normal and acceptable. We think there is an equivalent pejorative connotation, with equivalent consequences, to the term “partiality.” See American Heritage Dictionary 1319 (3d ed. 1992) (“partiality” defined as “[f]avorable prejudice or bias”). A prospective juror in an insurance-claim case may be stricken as partial if he always votes for insurance companies; but not if he always votes for the party whom the terms of the contract support. “Partiality” does not refer to all favoritism, but only to such as is, for some reason, wrongful or inappropriate. Impartiality is not gullibility. Moreover, even if the pejorative connotation of “partiality” were not enough to import the “extrajudicial source” doctrine into § 455(a), the “reasonableness” limitation (recusal is required only if the judge’s impartiality “might *reasonably* be questioned”) would have the same effect. To demand the sort of “child-like innocence” that elimination of the “extrajudicial source” limitation would require is not reasonable.

Declining to find in the language of § 455(a) a limitation which (petitioners acknowledge) *is* contained in the language of § 455(b)(1) would cause the statute, in a significant sense, to contradict itself. As we have described, § 455(a) expands the protection of § 455(b), but duplicates some of its protection as well—not only with regard to bias and prejudice but also with regard to interest and relationship. Within the

Opinion of the Court

area of overlap, it is unreasonable to interpret § 455(a) (unless the language *requires* it) as implicitly eliminating a limitation explicitly set forth in § 455(b). It would obviously be wrong, for example, to hold that “impartiality could reasonably be questioned” simply because one of the parties is in the fourth degree of relationship to the judge. Section 455(b)(5), which addresses the matter of relationship specifically, ends the disability at the *third* degree of relationship, and that should obviously govern for purposes of § 455(a) as well. Similarly, § 455(b)(1), which addresses the matter of personal bias and prejudice specifically, contains the “extra-judicial source” limitation—and *that* limitation (since nothing in the text contradicts it) should govern for purposes of § 455(a) as well.²

²JUSTICE KENNEDY asserts that what we have said in this paragraph contradicts the proposition, established in *Liljeberg v. Health Services Acquisition Corp.*, 486 U. S. 847 (1988), that “subsections (a) and (b), while addressing many of the same underlying circumstances, are autonomous in operation.” *Post*, at 566. *Liljeberg* established no such thing. It established that subsection (a) requires recusal in some circumstances where subsection (b) does not—but that is something quite different from “autonomy,” which in the context in which JUSTICE KENNEDY uses it means that the one subsection is to be interpreted and applied without reference to the other.

It is correct that subsection (a) has a “broader reach” than subsection (b), *post*, at 567, but the provisions obviously have some ground in common as well, and should not be applied inconsistently there. *Liljeberg* concerned a respect in which subsection (a) *did* go beyond (b). Since subsection (a) deals with the *objective appearance* of partiality, any limitations contained in (b) that consist of a subjective-knowledge requirement are obviously inapplicable. Subsection (a) also goes beyond (b) in another important respect: It covers *all* aspects of partiality, and not merely those specifically addressed in subsection (b). However, when one of those aspects addressed in (b) *is* at issue, it is poor statutory construction to interpret (a) as nullifying the limitations (b) provides, except to the extent the text requires. Thus, as we have said, under subsection (a) as under (b)(5), fourth degree of kinship will not do.

What is at issue in the present case *is* an aspect of “partiality” already addressed in (b), personal bias or prejudice. The “objective appearance” principle of subsection (a) makes irrelevant the subjective limitation of

Opinion of the Court

Petitioners suggest that applying the “extrajudicial source” limitation to § 455(a) will cause disqualification of a trial judge to be more easily obtainable upon remand of a case by an appellate court than upon direct motion. We do not see why that necessarily follows; and if it does, why it is necessarily bad. Federal appellate courts’ ability to assign a case to a different judge on remand rests not on the recusal statutes alone, but on the appellate courts’ statutory power to “require such further proceedings to be had as may be just under the circumstances,” 28 U. S. C. § 2106. That may permit a different standard, and there may be pragmatic reasons for a different standard. We do not say so—but merely say that the standards applied on remand are irrelevant to the question before us here.

For all these reasons, we think that the “extrajudicial source” doctrine, as we have described it, applies to § 455(a). As we have described it, however, there is not much doctrine to the doctrine. The fact that an opinion held by a judge derives from a source outside judicial proceedings is not a *necessary* condition for “bias or prejudice” recusal, since predispositions developed during the course of a trial will sometimes (albeit rarely) suffice. Nor is it a *sufficient* condition for “bias or prejudice” recusal, since *some* opinions acquired outside the context of judicial proceedings (for example, the judge’s view of the law acquired in scholarly reading) will *not* suffice. Since neither the presence of an extrajudicial source necessarily establishes bias, nor the absence of an extrajudicial source necessarily precludes bias, it would be

(b)(1): The judge does not have to be *subjectively* biased or prejudiced, so long as he *appears* to be so. But nothing in subsection (a) eliminates the longstanding limitation of (b)(1), that “personal bias or prejudice” does not consist of a disposition that fails to satisfy the “extrajudicial source” doctrine. The objective appearance of an adverse disposition attributable to information acquired in a prior trial is not an objective appearance of personal bias or prejudice, and hence not an objective appearance of improper partiality.

Opinion of the Court

better to speak of the existence of a significant (and often determinative) “extrajudicial source” *factor*, than of an “extrajudicial source” *doctrine*, in recusal jurisprudence.

The facts of the present case do not require us to describe the consequences of that factor in complete detail. It is enough for present purposes to say the following: First, judicial rulings alone almost never constitute a valid basis for a bias or partiality motion. See *United States v. Grinnell Corp.*, 384 U. S., at 583. In and of themselves (*i. e.*, apart from surrounding comments or accompanying opinion), they cannot possibly show reliance upon an extrajudicial source; and can only in the rarest circumstances evidence the degree of favoritism or antagonism required (as discussed below) when no extrajudicial source is involved. Almost invariably, they are proper grounds for appeal, not for recusal. Second, opinions formed by the judge on the basis of facts introduced or events occurring in the course of the current proceedings, or of prior proceedings, do not constitute a basis for a bias or partiality motion unless they display a deep-seated favoritism or antagonism that would make fair judgment impossible. Thus, judicial remarks during the course of a trial that are critical or disapproving of, or even hostile to, counsel, the parties, or their cases, ordinarily do not support a bias or partiality challenge. They *may* do so if they reveal an opinion that derives from an extrajudicial source; and they *will* do so if they reveal such a high degree of favoritism or antagonism as to make fair judgment impossible. An example of the latter (and perhaps of the former as well) is the statement that was alleged to have been made by the District Judge in *Berger v. United States*, 255 U. S. 22 (1921), a World War I espionage case against German-American defendants: “One must have a very judicial mind, indeed, not [to be] prejudiced against the German Americans” because their “hearts are reeking with disloyalty.” *Id.*, at 28 (internal quotation marks omitted). *Not* establishing bias or partiality, however, are expressions of impatience, dissatisfaction, annoy-

Opinion of the Court

ance, and even anger, that are within the bounds of what imperfect men and women, even after having been confirmed as federal judges, sometimes display. A judge's ordinary efforts at courtroom administration—even a stern and short-tempered judge's ordinary efforts at courtroom administration—remain immune.

III

Applying the principles we have discussed to the facts of the present case is not difficult. None of the grounds petitioners assert required disqualification. As we have described, petitioners' first recusal motion was based on rulings made, and statements uttered, by the District Judge during and after the 1983 trial; and petitioner Bourgeois' second recusal motion was founded on the judge's admonishment of Bourgeois' counsel and codefendants. In their briefs here, petitioners have referred to additional manifestations of alleged bias in the District Judge's conduct of the trial below, including the questions he put to certain witnesses, his alleged "anti-defendant tone," his cutting off of testimony said to be relevant to defendants' state of mind, and his post-trial refusal to allow petitioners to appeal *in forma pauperis*.³

All of these grounds are inadequate under the principles we have described above: They consist of judicial rulings, routine trial administration efforts, and ordinary admonishments (whether or not legally supportable) to counsel and to witnesses. All occurred in the course of judicial proceedings, *and* neither (1) relied upon knowledge acquired outside such proceedings nor (2) displayed deep-seated and unequivocal antagonism that would render fair judgment impossible.

The judgment of the Court of Appeals is

Affirmed.

³ Petitioners' brief also complains of the District Judge's refusal in the 1983 trial to call petitioner Bourgeois "Father," asserting that this "subtly manifested animosity toward Father Bourgeois." Brief for Petitioners 30. As we have discussed, when intrajudicial behavior is at issue, manifestations of animosity must be much more than subtle to establish bias.

KENNEDY, J., concurring in judgment

JUSTICE KENNEDY, with whom JUSTICE BLACKMUN, JUSTICE STEVENS, and JUSTICE SOUTER join, concurring in the judgment.

The Court's ultimate holding that petitioners did not assert sufficient grounds to disqualify the District Judge is unexceptionable. Nevertheless, I confine my concurrence to the judgment, for the Court's opinion announces a mistaken, unfortunate precedent in two respects. First, it accords nearly dispositive weight to the source of a judge's alleged partiality, to the point of stating that disqualification for intrajudicial partiality is not required unless it would make a fair hearing impossible. Second, the Court weakens the principal disqualification statute in the federal system, 28 U. S. C. § 455, by holding—contrary to our most recent interpretation of the statute in *Liljeberg v. Health Services Acquisition Corp.*, 486 U. S. 847 (1988)—that the broad protections afforded by subsection (a) are qualified by limitations explicit in the specific prohibitions of subsection (b).

I

We took this case to decide whether the reach of § 455(a) is limited by the so-called extrajudicial source rule. I agree with the Court insofar as it recognizes that there is no *per se* rule requiring that the alleged partiality arise from an extrajudicial source. In my view, however, the Court places undue emphasis upon the source of the challenged mindset in determining whether disqualification is mandated by § 455(a).

A

Section 455(a) provides that a judge “shall disqualify himself in any proceeding in which his impartiality might reasonably be questioned.” For present purposes, it should suffice to say that § 455(a) is triggered by an attitude or state of mind so resistant to fair and dispassionate inquiry as to cause a party, the public, or a reviewing court to have reasonable grounds to question the neutral and objective character of a

KENNEDY, J., concurring in judgment

judge's rulings or findings. I think all would agree that a high threshold is required to satisfy this standard. Thus, under § 455(a), a judge should be disqualified only if it appears that he or she harbors an aversion, hostility or disposition of a kind that a fair-minded person could not set aside when judging the dispute.

The statute does not refer to the source of the disqualifying partiality. And placing too much emphasis upon whether the source is extrajudicial or intrajudicial distracts from the central inquiry. One of the very objects of law is the impartiality of its judges in fact and appearance. So in one sense it could be said that any disqualifying state of mind must originate from a source outside law itself. That metaphysical inquiry, however, is beside the point. The relevant consideration under § 455(a) is the appearance of partiality, see *Liljeberg, supra*, at 860, not where it originated or how it was disclosed. If, for instance, a judge presiding over a retrial should state, based upon facts adduced and opinions formed during the original cause, an intent to ensure that one side or the other shall prevail, there can be little doubt that he or she must recuse. Cf. *Rugenstein v. Ottenheimer*, 78 Ore. 371, 372, 152 P. 215, 216 (1915) (reversing for judge's failure to disqualify himself on retrial, where judge had stated: "This case may be tried again, and it will be tried before me. I will see to that. And I will see that the woman gets another verdict and judgment that will stand").

I agree, then, with the Court's rejection of the *per se* rule applied by the Court of Appeals, which provides that "matters arising out of the course of judicial proceedings are not a proper basis for recusal" under § 455(a). 973 F. 2d 910 (CA11 1992). But the Court proceeds to discern in the statute an extrajudicial source interpretive doctrine, under which the source of an alleged deep-seated predisposition is a primary factor in the analysis. The Court's candid struggle to find a persuasive rationale for this approach demonstrates that prior attempts along those lines have fallen

KENNEDY, J., concurring in judgment

somewhat short of the mark. This, I submit, is due to the fact that the doctrine crept into the jurisprudence more by accident than design.

The term “extrajudicial source,” though not the interpretive doctrine bearing its name, has appeared in only one of our previous cases: *United States v. Grinnell Corp.*, 384 U. S. 563 (1966). Respondents in *Grinnell* alleged that the trial judge had a personal bias against them, and sought his disqualification and a new trial under 28 U. S. C. § 144. That statute, like § 455(b)(1), requires disqualification for “bias or prejudice.” In denying respondents’ claim, the Court stated that “[t]he alleged bias and prejudice to be disqualifying must stem from an extrajudicial source and result in an opinion on the merits on some basis other than what the judge learned from his participation in the case.” 384 U. S., at 583.

Although *Grinnell*’s articulation of the extrajudicial source rule has a categorical aspect about it, the decision, on closer examination, proves not to erect a *per se* barrier. After reciting what appeared to be an absolute rule, the Court proceeded to make a few additional points: that certain in-court statements by the judge “reflected no more than his view that, if the facts were as the Government alleged, stringent relief was called for”; that during the trial the judge “repeatedly stated that he had not made up his mind on the merits”; and that another of the judge’s challenged statements did not “manifes[t] a closed mind on the merits of the case,” but rather was “a terse way” of reiterating a prior ruling. *Ibid.* Had we meant the extrajudicial source doctrine to be dispositive under § 144, those further remarks would have been unnecessary.

More to the point, *Grinnell* provides little justification for its announcement of the extrajudicial source rule, relying only upon a citation to *Berger v. United States*, 255 U. S. 22, 31 (1921). The cited passage from *Berger*, it turns out, does not bear the weight *Grinnell* places on it, but stands for the more limited proposition that the alleged bias “must be

KENNEDY, J., concurring in judgment

based upon something other than rulings in the case.” 255 U. S., at 31. *Berger*, in turn, relies upon an earlier case advancing the same narrow proposition, *Ex parte American Steel Barrel Co.*, 230 U. S. 35, 44 (1913) (predecessor of § 144 “was never intended to enable a discontented litigant to oust a judge because of adverse rulings made, for such rulings are reviewable otherwise”). There is a real difference, of course, between a rule providing that bias must arise from an extrajudicial source and one providing that judicial rulings alone cannot sustain a challenge for bias. *Grinnell*, therefore, provides a less than satisfactory rationale for reading the extrajudicial source doctrine into § 144 or the disqualification statutes at issue here. It should come as little surprise, then, that the Court does not enlist *Grinnell* to support its adoption of the doctrine.

The Court adverts to, but does not ratify, *ante*, at 549, an alternative rationale: the requirement in § 144 that a litigant’s recusal affidavit “be filed not less than 10 days before the beginning of the term at which the proceeding is to be heard,” unless “good cause [is] shown for failure to file it within such time.” If a litigant seeking disqualification must file an affidavit 10 days before the beginning of the term, the argument goes, the alleged bias cannot arise from events occurring or facts adduced during the litigation. See *Berger*, *supra*, at 34–35. That rationale fails as well. The 10-day rule has been an anachronism since 1963, when Congress abolished formal terms of court for United States district courts. See 28 U. S. C. § 138. In any event, the rule always had an exception for good cause. And even if the 10-day requirement could justify reading the extrajudicial source rule into § 144, it would not suffice as to § 455(a) or § 455(b)(1), which have no analogous requirement.

The Court is correct to reject yet another view, which has gained currency in several Courts of Appeals, that the term “personal” in §§ 144 and 455(b)(1) provides a textual home for the extrajudicial source doctrine. *Ante*, at 548–550.

KENNEDY, J., concurring in judgment

Given the flaws with prior attempts to justify the doctrine, the Court advances a new rationale: The doctrine arises from the pejorative connotation of the term “bias or prejudice” in §§ 144 and 455(b)(1) and the converse of the term “impartiality” in § 455(a). *Ante*, at 550, 552–553. This rationale, as the Court acknowledges, does not amount to much. It is beyond dispute that challenged opinions or predispositions arising from outside the courtroom need not be disqualifying. See, e.g., *United States v. Conforte*, 624 F. 2d 869, 878–881 (CA9), cert. denied, 449 U. S. 1012 (1980). Likewise, prejudiced opinions based upon matters disclosed at trial may rise to the level where recusal is required. See, e.g., *United States v. Holland*, 655 F. 2d 44 (CA5 1981); *Nicodemus v. Chrysler Corp.*, 596 F. 2d 152, 155–157, and n. 10 (CA6 1979). From this, the Court is correct to conclude that an allegation concerning some extrajudicial matter is neither a necessary nor a sufficient condition for disqualification under any of the recusal statutes. *Ante*, at 554–555. The Court nonetheless proceeds, without much explanation, to find “a significant (and often determinative) ‘extrajudicial source’ factor” in those statutes. *Ante*, at 555 (emphasis in original).

This last step warrants further attention. I recognize along with the Court that, as an empirical matter, doubts about a judge’s impartiality seldom have merit when the challenged mindset arises as a result of some judicial proceeding. The dichotomy between extrajudicial and intrajudicial sources, then, has some slight utility; it provides a convenient shorthand to explain how courts have confronted the disqualification issue in circumstances that recur with some frequency.

To take a common example, litigants (like petitioners here) often seek disqualification based upon a judge’s prior participation, in a judicial capacity, in some related litigation. Those allegations are meritless in most instances, and their prompt rejection is important so the case can proceed. Judges, if faithful to their oath, approach every aspect of

KENNEDY, J., concurring in judgment

each case with a neutral and objective disposition. They understand their duty to render decisions upon a proper record and to disregard earlier judicial contacts with a case or party.

Some may argue that a judge will feel the “motivation to vindicate a prior conclusion” when confronted with a question for the second or third time, for instance, upon trial after a remand. Ratner, *Disqualification of Judges for Prior Judicial Actions*, 3 *How. L. J.* 228, 229–230 (1957). Still, we accept the notion that the “conscientious judge will, as far as possible, make himself aware of his biases of this character, and, by that very self-knowledge, nullify their effect.” *In re J. P. Linahan, Inc.*, 138 F. 2d 650, 652 (CA2 1943). The acquired skill and capacity to disregard extraneous matters is one of the requisites of judicial office. As a matter of sound administration, moreover, it may be necessary and prudent to permit judges to preside over successive causes involving the same parties or issues. See Rules Governing Section 2255 Proceedings for the United States District Courts, Rule 4(a) (“The original motion shall be presented promptly to the judge of the district court who presided at the movant’s trial and sentenced him, or, if the judge who imposed sentence was not the trial judge, then it shall go to the judge who was in charge of that part of the proceedings being attacked by the movant”). The public character of the prior and present proceedings tends to reinforce the resolve of the judge to weigh with care the propriety of his or her decision to hear the case.

Out of this reconciliation of principle and practice comes the recognition that a judge’s prior judicial experience and contacts need not, and often do not, give rise to reasonable questions concerning impartiality.

B

There is no justification, however, for a strict rule dismissing allegations of intrajudicial partiality, or the appearance

KENNEDY, J., concurring in judgment

thereof, in every case. A judge may find it difficult to put aside views formed during some earlier proceeding. In that instance we would expect the judge to heed the judicial oath and step down, but that does not always occur. If through obduracy, honest mistake, or simple inability to attain self-knowledge the judge fails to acknowledge a disqualifying predisposition or circumstance, an appellate court must order recusal no matter what the source. As I noted above, the central inquiry under § 455(a) is the appearance of partiality, not its place of origin.

I must part, then, from the Court's adoption of a standard that places all but dispositive weight upon the source of the alleged disqualification. The Court holds that opinions arising during the course of judicial proceedings require disqualification under § 455(a) only if they "display a deep-seated favoritism or antagonism that would make fair judgment impossible." *Ante*, at 555. That standard is not a fair interpretation of the statute, and is quite insufficient to serve and protect the integrity of the courts. In practical effect, the Court's standard will be difficult to distinguish from a *per se* extrajudicial source rule, the very result the Court professes to reject.

The Court's "impossibility of fair judgment" test bears little resemblance to the objective standard Congress adopted in § 455(a): whether a judge's "impartiality might reasonably be questioned." The statutory standard, which the Court preserves for allegations of an extrajudicial nature, asks whether there is an appearance of partiality. See *Liljeberg*, 486 U. S., at 860 ("[t]he goal of section 455(a) is to avoid even the appearance of partiality") (internal quotation marks omitted); *United States v. Chantal*, 902 F. 2d 1018, 1023 (CA1 1990). The Court's standard, in contrast, asks whether fair judgment is impossible, and if this test demands some direct inquiry to the judge's actual, rather than apparent, state of mind, it defeats the underlying goal of § 455(a): to avoid the appearance of partiality even when no partiality exists.

KENNEDY, J., concurring in judgment

And in all events, the “impossibility of fair judgment” standard remains troubling due to its limited, almost preclusive character. As I interpret it, a § 455(a) challenge would fail even if it were shown that an unfair hearing were likely, for it could be argued that a fair hearing would be possible nonetheless. The integrity of the courts, as well as the interests of the parties and the public, are ill served by this rule. There are bound to be circumstances where a judge’s demeanor or attitude would raise reasonable questions concerning impartiality but would not devolve to the point where one would think fair judgment impossible.

When the prevailing standard of conduct imposed by the law for many of society’s enterprises is reasonableness, it seems most inappropriate to say that a judge is subject to disqualification only if concerns about his or her predisposed state of mind, or other improper connections to the case, make a fair hearing impossible. That is too lenient a test when the integrity of the judicial system is at stake. Disputes arousing deep passions often come to the courtroom, and justice may appear imperfect to parties and their supporters disappointed by the outcome. This we cannot change. We can, however, enforce society’s legitimate expectation that judges maintain, in fact and appearance, the conviction and discipline to resolve those disputes with detachment and impartiality.

The standard that ought to be adopted for all allegations of an apparent fixed predisposition, extrajudicial or otherwise, follows from the statute itself: Disqualification is required if an objective observer would entertain reasonable questions about the judge’s impartiality. If a judge’s attitude or state of mind leads a detached observer to conclude that a fair and impartial hearing is unlikely, the judge must be disqualified. Indeed, in such circumstances, I should think that any judge who understands the judicial office and oath would be the first to insist that another judge hear the case.

KENNEDY, J., concurring in judgment

In matters of ethics, appearance and reality often converge as one. See *Offutt v. United States*, 348 U. S. 11, 14 (1954) (“[J]ustice must satisfy the appearance of justice”); *Ex parte McCarthy*, [1924] 1 K. B. 256, 259 (1923) (“[J]ustice should not only be done, but should manifestly and undoubtedly be seen to be done”). I do not see how the appearance of fairness and neutrality can obtain if the bare possibility of a fair hearing is all that the law requires. Cf. *Marshall v. Jerrico, Inc.*, 446 U. S. 238, 242 (1980) (noting the importance of “preserv[ing] both the appearance and reality of fairness,” which “‘generat[es] the feeling, so important to a popular government, that justice has been done’”) (quoting *Joint Anti-Fascist Refugee Comm. v. McGrath*, 341 U. S. 123, 172 (1951) (Frankfurter, J., concurring)).

Although the source of an alleged disqualification may be relevant in determining whether there is a reasonable appearance of impartiality, that determination can be explained in a straightforward manner without resort to a nearly dispositive extrajudicial source factor. I would apply the statute as written to all charges of partiality, extrajudicial or otherwise, secure in my view that district and appellate judges possess the wisdom and good sense to distinguish substantial from insufficient allegations and that our rules, as so interpreted, are sufficient to correct the occasional departure.

II

The Court’s effort to discern an “often dispositive” extrajudicial source factor in § 455(a) leads it to an additional error along the way. As noted above, the Court begins by explaining that the pejorative connotation of the term “bias or prejudice” demonstrates that the source of an alleged bias is significant under §§ 144 and 455(b)(1). The Court goes on to state that “it is unreasonable to interpret § 455(a) (unless the language *requires* it) as implicitly eliminating a limitation explicitly set forth in § 455(b).” *Ante*, at 553 (emphasis in original). That interpretation, the Court reasons, “would

KENNEDY, J., concurring in judgment

cause the statute, in a significant sense, to contradict itself.” *Ante*, at 552.

We rejected that very understanding of the interplay between §§ 455(a) and (b) in *Liljeberg v. Health Services Acquisition Corp.*, 486 U. S. 847 (1988). Respondent in *Liljeberg* sought to disqualify a district judge under § 455(a) because the judge (in his capacity as trustee of a university) had a financial interest in the litigation, albeit an interest of which he was unaware. Petitioner opposed disqualification, and asked us to interpret § 455(a) in light of § 455(b)(4), which provides for disqualification only if the judge “knows that he, individually or as a fiduciary, . . . has a financial interest in the subject matter in controversy or in a party to the proceeding.” According to petitioner, the explicit knowledge requirement in § 455(b)(4) indicated that Congress intended a similar requirement to govern § 455(a). See *Liljeberg*, 486 U. S., at 859, n. 8. Otherwise, petitioner contended, the knowledge requirement in § 455(b)(4) would be meaningless. *Ibid.*

In holding for respondent, we emphasized that there were “important differences” between subsections (a) and (b), and concluded that the explicit knowledge requirement under § 455(b)(4) does not apply to disqualification motions filed under § 455(a). *Id.*, at 859–860, and n. 8. *Liljeberg* teaches, contrary to what the Court says today, that limitations inherent in the various provisions of § 455(b) do not, by their own force, govern § 455(a) as well. The structure of § 455 makes clear that subsections (a) and (b), while addressing many of the same underlying circumstances, are autonomous in operation. Section 455(b) commences with the charge that a judge “shall also disqualify himself in the following circumstances”; Congress’ inclusion of the word “also” indicates that subsections (a) and (b) have independent force. Section 455(e), which permits parties to waive grounds for disqualification arising under § 455(a), but not § 455(b), provides further specific textual confirmation of the difference.

KENNEDY, J., concurring in judgment

The principal distinction between §§ 455(a) and (b) is apparent from the face of the statute. Section 455(b) delineates specific circumstances where recusal is mandated; these include instances of actual bias as well as specific instances where actual bias is assumed. See 28 U. S. C. § 455(b)(1) (“personal bias or prejudice”); § 455(b)(2) (judge “served as [a] lawyer in the matter in controversy” while in private practice); § 455(b)(3) (same while judge served in government employment); § 455(b)(4) (“financial interest” in the litigation); § 455(b)(5) (judge “within the third degree of relationship” to a party, lawyer, or material witness). Section 455(a), in contrast, addresses the appearance of partiality, guaranteeing not only that a partisan judge will not sit, but also that no reasonable person will have that suspicion. See *Liljeberg, supra*, at 860.

Because the appearance of partiality may arise when in fact there is none, see, e. g., *Hall v. Small Business Admin.*, 695 F. 2d 175, 179 (CA5 1983); *United States v. Ritter*, 540 F. 2d 459, 464 (CA10), cert. denied, 429 U. S. 951 (1976), the reach of § 455(a) is broader than that of § 455(b). One of the distinct concerns addressed by § 455(a) is that the appearance of impartiality be assured whether or not the alleged disqualifying circumstance is also addressed under § 455(b). In this respect, the statutory scheme ought to be understood as extending § 455(a) beyond the scope of § 455(b), and not confining § 455(a) in large part, as the Court would have it. See *ante*, at 553–554, n. 2. The broader reach of § 455(a) is confirmed by the rule permitting its more comprehensive provisions, but not the absolute rules of § 455(b), to be waived. See 28 U. S. C. § 455(e). And in all events, I suspect that any attempt to demarcate an “area of overlap” (*ante*, at 553) between §§ 455(a) and (b) will prove elusive in many instances.

Given the design of the statute, then, it is wrong to impose the explicit limitations of § 455(b) upon the more extensive protections afforded by § 455(a). See *Liljeberg, supra*,

KENNEDY, J., concurring in judgment

at 859–861, and n. 8. The Court’s construction of the statute undercuts the protection Congress put in place when enacting § 455(a) as an independent guarantee of judicial impartiality.

III

The Court describes in all necessary detail the unimpressive allegations of partiality, and the appearance thereof, in this case. The contested rulings and comments by the trial judge were designed to ensure the orderly conduct of petitioners’ trial. Nothing in those rulings or comments raises any inference of bias or partiality. I concur in the judgment.

Music Industry A-Listers Call on Congress to Reform Copyright Act

1:48 PM PDT 3/31/2016 by Ashley Cullins

A day before a crucial deadline, the music industry is pulling no punches.

[1]

Getty Images

Katy Perry, Steven Tyler and Lionel Richie

Katy Perry, Steven Tyler and Lionel Richie are just a few of hundreds of artists, songwriters and others in the music industry who are calling on Washington to reform the Digital Millennium Copyright Act, according to a statement issued Thursday by the Recording Industry Association of America.

"Artists spanning a variety of genres and generations are submitting comments to the federal government's U.S. Copyright Office today and tomorrow demanding reforms to the antiquated DMCA which forces creators to police the entire Internet for instances of theft, placing an undue burden on these artists and unfairly favoring technology companies and rogue pirate sites," said the statement.

On Dec. 31, the Copyright Office announced its intent [2] to evaluate the safe harbor provisions of

the DMCA, which — to an extent — protect Internet service providers from third parties who illegally share content online.

“While Congress understood that it would be essential to address online infringement as the Internet continued to grow, it may have been difficult to anticipate the online world as we now know it, where each day users upload hundreds of millions of photos, videos and other items, and service providers receive over a million notices of alleged infringement,” said the announcement from the Copyright Office. “Among other issues, the Office will consider the costs and burdens of the notice-and-takedown process on large- and small-scale copyright owners, online service providers and the general public.”

The DMCA was signed into law by President Bill Clinton in 1998 with a goal of updating copyright laws for the digital age, but it's now disturbingly out of date, according to a petition from dozens of artists and songwriters that was filed Thursday.

"It has allowed major tech companies to grow and generate huge profits by creating ease of use for consumers to carry almost every recorded song in history in their pocket via a smartphone, while songwriters' and artists' earnings continue to diminish," the petition states. "Music consumption has skyrocketed, but the monies generated by individual writers and artists for that consumption has plummeted. The growth and support of technology companies should not be at the expense of artists and songwriters."

```
{ "nid": 876557, "type": "blog", "title": "'Dancing Baby' Appeals Court Decision Stands Minus the 'Fair Use' Algorithms", "path": "http://www.hollywoodreporter.com/thr-esq/dancing-baby-appeals-court-decision-876557", "relative-path": "/thr-esq/dancing-baby-appeals-court-decision-876557" }
```

The petition claims the safe harbor and notice-and-takedown provisions of the DMCA create a shield for tech companies and allow infringers to repost material after it has been removed.

"This outdated law forces us to stand by helplessly as billions of dollars in advertising is sold around illegal copies of our work," states the petition, which says the DMCA "thwarts the success" of digital services that pay musicians by allowing free, illegal copies of their works to be readily available.

It's not just individuals who are demanding change. The RIAA says 18 major music organizations submitted a 97-page joint brief "explaining the myriad flaws in the DMCA — a law passed during the dial-up era — and calling for reforms."

According to the brief, those flaws include a broken "notice-and-takedown" system, toothless repeat infringer policies and incentives for services to embrace willful blindness instead of preventing known and widespread infringement.

The music industry worked with Congress to draft and pass the DMCA and, at the time, felt it was a balanced compromise that addressed the concerns of copyright holders and service providers, but now these more than a dozen organizations feel it is antiquated and it's up to Congress, not the courts, to fix it.

“Almost 20 years later, the reality on the ground bears little resemblance to the expectations of the Music Community when the DMCA was passed,” states the brief. “The DMCA has now become a dysfunctional relic, not suited to the realities of the 21st Century.”

Those on the tech side of the issue don't feel the same way.

The Internet Association, a group that represents leading tech companies [3] like Facebook, Google and Netflix, commented on the issue [4] Tuesday and said the DMCA is working effectively as intended.

"The Digital Millennium Copyright Act creates safe harbors for Internet platforms by ensuring they will not be liable for what their users do, so long as the platforms act responsibly," says the post. "These smart laws allow people to post content that they have created on platforms — such as videos, reviews, pictures and text. In essence, this is what makes the Internet great."

The deadline to submit comments [5] is 11:59 p.m. ET on April 1.

RE: Section 512 Study: Notice and Request for Public Comment, Docket No. 2015-7

COMMENTS OF RECORDING ARTISTS & SONGWRITERS

The recording artists and songwriters submitting this filing are an eclectic mix of international musicians, spanning a variety of genres and generations, who depend on the protection of copyright to earn their living.

Submitted by Rebecca Greenberg
Azoff MSG Entertainment & Global Music Rights

Songwriters' and Artists' Perspective on DMCA: A Threat to the Future of Creating Music

As songwriters and artists who are a vital contributing force to the U.S. and to American exports around the world, we are writing to express our concern about the ability of the next generation of creators to earn a living, given the legislative and judicial environment that has evolved in the wake of technological innovation over the last decade.

The existing laws -- and their interpretation by judges -- threaten the continued viability of songwriters and recording artists to survive from the creation of music. The next generation of creators may be silenced if the economics don't justify a career in the music industry.

One of the biggest problems confronting us as songwriters and recording artists today is the Digital Millennium Copyright Act. This law was written and passed in an era that is technologically out-of-date compared to the era in which we live. It has allowed major tech companies to grow and generate huge profits by creating ease of use for consumers to carry almost every recorded song in history in their pocket via a smartphone, while songwriters' and artists' earnings continue to diminish. Music consumption has skyrocketed, but the monies generated by individual writers and artists for that consumption has plummeted. The growth and support of technology companies should not be at the expense of artists and songwriters.

Section 512 of the DMCA has become the all-purpose shield that tech companies hide behind while they threaten the livelihood of music creators. The notice-and-takedown provision to which we refer allows ongoing infringements of the works we create since videos can immediately be re-posted, even after we have requested to have them removed. This outdated law forces us to stand by helplessly as billions of dollars in advertising is sold around illegal copies of our work. Most of the money goes to the tech services -- not to creators. In fact, according to a recently released report by the RIAA, U.S. vinyl sales generated more revenue for the music industry than ad-supported, free streaming by services like YouTube and Spotify over the past year.

The DMCA actually thwarts the success of digital services that are prepared to pay musicians a living wage. These legitimate services are having a difficult time getting consumers to pay for music when illegal copies of our music are readily made available through services that hide behind the DMCA.

As writers and artists who spend countless hours perfecting our craft, it is extremely demoralizing to have no control over poor quality reproductions of our songs or performances. For some acts, videos posted from live concerts are not reflective of the way we would choose to present our performances, and illegal lyric videos are created without our consent.

In sum, the DMCA simply doesn't work. It's impossible for tens of thousands of individual songwriters and artists to muster the resources necessary to comply with its application. The tech companies who benefit from the DMCA today were not the intended protectorate when it was signed into law nearly two decades ago. We ask you to recommend sensible reform that balances our interests as creators with the interests of the companies who exploit our creations for their financial enrichment. It's only then that consumers will truly benefit.

Respectfully submitted to the U.S. Copyright Office, *(signed as of 8 pm EST, 4/1/16)*

The submitting parties (the “Music Community”), described in Appendix A hereto, are associations and organizations whose members create and disseminate a wide variety of copyrighted musical compositions and sound recordings. The Music Community has fully embraced the digital marketplace as the primary avenue for delivering high-quality content to music fans through a variety of exciting platforms. Collectively, the Music Community represents hundreds of thousands of songwriters, composers, music publishers, recording artists, record labels, studio professionals, and others, who rely on copyright protection for their livelihoods.

I. INTRODUCTION

By many measures, this should be a great moment for the music community.

More music is being enjoyed than ever before by fans around the globe. Fans enjoy music through a plethora of music services that offer consumers abundant choice and unprecedented access.¹ Digital platforms are using music to build and drive their businesses.²

But growing market distortions resulting from the pervasive misuse of the Digital Millennium Copyright Act (“DMCA”)³ by online platforms harm music creators and threaten their ability to succeed and thrive in the future.

The DMCA was supposed to provide balance between service providers and content owners, but instead it provides harmful “safe havens” under which many platforms either pay nothing or pay less than market value for music.

The Music Community’s list of frustrations with the DMCA is long. A broken “notice-and-takedown” system. Toothless repeat infringer policies. Active services mischaracterized as passive intermediaries. Incentives for services to embrace willful blindness instead of preventing known and widespread infringement. The words “representative list” read out of the statute.

DMCA reform is essential to bring about balance. A vibrant and healthy future for the music ecosystem depends on it.

Throughout these comments, we note various issues that should be addressed. We stand ready to work with Congress, the Copyright Office, and other stakeholders to develop practical solutions to these issues and enact comprehensive DMCA reform.

II. EXECUTIVE SUMMARY

Several factors have contributed to the failure of the DMCA to fulfill its purpose. To start, Congress enacted the DMCA in 1998 when dial-up Internet speeds and static web sites predominated. Soon thereafter, individuals could be worldwide publishers of content on peer-to-peer networks and service providers began to distribute massive amounts of content uploaded to their servers. And then came along more sophisticated search engines, social networks, and an explosion of smartphones and other mobile Internet access devices. The rules for service providers and tools for content creators set forth in the DMCA proved unsuitable for this new world.

¹ See whymusicmatters.com for a non-exclusive list and description of digital music services available in the United States.

² *Music Fuels the Internet*, RIAA, <http://www.musicfuels.com/>.

³ Unless otherwise stated, all references are to Title II of the DMCA, the Online Copyright Infringement Liability Limitation Act, which added Section 512 to Title 17, U.S. Code.

For example, the notice-and-takedown system has proved an ineffective tool for the volume of unauthorized digital music available, something akin to bailing out an ocean with a teaspoon. There is no evidence that Congress anticipated that Google or any service provider would receive and be required to respond to more than one billion takedown notices.⁴ Google wears this as a badge of honor, yet this fact emphasizes the failure of the DMCA to address the challenges faced by content owners today.

Given all of these fundamental changes, a law that might have made sense in 1998 is now not only obsolete but actually harmful. The problem is compounded by the fact that, as courts, too, have struggled to apply this outdated law for the present day, DMCA has been shifted from its original intent through a series of judicial rulings to strip away adequate protection for content owners.⁵ To start, courts have expanded application of the safe harbors well beyond the passive service providers of 1998 to more active distributors of music that compete directly with services that must obtain licenses. The result: a Hobson's Choice for content owners, either to license content for much less than it's worth, or have the broken notice-and-takedown system as the only recourse. Is it any surprise that in this distorted marketplace revenue from sales of vinyl records outpaces revenue from on-demand, ad-supported video platforms making billions of transmissions annually?⁶

Courts have also given little meaning to key provisions for content owners in the DMCA bargain. Examples include "red flag" knowledge, repeat infringer policies and representative lists. The result: safe harbor status for services that choose to stick their heads in the sand rather than do their fair share, forcing content owners to divert valuable resources from away creating content to sending minimally effective take down notices, or for content owners with limited resources, to actually refrain from sending takedown notices at all. Content owners, especially those with limited resources, simply cannot take on the entire digital universe alone.

At its worst, the DMCA safe harbors have become a business plan for profiting off of stolen content; at best, the system is a de facto government subsidy enriching some digital services at the expense of creators. This almost 20 year-old, 20th Century law should be updated.

⁴ *Google Asked to Remove 100,000 'Pirate Links' Every Hour*, TORRENTFREAK (Mar. 6, 2016), <https://torrentfreak.com/google-asked-to-remove-100000-pirate-links-every-hour-160306/> (estimating that Google will have to process a billion reported links this year alone, a milestone which previously took over a decade to reach).

⁵ Please see responses to Questions 5, 14, 19, 24 and 25 for a discussion of judicial interpretations of these provisions.

⁶ Cary Sherman, *Valuing Music In a Digital World*, FORBES (Sept. 23, 2015), <http://www.forbes.com/sites/realspin/2015/09/23/how-government-set-licensing-killed-the-music-industry/#23d7a29cf988>; see also Cary Sherman, *State of the Music Business: What the Numbers Tells Us*, RIAA (Mar. 22, 2016), <https://medium.com/@RIAA/state-of-the-music-business-what-the-numbers-tell-us-63ce1524b30#.wcdv03wso>; RIAA 2015 Year-End Sales & Shipments Data Report, available at <http://www.riaa.com/reports/riaa-2015-year-end-sales-shipments-data-report-riaa/>.

III. GENERAL EFFECTIVENESS OF SAFE HARBORS

To supplement the Music Community’s answers to the questions below, we have attached, as Appendix B, a detailed history of the pre-DMCA legal and economic ecosystem, including analysis of the cases and political history related to the passage of the DMCA.

1. Are the Section 512 safe harbors working as Congress intended?

In a word, NO. When it passed the DMCA in 1998, Congress intended to provide effective protection for copyright owners while allowing for the continued growth and development of the Internet. It intended to find a balance: limit liability for certain classes of passive service providers in exchange for effectively addressing infringement. Yet, today, digital services enjoy an (expanding) safe harbor while content owners face an increasing onslaught of digital infringement, with no effective recourse. This couldn’t possibly be what Congress meant to achieve.

To better understand Congress’s intent, it makes sense to recall the online experience of the late 1990s. When the DMCA was enacted, Internet access was slow; online material was difficult to locate; consumers in many countries lacked widespread access to the Internet; Internet businesses (including access providers, hosts, and website operators) largely earned income from subscription or use-based pricing; and computing devices were expensive and stationary.

Given Congress’s understandable inability to anticipate the dramatic transformation of the Internet, the DMCA has failed to scale, rendering it increasingly obsolete and futile from an enforcement standpoint. Consider that, since 2012, the Recording Industry Association of America (“RIAA”) has sent more than 175 million infringement notices in the aggregate to web site operators, their underlying hosting providers, and search engines. Many of these relate to works taken down on a particular site, only to see a repeat infringement of the same work appear on the same site.⁷ And then, that repeat infringement is often once again indexed by search engines. This is of particular concern as search engines are one of the leading ways to discover pirated music.⁸ This renders the notice-and-takedown process minimally effective at best.

Of course, what is expensive and difficult for large copyright owners is an impossible task for small copyright owners seeking to protect the value of their works.⁹ As described in response to Question 8, Maria Schneider, a three-time GRAMMY winning jazz and classical composer, bandleader and conductor noted in describing her frustration with the DMCA, “[t]he DMCA makes it my responsibility to police the entire

⁷ Please see responses to Questions 6 and 7 for examples of such repeat infringements.

⁸ Source: Survey of digital music listeners by consumer research firm MusicWatch; Russ Crupnick, *Bad Company, You Can’t Deny*, MUSICWATCH (Feb. 22, 2016), <http://www.musicwatchinc.com/blog/bad-company-you-cant-deny/>.

⁹ See Nelson Granados, *How Online Piracy Hurts Emerging Artists*, FORBES (Feb. 1, 2016), <http://www.forbes.com/sites/nelsongranados/2016/02/01/how-online-piracy-hurts-emerging-artists/#488ccf0a7fa2>.

Internet on a daily basis. As fast as I take my music down, it reappears again on the same site—an endless whack-a-mole game.”¹⁰ ESL Music and Thievery Corporation co-founder Eric Hilton has stated even more distinctly “if our music was taken down, it would almost immediately return on another site or even the same site. We were spending more and more resources on the takedown notices, and we were consistently getting less and less in return. Eventually, we decided to stop sending the notices altogether. It was simply an exercise of throwing good money after bad. So time and again, we released product realizing more and more that we had no real way to stop its unauthorized use and the erosion of its commercial viability.”¹¹

Unfortunately, large, sophisticated entertainment-oriented digital services have thrived as a result of this “whack-a-mole” process, premising business models on being shielded from responsibility by the safe harbors. As filmmaker Ellen Seidler asks, “Why does Google make it so damn difficult to send a DMCA notice?” She provides a step-by-step guide on takedown notices, with all the pitfalls and roadblocks set up by Google and writes, “Google has designed cutting edge online tech, but its DMCA procedures are something out of the Dark Ages. That’s no accident.”¹²

So what was the proper balance Congress sought in 1998? Congress understood that unchecked Internet-based infringement would damage copyright owners.¹³ Congress intended to retain for copyright owners the kind of “effective – not merely symbolic – protection” it had always provided for their property.¹⁴ Congress sought a balance by providing liability limitations to service providers that acted responsibly to help achieve the Internet’s potential. However, Congress certainly did not plan to sacrifice the health of America’s creative industries on the altar of the Internet’s success. Congress specifically did not adopt, as it did with respect to almost all other torts in the Communication Decency Act (“CDA”) two years earlier,¹⁵ blanket immunity for service providers.

Congress was clearly influenced by the existing legal landscape and the dominant views expressed in *Netcom* and its progeny.¹⁶ Importantly, Congress did not intend to absolve service providers of all liability so long as they responded to notices from copyright owners that identified specific infringing items. Instead, Congress’s approach was intended to: (i) preserve direct liability for service providers who actively engaged in infringing conduct, such as selectively choosing which user uploads to repackage and

make publicly available; (ii) preserve contributory liability for service providers who substantially contributed to infringement while possessing knowledge of facts from which a reasonable person would deduce that infringement is occurring, unless the service provider took steps to stop the infringement upon obtaining such knowledge; and (iii) preserve vicarious liability for service providers who used infringing content to attract or retain users to their websites or networks (*i.e.*, where the value of the product or services was derived in part from access to infringing content) or charged users specific fees associated with infringing content. In short, the DMCA’s approach was intended to create safe harbors only for “innocent” actors.¹⁷

Congress was aware of arguments that it might be difficult for service providers to determine whether content transmitted by users qualified as infringing. Nevertheless, Congress believed that, in many cases, service providers “know infringement when they see it,”¹⁸ and concluded that service providers have a responsibility to take steps to prevent such conduct or risk full liability. When users post copies of recognizable works with recognizable copyright owners or aggregate infringing material and label it as such, services should act.

Of course, too many service providers do not proactively respond to infringement. Judicial decisions have further bolstered this skewed view of liability and responsibility. Courts have repeatedly required less and less – sometimes almost nothing – from Internet intermediaries, and more and more from the content owner. This was never Congress’s intent.

Note that Congress also believed that termination of access to a particular digital service was a reasonable method of deterring repeated copyright violations from persons who flagrantly abused their access in order to violate copyright law. It underscored the importance of this remedy by requiring *all* service providers to implement such methods if they wished to benefit from *any* of the four statutory safe harbors.¹⁹ Yet termination remains a particularly rare occurrence.

It is no surprise that the 2001 European Union E-Commerce Directive that established safe harbors similar to the safe harbors established by the DMCA is also currently under review within the European Union. Commenters there have criticized the Directive as similarly inapplicable to and ineffective in today’s digital marketplace, finding that it unfairly protects and advantages service providers at the expense of music and other rights holders.²⁰

Sadly, it is now clear that the explicit warning sounded in 1995 by the USPTO Working Group’s White Paper has been fulfilled: the safe harbors have “encourage[ed]

²⁰ See European Commission, *Public consultation on the regulatory environment for platforms, online intermediaries, data and cloud computing and the collaborative economy*, DIGITAL SINGLE MARKET (Sept. 9, 2015), <https://ec.europa.eu/digital-agenda/en/news/public-consultation-regulatory-environment-platforms-online-intermediaries-data-and-cloud>.

intentional and willful ignorance” on the part of service providers and “chok[ed] the development of marketplace tools that could be used to lessen ... the risk to copyright owners, including ... educating subscribers about infringement and using technological protections, such as tracking mechanisms.”²¹

2. Have courts properly construed the entities and activities covered by the Section 512 safe harbors?

For the most part, courts have *not* properly construed the entities and activities provisions covered by the Section 512 safe harbors.

As an initial matter, courts have generally construed the definition of “service provider” and the “activities” permissible under the safe harbors too broadly. Parties that are nothing like the passive, neutral online service providers that Congress had in mind when drafting and enacting the DMCA now take unfair advantage of the safe harbors. The safe harbors are relied upon by digital services that expressly attract users by hosting and publishing content and directly benefit from such increased user base by mining data and selling advertisements. What was intended to be a limitation on monetary damages for infringing activity by passive, neutral intermediaries has instead become a “get out of jail free” card for all but the most egregious actors.

Although some early cases seemed to recognize that Congress wanted judges to approach cases of online infringement pragmatically,²² too many courts have now diverged from this view.²³ Cases involving YouTube and Veoh exemplify the problem. Consider the following:

- Both services facilitated user access to videos uploaded by third parties and generated revenue by displaying advertising alongside videos;²⁴

²¹ See Appendix B, at 2.

²² See, e.g., *A&M Records, Inc. v. Napster, Inc.*, 54 U.S.P.Q.2d 1746 (N.D. Cal. 1998); *A&M Records, Inc. v. Napster, Inc.*, 2000 U.S. Dist. LEXIS 6243 (N.D. Cal. 2000); *A&M Records, Inc. v. Napster, Inc.*, 114 F. Supp. 2d 896 (N.D. Cal. 2000); *A&M Records, Inc. v. Napster, Inc.*, 239 F. 3d 1004 (9th Cir. 2001).

²³ One reason for this may be the courts improperly grafting principles behind the Communications Decency Act (CDA) onto the DMCA. See, e.g., *Hendrickson v. eBay, Inc.*, 165 F. Supp. 2d 1082 (C.D. Cal. 2001); *Hendrickson v. Amazon.com, Inc.*, 298 F. Supp. 2d 914 (C.D. Cal. 2003); *Corbis Corp. v. Amazon.com, Inc.*, 351 F. Supp. 2d 1090 (W.D. Wash. 2004). These cases embody judicial willingness to read the carefully crafted safe harbors too broadly so as to cover conduct, such as facilitating sales of merchandise, that the statute was never designed to protect. Later, poorly conceived claims involving Google’s search engine activities would also lead to broad pronouncements unfairly expanding the safe harbors beyond the four corners of the statute. See *Field v. Google Inc.*, 412 F. Supp. 2d 1106 (D. Nev. 2006); *Parker v. Google, Inc.*, 422 F. Supp. 2d 492 (E.D. Pa. 2006). Courts also sometimes conflated the principles beyond the CDA with those behind the DMCA, not recognizing key differences. See, e.g., *Perfect 10, Inc. v. CCBill, Inc.*, 488 F.3d 1102 (9th Cir. 2007); see also *Batzel v. Smith*, 333 F.3d 1018 (9th Cir. 2003) (“The Digital [Millennium Copyright] Act includes immunity provisions, similar to those of the Communications Decency Act.”).

²⁴ See *Io Grp., Inc. v. Veoh Networks, Inc.*, 586 F. Supp. 2d 1132, 1143 (N.D. Cal. 2008); *UMG Recordings, Inc. v. Veoh Networks Inc.*, 665 F. Supp. 2d 1099, 1117-18 (CD. Cal. 2009) (“*Veoh*”), *aff’d UMG Recordings, Inc. v. Shelter Capital Partners LLC*, 718 F.3d 1006, 1014 (9th Cir. Cal. 2013); *Viacom, Inc. v. YouTube, Inc.*, 718 F. Supp. 2d 514, 528-29 (S.D.N.Y. 2010) (“*Viacom*”), *aff’d in part and*

- Both generated massive traffic to their websites by hosting infringing material, and the court found they had “welcomed” infringing material on their services and advertised its availability.²⁵ Nevertheless, the district courts placed the entirety of the burden of identifying and noticing infringement on copyright owners.²⁶
- In *Veoh*, the court extended the safe harbor even though Veoh was informed that any music videos containing performances by certain listed recording artists were infringing, thereby reading the “representative list” language out of the statute.
- In *Viacom*, the district court decided that liability could attach only if YouTube had knowledge of each specific infringing clip.²⁷
- The court found that YouTube did not have the “right and ability to control infringing activity” even though the service’s founders decided to take down certain types of infringing content, such as full length films, and allow others to remain, including music videos.
- YouTube also had the capability of using digital fingerprinting to block infringing material, but chose to do so only when the content providers entered into licensing agreements with it.²⁸ The court sanctioned this behavior, ruling that the DMCA did not require YouTube to use this software to attempt to stop, for example, repeat postings of a video that had already been identified as infringing through a notice-and-takedown procedure.²⁹

These are but two examples that illustrate how the scales have tilted well beyond the balance Congress sought to create when passing the DMCA.³⁰

Such decisions also ignore how the technological tools available to digital services to prevent or limit systematic infringement have advanced.³¹ When commercial digital services rely on third party content to expand their user base and generate revenue,

remanded, Viacom, Inc. v. YouTube, Inc., 676 F.3d 19 (2d Cir. 2012) (“*Viacom II*”), *on remand Viacom Int’l, Inc. v. YouTube, Inc.*, 940 F. Supp. 2d 110, 115 (S.D.N.Y. 2013) (“*Viacom III*”).

²⁵ William Hensley, *Copyright Infringement Pushin’: Google, YouTube, and Viacom Fight for Supremacy in the Neighborhood that may be Controlled by the DMCA’s Safe Harbor Provision*, 51 IDEA 607 (2011) (“YouTube’s business model was designed to maximize the number of site viewers in order to increase advertising revenue to attract a buyer. To increase the number of viewers, they needed infringing material.”).

²⁶ *Viacom*, 718 F. Supp. 2d at 528-29.

²⁷ *Viacom III*, 940 F. Supp. 2d at 115. This decision astoundingly applauded the “wisdom of the legislative requirement” that places the burden on the copyright owner to identify and give notice of each infringement, and cited Viacom’s 100,000 takedown notices to YouTube in a single year as evidence that this “system is entirely workable.” *Id.*

²⁸ *Id.* at 119-120.

³¹ Please see responses to Questions 11 and 15 for a discussion of these technologies.

those services should not be able to avail themselves of the safe harbors simply because they use the public to populate the content on their sites and refuse to implement commercially available tools to weed out unlicensed third party copyrighted content. The DMCA must be rebalanced to address this fundamental unfairness.

3. How have Section 512's limitations on liability for online service providers impacted the growth and development of online services?

The DMCA has hurt the growth of legitimate services that are forced to compete with unlicensed services that use the safe harbors as a shield. Unfair competition impedes the marketplace. Here, unfair competition comes in two forms: completely unlicensed services; and services that negotiate “in the shadow of the law” to obtain below market rates. This distortion in the market stifles investment and ultimately reduces innovation and diversity of services and business models.

Again, the culprits are a variety of problems with the way the DMCA has worked in practice:

- Court interpretations that encourage user-generated content services to turn a blind eye to infringement rather than providing incentives for cooperation;
- A mindset of “use third party copyrighted works first, ask for a license later.”³² Consider that Flipagram, YouTube and SoundCloud all claimed safe harbor status in their early years while relying on music for their growth, and only sought licenses for music after they had obtained substantial audiences.
- Rogue services design and engineer their systems to make the DMCA irrelevant and ineffective in stopping their ongoing infringement. Consider Grooveshark, which profited from its infringing activity for years under the color of the DMCA safe harbor before ultimately being found liable for willful copyright infringement.³³

A balanced law would deter rogue actors from seeking to realize short term profits from music at the expense of music creators, owners, and legitimate digital services. Fixing the DMCA will help legitimate digital services flourish.

³² See Kurt Wagner, *Why Aren't More People Talking About Flipagram? (Q&A)*, RECODE.NET (Mar. 13, 2016), <http://recode.net/2016/03/13/why-arent-more-people-talking-about-flipagram-qa/> (quoting the CEO of Flipagram as saying, “we kind of just did it and [decided] we’d ask for permission after”).

³³ *Capitol Records, LLC v. Escape Media Group, Inc.*, 2014 U.S. Dist. LEXIS 183098, *76-79 (S.D.N.Y. May 28, 2014), *adopted* 2015 U.S. Dist. LEXIS 38007, *18-19, 30-32 (S.D.N.Y. Mar. 25, 2015) (“*Grooveshark*”).

4. How have Section 512’s limitations on liability for online service providers impacted the protection and value of copyrighted works, including licensing markets for such works?

In addition to hampering the growth of other digital music services that choose to partner with the Music Community and license music content, Section 512’s limitations on liability for digital service providers have negatively impacted the protection and value of copyrighted works, including licensing markets for such works in a number of ways:

- Overall protections are limited as the safe harbor allows for many variations of unauthorized use with no meaningful remedy, thus depressing the licensing market.
- The shadow of the safe harbor too often leads to a below market rate.
- When service providers decide to exploit music but not license it and instead hide behind the safe harbor wall, no monetary compensation is offered to content owners, who must also expend resources to identify infringements and send takedown notices.

Rather than encouraging cooperation between service providers and content owners to address infringement, the DMCA has led to certain service providers actively avoiding any knowledge of what is occurring on their service, declining to use readily available tools to limit infringements, and using flawed interpretations of the DMCA to avoid ensuring that works that have been noticed as infringing do not reappear on their service. By way of example, unauthorized uses of One Direction’s “Drag Me Down” reappeared over 2,700 times on YouTube following the first notice.³⁴ The problem is endemic in today’s Internet environment.³⁵ In addition, some social media networks invoke the safe harbors while enabling their users to shield their content from public searching – further impeding the enforcement of copyright rights.

Moreover, rogue actors design their systems to purportedly comply with the DMCA notice-and-take down regime, while actively encouraging infringing behavior, all under the color of the DMCA. As noted above, despite Grooveshark being ultimately found liable for copyright infringement for its egregious behavior,³⁶ it was able to profit from unauthorized use of music for years while the case was litigated. In that case, the court found that Grooveshark had created a “technological Pez dispenser” that required copyright owners to submit “successive takedown notices” in order to remove a single sound recording from the service.³⁷ This “actively prevented copyright owners from

³⁴ IFPI submission on regulatory environment for platforms, online intermediaries, data and cloud computing and the collaborative economy (Dec. 2015).

³⁵ Please see responses to Questions 6-12 for further examples of the DMCA’s failure as a regime to protect copyrighted works.

³⁷ *Grooveshark* at *19.

being able to issue meaningful DMCA takedown notifications.”³⁸ Others are so shameless as to publicly tout their activity and seek crowd sourced funding for their illegal efforts.³⁹

This type of brazen work-around of the DMCA by Grooveshark and other rogue actors of the DMCA devalues music and suppresses the legitimate market for it.

Furthermore, the deficiencies in the DMCA, compounded by flawed judicial interpretations of the DMCA has created a “culture of free” mentality, leading to market distortions. As IFPI explained, services directly licensed on the basis of full exclusive rights generated over \$1.3 billion for the music industry in 2014, whereas by comparison, the over 900 million music users of user-uploaded, on-demand streaming platforms generated less than half of that (approx. \$530 million) in the same year.⁴⁰ Based on available data, IFPI estimates that in 2014 YouTube paid out approximately \$0.72 per user per year to record companies, while in 2013 Spotify paid out \$20 per user (no equivalent 2014 data available).⁴¹ “The notice-and-takedown system—intended as a reasonable enforcement mechanism—has instead been subverted into a discount licensing system where copyright owners and artists are paid far less than their creativity is worth.”⁴²

³⁸ *Id.* at *21-22.

³⁹ A particularly egregious example was Aurous, a service that allowed users to search for, stream, and download pirated copies of popular music, and which was designed specifically to search for and retrieve copies from online sources notorious for offering pirated music. Aurous had promoted itself by linking to articles that call it “BitTorrent Music for Your Dad” and “Popcorn Time for Music”; in other words, as a site that made it incredibly easy to find and stream or download pirated music. Aurous brazenly began a crowdfunding campaign for its mobile app. *See* Aurous, “We need your help to bring Aurous to Iphone, Android and Windows phone! Please consider donating to our Indiegogo...”, TWITTER (Sept. 17, 2015, 11:55 am), <https://twitter.com/aurousapp/status/644585368440938496?lang=en>; Aurous, “Hey everyone who contributed to our @Indiegogo campaign, we've issued refunds for all our backers, Aurous will be released October 10th.”, TWITTER (Sept. 19, 2015, 1:00 pm), <https://twitter.com/aurousapp/status/645326516600086528?lang=en>. The RIAA, on behalf of its members, brought suit against Aurous, securing a judgment and permanent injunction that shut down the service. *See Atlantic Recording Corporation et al. v. Andrew Sampson*, Case No. 1:15-cv-23810 (S.D. Fla., filed Oct. 13, 2015); Judgment and Permanent Injunction, *id.* (Dec. 23, 2015).

⁴⁰ IFPI submission, *supra* n. 34.

⁴¹ *Id.*

⁴² *See* Sherman, *supra* n. 6; *see also* IFPI submission, *supra* n. 34 (“[O]ur member companies, as content producers, are unable to negotiate fair commercial contractual terms with some online platforms, specifically those that rely on user-uploaded content (‘UUC’), such as YouTube, Dailymotion and SoundCloud. These services build up a user base off the back of UUC content, relying on the lack of clarity in the legal framework, and then make a “take it or leave it” offer. Music companies can license their content on the terms of offer, or not agree to license, knowing that in such case their content will still be available and that they will have no option other than engaging in notice-and-takedown procedures which are ultimately ineffective in handling the vast volumes of UUC. This leads to licenses being concluded at artificially low rates, causing a “value gap” between the income generated by such services from their use of music, and the revenues that are being returned to record companies and artists. This behavior harms creators and producers as well as other music services, consumers, and the economy as a whole.”).

Despite music being more popular than ever today,⁴³ U.S. music industry revenues have been virtually flat since 2010 and are down nearly 50% since the DMCA was enacted in 1998. This has led to what we call the “value grab”, creating market distortions that lead to bizarre statistics like vinyl records generating more revenue for the industry in 2015 than the billions of on-demand ad-supported music streams on YouTube and similar services.⁴⁴

This is further illustrated by the disparity between the annual growth of usage compared with revenues from on-demand ad-supported music streaming in the U.S. This category of music listening includes many popular services such as YouTube, Vevo, the free portion of Spotify, and other services as well.

Chart 4.1 – Disparity between growth in music streaming consumption versus growth in revenues from that streaming consumption

As shown in Chart 4.1, in 2014, on-demand, ad-supported streaming usage grew 63%, while revenues for sound recordings from that usage only grew 34%. This disparity – an indicator of the “value grab” – grew even wider in 2015. In 2015, on-demand, ad-

⁴³ “Demand for music online is higher than ever, with many sites directly dependent upon professionally produced, copyrighted music for their success. Over 65% of Americans ages 13+ agree that music is important to their lifestyle. American consumers spend, on average, more than 24 hours per week listening to music and, in a typical week, 75% of U.S. consumers listen to music online. Twelve of the top 20 most followed people on Twitter are from the Music Community. Fifteen of the top 20 celebrities on Facebook are musicians.” Music Community Written Submission Regarding Development of the Joint Strategic Plan on Intellectual Property Enforcement, in response to Request of the U.S. Intellectual Property Enforcement Coordinator for Public Comments, 80 Fed. Reg. 52800 (Oct. 15, 2015), Appendix C.

⁴⁴ At retail in the U.S., vinyl revenues outpaced revenues from all on-demand, ad supported music streaming services. See Sherman and RIAA 2015 Year-End Sales & Shipments Data Report, *supra* n. 6. Even at wholesale in the U.S., vinyl revenues outpaced revenues from total on-demand, ad supported music video steaming services.

supported music streaming consumption more than doubled in the U.S., while the revenues to the sound recording industry from that usage only grew 31%.

The fact is that, while the technology industry is benefitting from the increased availability of digital music, and profiting from the unprecedented consumption and interest in music, the Music Community is facing a shortfall.

The DMCA has prevented the Music Community from receiving its fair share of the significant and growing digital marketplace.⁴⁵ If the Music Community is to be successful through, creating, investing in, and rewarding music creators, it needs a digital marketplace operating in a free market that properly compensates creators and content owners.

5. Do the Section 512 safe harbors strike the correct balance between copyright owners and online service providers?

The DMCA Section 512 safe harbors may have initially been designed to provide a balanced approach. But after years of transformative technological developments and flawed judicial interpretations of what activities should be permitted to fall within the safe harbor (*i.e.*, what constitutes red flag knowledge, what qualifies as a representative list, etc.),⁴⁶ the DMCA no longer strikes the balance intended by Congress between copyright owners and service providers.

Significantly, broad judicial interpretations of “online service provider” have resulted in safe harbors protecting more than just passive and/or neutral, “innocent” service providers. The unbalanced safe harbors are now relied upon by digital services to attract visitors by hosting content. These services then benefit financially from mining data from, and selling advertisements based on, that increased audience. Some of these services then negotiate with content providers for licensing fees at below market rates (if any fees are paid at all), because the content owners’ only other option is a notice-and-takedown regime that simply does not work.⁴⁷

Some judicial decisions have dis-incentivized service providers from even taking steps to meaningfully stop infringement lest they be deemed to have red flag knowledge of infringement or discover the existence of repeat offenders. This makes service providers actively avoid doing otherwise reasonable things.

Initially Congress sought balance so that Section 512 limitations would enable a nascent online industry. However, given the flawed judicial interpretations of the DMCA, and the incredible growth and market power of this industry, protecting service providers that act as content distributors at the expense of creators is not a justifiable

⁴⁵ See David Israelite, *NMPA Head Says “Free” May Work For Pandora But is Devastating to Songwriters: Op-Ed*, BILLBOARD (Sept. 24, 2015), <http://www.billboard.com/articles/business/6707834/nmpa-david-israelite-oped-pandora-songwriter-payments>.

⁴⁶ Please see responses to Questions 2, 4, 19 and 21 for a more detailed discussion.

⁴⁷ Please see responses to Questions 3 and 4.

policy objective. Instead of enabling certain service providers to unfairly benefit from their exploitation of music, Congress should seek to create a level playing field.

IV. NOTICE-AND-TAKEDOWN PROCESS

6. **How effective is Section 512's notice-and-takedown process for addressing online infringement?**

Section 512's notice-and-takedown process, as implemented, is impracticable and ineffective on today's Internet. Music trade associations have sent notices of over 280 million infringements to Google alone.⁴⁸ Individuals and small-businesses which cannot afford such an undertaking are left without even this minimal protection under the DMCA against digital piracy.⁴⁹ These issues are exacerbated by the "whack-a-mole" nature of the notice-and-takedown process.⁵⁰ Certain service providers have been known to contribute to this problem by ignoring the rampant infringing activity occurring on their sites, and waiting to act until they receive copyright-owner notifications.⁵¹ These notifications may never come because of content owners' unawareness of infringement, or may only come once the infringement has gone viral.⁵² The DMCA was not intended to enable or allow service providers to profit from such widespread and repeat infringement, while shielding themselves from liability; yet it is doing just that.

Music has been particularly hard hit. To get a sense of the scope of the problem, consider that since 2012, RIAA alone has noticed over 175 million infringements of music. In just the short period between the Grammy nominations (December 7, 2015) and the Grammy awards (February 16, 2016), nearly 4,000 unique infringing links were noticed to digital services for just the five nominated "Record of the Year" tracks.⁵³

In addition, there has also been escalating damage from the unauthorized dissemination of pre-release music, *i.e.*, albums slated for commercial release that have not yet been commercially released to the public.⁵⁴ In these circumstances, the

⁴⁸ Source: Google Copyright Transparency Report for infringements noticed by RIAA, BPI, and IFPI.

⁴⁹ See also Granados, *supra* n. 9. Kimberly James, President of indie label CBM, says that within two hours of releasing music, that often costs thousands of dollars to produce, she has found it illegally downloaded on hundreds of websites. Once the music has been uploaded, it's a massive battle to get it taken down, one that most emerging artists cannot afford; a conservative estimate puts 10% of music royalties as lost to piracy.

⁵⁰ Please see response to Question 4 and discussion above.

⁵³ This did not include notices for those links to search engines, and includes a period months after the commercial release of these songs.

⁵⁴ See Stephen Witt, *The Man Who Broke the Music Business*, THE NEW YORKER (Apr. 27, 2015), <http://www.newyorker.com/magazine/2015/04/27/the-man-who-broke-the-music-business> (describing some of the history of online infringement of pre-release music); see also Stephen Witt, *How Music Got Free: The End of an Industry, the Turn of the Century, and the Patent Zero of Piracy*, (Viking Pres, 2015); Andre Yoskowitz, *FBI Takes Down Pre-Release Music Piracy Site Share Beast*, NEWS BY AFTERDAWN (Sept. 16, 2015), <http://www.afterdawn.com/news/article.cfm/2015/09/16/fbi-takes-down-pre-release->

infringement is particularly damaging as it hits before the music has been released commercially to the public.

Chart 6.1 illustrates the ratio of infringing links per site noticed around the time of release for several recently released popular sound recordings.

Chart 6.1 – Average Noticed, Unique, Infringing Links per Site (Before & After Release Date)

As shown, sometimes serial and viral infringement is found even before the release date of the track. Once the sound recordings were released, the scope of the infringement problem quickly escalated. For example, by the fifth day after commercial release, the number of infringements noticed per site had expanded to over five per site per day.

Chart 6.2 shows how quickly the infringements spread to different sites, based on what could be identified within the limited resources of existing content protection operations.

music-piracy-site-sharebeast (describing ShareBeast, a rogue cyberlocker shut down by the Department of Justice in 2015 that trafficked in pre-release music).

Chart 6.2 – Cumulative number of unique sites where an infringement of the track was noticed from the date of the first infringement of that track was noticed

Unauthorized copies of virtually all these works were found on at least 10 different sites within the first couple of days of release, with several being infringed on over 100 different sites by the end of the first week. This is despite right holder efforts to take down the infringements.

With that understanding of the scope of the problem, consider the ineffectiveness of the DMCA. In 2014, RIAA noticed over 278,000 instances of music infringement to just one site that claims to comply with the DMCA Section 512(c) safe harbors, 4shared.com, a cyberlocker and file sharing hub. Of those, 97% were for repeat infringements of a previously noticed sound recording. In the five months prior to Grooveshark being shut down for willful copyright infringement, RIAA sent the service nearly 300,000 infringement notices; 94% were for repeat infringements of a previously noticed track.

Chart 6.3 – the overwhelming majority of notices sent relate to tracks for which at least 1 notice was already sent

This problem with repeat infringement of the same track on the same site is not limited to a particular class of service provider. IFPI, an international music trade association, reported that infringements of One Direction’s “Drag Me Down” reappeared over 2,700 times on YouTube (an on-demand, audio-visual service) following the first notice, infringements of Mark Ronson’s “Uptown Funk” reappeared over 3,000 times on SoundCloud (an on-demand, music streaming service) following the first notice.⁵⁵

Copyright owners should not be required to engage in the endless game of sending repeat takedown notices to protect their works, simply because another or the same infringement of the initially noticed work appears at a marginally different URL than the first time. The current standard of “URL by URL” takedown does not make sense in a world where there is an infinite supply of URLs. As described in the response to Question 15, technologies exist to identify content that is reposted on a digital service after it is removed, services of all sizes have implemented them, and they should be deployed as a standard industry practice.

We see very similar inefficiencies with search engines, who claim safe harbor status, and the way they continue to index known, infringing sites. Consider the example of the Mp3Skull site, found at various domains in 2015, and the numbers of infringements continually indexed by Google to that infringer. This site jumped to a new domain every time Google demoted the old domain, and that switch to the new domain allowed them to reappear prominently in Google search results.

Chart 6.4 below lists the number of infringing links RIAA noticed to Google for Mp3Skull at some of its various domains through 2015.

⁵⁵ IFPI submission, *supra* n. 34.

Chart 6.4– Infringements Noticed just by RIAA to Google about one rogue service, Mp3Skull, at its various domain addresses⁵⁶

Domain Address for Mp3Skull	# infringements noticed
Mp3skull.com	1,759,947
Mp3skull.to	20,145
Mp3skull.cr	87,971
Mp3skull.is	67,274
Mp3skull.wtf	46,377
Mp3skull.la	70,225
<i>Total</i>	<i>2,051,939</i>

As noted in the response to Question 13, each of these domains pointed to the same underlying IP address,⁵⁷ and continued to redirect to its then current domain address. Despite all of this knowledge about rampant infringement on this rogue service, Google continued to regularly index and point users to it as it hopped domains.

In fact, RIAA provided notices to Google about continued infringements of at least 3,000 tracks on each of these Mp3Skull domains. These tracks included, among others, those set forth in Chart 6.5. Clearly there are inefficiencies at play when Google has received so many notices about the same track at on this service and yet it continued to index infringements for the same track on the same service.

⁵⁶ Most recently, the Mp3Skull site has moved from .la to .yoga, to .mn, and as of March 28, 2016, back to .is.

⁵⁷ As reported by CloudFlare to RIAA.

Another major inefficiency in the DMCA, as implemented in today’s environment, is the lack of clarity about what is meant by “expeditious” takedown⁵⁸, and the ability of services to game the system under the veneer of protecting their user base. “Expeditious” takedown must be interpreted to be commensurate with the speed at which infringing material can be uploaded, indexed and disseminated over the Internet.⁵⁹ Google touts that it removes noticed infringing URLs from its system within six hours, but fails to provide transparency about the speed by which it indexes those infringing sites. Six hours on its own is a meaningless statistic in thinking about what “expeditious” means without an understanding of Google’s capabilities and speed in indexing infringing services in the first place. This can be a particularly crucial window of time in the case of works that have not yet been commercially released. Another service recently announced, supposedly for the benefit of its users, that it would institute a 48-hour rule before taking down infringing content that has been the subject of a DMCA notice.⁶⁰ That guarantees for this service, and its users, the ability to continue to benefit from the

⁵⁸ 17 U.S.C. § 512(c)(1)(A)(iii) (“upon obtaining such knowledge or awareness, acts expeditiously to remove, or disable access to, the material”) and 17 U.S.C. § 512(d)(1)(C) (“upon obtaining such knowledge or awareness, acts expeditiously to remove, or disable access to, the material”).

⁵⁹ For example, as noted in response to Question 9, last year YouTube CEO Susan Wojcicki announced that over 400 hours of video were being uploaded onto YouTube per minute.

⁶⁰ See *A Fair DMCA Policy for Creators*, PATREONBLOG (Feb. 22, 2016), <http://blog.patreon.com/a-fair-dmca-policy-for-creators/>.

infringement during this period. If a service wants to institute such a policy to keep the alleged infringement up after notice for whatever reason, that is a business risk it can take, but it should not be permitted to continue to avail itself of the safe harbors for any activity on its service. The law must be clarified to reflect this.

For further inefficiencies in the DMCA process, please see responses to Questions 16 and 26 on the issues surrounding the current abuse of the counter-notice procedure by users.

In thinking about the problem of repeat infringements, prominent scholars have advocated that recalibration is necessary, and suggested that a return to more traditional tort principles would help solve this concern.⁶¹ This proposal should be seriously considered.

7. How efficient or burdensome is Section 512’s notice-and-takedown process for addressing online infringement? Is it a workable solution over the long run?

Section 512’s notice-and-takedown system is unduly inefficient and burdensome for a number of reasons, including the whack-a-mole nature of the problem and the lack of a serious “takedown-and-staydown” component, both discussed in response to Question 6, above.

As a general matter, the DMCA, as currently interpreted by some service providers, requires content owners to survey every link on the Internet, worldwide, twenty-four hours a day, seven days a week, three hundred and sixty-five days a year, while service providers take advantage of the DMCA to profit from the infringing activity. Even with large-scale content owners with a large back office and significant resources, these efforts are only minimally effective. Smaller copyright owners – like songwriters, indie artists, indie labels and publishers – cannot even engage in these minimally effective efforts and have no remedy at all.

As noted above, RIAA alone has sent notices of over 175 million infringements. And the music industry regularly has to send notices of repeat infringements of the same copyrighted content to or about the same digital services over and over again. In just the first two months of 2016, RIAA sent repeat notices of infringements on over 6,500 tracks to just one service claiming DMCA safe harbors.⁶²

The process has gotten so out of hand that at least one service provider that claims safe harbor protection has told RIAA that receiving a notice about one link to an infringing file it hosts will not lead to a takedown of any other links it provides to exactly the same file. That service provider reasons that while it can condense user uploads of

⁶¹ See Peter S. Menell and David Nimmer, *Legal Realism in Action: Indirect Copyright Liability’s Continuing Tort Framework and Sony’s DeFacto Demise*, 55 UCLA L. Rev. 1 (2007). See also Bruce Boyden, *The Failure of the DMCA Notice and Takedown System*, CENTER FOR THE PROTECTION OF INTELLECTUAL PROPERTY (Dec. 2013), available at <http://cpip.gmu.edu/wp-content/uploads/2013/08/Bruce-Boyden-The-Failure-of-the-DMCA-Notice-and-Takedown-System1.pdf> for a discussion of other solutions to address the repeat infringement problem.

⁶² Source: RIAA (based on notices sent for 4shared.com).

the same content into one file so that it can conserve server space, it is inappropriate for the site to be obligated to remove all links its service created to that file upon a DMCA notice that specifies only one of those links, because the other uploaders might have authorization to upload that file. This is contrary to the express provisions of the DMCA.

If the current trend continues, the burden will only become worse. Digital use of copyrighted content is increasing. Congress must take this into consideration as it looks at reforming the notice-and-takedown process. Implementing a system where a notice sent to a service provider will be valid beyond the initial identification of an infringement, and strengthening the use of “representative lists” of content provided to intermediaries, will go far in relieving the burden placed on the copyright owner under the present DMCA system.

8. In what ways does the process work differently for individuals, small-scale entities, and/or large scale entities that are sending and/or receiving takedown notices?

As noted throughout our comments, the notice-and-takedown system is challenging, cumbersome, and expensive for all copyright owners. Even for large entities it is a serious resource challenge. But for small-scale entities and individual creators, the challenge is almost impossible to meet. The process is so daunting that many have stopped sending takedown notices altogether, and some conclude that they literally have no remedy under the DMCA, and no real way to protect the value of their works from indiscriminate infringement.

For example, Maria Schneider, a three-time GRAMMY winning jazz and classical composer, bandleader and conductor, notes that her most recent album has been available, for free and without her authorization, on numerous file sharing websites, and proposes that in the case of unauthorized verbatim copies, which cannot possibly be fair use, content matching technologies should be used to *prevent* infringement *before* it occurs, rather than solely to identify infringement after it occurs.⁶³

Musician Eric Hilton, founder of ESL Music and Thievery Corporation, believes that even with the existence of viable content ID and filtering systems, the greatest challenge is to require the companies to use the technology. Most of these companies are conditioned and dedicated to ignoring the existence of the problem – essentially engaging in a form of willful blindness. Quite simply, without a strong legal deterrent mandating the use of such systems, service providers and other intermediaries will never engage in the effort. It is in their best interest for the status quo to continue.⁶⁴

⁶³ See House Judiciary Subcommittee Section 512 Hearing, 113th Cong. 57 (2014) (statement of Maria Schneider).

⁶⁴ See ESL Music Letter, Appendix E.

“This view is shared by small independent record labels. Notice-and-takedown is simply not a viable remedy for the rest of the world. Only a viable ‘notice-and-staydown’ program will work for copyright owners, particularly the smaller entities.”⁶⁵

9. Please address the role of both “human” and automated notice-and-takedown processes under Section 512, including their respective feasibility, benefits, and limitations.

In today’s environment, a combination of automated and human takedown processes are required to deal with user-uploaded and automated, un-curated, unscreened upload/indexing processes. Last July, YouTube CEO Susan Wojcicki announced that over 400 hours of video were being uploaded onto YouTube every minute.⁶⁶ That translates into over 1,000 days’ worth of content per hour, for just a single user-uploaded content service. The Music Community would be severely handicapped without the ability to use automated tools to match this unprecedented scale of uploading of content.

A thoughtful implementation of a combination of automated and human infringement identification and notice processes is often quite accurate. For example, RIAA’s procedures and infringement identification track record, based on automated and human processes, has been viewed as good by service providers.⁶⁷ Conversely, a human only process to identifying infringements and sending notices is clearly ineffective in today’s environment.⁶⁸ However diligent a creator or owner may be in trying to protect a single work, sufficient person-hours will never be available to them to deal with the scale of uploading that exists today.⁶⁹

At the end of the day, if service providers are permitted and encouraged to automatically post thousands of pieces of user-uploaded content without requirement to conduct any level of analysis whatsoever as to whether that content is likely to infringe a third party’s rights, then rights holders must have commensurate tools to address that infringement.

10. Does the notice-and-takedown process sufficiently address the reappearance of infringing material previously removed by a service provider in response to a notice? If not, what should be done to address this concern?

The notice-and-takedown process, as currently implemented by some providers, does not in any manner address the reappearance of infringing material previously removed by a provider in response to a notice. Please see the responses to Questions 6 and 7 above and Question 13 below, for various examples of the repeat infringement problem across various classes of digital services.

⁶⁵ A2IM.

⁶⁷ For example, RIAA is part of Google’s trusted notice sender program.

⁶⁸ See the individual submissions by Universal Music Group, Warner Music Group and Sony Music.

⁶⁹ Please see response to Question 8 for some of the experiences owners and creators have had with using a human only review process.

In some cases, the repeat infringement is of the same file previously noted as being infringing. In other cases, it can be a repeat infringement of the same full length sound recording previously noticed, but may involve a file with a different hash. In yet other cases, the repeat infringements may involve variations of infringements of the previously noticed copyrighted work. In all these cases, even though the copyright owner has noticed the service that it has not authorized the use of its work on that service, the service permits further infringements of the copyrighted work to continue until the specific URL where that instance is located is identified in a DMCA notice.

As discussed in responses to Questions 14 and 19, this problem is exacerbated by judicial interpretations of “representative list” and “red flag” knowledge. These judicial interpretations embolden some service providers to take little or no action to address further infringements of the same copyrighted work on their service, if only one or a sample of fewer than all URLs for the infringements of that copyrighted work are noticed to the service.

This is simply not a system that Congress designed or ever would have designed. The statute must be revised to stop service providers and their users from gaming the system in this way.

11. Are there technologies or processes that would improve the efficiency and/or effectiveness of the notice-and-takedown process?

Technologies and processes exist today, and others can be readily adapted, to improve the efficacy of the notice-and-takedown process, at least with respect to sound recordings. These include, among others:

- Audio fingerprinting technologies to prohibit the redistribution or posting of unauthorized sound recordings that match previously noticed copyrighted sound recordings or musical works.
- Hash-matching technologies to prohibit the redistribution or posting of the exact instances of infringement previously noticed as infringing.
- Meta-data correlations by a service provider to identify potential infringements of previously noticed copyrighted works.
- Automatic removal and/or disabling of any links that point to a previously noticed infringement.

While several of these technologies and processes have challenges and limitations, they at least represent an improvement over the status quo. And several digital services, both large and small, use such technologies today.⁷⁰ Please see the

⁷⁰ See, e.g., *How Content ID Works*, YOUTUBE HELP, <https://support.google.com/youtube/answer/2797370?hl=en>, last accessed March 29, 2016; *An Update on Video Management on Facebook*, FACEBOOK MEDIA (Aug. 27, 2015), <http://media.fb.com/2015/08/27/an-update-on-video-management-on-facebook/>; *Customer Partners*, AUDIBLE MAGIC,

response to Question 15 for a further discussion of such technologies, and the impact they have had on the problem of repeat infringements.

Google often suggests that it cannot practically address the fact that it continuously indexes unauthorized copyrighted works on third party sites. It claims this even though it has received numerous notices of infringements of the same copyrighted work on the same third party site, even in cases where the new URL is only slightly changed (*e.g.*, www.roguesite.infringeadelehello-1 to www.roguesite.infringeadelehello-2), and even though Google apparently knows enough about the revised URL to serve it in the first page of search results when looking for a sound recording of the previously noticed track. If Google can develop programs to play and beat a master of the complex game Go,⁷¹ it can certainly develop programs to address this repeat infringement problem in its indexing function.

Some opponents of adopting technological processes to detect and deal with infringing content argue that content matching systems would result in an increase in false notices, and consequently, could disproportionately impose on user's free speech and expression rights. The data show that those claims are overblown and not consistent with the facts. For example, YouTube employs content identification technology. Nonetheless, as noted in responses to Questions 16 and 26, in one month, one music trade association noticed 98,753 infringements of sound recordings to YouTube. Only 653 counter-notices were filed on those notices by users claiming that the notices were improperly sent. Even assuming that free speech concerns underlay every one of these counter-notices, and even assuming all of them were valid, this is very thin evidence of disproportionate impact.⁷²

In addition, as discussed in response to Question 9, there are automated tools that can be and have been implemented thoughtfully by rights holders to scan for and identify

⁷² When YouTube wants to ensure content is not available on its free service, it certainly knows how to effectively make that happen. For example, Indie artist Zoe Keating was told her content channel would be "blocked" if she did not sign YouTube's licensing agreement as it was presented. Furthermore, whether she signed or not, content uploaded by users would be added to YouTube's Music Key, regardless of whether she had authorized any such distribution of her content. Glenn Peoples, *Cellist Zoe Keating Opens Up on Her YouTube Battle: 'There's a Lot of Fear Out There'*, BILLBOARD (Jan. 28, 2015), <http://www.billboard.com/articles/business/6451152/qa-zoe-keating-youtube-battle-theres-a-lot-of-fear>. YouTube has also announced that YouTube is launching a new subscription service, YouTube Red, with exclusive and original content available ad-free and at no extra charge only to paying subscribers. Todd Spangler, *YouTube Set to Premier First Original Movies, PewDiePie Series*, VARIETY (Feb. 3, 2016), <http://variety.com/2016/digital/news/youtube-first-original-movies-pewdiepie-show-1201695813/>. It will be interesting to watch what efforts YouTube takes to ensure that content doesn't show up on its free service, and how those efforts compare to its efforts to deter infringements of third party content.

infringements, that are then sent to digital services for remedial action. Such automated tools help speed up the identification of infringing links, and, as noted above, can also improve the accuracy of such infringement identification. However, improving the efficiency of finding infringements and sending notices about them does not solve the underlying problem of repeat infringements, and the rapid proliferation of infringing works in the digital marketplace.

12. Does the notice-and-takedown process sufficiently protect against fraudulent, abusive, or unfounded notices? If not, what should be done to address this concern?

The protections that exist today not only protect against unfounded notices, but, as noted in responses to Questions 16-18 and 26, they can go too far in trying to protect the uploader and service provider. Section 512(c)(3) provides many necessary elements for an effective takedown notification, including a statement “that the complaining party has a good faith belief that use of the material in the manner complained of is not authorized by the copyright owner, its agent, or the law.” While everyone makes honest mistakes, the liability provided by Section 512(f) is a significant deterrent. Consider, as noted in responses to Questions 11, 18 and 26, on a sample of 98,753 infringements noticed to one site, only 0.7% received a counter-notice. However, of those counter-notices, over 80% seemed likely to be unfounded. While certainly there are anecdotes of fraudulent notices, as the data show, they are very few and far between.⁷³ Further changes to the DMCA to protect against fraudulent notices are unwarranted.

13. Has Section 512(d), which addresses “information location tools” been a useful mechanism to address infringement that occurs as a result of a service provider’s referring or linking to infringing content? If not, what should be done to address this concern?

Given the prominent role “information location tools” have taken on in today’s environment, Section 512(d) has been largely ineffective in addressing online infringement. A recent study shows that search engines are the number one source by which consumers find ways to acquire music for free from unlicensed sources.⁷⁴ Huge volumes of DMCA notices sent to leading search engines have not altered this basic fact.

Search engines take the position that once they are notified that copyrighted content on a particular digital service is infringing, they will remove only the particular URL identified, disregarding the ease with which an infringing service can and will create a new URL to the very same content that is the subject of the takedown notice. That new URL is then re-indexed by the search engine. In 2013, RIAA reported that it

⁷³ Of the retractions submitted by the trade association after reviewing the counter-notices (which accounted for 0.1% of the infringements noticed), we note that the overwhelming majority of them concerned express authorizations granted to use the copyrighted material, and not mistake in identifying the material or other defenses offered by the uploader.

⁷⁴ MusicWatch, *The Environment Around Unsanctioned Music Acquisition* (January 2016). Another study from Carnegie Mellon University, perhaps the most comprehensive study yet on the link between search engines and media piracy, confirmed what search engines have likely known all along: that more highly placed links do have an effect influencing consumer behavior. The study showed that even users looking for lawful content could be led astray by promoted links to pirated content. Sivan, *supra* n. 33.

sent notices to Google of repeat infringements of the same track on 4shared.com at a rate of 1.1 infringements per week.⁷⁵ For the same period in 2015, RIAA continued to have to send Google repeat notices about the same track on the same site. For example, 62% of the infringements noticed to Google during this period occurring on 4shared.com were for repeat infringements of the same track.⁷⁶ The trend was even worse for sites such as the Mp3skull.com family of sites. In 2012, RIAA was sending on average 4.4 notices per week per track to Google about infringements of popular tracks on Mp3skull.com. In the fall of 2015, RIAA sent a similar number of repeat notices per week per track for popular tracks to the then current address for Mp3Skull, Mp3skull.wtf.⁷⁷

In a world of an infinite supply of URLs and sophisticated search engines that can quickly index and categorize these URLs for search purposes, copyright owners should not be required to engage in the constant game of sending repeat takedown notices to search engines for the same sound recording on the same service simply because it appears at a slightly different URL than it originally did. The fact that Google receives and responds to large numbers of notices is not a reflection of the system working, but rather a symptom of the gross inefficiencies of the DMCA. Again, Google should develop programs to address this repeat infringement problem in its search index function.

Google argues that de-indexing an entire site, even though Google has received actual knowledge of millions of infringements on that site, would be “censorship”. It is unclear whose speech Google believes is being censored, but, in any event, when considering the First Amendment and intellectual property rights, a thoughtful weighing and balancing of the interests is required. At some point, when the evidence of infringement on a service is so rampant, and evidence of legitimate speech on the service is minimal, such speech should not benefit from heightened protection. The appropriate remedy in this case is to remove the site from the search engine index.

14. Have courts properly interpreted the meaning of “representative list” under Section 512(c)(3)(A)(ii)? If not, what should be done to address this concern?

Courts have not properly interpreted the meaning of “representative list” under Section 512(c)(3)(A)(ii).

The statute expressly allows copyright owners who learn of the presence of infringing material on a website to notify the service provider of a “representative list” of infringed works thereby requiring the service provider to remove not only the specific works set forth in the notice, but also other clearly infringing material that is not specified in the notice.⁷⁸ The statute specifically considered that this would apply to entire

⁷⁵ *Six Months Later – A Report Card on Google’s Demotion of Pirate Sites*, RIAA (Feb. 21, 2013), available at http://www.riaa.com/wp-content/uploads/2015/10/Google_ReportCard.pdf.

⁷⁷ Source: RIAA

⁷⁸ 17 U.S.C. § 512(c)(3)(A)(ii) (“if multiple copyrighted works at a single online site are covered by a single notification, a representative list of such works at that site”).

websites, not specific webpages.⁷⁹ As noted in one of the earlier cases interpreting the DMCA, the purpose of the representative list is to “reduce the burden of holders of multiple copyrights who face extensive infringement of their works.”⁸⁰ In that case, the court denied the defendant’s motion for summary judgment on the grounds that the notice was insufficient.⁸¹ In another early case, the court found that defendant’s policy requiring notices to contain the exact webpage of the infringing material was contrary to the DMCA.⁸²

However, subsequent court interpretations have effectively nullified the representative list provision by either finding such lists insufficient or, notwithstanding the plain language of the statute, requiring a specific URL for each instance of infringement, thus eviscerating the practical effect of a representative list.

- In *UMG Recordings v. Veoh*,⁸³ the district judge, and later the appellate judge, concluded that the DMCA’s liability limitations applied notwithstanding uncontroverted evidence that the service had been informed that any videos on Veoh by a list of recording artists were infringing, that the CEO had admitted knowledge of infringing material service, and other evidence of apparent infringement.
- In *Capitol Records, Inc. v. MP3Tunes, LLC*,⁸⁴ the court found that the representative list provided was insufficient because it did not include specific URLs for all of the locations, noting that while service providers must take down specific material identified in the notice, they are not required to search for or take down other material that may infringe the identified copyrighted work.
- And in *Viacom v. YouTube*,⁸⁵ the court ruled that there must be a specific URL address identified for each instance of an identified infringing work, essentially leaving the representative list provision devoid of any meaning. The court also misconstrued Section 512(m) to require no reactive action by a service provider regardless of the information provided to it about infringing activity via a representative list.⁸⁶

The scope of infringements in today’s environment makes the “representative lists” provision of DMCA more necessary than ever. As the statute is reformed, the term should be more clearly defined to allow copyright owners to use this and other more technologically feasible methods to put services on notice of widespread and actionable infringement.

15. Please describe, and assess the effectiveness or ineffectiveness of, voluntary measures and best practices – including financial measures, content “filtering” and takedown procedures – that have been undertaken by interested parties to supplement or improve the efficacy of Section 512’s notice-and-takedown process.

Voluntary measures are a useful tool to address infringement when both parties are willing to take practical steps to address the problem. They do not, however, represent a silver bullet that solves the inequities that exist in today’s digital environment. To work effectively, voluntary measures must take place against the backdrop of practical, effective, and balanced laws that create an environment where all stakeholders see value in pursuing such measures. The DMCA, as currently interpreted, does not encourage this approach.

Currently, the interests of content and some tech companies do not often align on certain aspects surrounding the DMCA and a notice-and-takedown regime. Consider, for example, the recent exercise on notice-and-takedown best practices facilitated by the Commerce department.⁸⁷ Rights holders, individual creators, service providers of different sizes, and consumer and public interest representatives, including several representatives from the Music Community, participated in this process. Meetings took place every six weeks through the end of the year, but the result, while useful, only addressed limited efficiencies in the DMCA, despite calls for discussions to address efforts to increase the effectiveness of the notice-and-takedown regime. The misalignment of interests prevented such discussions from meaningfully taking place. This lack of cohesion and misalignment of present interests underscore the need for legislative reform in defining and establishing standard technical measures (“STMs”).

For a detailed description of various voluntary measures that have been considered and the challenges faced with effectively negotiating and implementing them, please see the October 2015 comments to the Intellectual Property Enforcement Coordinator, attached hereto as Appendix C.⁸⁸

To supplement those comments, we note the following additional observations.

Financial Measures. In the past few years, there has been a more concerted effort on the part of payment processors, ad networks, and advertisers to stop the flow of funds from these intermediaries to services engaged in rampant widespread copyright infringement. We believe these measures have made a positive impact in that they have limited the sources of funding for these infringing services and also caused the sites to look illegitimate, discouraging some visitors. For example, in the summer of 2015, a major payment processor stopped providing payment services to a rogue infringing cyberlocker, and in response, at least one of the cyberlocker's uploaders claimed it would no longer source third party content to the cyberlocker because it could no longer receive payment from that cyberlocker.⁸⁹ Also, on February 11, 2016, the Trustworthy Accountability Group ("TAG", at tagtoday.net) announced it was moving its program to deter the flow of advertising dollars to criminals engaged in piracy from the design phase to the execution phase. We look forward to seeing how this program progresses.

Content Matching Technologies. While there is no multi-industry initiative on the use of content matching technologies, several digital services, including YouTube, Tumblr, SoundCloud, 4shared, and others, have unilaterally implemented some form of content matching and have taken action based on that matching to deter further infringement. Content matching solutions include proprietary systems, hash-based file identification, and/or various implementations of third party fingerprinting solutions, such as Audible Magic.

The type of technology used and its implementation significantly affect the scope of the content identified, the action taken after such content is identified, and its overall effectiveness. For example, for a service that implemented hash-based content identification, the number of notices of repeat infringement that were sent by RIAA declined only slightly, from 99% repeat infringements to 97% the following year. On the other hand, when a service used a more robust Audible Magic implementation designed to address master sound recordings, RIAA found that, after such implementation, no meaningful infringements of full commercially released sound recordings were hosted on that service. This meant RIAA could focus its efforts on this service to detecting and dealing with on pre-release leaks, for which content matching was not yet available.⁹⁰

⁸⁹ See comments by user tomlav2634 left on discussion on wjunction.com, visited on July 20, 2015.

⁹⁰ We also note that while courts have not gone so far as requiring service providers to utilize content identification technologies to prevent infringement, one case found that LiveJournal's "anti-spam" system, which it employed voluntarily to block posts with keywords related to notices it had received, would be a type of "technological measure" that could be required by an injunction issued under § 512(j)(1)(A)(iii). See *Mavrix Photographs LLC v. LiveJournal, Inc.*, No. SACV 13-00517-CJC(JPRx), 2014 U.S. Dist. LEXIS 160324, *27-28 (C.D. Cal. Sept. 19, 2014). For services where infringement is occurring on a large scale, forward-looking injunctions requiring screening of uploads based on artists' names and titles, for example, would shift the burden to services to screen, review, and then post harmless content. Many sharing sites, like YouTube and Facebook, already employ large back offices offshore for screening for offensive content. See, e.g., Adrian Chen, *The Laborers Who Keep Dick Pics and Beheadings Out of Your Facebook Feed*, WIRED (Oct. 23, 2014), <http://www.wired.com/2014/10/content-moderation/>; and Adrian Chen, *Inside Facebook's Outsourced Anti-Porn and Gore Brigade, Where 'Camel Toes' are More Offensive Than 'Crushed Heads'*, GAWKER (Feb. 16, 2012), <http://gawker.com/5885714/inside-facebooks-outsourced-anti-porn-and-gore-brigade-where-camel-toes->

The implementation of such technology is certainly appreciated by the Music Community but should not be seen as a panacea, particularly when, despite the availability and increased use of content matching technologies, to date services have been unwilling to address these issues on an industry-wide basis.

Search Engine Demotion. In October, 2014, Google introduced an enhanced “demotion” signal to deprioritize sites for which it had received high numbers of notices. However, Google has provided no transparency into how this demotion signal works in practice. Worse, it appears that Google does not take into account previous notices sent about a service when it merely “hops” to a different domain. This apparently allows an infringing service to wipe the slate clean and avoid demotion simply because it changed the location of its domain on the Internet.

As demonstrated in the following charts, while Google’s demotion signal appears to impact traffic to a particular domain, the clock apparently starts over if the service merely switches its domain address. Chart 15.1 shows the number of infringements noticed to Google (from all sources) about Mp3Skull at its various domain locations in 2015. Chart 15.2 shows the frequency with which the various Mp3Skull domains appeared in the top 10 search results for searches for the top 50 Billboard tracks. Each of these domains at some point in 2015 included a “301 redirect” to automatically direct visitors to the subsequent domain, and each of these domains points to the same underlying IP address for the site. In essence, the service hasn’t changed its true address or underlying function – it merely changed the pointer to it. Nonetheless, even though Google had received notices of over 500,000 infringements on Mp3skull.to and demoted that domain, upon redirection of the service to Mp3skull.cr, Mp3skull.cr immediately gained popularity in search results. And the same trend continued as Mp3Skull hopped to various other domains.

are-more-offensive-than-crushed-heads. Therefore, these companies already have the workforce and infrastructure for screening and blocking.

Chart 15.1 – Infringements Noticed To Google about Mp3Skull⁹¹

Chart 15.2 – Frequency Mp3Skull family of domains appears in one class of sound recording searches in 2015⁹²

⁹¹ Source: RIAA analysis. This excludes the millions of infringements previously noticed to Google about Mp3skull.com.

⁹² Source: RIAA analysis.

As shown in Chart 15.3, this situation resulted in Mp3Skull not suffering any significant decrease in traffic for 2015.⁹³

Chart 15.3 – Traffic to Mp3Skull family of domains⁹⁴

More importantly, while the demotion signal impacts traffic to a particular domain, it does not negatively impact the overall trend of infringing services promoted in Google search results for searches for popular music. In fact, as shown in Chart 15.4 below, estimated traffic to infringing services from Google search results for popular music in 2015 continued to rise, while traffic to licensed services and to YouTube remained flat.

⁹³ Per Similarweb, in January 2016, Mp3Skull received over 50% of its traffic from search, and over 75% of that from Google.

⁹⁴ Source: Similarweb.

Chart 15.4 – Traffic from Google Search Results for Popular Music Content 2015⁹⁵

In sum, search engines continue to provide a critical link between digital services that infringe copyrights and the audiences they seek to serve, including U.S. consumers. While demotion efforts have made some difference, without greater cooperation by the major search engines, pirate services will continue to benefit from the substantial traffic sent to them by search engines. Unfortunately, efforts to encourage these critical players in the e-commerce environment to work cooperatively toward a sensible framework for this problem have failed to gain traction. Notices to search engines about repeat infringement on the same service need to have a meaningful impact, or there must be a tipping point where whole site removal from the search engine index is warranted.

Accordingly, while voluntary measures should be encouraged and services should be incentivized to implement them, the effect of such measures will not be adequate to combat copyright infringement, as long as such voluntary measures exist in a legal environment that does not more closely align the interests of service providers and rights holders.

⁹⁵ Source: IFPI Analysis. This is based on estimated traffic from weekly search results for searches for the then current top 50 Billboard tracks and mp3s and downloads of those tracks. For purposes of this analysis, an infringing site is one where the majority of the content on the homepage of the site infringes copyright (or, if the homepage has no content like TPB or Kickass, then a general assessment of the site indicates that the majority of the content available infringes copyright), and licensed sites are those listed on the Pro Music site, <http://pro-music.org/>.

V. COUNTER-NOTIFICATIONS

16. How effective is the counter-notification process for addressing false and mistaken assertions of infringement?

In our experience, the counter-notification process results in too many false-positive counter-notices. For example, IFPI received counter-notices on 653 infringements, based on a sample of 98,753 infringements noticed to YouTube.⁹⁶ After reviewing these counter-notices, it appeared that over 80% of the counter-notices had no good faith basis for claiming “mistake or misidentification,” the only valid statutory grounds for a counter-notification⁹⁷ Yet, based on this sample, the association representing the rights holders would be required to institute over 500 lawsuits in order to enforce their rights.⁹⁸ This is an unmanageable burden. These statistics further demonstrate that the deck is unfairly stacked against rights holders. Unfortunately, uploaders of third party content are often either misinformed or encouraged to file counter-notices without a basic understanding of their rights and obligations concerning their use of third party content.⁹⁹

Clearly, the system needs to be rebalanced or reconsidered in its entirety.

17. How efficient or burdensome is the counter-notification process for users and service providers? Is it a workable solution over the long run?

Further to the response to Question 16 above, it appears to us that the counter-notice process is much too easy for uploaders, and results in far too many counter-notices that lack any good faith belief of mistake or misidentification. This is not a workable solution over the long run because it leads to misconceptions about the law, and copyright owners must either engage in expensive litigation or have no recourse. In practice, there is no meaningful difference between a proper counter-notification and a legally sanctioned “putback” of material, even if clearly infringing.

18. In what way does the process work differently for individuals, small-scale entities, and/or large scale entities that are sending and/or receiving counter notifications?

For rights holders, whether small or large, properly addressing counter-notices in today’s environment is an insurmountable task. As noted above, uploaders are encouraged to file counter-notices often without understanding their rights and obligations. Further, there is a mounting perception that there is no financial risk or other down-side to filing counter-notices. This results in significant numbers of counter-notices that are false, leaving copyright holders with the significant burden of either filing

expensive and lengthy litigation in a very short time frame, or being left with no remedy at all.

Most artists simply do not have the resources to engage in such a costly, and time compressed litigation. Don Henley is the only artist we know of to date who has actually sued under the counter-notification provision.¹⁰⁰ Clearly the cost of such a lawsuit, and the short turnaround time, has effectively pre-empted other artists with fewer resources from engaging in such an exercise.

VI. LEGAL STANDARDS

19. Assess courts' interpretations of the "actual" and "red flag" knowledge standards under the Section 512 safe harbors, including the role of "willful blindness" and Section 512(m)(1) (limiting the duty of a service provider to monitor for infringing activity) in such analyses. How are judicial interpretations impacting the effectiveness of Section 512?

Certain judicial interpretations of "red flag" knowledge, and "willful blindness" under the DMCA have significantly undermined the effectiveness of Section 512.¹⁰¹ These decisions have given rise to a perverse universe where services are incentivized to take efforts to blind themselves to what is occurring over their services, and to take no action to prevent it. This is precisely the opposite of Congressional intent to "preserve the strong incentives for service providers and copyright owners to detect and deal with copyright infringements that take place in the digital networked environment."¹⁰²

Congress intended that the safe harbors only be used by passive, neutral actors. The red flag provision was designed to ensure that result. Thus, a "copyright owner could show that the provider was aware of facts from which infringing activity was apparent if the copyright owner could prove that the location was clearly, at the time the directory provider viewed it, a 'pirate' site . . . where sound recordings, software, movies or books were available for unauthorized downloading, public performance or public display."¹⁰³ As such, the statute makes clear that the limitation is conditioned upon,

¹⁰⁰ See, e.g., *Henley v. Devore*, 733 F. Supp. 2d 114 (C.D. Cal. 2010); see also Daniel Kreps, *Don Henley Settles Suit Against California Rep. ¹⁰¹ See, e.g., *UMG II*, 665 F. Supp. 2d 1099, *aff'd*, *UMG IV*, 667 F.3d 1022; *Viacom III*, 940 F. Supp. 2d at 115; *Capitol Records, LLC v. Vimeo, LLC*, 972 F. Supp. 2d 500 (S.D.N.Y. 2013), *reconsideration granted in part, reconsideration denied in part*, 972 F. Supp. 2d 537 (S.D.N.Y. 2013).

¹⁰² Report of House Commerce Committee on H.R. 2281, the Digital Millennium Copyright Act, H.R. Rep. No. 105-551, pt. 2, 49 (1998).

¹⁰³ Staff of House Committee on the Judiciary, 105th Cong., Section-By-Section Analysis of H.R. 2281 as Passed by the United States House of Representatives on August 4, 1998, at 33 (Comm. Print 1998), *reprinted in* 46 J. Copyright Soc'y U.S.A. 635 (1999) ("Manager's Rep.").

among other things, taking certain action expeditiously upon “becoming aware of facts or circumstances from which infringing activity is apparent.”¹⁰⁴

Red Flag Knowledge. Commentators have stated that it is reasonable to construe the red flag prong as referring to general infringing activity.¹⁰⁵ Further legislative history clarifies awareness of the facts or circumstances in question should be determined on a subjective standard, but that an objective standard should be used to determine whether “infringing activity is apparent” based on those facts or circumstances.¹⁰⁶ Moreover, “apparent” under Section 512(c)(1)(A)(ii) “does not mean ‘in fact illegal,’ nor does it mean ‘conclusively exists.’”¹⁰⁷

Despite this, the courts in *Veoh* and *Viacom* misapplied the statute to virtually read the red flag prong out of the law. As noted in response to Question 14 above, in *Veoh*, the plaintiff cited several aspects from which a jury could reasonably find that infringing activity was apparent, including various articles that noted Veoh was a haven for pirated content and that the CEO of Veoh was aware that Veoh hosted unauthorized content.¹⁰⁸ Nonetheless, the court granted summary judgment to the defendant by misconstruing the plain meaning of the statute and the relevant legislative history.¹⁰⁹

While the *Viacom* court acknowledged that the jury “could find that the defendants . . . welcomed copyright-infringing material being placed on their website,” it nonetheless decided that the red flag provision requires “knowledge of specific and identifiable infringements of particular items”.¹¹⁰ This result simply does not square with legislative intent nor a proper construction of the difference between actual, specific knowledge of “the infringing activity” versus awareness that general “infringing activity” is present.¹¹¹ Furthermore, as discussed above, it reads out of the statute any meaningful way to provide knowledge of infringement through a “representative list”.

Critics argue that any requirement under the red flag prong to require action absent express URL-by-URL identification of the infringement is inconsistent with Section 512(m)(i). This is incorrect, and ignores the other provisions of the statute. While Section 512(m)(i) does not obligate a service provider to generally monitor its service or affirmatively seek facts indicating infringing activity, this does not mean that providers can avoid taking expeditious action once they have awareness of infringing activity or have received a representative list of infringement. As noted in legislative history, the “no monitoring” provision was “designed to protect the privacy of Internet

users.”¹¹² It was not intended to discourage the service provider from monitoring its service for infringing material, and certainly it was never intended to permit providers to continue to operate with impunity despite knowledge of wide- ranging infringing activity over their services.

These misinterpretations of “red flag” knowledge further widen the schism between what Congress intended – incentives for service providers and content owners to cooperate to detect and deal with infringement – and actual practice in today’s market place.

Willful Blindness. With respect to “willful blindness”, even the *Viacom* court recognized that, if a service provider is aware of a high probability of infringement on its system but then successfully turns a blind eye to avoid confirming that fact, there will rarely, if ever, be evidence of the provider’s awareness of “particular infringing transactions.”¹¹³ That is why the willful blindness doctrine, to prevent an actor from benefiting from its misconduct, serves as a substitute “to demonstrate” the required knowledge or awareness.¹¹⁴ To rule otherwise, as the *Vimeo* district court erroneously did,¹¹⁵ rewards willful blindness and “essentially empties any significance from the willful blindness inquiry.”¹¹⁶

As a consequence of these judicial decisions, rather than providing incentives for cooperation, the DMCA has provided incentives for service providers to turn a blind eye to infringement, or even to build willful blindness into their business models, contrary to the diligence expected in nearly any other business environment.¹¹⁷ This has resulted not only in increased inefficiencies in the DMCA regime,¹¹⁸ and market distortions in the value of music,¹¹⁹ but also in various rogue sites claiming DMCA protection when in fact, they are intentionally gaming the system. This is the exact opposite of Congressional intent.

<http://www.copenhype.com/2014/10/grooveshark-is-done/> (Grooveshark instructed its employees to create user accounts and to upload infringing files to the site, knowing that the business “depended on the use of infringing content”); see also William Hensley, *Copyright Infringement Pushin’: Google, YouTube, and Viacom Fight for Supremacy in the Neighborhood that may be Controlled by the DMCA’s Safe Harbor Provision*, 51 IDEA 607, 626 (2011) (“YouTube’s business model was designed to maximize the number of site viewers in order to increase advertising revenue to attract a buyer. To increase the number of viewers, they needed infringing material.”). The DMCA’s current provision providing that monitoring is not required was intended to apply to passive ISPs who otherwise meet the statutory eligibility tests for the safe harbors – not to shield ISPs operating with full awareness of the widespread presence of infringing content and indeed active inducement of posting of such content.

¹¹⁸ Please see responses to Questions 6, 16 and 26.

¹¹⁹ Please see response to Question 4.

20. Assess courts’ interpretations of the “financial benefit” and “right and ability to control” standards under the Section 512 safe harbors. How are judicial interpretations impacting the effectiveness of Section 512?

Certain judicial interpretations of the “financial benefit” and “right and ability to control” standards under the Section 512 safe harbors have similarly upset the balance Section 512 was intended to strike.

In discussing this condition, Congress recommended that “courts should take a common-sense, fact-based approach, not a formalistic one” to determining if there is a financial benefit.¹²⁰ For example, Congress stated that a service provider would be ineligible for the safe harbor under this prong where “the value of the service lies in providing access to infringing material.”¹²¹ Congress further noted that the “right and ability to control” provision was intended to preserve existing case law that examines all relevant aspects of the relationship between the primary and secondary infringer.¹²²

In considering the “financial benefit” prong, courts previously stated they should apply the same standard used for vicarious copyright infringement.¹²³ Taking that to heart, courts should look to the Ninth Circuit’s decision in *Fonovisa*¹²⁴ for a practical model.¹²⁵ In *Fonovisa*, vicarious liability was imposed because the availability and sale of infringing goods enhanced the attractiveness of the venue to potential customers and the provider, Cherry Auction, had the right and ability to terminate the vendors for any reason and/or control their activities. Cherry Auction’s provision of the site and facilities for known infringing activity was sufficient to establish contributory liability as well.

Yet under existing DMCA case law, very few defendants have been found ineligible for the safe harbor due to the financial benefit prong.¹²⁶ For example, defendants more closely resembling digital versions of Cherry Auction were able to claim the safe harbor, with courts deciding that “something more” is now required to show ineligibility under the financial benefit prong.¹²⁷ Because of this, at least one court suggested that only a very high standard of actual control would satisfy the “right and ability to control prong”.¹²⁸

¹²⁴ 76 F.3d 259 (9th Cir. 1996).

¹²⁵ *Id.*

¹²⁶ To be sure, in a few egregious cases, such as *Columbia Pictures Indus. v. Gary Fung*, defendants have been found to have such financial benefit and right and ability to control. 710 F.3d 1020 (9th Cir. 2013).

¹²⁷ *Hendrickson v. eBay, Inc.*, *supra* n. 23; *see also*, *Viacom*, 718 F. Supp. 2d 514.

¹²⁸ The court implied that only the following type of evidence would be sufficient to show the right and ability to control prong: “evidence that YouTube induced its users to submit infringing videos, provided users with detailed instructions about what content to upload or edited their content, prescreened submissions for quality, steered users to infringing videos, or otherwise interacted with infringing users to a point where it might be said to have participated in their infringing activity.” *Viacom III*, 940 F. Supp. 2d at 121. The *Veoh* case went further, suggesting erroneously that in order to meet a standard intended to

Additionally, in another troubling decision (now on appeal), a federal court in California rewrote from whole cloth a well-established aspect of the financial benefit prong of vicarious infringement. It is black letter law that the financial benefit requirement can be met by, among other things, showing that “the availability of infringing material ‘acts as a ‘draw’ for customers.’”¹²⁹ However, in *Perfect 10, Inc. v. Giganews, Inc.*,¹³⁰ the district court, citing no authority, held that a plaintiff must also demonstrate that its own works, or its category of works, acted as a specific draw to an infringing service.¹³¹ The court so held notwithstanding its recognition that the defendant service in that case was “awash in copyrighted material,” including, “staggering amounts of copyrighted works owned by movie producers and television networks.”¹³²

These judicial interpretations further weaken the statutory conditions that were intended to ensure the safe harbor was only available for passive actors. Instead, the bar has been set so high, services feel they can profit from infringing content with near impunity. This is not what Congress intended, and the law must be rebalanced.

21. Describe any other judicial interpretations of Section 512 that impact its effectiveness, and why.

We take this opportunity to highlight one case in particular, *Lenz v. Universal Music Corp.*¹³³ In that case, contrary to Congressional intent and the weight of authority concerning who has the burden of claiming and proving fair use, the court held that a copyright holder must subjectively consider fair use before submitting a DMCA notice. This unique decision, and the fanfare that has followed it, is quite remarkable considering that other courts have expressly rejected that view,¹³⁴ and that the Supreme Court has

comport with general vicarious liability standards, the defendant’s conduct would need to rise to the level of inducement. *Veoh Networks*, 586 F. Supp. 2d at 1150.

Oct. 28, 2008) (“*Lenz II*”) (denying motion for interlocutory appeal); 2010 U.S. Dist. LEXIS 16899 (N.D. Cal. Feb. 25, 2010) (“*Lenz III*”) (granting plaintiff’s motion for partial summary judgment on affirmative defenses); 2013 U.S. Dist. LEXIS 9799 (N.D. Cal. Jan. 24, 2013) (“*Lenz IV*”) (denying motions for summary judgment).

¹³⁴ *See Tuteur v. Crosley-Corcoran*, 961 F. Supp. 2d 333, 344 (D. Mass. 2013) (rejected view that fair use had to be considered prior to sending a DMCA notice, noting that “To have required [that] would have put the takedown procedure at odds with Congress’s express intent of creating an ‘expeditious[,]’ ‘rapid response’ to ‘potential infringement’ on the Internet” and that “It is also reasonable to assume that Congress was aware well prior to the passage of the DMCA that the Supreme Court had made clear that the burden of proof for a fair use defense rests on the accused infringer.”); *see also Ouellette v. Viacom*, 2011 U.S. Dist. Lexis 52570, at *15 (D. Mont. 2011) (noting that in establishing the DMCA, “Congress chose not to rewrite or modify the existing doctrines that impose liability for copyright infringement as those doctrines apply to the online world.”).

routinely held that the burden of proof for a fair use defense rests on the accused infringer.¹³⁵

The same court recently amended its ruling by omitting certain provisions that helped content owners satisfy the new and unprecedented requirement placed on the content owners by the court to consider fair use before sending the DMCA notice.¹³⁶

It remains to be seen what impact, if any, this decision, and its recent revision, has on the effectiveness of the DMCA. But at a minimum, it is a clear example of why congressional reform of the DMCA is necessary.

22. Describe and address the effectiveness of repeat infringer policies as referenced in Section 512(i)(A).

Too often, it appears that repeat infringer policies are only paid lip service, or not implemented with any rigor, effectively reducing, if not eliminating, their utility to deter infringement.¹³⁷ Overall, repeat infringer policies are meaningless in a world of anonymous uploading. Some services allow uploads without any registration, and some that require registration ask for nothing more than an email account. RIAA Executive Vice President Brad Buckles observes, “In a world of free anonymous uploading... [to platforms such as] lockers, repeat infringer policies are completely meaningless. The DMCA assumed the service provider was providing a service to the user, but in today’s world the user by uploading content is providing a service/value to the service provider.”

Congress included the repeat infringer condition to ensure that “those who repeatedly or flagrantly abuse their access to the Internet through disrespect for the intellectual property rights of others should know that there is a realistic threat of losing that access.”¹³⁸ Significantly, it made this condition a prerequisite to any claim of entitlement to safe harbor protection.¹³⁹ Thus, it should be a linchpin to ensure that infringement on any particular service does not get out of control.

In practice, however, there is little to no transparency into the repeat infringer policies of particular companies or organizations. In today’s environment, it appears that one achieves such transparency only through burdensome litigation. Even once suit is brought, establishing whether or not a service’s repeat infringer policy is compliant usually requires sifting through massive volumes of discovery, building expert reports and soliciting testimony to deconstruct just that one service’s repeat infringer policy. The entire cost and risk of such an endeavor falls on copyright owners even though the result may be obvious (*i.e.*, whatever the service’s repeat infringer policy may be, it is not being “reasonably implemented” when the content owner’s works reappear incessantly from the

¹³⁵ *Harper & Row, Publishers, Inc. v. National Enters.*, 471 U.S. 539, 561 (1985) (“The drafters [of sec. 107] resisted pressures from special interest groups to create presumptive categories of fair use, but structured the provision as an affirmative defense.”).

¹³⁶ *Lenz v. Universal Music Corp.*, 2016 U.S. App. LEXIS 5026 (9th Cir. Mar. 17, 2016).

¹³⁷ Please see responses to Questions 6 and 7 for a discussion of problems with repeat infringement.

¹³⁸ Senate Judiciary Committee Report, S. Rep. No. 105-190, at 52 (1998).

¹³⁹ 17 USC 512 (i)(1)(A).

same source). And because of the complex and lengthy litigation process, companies that want to take advantage of this lack of transparency can continue to profit from infringement of the Music Community's protected content for years.¹⁴⁰

Additionally, some providers encourage their users to seek "retractions" or make up excuses to avoid consistently implementing their repeat infringer policies,¹⁴¹ or appear to have weak or ineffective methods of tracking infringement attributable to one of their customer's accounts.¹⁴² This further dilutes the intended impact of the repeat infringer condition.

In any event, there are high percentages of repeat notices sent to the same services, and their underlying providers.¹⁴³ Change is needed to correct this inequity.

23. Is there sufficient clarity in the law as to what constitutes a repeat infringer policy for purposes of Section 512's safe harbors? If not, what should be done to address this concern?

Though Congress's intent was clear, inconsistency among judicial interpretations of the law have led to confusion and uncertainty regarding the repeat infringer standard.

Where the actions of the defendant are clearly egregious or intentional, some courts have been inclined to find that the defendant failed to implement a repeat infringer policy:

- In *Grooveshark*, the court found that the service failed to meet the requirement of reasonably implementing a repeat infringer policy, because it purposely made it nearly impossible for copyright owners to issue meaningful takedown notices, and purposely failed to keep adequate records of repeat infringement or to strip users of uploading privileges.¹⁴⁴
- In *Disney v. Hotfile*, the court ruled that the defendant was ineligible for the Section 512 safe harbors, noting that the defendant not only failed to comply with its policy of terminating users after two strikes, but also failed to tie infringement notices to user's accounts, "despite receiving

¹⁴⁰ Please see responses to Questions 3 and 4 for a discussion of how Grooveshark continued to profit from its unauthorized exploitation of infringing material while in litigation.

¹⁴¹ See *BMG Rights Mgmt. (US) LLC v. Cox Communs., Inc.*, 2015 U.S. Dist. LEXIS 161091, *56 (E.D. Va. Dec. 1, 2015).

¹⁴² As discussed in response to Question 6 above, RIAA has sent CloudFlare notices of nearly 300,000 infringements in connection with Mp3Skull entities on various Mp3Skull domains following the move from Mp3skull.com. CloudFlare has told us that each of those domains points to the same IP address, yet CloudFlare continues to provide service to Mp3Skull.

¹⁴³ Please see responses to Questions 6 and 13 for a discussion of the number of times infringements were noticed to the same site, service or family of sites, particularly in the case of Mp3Skull, as well as the disturbing lack of change in traffic to rogue site, Mp3Skull, as even after the hosting provider for Mp3Skull was noticed, Mp3Skull simply moved its operations to another hosting provider.

¹⁴⁴ *Grooveshark*, at *102-103 (S.D.N.Y. May 28, 2014), *adopted* 2015 U.S. Dist. LEXIS 38007, *18-19, 30-32 (S.D.N.Y. Mar. 25, 2015).

over eight million notices for five million users,” including “more than 300 notices each” for dozens of users who were not terminated.¹⁴⁵

- In *BMG v. Cox*, the court found the defendant failed to implement a repeat infringer policy where internal documents revealed that the defendant had a clear policy to intentionally circumvent the DMCA.¹⁴⁶

In other cases, however, it appears that the courts have strained to find the defendant had a compliant repeat infringer policy, even though the facts made the determination suspect.

- In *Perfect 10 v. Giganews*,¹⁴⁷ the court found that the defendant had reasonably implemented a repeat infringer policy, despite evidence that only 46 accounts had been deleted in a year with over 531 million infringing messages.

In some cases, courts have in effect read the repeat infringer policy condition out of the statute altogether.

- In *CCBill*, the court held that a service provider implements a repeat infringer policy if it has a working notification system, a procedure for dealing with DMCA notifications, and it does not actively prevent copyright owners from collecting information needed to issue such notifications.¹⁴⁸ This approach conflates the repeat infringer requirement with the notice-and-takedown process itself, while Congress clearly intended the former as a condition for reliance on the latter to qualify for safe harbor protection.

The DMCA safe harbors were intended to apply only to passive, innocent actors. Too often, courts have instead ruled that unless evidence of deliberate intent to circumvent the DMCA can be established, a clearly ineffective repeat infringer policy will nonetheless be found to be compliant. In order to correct this, Congress must reform the DMCA to provide greater clarity regarding what qualifies as an acceptable repeat infringer policy and what constitutes reasonable implementation of such a policy.

¹⁴⁵ *Disney Enters. v. Hotfile Corp.*, 2013 U.S. Dist. LEXIS 172339, *68-70 (S.D. Fla. Aug. 28, 2013).

¹⁴⁶ *Cox*, *supra* n. 141 (Defendant purported to have a repeat infringer policy, but internal documents revealed that the provider’s true intention was to “hold onto every subscriber we can.” Thus it told its employees to reactivate the accounts of users who had been terminated due to DMCA notices, and to then treat complaints against them as new complaints. Internally, Cox took the position that they would be in compliance with the DMCA provided they “terminate” the user, even if they quickly reactivated the account and restarted the “DMCA ‘counter.’”).

¹⁴⁷ *See, e.g., Giganews*, at 1196 (C.D. Cal. 2014).

¹⁴⁸ *CCBill*, 488 F.3d at 1109-10.

VII. STANDARD TECHNICAL MEASURES

24. Does Section 512(i) concerning service providers’ accommodation of “standard technical measures” (including the definition of such measures set forth in Section 512(i)(2)) encourage or discourage the use of technologies to address online infringement?

Section 512(i) concerning service providers’ accommodation of STMs has ironically had the negative impact of discouraging the use of technologies to address digital infringement. Because Section 512(i) acts to limit safe harbor protection, service providers have a perverse disincentive to participate in the development of any STMs, even though Congress expressly encouraged the use of STMs.¹⁴⁹

Consider, for example, the USPTO DMCA Best Practices multi-stakeholder forum discussed above in response to Question 15. Despite calls in that forum to discuss improvements to the effectiveness of the DMCA, including through the use of STMs, the misalignment of interests at the forum prevented those discussions from taking place in a meaningful way. This underscores the need for legislative reform to promote the use of STMs.

Currently, a number of reasonably priced, commercially available technical measures exist to identify and protect copyrighted works.¹⁵⁰ As noted in response to Question 15, some of these measures have shown a significant impact in reducing the number of infringements noticed on certain services, and several services have adopted them.

However, while some service providers have implemented such measures, many others feel no obligation to do so because they were developed organically in the market, and not, they argue, through the consensus process set forth in the DMCA for an STM. And, as noted above, service providers currently have no incentive to participate in such a process.

In addition, some have raised concerns that Section 512(i) creates a one size fits all approach to adopting an STM. In today’s environment, this may not make sense, as different tools are available to identify and protect different types of copyrighted works, offered at different price points, and that work in different service provider environments. Allowing more flexibility in how those technical measures can be adopted and when they need to be implemented may help create an environment where appropriate STMs can be adopted by particular kinds of service providers to which they best apply.

25. Are there any existing or emerging “standard technical measures” that could or should apply to obtain the benefits of Section 512’s safe harbors?

There are practices that are used by several in the industry that should be considered, or used as a model for, STMs. For example, see the response to Question 15

¹⁴⁹ House Judiciary Committee Report, H.R. Rep. No. 105-551.

¹⁵⁰ See, e.g., audiblemagic.com.

for a description of fingerprinting technologies to identify sound recordings and musical works. If other services that allow user-uploaded content involving music adopted robust implementations of these tools, it would help reduce the legal inefficiencies that currently characterize the DMCA notice-and-takedown regime.

Other options that should be explored include efforts to identify and deter dissemination of unauthorized sound recordings through the use of metadata¹⁵¹ as well as implementation of systems that allow rights holders to more easily send takedown notices with bulk URLs.

VIII. REMEDIES

26. Is Section 512(g)(2)(C), which requires a copyright owner to bring a federal lawsuit within ten business days to keep allegedly infringing content offline – and a counter-notifying party to defend any such lawsuit—a reasonable and effective provision? If not, how might it be improved?

As discussed above, Section 512(g)(2)(C), is not a reasonable provision, and is ineffective for the purposes intended.

Consider the statistics offered in response to Question 12 above. Based on that study on one month of data, even though the number of counter-notices received was tiny compared to the number of notices sent, the percentage of those counter-notices that appeared erroneous was over 80%. In that study, under Section 512(g)(2)(C), the rights holder would be obligated to bring over 500 lawsuits in order to protect its intellectual property. And that is based on observations of only a single service during a single month.

The problem is that any currently available solutions are highly un-scalable in the current environment, where technology and data transfer speeds permit millions of users to upload to countless services on a daily basis, and service providers' pecuniary interests make them inclined to favor their users over rights holders. Most artists simply do not have the resources to engage in such a costly, and time compressed litigation.¹⁵² The environment is ripe for abuse by uploaders, and the 10-day rule, among the other statutory provisions discussed in these comments, makes it virtually impossible for rights holders to obtain recourse.

27. Is the limited injunctive relief available under Section 512(j) a sufficient and effective remedy to address the posting of infringing material?

Section 512(j) has proven to be an illusory remedy that has rarely, if ever, been invoked in any meaningful respect. While reasonable, targeted injunctions applied to

¹⁵¹ *Gardner v. Cafepress Inc.*, No. 3:13-cv-1108-GPC-JMA, 2014 US Dist LEXIS 25405 (S.D. Cal. Feb. 26, 2014).

¹⁵² Please see response to Question 18 for a discussion of the cost of litigation and the dearth of artists who have actually sued under the counter-notification provision; *see also*, *Henley*, 735 F. Supp. 2d 114.

Internet intermediaries should be helpful in deterring infringement, particularly repeat infringement, and developing a balanced and healthy marketplace for music, experience up to this point indicates that such injunctions will practically never be meaningfully issued under the DMCA as currently drafted.

The few cases that have addressed Section 512(j) have found the issue of injunctive relief to be moot because the service provider had already removed the infringing material and/or terminated the accounts of the infringers by the time the case was heard.¹⁵³ Further, even if Section 512(j) were applied more commonly, it would not offer much more relief from the whack-a-mole problem than notice-and-takedown measures do. This is particularly true under Section 512(j)(B)(ii), which provides that a court may issue an injunction preventing a Section 512(a) service from providing access to a “specific, identified, online location outside the United States”. While this provision should be read to mean an injunction can be applied to deter infringement from rogue sites, recent court decisions suggest that any proposed injunction broader than a specific URL by URL injunction, even if it included a representative list of the copyrighted works at issue, would be difficult to obtain.

The presence of offshore digital services that make infringing material available to the U.S. market was mainly a theoretical concern in 1998. In 2016, it is a pervasive and intractable reality.¹⁵⁴ Where such sites are hosted or based in one country but target consumers in another — or worldwide — the failure of the host country to take effective action against them imposes costs on and pollutes the markets of its neighbors and trading partners. Increasingly, responsible governments are pushing back against this “offshoring” of enforcement responsibility, by developing means and processes for restricting or blocking access from within their borders to these overseas pirate sites. In due course, the U.S. must join the growing number of its trading partners by stepping up to this problem and providing an effective and reasonable solution, whether or not within the DMCA context. The current provision in Section 512(j) is clearly insufficient.

28. Are the remedies for misrepresentation set forth in Section 512(f) sufficient to deter and address fraudulent or abusive notices and counter notifications?

As discussed in responses to Questions 12 and 26, one study found that only 0.7% of notices were counter-noticed, which suggests that Section 512(f) does deter fraudulent notices by at least some rights-holders. However, the same study found that over 80% of the counter-notices were erroneous, which suggests that Section 512(f) has a much lesser impact on abusive counter-notices.

¹⁵³ See, e.g., *Veoh Networks*, 586 F. Supp. 2d at 1154-1155 (injunction moot because infringing content already removed); *Wolk v. Kodak Imaging Network, Inc.*, 2011 U.S. Dist. LEXIS 27541, *19-21 (S.D.N.Y. Mar. 17, 2011) (defendant already removing material in response to compliant notice, which is essentially what injunction sought).

¹⁵⁴ For a description of dozens of such sites, hosted in numerous foreign jurisdictions, see USTR, *2015 Out-of-Cycle Review of Notorious Markets* (Dec. 2015), available at <https://ustr.gov/sites/default/files/USTR-2015-Out-of-Cycle-Review-Notorious-Markets-Final.pdf>. The sites listed are only a fraction of those nominated by RIAA and other copyright industry organizations as “notorious online marketplaces” engaged in or dedicated to facilitating copyright infringement.

IX. OTHER ISSUES

29. Please provide any statistical or economic reports or studies that demonstrate the effectiveness, ineffectiveness, and/or impact of Section 512's safe harbors.

In addition to the studies and reports cited throughout this submission, please see Appendix D for a list of reports and studies that help address these issues.

30. Please identify and describe any pertinent issues not referenced above that the Copyright Office should consider in conducting its study.

For now, the Music Community omits any response to this question.

X. CONCLUSION

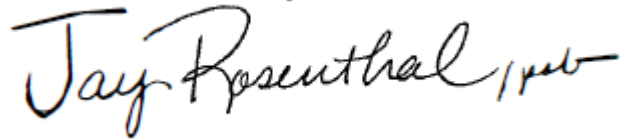

In 1998, the Music Community worked with service providers and Congress to draft and pass the DMCA – a balanced compromise that most believed would address the legitimate concerns of both constituencies. The Music Community believed the DMCA provided their community with reasonable, yet effective means to protect their works against infringing activity on the Internet. The passive intermediaries believed they would be protected from liability that was not facilitated by their services, and the law would provide them with a road to expand their business and the overall vitality of the digital marketplace.

Almost 20 years later, the reality on the ground bears little resemblance to the expectations of the Music Community when the DMCA was passed. The DMCA is arguably the first comprehensive law designed to regulate activity of content owners, passive intermediaries, and users of digital services. However, instead of the carefully balanced law passed by Congress, the DMCA has now become a dysfunctional relic, not suited to the realities of the 21st Century. This is not what Congress or those stakeholders involved in passing the DMCA intended.

Relying on the courts to resolve the problems of the DMCA at this point is unrealistic. Congress must get involved. The Music Community calls on Congress to re-examine the DMCA and to promote reasonable, sensible DMCA reform. The Copyright Office should assist Congress in this process by studying the problematic sections of the law, determining how these provisions have negatively impacted the Music Community, and ultimately advise Congress on how to reform the law in ways that restore the balance between the creative and technology communities that Congress intended to underlie the law from its inception.

The Music Community commits to working with the Copyright Office, Congress and other stakeholders in this legislative process.

Respectfully submitted on behalf of the
Music Community

Appendix A

Music Community Members

A2IM

A2IM is a 501(c)(6) not-for-profit trade organization headquartered in New York City representing a broad coalition of 391 Independently-owned American music labels. The organization represents these independently owned small and medium-sized enterprises' (SMEs) interests in the marketplace, in the media, on Capitol Hill, and as part of the global music community. In doing so it supports a key segment of America's creative class that represents America's diverse musical cultural heritage. Billboard Magazine, using Nielsen SoundScan data, identified the Independent music label sector as 34.4 percent of the music industry's U.S. recorded music sales market in 2015 based on copyright ownership, making Independent labels collectively the largest music industry segment.

American Society of Composers, Authors and Publishers

The American Society of Composers, Authors and Publishers (ASCAP) is a membership association of more than 565,000 US composers, songwriters, lyricists and music publishers of every kind of music. Through agreements with affiliated international societies, ASCAP also represent hundreds of thousands of music creators worldwide. ASCAP is the only US performing rights organization created and controlled by composers, songwriters and music publishers, with a Board of Directors elected by and from its membership.

ASCAP protects the rights of ASCAP members by licensing and distributing royalties for the non-dramatic public performances of their copyrighted works. ASCAP's licensees encompass all who want to perform copyrighted music publicly.

Americana Music Association

The Americana Music Association is a professional non-profit trade organization whose mission is to advocate for the authentic voice of American Roots Music around the world. The Association curates events throughout the year including the annual Americana Music Festival and Conference in Nashville, the acclaimed Americana Honors & Awards program (and PBS special) and "Americana NYC" in partnership with Lincoln Center, New York City.

Broadcast Music, Inc.

BMI was founded in 1939 by forward-thinkers who wanted to represent songwriters in emerging genres, like jazz, blues and country, and protect the public performances of their music. Operating on a non-profit-making basis, BMI is now the largest music rights organization in the U.S. and is still nurturing new talent and new music.

BMI is the bridge between songwriters and the businesses and organizations that want to play their music publicly. As a global leader in music rights management, BMI serves as an advocate for the value of music, representing more than 10.5 million musical works created and owned by more than 700,000 songwriters, composers and music publishers.

Christian Music Trade Association

Established in 1993, the Christian Music Trade Association is a non-profit organization that exists to build community and cooperation among Christian & Gospel music industry leadership in order to address mutual issues and to maximize Christian/Gospel music's impact on culture. The CMTA supports and promotes all styles of gospel music including pop, black gospel, hip hop, rock, country, southern gospel and more.

Church Music Publishers Association

The Church Music Publishers Association (CMPA), Nashville, TN, is an organization of North American and international publishers of Christian and other religious music that promotes worldwide copyright information, education, and protection. Founded in 1926, CMPA represents 56 member publishers.

Global Music Rights

Global Music Rights was founded in 2013 by Irving Azoff and represents music rights holders for the licensing of their public performances. Former Performing Rights Organization (PRO) executives Randy Grimmett and Sean O'Malley run operations and bring with them more than 30 years of collective experience in music publishing. Global Music Rights offers licensing, distribution and collection services for the exclusive rights granted to music creators and owners by copyright law.

The Latin Academy of Recording Arts & Sciences, Inc.

The Latin Recording Academy is a non-profit international membership based U.S. organization comprised of thousands of recording artists, musicians, songwriters, producers and other creative and technical professionals. The organization is dedicated to improving the quality of life and cultural condition for Latin music and its makers. In addition to producing the Latin GRAMMY Awards honoring excellence in the recorded arts and sciences, The Latin Recording Academy provides educational and outreach programs for the Latin music community.

Music Managers Forum – United States

The Music Managers Forum (MMF-US) provides a platform to connect, enhance, and reinforce the expertise and professionalism of music managers. Our goal is to further the interests of managers and their artists in all fields of the music industry, including live performance, recording and music publishing matters.

While many up and coming managers cannot easily have their voices heard or their views recognized, the MMF-US has a vital role to play in ensuring that the industry evolves fairly and profitably for all who work in the management industry and their clients. It is the goal of the MMF-US to make sure managers voices are heard. As the industry continues to evolve, the MMF-US endeavors to help its members to stay ahead of the curve.

Music Publishers Association

Founded in 1895, the Music Publishers Association is the oldest music trade organization in the United States, fostering communication among publishers, dealers, music educators, and all ultimate users of music. This non-profit association addresses itself to issues pertaining to every area of music publishing with an emphasis on the issues relevant to the publishers of print music for concert and educational purposes.

Nashville Songwriters Association International

The Nashville Songwriters Association International (NSAI) is the world's largest not-for-profit songwriters trade association. Established in 1967, the membership of more than 5,000 active and professional members spans the United States and seven other countries. NSAI is dedicated to protecting the rights of and serving aspiring and professional songwriters in all genres of music.

National Academy of Recording Arts and Sciences

Established in 1957, The Recording Academy is an organization of musicians, songwriters, producers, engineers and recording professionals that is dedicated to improving the cultural condition and quality of life for music and its makers. Internationally known for the GRAMMY Awards® — the preeminent peer-recognized award for musical excellence and the most credible brand in music — The Recording Academy is responsible for groundbreaking professional development, cultural enrichment, advocacy, education and human services programs. The Academy continues to focus on its mission of recognizing musical excellence, advocating for the well-being of music makers and ensuring music remains an indelible part of our culture.

National Music Publishers' Association

Founded in 1917, the National Music Publishers' Association (NMPA) is the largest music publishing trade association in the United States and the voice of music publishers and their songwriter partners. Its mission is to protect, promote, and advance the interests of music's creators on the legislative, judicial, and regulatory fronts.

Recording Industry Association of America

The Recording Industry Association of America (RIAA) is the trade organization that supports and promotes the creative and financial vitality of the major music companies. Its members are the music labels that comprise the most vibrant record industry in the world. RIAA members create, manufacture and/or distribute

approximately 85% of all legitimate recorded music produced and sold in the United States.

Rhythm and Blues Foundation

The Rhythm & Blues Foundation is the pre-eminent non-profit organization dedicated to the historical and cultural preservation of Rhythm & Blues music. It provides financial and medical assistance, educational outreach, performance opportunities and archival activities to Rhythm & Blues artists and their fans.

Screen Actors Guild – American Federation of Television and Radio Artists

Screen Actors Guild – American Federation of Television and Radio Artists (SAG-AFTRA) represents more than 160,000 actors, announcers, broadcast journalists, dancers, DJs, news writers, news editors, program hosts, puppeteers, recording artists, singers, stunt performers, voiceover artists and other media professionals. SAG-AFTRA members are the faces and voices that entertain and inform America and the world. With national offices in Los Angeles and New York, and local offices nationwide, SAG-AFTRA members work together to secure the strongest protections for media artists into the 21st century and beyond.

SESAC Holdings, Inc.

SESAC is a music rights organization that administers public performance, mechanical, synchronization and other rights. The combination of SESAC's performing rights business with The Harry Fox Agency's recently acquired mechanical rights business and SESAC's micro-licensing and network monetization affiliate, Rumblefish, allows SESAC to make licensing simpler, more efficient and more transparent. As SESAC undertakes this transformation, SESAC's performing rights business will continue to represent a renowned roster of affiliates including Bob Dylan, Mumford & Sons, Neil Diamond, Green Day, Mariah Carey, Lady Antebellum, Alt-J among many others.

Songwriters Guild of America, Inc.

The Songwriters Guild of America, Inc., founded in 1931, is the nation's longest established and largest music creator organization run exclusively by and for songwriters and composers. SGA actively serves its approximately 5,000 professional music creator members on legislative, legal and administrative matters, and provides copyright administration services upon request.

SoundExchange

SoundExchange is the independent non-profit collective management organization representing the entire recorded music industry. The organization collects statutory royalties on behalf of over 110,000 recording artists and master rights owners accounts for the use of their content on satellite radio, Internet radio, cable TV music channels and other services that perform sound recordings over noninteractive digital

music services. The Copyright Royalty Board, created by Congress, has entrusted SoundExchange as the sole entity in the United States to collect and distribute statutory digital performance royalties from more than 2,500 services. Since 2003, SoundExchange has paid out over \$3 billion in royalties.

Appendix B

The Law and Policy Landscape Pre-DMCA

A. The White Paper

In February 1993, President Clinton formed the Information Infrastructure Task Force (“IITF”), chaired by Commerce Secretary Ron Brown, and assigned it the task of articulating Administration policy related to the emergence of the Internet as a commercial and cultural force. A National Advisory Council was established within the Commerce Department to advise the Secretary on relevant issues, including intellectual property rights. Bruce Lehman, Assistant Secretary of Commerce, chaired the Working Group on Intellectual Property Rights (the “Working Group”).

The Working Group issued a Federal Register Notice requesting comments in October 1993 and held hearings in November 1993. Following the hearings, the Working Group published in July 1994 a draft report on policy proposals, commonly referred to as “the Green Paper.” More public comments were received and then more hearings took place in September 1994. One year later, in September 1995, the Working Group published “Intellectual Property and the National Information Infrastructure,” which is commonly referred to as “the White Paper.”¹

During this two-and-one-half-year period, lawsuits involving placement of infringing copies of works on publicly accessible electronic bulletin-board systems (“BBS”) began to move through the courts.² The first two cases to result in published opinions alarmed technology companies who provided access to the Internet and various BBS services. These cases held that an Internet service provider could be strictly liable for direct infringement, even where a provider’s subscriber, rather than the provider itself, uploaded the infringing copies.³

In the White Paper, the Working Group noted these cases, as well as two pending cases,⁴ and considered their implications. The report explained the views expressed by Internet service providers:

¹ “Intellectual Property and the National Information Infrastructure: The Report of the Working Group on Intellectual Property Rights,” Information Infrastructure Task Force (Sept. 1995), <http://www.uspto.gov/web/offices/com/doc/ipnii/ipnii.pdf> (“The White Paper”).

² Also during this time, a criminal case involving placement of unauthorized copies of software programs on a BBS resulted in an acquittal based on a judicial interpretation of a statutory requirement that only infringement for commercial advantage or private financial gain attracted criminal liability. *See United States v. LaMachia*, 871 F. Supp. 535 (D. Mass. 1994). Congress reacted by amending the Copyright Act to allow for criminal penalties where Internet dissemination results in significant harm to a copyright owner, even if the infringer did not profit. *See The No Electronic Theft Act*, Pub. L. No. 105–147 (1997).

³ *See Playboy Enterprises, Inc. v. Frena*, 839 F. Supp. 1552, 1554 (M.D. Fla. 1993); *Sega Enterprises Ltd. v. MAPHIA*, 857 F. Supp. 679, 683 (N.D. Cal. 1994). A third case, which went unmentioned in the White Paper, also held a BBS operator directly liable. *See Central Point Software, Inc. v. Nugent*, 903 F. Supp. 1057 (E.D. Tex. 1995).

⁴ *See Frank Music Corp. v. CompuServe Inc.*, No. 93 Civ. 8153 (S.D.N.Y. filed Nov. 29, 1993) (settled Nov. 8, 1995); *Netcom*, 907 F. Supp. 1361. For an academic discussion of the cases from that time period,

Some have a view that on-line service providers, such as bulletin board operators, should be exempt from liability or given a higher standard for liability, such as imposing liability only in those cases where infringement was willful and repeated or where it was proven that the service provider had both “actual knowledge” of the infringing activity and the “ability and authority” to terminate such activity. The latter proposed standard would combine the contributory infringement standard with the requirements for vicarious liability and apply it to all infringements (including direct infringements) of the service provider.⁵

However, the Working Group declined to recommend the changes to the law proffered by the large Internet service providers:

It would be unfair – and set a dangerous precedent – to allow one class of distributors to self-determine their liability by refusing to take responsibility. This would encourage intentional and willful ignorance. Whether or not they choose to reserve the right to control activities on their systems, they have the right. Service providers expect compensation for the use of their facilities – and the works thereon – and have the ability to disconnect subscribers who take their services without payment. They have the same ability with respect to subscribers who break the law. Exempting or reducing the liability of service providers prematurely would choke development of marketplace tools that could be used to lessen the risk of liability and the risk to copyright owners, including ... educating their subscribers about infringement and using technological protections, such as tracking mechanisms.⁶

In support of its conclusion, the Working Group also offered the following prescient reasoning.

Circumstances also vary greatly among service providers. ... There are those that try to prevent and react when notified and those that encourage infringing activity. Different service providers play different roles – and those are changing and being created virtually every day. At this time in the development and change in the players and roles, it is not feasible to identify *a priori* those circumstances or situations under which service providers should have reduced liability.⁷

The White Paper included proposed, draft legislation, which was introduced almost immediately as the National Information Infrastructure Copyright Protection Act of 1995.⁸ However, the legislation, which lacked any liability limitations for Internet

see I. Trotter Hardy, *The Proper Legal Regime For Cyberspace*, 55 U. PITT. L. REV. 993 (1994); Niva Elkin-Koren, *Copyright Law and Social Dialogue on the Information Superhighway: The Case Against Copyright Liability of Bulletin Board Services*, 13 CARDOZO ARTS & ENT. L.J. 345 (1993).

⁵ The White Paper at 114. See also *Public Hearings Explore IP and Fair Use on Information Highway*, 48 PAT. TRADEMARK & COPYRIGHT J. (BNA) 567 (Sept. 29, 1994) (describing testimony of Ellen Kirsh of America Online).

⁶ The White Paper at 123.

⁸ See H.R. 2441, and S. 1284.

service providers, failed to become law. This failure was due, in part, to opposition from large Internet service providers, who wanted the immunity that the Working Group viewed as counter-productive.⁹

B. Developing Case Law

Meanwhile, several cases were decided that altered the landscape significantly. The first and the most important was *Religious Tech. Center v. Netcom On-Line Communications*,¹⁰ in the Northern District of California. In this decision, the court concluded that the Copyright Act did not impose direct liability on a person who did not engage in a volitional act that violated one of the exclusive rights provided to copyright owners in 17 U.S.C. § 106.¹¹ In so doing, the court expressly disagreed with *Playboy Enterprises v. Frena*¹² and *Sega v. MAPHIA*¹³ on this point of law. The court stated: “Where the infringing subscriber is clearly directly liable for the same act, it does not make sense to adopt a rule that could lead to the liability of countless parties whose role in the infringement is nothing more than setting up and operating a system that is necessary for the functioning of the Internet.”¹⁴

However, the *Netcom* court did not absolve Internet service providers of all liability in connection with their subscribers’ conduct. Instead, the court carefully parsed theories of secondary liability. The court concluded that summary judgment could not be granted in favor of Netcom because Netcom continued to provide access to the direct infringer at issue after receiving a complaint letter from the plaintiff.¹⁵ Concluding that “[a]lthough a mere unsupported allegation of infringement by a copyright owner may not automatically put a defendant on notice of infringing activity, Netcom’s position that liability must be unequivocal is unsupportable,” the court also said that the notice provided by the copyright owner should “have triggered an investigation into whether there was infringement.”¹⁶

With respect to vicarious liability, the court concluded an issue of fact existed regarding Netcom’s right and ability to control infringing conduct because the evidence indicated that “with an easy software modification Netcom could identify postings that contain particular words or come from particular individuals” and that Netcom had “acted to suspend subscribers’ accounts on over one thousand occasions ... for commercial advertising, posting obscene materials, and off-topic postings.”¹⁷ However, the court concluded that the plaintiff’s vicarious claim failed because the plaintiff introduced no evidence to show that Netcom profited from the infringement in any manner other than receiving a fixed fee for access provision, which the court compared to a landlord

⁹ See Robert Levine, *FREE RIDE*, 15-31 (Double Day, 1st. ed. 2011) (describing negotiations related to bills).

¹⁰ *Netcom*, 907 F. Supp. 1361.

¹⁷ *Id.* at 1376.

receiving rent payments (a circumstance that traditionally did not result in vicarious liability).¹⁸ The court found that the plaintiff failed to show that Netcom attracted subscribers by advertising lax copyright standards because the evidence introduced did not adequately support that such a strategy was implemented.¹⁹

In sum, *Netcom*'s holdings may be stated as follows:

- An Internet service provider does not commit direct infringement by routing transmissions or temporarily storing content at the direction of a user because no volition is involved in such conduct.
- Contributory liability may be imposed where an Internet service provider is provided with notice of infringement on its system but fails to properly investigate and put a stop to infringement of the relevant works or by the user at issue.
- Vicarious liability may be imposed where an Internet service provider is capable of implementing technological methods of identifying infringing conduct and terminating the access and use privileges of specific users but fails to do so while financially benefitting either from payments directly related to accessing or posting specific infringing content or by using infringing content to attract users.

Immediately following *Netcom*, courts considering BBS cases almost unanimously elected to adopt its approach to direct liability, rather than the approach of *Frena* and *MAPHIA*.²⁰ Nevertheless, some cases, distinguished their facts from *Netcom*, found direct infringement occurred due to the extensive involvement of defendants in the conduct at issue.²¹ Where defendants purposefully sought to create Internet destinations where users could access infringing material for a price, and the defendants actively participated in the collection of content for that purpose, they were found directly liable.²²

For example, in *Playboy Enterprises v. Webworld*, the defendants selected specific adult-oriented news groups to copy and then used software to crawl the content, strip out the text, and create thumbnail and full-size copies of images. The defendants then offered users access to these images at subscription prices. Many of the images were infringing copies owned by Playboy. The defendants attempted to compare themselves to *Netcom*, but the court disagreed. "Webworld did not sell access; it sold adult images. ... Webworld did not function as a passive conduit of unaltered

¹⁸ *Id.*

¹⁹ *Id.*

Sabella*, No. C 93-04260 CW, 1996 U.S. Dist. LEXIS 20470 (N.D. Cal. Dec. 18, 1996); *Playboy Enterprises, Inc. v. Webworld, Inc.*, 991 F. Supp. 543 (N.D. Tex. 1997), *aff'd* 168 F.3d 486 (5th Cir. 1999); *Playboy Enterprises, Inc. v. Russ Hardenburgh, Inc.*, 982 F. Supp. 503 (N.D. Oh. 1997). In fact, in an opinion on summary judgment, the *MAPHIA* court itself agreed with *Netcom*, despite its earlier decision on a preliminary injunction motion. *MAPHIA*, 948 F. Supp. 923.

²¹ See, e.g., *Russ Hardenburgh, Inc.*, 982 F. Supp. 503; *Webworld, Inc.*, 991 F. Supp. 54, *aff'd* 168 F.3d 486.

²² *Id.*

information. Instead, Webworld functioned primarily as a store, a commercial destination within the Internet.”²³

The court also rejected the defendants’ attempt to claim ignorance of the copyrighted nature of the content at issue. “Clearly, a newsgroup named, for example, “alt.sex.playboy” or “alt.mag.playboy” might instantly be perceived as problematic from the standpoint of federal copyright law. Alternatively, Webworld might simply have refrained from conducting business until it had developed software or a manual system of oversight to prevent, or at least to minimize the possibility of, copyright infringement.”²⁴

In *Playboy Enterprises v. Russ Hardenburgh*, the defendants were also actively involved in infringement. They actively encouraged users to upload infringing images by offering users free downloads in exchange for uploads. The defendants also screened images prior to electing to post them and charged a subscription price to access certain images that were not otherwise publicly accessible. The court found these factors justified a finding of direct infringement, concluding that “[i]t is inconsistent to argue that one may actively encourage and control the uploading and dissemination of adult files, but cannot be held liable for copyright violations because it is too difficult to determine which files infringe upon someone else’s copyrights.”²⁵

Post-*Netcom* BBS cases also applied approaches to secondary liability in a manner similar to *Netcom*. For example, in *Marobie v. National Association of Fire Equipment Distributors*,²⁶ the court acknowledged that hosting a website could lead to contributory liability. The court declined to grant summary judgment for the defendant because, based on the evidence presented, it was unclear whether Northwest knew that any material on the website was copyrighted and, “if it did know, when it knew.”²⁷

In *Sega v. Sabella*,²⁸ the court held the defendant contributorily liable because the plaintiff proved the defendant had knowledge of the infringement in the following manners:

Here, Sega has established the following: Sabella was the system operator of her BBS; files on Sabella’s BBS were labeled as Sega Genesis games; and Sabella had the ability to track user uploads and downloads of these files. Additionally, postings on her BBS indicated that downloadable files were playable and warned that she and the co-sysop “read the user log several times a day.”²⁹ These facts establish the inference that Sabella had reason to know of her users’ infringing activity.³⁰

In *Playboy Enters. v. Russ Hardenburgh*, the court also found the defendant contributorily liable. The court found knowledge and material contribution to

infringement based on the following facts (which appear to mix and match things relevant to both contributory and vicarious liability):

Defendants clearly induced, caused, and materially contributed to any infringing activity which took place on their BBS. Defendants admit that they encouraged subscribers to upload information including adult files. Defendants admit that they benefitted from having more files available to their customers. Also, Defendants had at least constructive knowledge that infringing activity was likely to be occurring on their BBS. Defendants were aware that PEI was enforcing its copyrights against BBS owners. Moreover, Playboy Magazine is one of the most famous and widely distributed adult publications in the world. It seems disingenuous for Defendants to assert that they were unaware that copies of photographs from Playboy Magazine were likely to find their way onto the BBS. Defendants are liable for contributory copyright infringement.³¹

i. The Technology Landscape

The DMCA was written to address a technological landscape that differs markedly from what prevails today. This was true both with respect to the scope and volume of infringement, and the strength and robustness of the technical tools available to combat it.

The online environment of 1998 was certainly replete with infringing material, especially for relatively small files of text, small software programs, and audio recordings, which the existing infrastructure for data storage and transmission could readily accommodate. But the volume of infringing materials was, by today's standards, relatively minimal. The BBS systems described in the cases decided prior to 1998 stored and made available dozens or hundreds of works, but not the millions or tens of millions now featured on numerous user-generated content sites. Similarly, this was an environment in which the process for gathering, storing and disseminating infringing copies was more of a craft than an industry, and automation of the process was comparatively limited. A pirate BBS could depend upon the manual, copy-by-copy stripping of copyright notices from individual images.

Although the Internet was beginning to attract millions of users by the late 1990s, it was very different from the omnipresent commercial and cultural powerhouse we know today. Probably the most significant differences relate to speed and storage space. In the late 1990s, dial-up access was the standard. It took multiple seconds just to move from webpage to webpage, and streaming or downloading video was practically impossible. In addition, accounts (such as email) were limited in the amount of storage provided – no one could, for free, store terabytes of data in the cloud as they can today.

In addition, locating material took time and effort. The search engines available today have progressed by leaps and bounds over what was available then. In the late 1990s, companies that provided world wide web “directories” actually reviewed material

³¹ 982 F. Supp. 503 at 514.

as they catalogued it, rather than sending automated “robots” to crawl everything online with blazing speed.³²

On the other side of the coin, copyright owners had relatively few automated tools at their disposal to detect infringements. Specialized vendors to crawl the Web and flag infringing files were beginning to emerge, but their methods were relatively primitive.

Attracting advertising to a website or service also required greater effort. Whereas now ad servers like Google run targeted ads on millions of websites through embedded links, in the late 1990s, a website who wanted to generate funds from infringing conduct had to charge subscription prices or actually solicit advertisers. Similarly, a user who wanted to find infringing content would not see ads for such content displayed alongside search results after Googling for a recording artist by name. Today, according to our research, users are connected to infringing content through search engines more so than through any other means.³³

Peer-to-peer file sharing did not yet exist, at least in a manner accessible to most people. In fact, many of the services that possess large market share online now, were in their infancy or did not yet exist at the time the DMCA was enacted. For example, Facebook, Instagram, Twitter, iTunes, Spotify, YouTube, PayPal and Skype did not exist. eBay, Amazon, Google, and Yahoo! were all less than 5 years old.

ii. Legislative History of the DMCA

While the cases discussed above were reaching resolution, the United States signed the World Intellectual Property Organization Copyright Treaty and Performances and Phonograms Treaty. These treaties required certain changes to U.S. law, including protection for technological protection measures used to prevent misuse of copyrighted works and copyright management information used to identify right holders. Although the treaties did not require any liability limitations for Internet service providers, it became a political reality that legislation to implement the treaties could not be passed without accommodating demands made by large providers such as America Online, Yahoo!, CompuServe and Verizon.³⁴

³² See Senate Judiciary Committee Report, S. Rep. No. 105-190, at 49 (1998) (“The Yahoo! directory, for example, currently categorizes over 800,000 online locations and serves as a “card catalogue” to the World Wide Web, which over 35,000,000 different users visit each month. Directories such as Yahoo!’s usually are created by people visiting sites to categorize them. It is precisely the human judgment and editorial discretion exercised by these cataloguers which makes directories valuable.”).

³³ In a survey of digital music listeners by consumer research firm MusicWatch, search engines were found to be one of the leading way to discover pirated music. Crupnick, *supra* n. 8. Another study from Carnegie Mellon University, perhaps the most comprehensive study yet on the link between search engines and media piracy, confirmed what search engines have likely known all along: that more highly placed links do have an effect influencing consumer behavior. The study showed that even users looking for lawful content could be led astray by promoted links to pirated content. Liron Sivan, Michael D. Smith, and Rahul Telang, *Do Search Engines Influence Media Piracy?: Evidence from a Randomized Field Study*, SCHOOL OF INFORMATION SYSTEMS AND MANAGEMENT, HEINZ COLLEGE, CARNEGIE MELLON UNIVERSITY (Sept. 12, 2014), <http://ssrn.com/abstract=2495591>.

³⁴ See Levine, *supra* n. 9.

In the House of Representatives, the implementing legislation (called the “WIPO Copyright Treaties Implementation and Online Copyright Infringement Liability Limitation Act”) contained language intended to “codify the core of current case law dealing with liability of online service providers.”³⁵ Under this bill, direct infringement could not be “based solely on the intermediate storage and transmission of material through a system or network” so long as specific circumstances existed. The legislation also included liability limitations for contributory and vicarious infringement for the actions described above as well as for otherwise “transmitting or providing access to material over the provider’s system or network,” so long as the provider lacked actual knowledge that material was infringing or awareness of facts and circumstances from which infringement was apparent and the provider did not receive a financial benefit directly attributable to the infringement where the provider had a right and ability to control the infringement.³⁶ The Report of the Judiciary Committee that accompanied the bill³⁷ explained the purpose of the provisions as follows:

As to direct infringement, liability is ruled out for passive, automatic acts engaged in through a technological process initiated by another. Thus, the bill essentially codifies the result in the leading and most thoughtful judicial decision to date: *Religious Technology Center v. Netcom On-line Communications Services, Inc.*, 907 F. Supp. 1361 (N.D. Cal. 1995). In doing so, it overrules those aspects of *Playboy Enterprises, Inc. v. Frena*, 839 F. Supp. 1552 (M.D. Fla. 1993), insofar as that case suggests that such acts by service providers could constitute direct infringement, and provides certainty that *Netcom* and its progeny, so far only a few district court cases, will be the law of the land. As to secondary liability, the bill changes existing law in two primary respects: (1) no monetary relief can be assessed for the passive, automatic acts identified in *Religious Technology Center v. Netcom On-line Communications Services, Inc.*; and (2) the current criteria for finding contributory infringement or vicarious liability are made clearer and somewhat more difficult to satisfy.³⁸

The House bill was also the source of the “red flag” test found in the enacted legislation, as part of an overall effort to “[m]odif[y] and clarify[y] the knowledge element of contributory infringement and the financial benefit element of vicarious liability. . . . The knowledge standard in subparagraph (A), in addition to actual knowledge, includes ‘facts or circumstances from which infringing activity is apparent.’ This would include a notice or any other ‘red flag’—information of any kind that a reasonable person would rely upon. It may, in appropriate circumstances include the absence of customary indicia of ownership or authorization, such as a standard and accepted digital watermark or other copyright management information. As subsection (b) makes clear, the bill imposes no obligation on a provider to seek out such red flags.

³⁵ H.R. Rep. No. 105-551.

³⁸ *Id.*

Once a provider becomes aware of a red flag, however, it ceases to qualify for the exemption. This standard differs from existing law, under which a defendant may be liable for contributory infringement if it knows or should have known that material was infringing.”³⁹

Ultimately, Congress did not follow the approach of directly codifying the Netcom liability standards. Instead, beginning with the Senate bill, the legislation created “safe harbors” within which service providers who were liable for direct or secondary infringement “by reason of” engaging in four specified categories of activity were immunized against all monetary liability and much injunctive relief, if they met certain conditions.⁴⁰ The Report explained the overall purpose and scope of the liability limitations as follows:

Although the copyright infringement liability of on-line and Internet service providers (OSPs and ISPs) is not expressly addressed in the actual provisions of the WIPO treaties, the Committee is sympathetic to the desire of such service providers to see the law clarified in this area. There have been several cases relevant to service provider liability for copyright infringement. Most have approached the issue from the standpoint of contributory and vicarious liability. Rather than embarking upon a wholesale clarification of these doctrines, the Committee decided to *leave current law in its evolving state* and, instead, to create a series of ‘safe harbors,’ for certain common activities of service providers. A service provider which qualifies for a safe harbor, receives the benefit of limited liability. ... Title II preserves strong incentives for service providers and copyright owners to *cooperate to detect and deal with copyright infringements that take place in the digital networked environment*. At the same time, it provides greater certainty to service providers concerning their legal exposure for infringements that may occur in the course of their activities.⁴¹

The “common activities of service providers” eligible for safe harbor treatment were: (1) “transmitting, routing, or providing connections for, material through a system or network controlled or operated by or for the service provider, or the intermediate and transient storage of such material in the course of such transmitting, routing or providing connections”; (2) “intermediate and temporary storage of material on the system or network controlled or operated by for the service provider [where another person initiates the presence of the material and] ... where the storage is carried out through an automatic technical process for the purpose of making such material available to users of such system or network...”; (3) storage at the direct of a user of material that resides on a system or network controlled or operated by of for the service provider”; and (4) “referring or linking users to an online location containing infringing material or activity by using information location tools, including a directory, index, reference,

³⁹ *Id.*

⁴⁰ An earlier bill introduced by Senator Ashcroft contained broader immunity for service providers. *See Liability Bill for Online Service Providers Focuses on Notice and Take Down, Fair Use, 54 Pat. Trademark & Copyright J. (BNA) 384 (Sept. 11, 1997).*

⁴¹ Senate Judiciary Committee Report, S. Rep. No. 105-190.

pointer or hypertext link”.⁴² Limitations (2) through (4) were limited to circumstances where the provider responded “expeditiously” to “notifications of claimed infringement” from copyright owners (a so-called “notice-and-takedown process”), and, similar to the House bill, lacked actual knowledge that material was infringing or awareness of facts and circumstances from which the infringement was apparent, and did not receive a direct financial benefit directly attributable to infringing activity that the service provider had a right and ability to control.⁴³

With respect to the knowledge related limitations on the liability limitations, the Senate Judiciary Committee Report that accompanied the legislation⁴⁴ clarified that the “intended objective” of the “red flag” knowledge standard referred to by the House Judiciary Report was “to exclude sophisticated ‘pirate’ directories—which refer Internet users to other selected Internet sites where pirate software, books, movies, and music can be downloaded or transmitted—from the safe harbor.”⁴⁵ Such pirate directories refer Internet users to sites that are obviously infringing because they typically use words such as ‘pirate,’ ‘bootleg,’ or slang terms in their uniform resource locator (URL) and header information to make their illegal purpose obvious to the pirate directories and other Internet users.”⁴⁶ The Report also provided this example: “For instance, the copyright owner could show that the provider was aware of facts from which infringing activity was apparent if the copyright owner could prove that the location was clearly, at the time the directory provider viewed it, a ‘pirate’ site of the type described below, where sound recordings, software, movies or books were available for unauthorized downloading, public performance or public display.”⁴⁷ The Report also states: “The ‘red flag’ test has both a subjective and an objective element. In determining whether the service provider was aware of a ‘red flag,’ the subjective awareness of the service provider of the facts or circumstances in question must be determined. However, in deciding whether those facts or circumstances constitute a ‘red flag’ – in other words, whether infringing activity would have been apparent to a reasonable person operating under the same or similar circumstances – an objective standard should be used.”⁴⁸

Regarding the financial benefit limitation on the liability limitations, the Report stated:

In determining whether the financial benefit criterion is satisfied, courts should take a common-sense, fact-based approach, not a formalistic one. In general, a service provider conducting a legitimate business would not be considered to receive a “financial benefit directly attributable to the infringing activity” where the infringer makes the same kind of payment as non-infringing users of

⁴² *Id.*

⁴³ *Id.*

⁴⁴ *Id.*

⁴⁵ *Id.*

⁴⁶ *Id.*

⁴⁷ *Id.*

⁴⁸ *Id.*

the provider's service. Thus, receiving a one-time set-up fee and flat periodic payments for service from a person engaging in infringing activities would not constitute receiving a "financial benefit directly attributable to the infringing activity." Nor is subparagraph (B) intended to cover fees based on the length of the message (per number of bytes, for example) or by connect time. It would however, include any such fees where the value of the service lies in providing access to infringing material.⁴⁹

The Report also clearly stated that "Section 512 does not require use of the notice-and-takedown procedure. A service provider wishing to benefit from the limitation on liability under subsection (c) must 'take down' or disable access to infringing material residing on its system or network of which it has actual knowledge or that meets the 'red flag' test, even if the copyright owner or its agent does not notify it of a claimed infringement. For their part, copyright owners are not obligated to give notification of claimed infringement in order to enforce their rights."⁵⁰

The Senate bill also included two additional prerequisite for safe harbor status, neither of which were contained in the House bill. The bill required a service provider to adopt and reasonably implement "a policy for the termination of subscribers of the service who are repeat infringers" and to accommodate and not interfere with "standard technical measures ... used by copyright owners to identify or protect copyrighted works [] that have been developed pursuant to a broad consensus of copyright owners and service providers..."⁵¹

The Senate Judiciary Committee Report said the following about these requirements:

First, the service provider is expected to adopt and reasonably implement a policy for the termination in appropriate circumstances of the accounts of subscribers of the provider's service who are repeat online infringers of copyright. The Committee recognizes that there are different degrees of online copyright infringement, from the inadvertent to the noncommercial, to the willful and commercial. In addition, the Committee does not intend this provision to undermine the principles of subsection (l) or the knowledge standard of subsection (c) by suggesting that a provider must investigate possible infringements, monitor its service, or make difficult judgments as to whether conduct is or is not infringing. However, those who repeatedly or flagrantly abuse their access to the

⁴⁹ *Id.*

⁵⁰ *Id.*

⁵¹ 17 U.S.C. §§ 512(i).

Internet through disrespect for the intellectual property rights of others should know that there is a realistic threat of losing that access. Second, a provider's system must accommodate, and not interfere with, standard technical measures used to identify or protect copyrighted works. The Committee believes that technology is likely to be the solution to many of the issues facing copyright owners and service providers in this digital age. For that reason, we have included subsection (h)(1)(B), which is intended to encourage appropriate technological solutions to protect copyrighted works. The Committee strongly urges all of the affected parties expeditiously to commence voluntary, interindustry discussions to agree upon and implement the best technological solutions available to achieve these goals. Subsection (h)(1)(B) is explicitly limited to "standard technical measures" that have been developed pursuant to a broad consensus of both copyright owners and service providers in an open, fair, voluntary, multi-industry standards process. The Committee anticipates that these provisions could be developed both in recognized open standards bodies or in ad hoc groups, as long as the process used is open, fair, voluntary, and multi-industry and the measures developed otherwise conform to the requirements of the definition of standard technical measures set forth in paragraph (h)(2). A number of recognized open standards bodies have substantial experience with Internet issues. The Committee also notes that an ad hoc approach has been successful in developing standards in other contexts, such as the process that has developed copy protection technology for use in connection with DVD.⁵²

Similar to the House bill, the Senate bill also contained a provision that stated that nothing in the legislation "should be construed to condition the applicability" of the liability limitations "on a service provider monitoring its service or affirmatively seeking facts indicating infringing activity."⁵³ However, the Senate bill qualified this provision to account for the expected development of the standard technical measures discussed above, which could require monitoring by service providers.⁵⁴ The Report explained the "no monitoring" provision was "designed to protect the privacy of Internet users."⁵⁵

Once the House Commerce Committee amended the House bill to include the liability limitations of the Senate bill, the Commerce Committee issued another Report on

⁵² Senate Judiciary Committee Report, S. Rep. No. 105-190.

⁵³ *Id.*

⁵⁴ *Id.*

⁵⁵ *Id.*

the legislation.⁵⁶ This Report largely parrots the language quoted above from the Senate Judiciary Report. The final Conference Report issued by the House and Senate said very little about the liability limitations.⁵⁷ However, both of these later reports emphasized that the legislation was intended to protect copyright owners in the Internet environment. Both Reports state: “Title II preserves strong incentives for service providers and copyright owners to cooperate to detect and deal with copyright infringements that take place in the digital networked environment. At the same time, it provides greater certainty to service providers concerning their legal exposure for infringements that may occur in the course of their activities.”⁵⁸ The Conference Report also states that “this legislation is not intended to discourage the service provider from monitoring its service for infringing material.”⁵⁹

Appendix C

Music Community October 2015 IPEC Submission

Music Community Written Submission
October 16, 2015

Regarding Development of the Joint Strategic Plan on Intellectual Property Enforcement, in response to Request of the U.S. Intellectual Property Enforcement Coordinator for Public Comments, 80 Fed. Reg. 52800 (September 1, 2015)

The submitting parties (the “Music Community”), described in Appendix A hereto, are associations and organizations whose members create and disseminate a wide variety of copyrighted musical compositions and sound recordings. The Music Community has fully embraced the Internet marketplace as the primary avenue for delivering high-quality content to fans of music through a variety of exciting platforms. Collectively, the Music Community represents hundreds of thousands of songwriters, composers, music publishers, recording artists, record labels, studio professionals, and others, who rely on copyright protection for their livelihoods.

I. Introduction

The Music Community sees itself as a key contributor and participant in the digital marketplace. Music can be experienced in a rapidly increasing variety of ways through an ever-evolving choice of innovative platforms that are in high demand. As a result, musicians, songwriters, music publishers, record labels, consumers, device manufacturers, online music distributors, website providers, app developers and Internet access providers are all benefitting.

However, significant challenges remain. Copyright theft continues to proliferate online, despite the widespread availability of affordable, lawful content. Thus, the Music Community strongly believes that it is crucial for the Office of the IPEC to continue to play a positive role in strengthening and ensuring the appropriate balance for our copyright system for the digital age. This can be achieved in a variety of ways, including via government involvement in coordinating voluntary best practices initiatives, as well as legislative reform and regulatory actions.

For example, the enforcement mechanism and eligibility tests for the safe harbors in the Digital Millennium Copyright Act (“DMCA”) must be improved. Since passage of the DMCA, the digital landscape and the music industry have dramatically changed. Initially the DMCA was primarily designed to prevent isolated infringement by third parties on specific online sites when connection speeds were slower than today and storage space was limited. In that environment, these third parties were not able to infringe on the massive scale that they do today, and the “takedown notice” provisions were thought to provide an alternative to lengthy and expensive legal proceedings. The qualification standards for the safe harbor eligibility were thought to be available only to innocently infringing ISPs with no connection to the third party content they hosted, linked to or otherwise transmitted. The notice and take down process was intended as a safeguard to provide a mechanism for copyright owners to prevent infringement by even innocent ISPs.

But in the transformed Internet environment of today, as online speeds have dramatically increased while the cost of storage space has dramatically decreased, the DMCA’s failure to

scale has rendered it increasingly obsolete and futile from an enforcement standpoint. Large, sophisticated entertainment-oriented websites have developed, and they premise their business models on being shielded from responsibility by the safe harbors. Instead of sending a relatively small number of “take-down” notices to prevent isolated infringement in a manner that ensures the material doesn’t reappear, the Music Community is instead faced with the unprecedented burden of attempting to “take-down” literally billions of infringing copies of music and associated links from thousands of unauthorized sources in an environment where infringers feel free to simply continuously repost links to the infringing content. This mismatch between the amount of infringement and the burden of enforcement has increasingly led to the devaluation of music and the perception that there is no effective remedy against unauthorized infringement. Once a song is available, authorized or not, the law provides no means to effectively protect the Music Community’s property. Adding insult to injury, some ISPs have complained about “abusive DMCA notices” – they seek to curtail one of the only remedies left for copyright owners.

In sum, after 15 years of case law and changes in the marketplace noted above, the safe harbors can no longer be said to balance the burdens of policing copyright infringement between the ISPs and the owners. Consider that since the creative community’s last submission to the Intellectual Property Enforcement Coordinator (IPEC) in August, 2012 (the 2012 IPEC Submission),¹ the Recording Industry Association of America (RIAA) has sent over 128 million infringement notices in the aggregate to web site operators, their underlying hosting providers, and search engines. Unfortunately, all too often, when a work is “taken-down” on a particular site or in a search engine index, it immediately re-appears someplace else on that site, or on mirror sites. Congress never intended for things to work in this way. The extent of this “whack-a-mole” problem was not anticipated and, unfortunately, this DMCA loophole has been embraced as a way to continually use and profit from unauthorized use of music, and still arguably maintain the “safe-harbor” protections built into the DMCA, at least until a costly and time consuming lawsuit is filed and won.²

The Music Community stands willing to monitor for infringement and to do its best to cooperate to limit its impact. Self-help against pirate sites is certainly an action available to copyright owners, but without cooperative partners it has limited utility. And, generally, the

¹ Joint Submission of MPAA, NMPA, and RIAA to Office of the Intellectual Property Enforcement Coordinator 7-13 (Aug. 10, 2012), <http://www.regulations.gov/#!documentDetail;D=OMB-2012-0004-0248> [hereinafter 2012 IPEC Submission].

² It must be noted that what is expensive and difficult for large copyright owners is an impossible challenge for small copyright owners seeking to protect the value of their works from indiscriminate sharing online. As Maria Schneider, a three-time GRAMMY winning jazz and classical composer, bandleader and conductor noted in describing the frustration with the DMCA, “[t]he DMCA makes it my responsibility to police the entire Internet on a daily basis. As fast as I take my music down, it reappears again on the same site—an endless whack-a-mole game.” See *Section 512 of Title 17: Hearing Before the Subcomm. on Courts, Intell. Prop. and the Internet of the H. Comm on the Judiciary*, 113th Cong. 57 (2014) (statement of Maria Schneider).

courts have not been helpful in this regard. Recent judicial decisions have interpreted the DMCA in a way that puts an unfair burden on the copyright owner, while allowing the online services to use the “safe harbor” provisions in the law more as a sword than as a shield. Moreover, litigation against sites that provide pirated content has proven a long and costly process.³ And it simply doesn’t scale when there are thousands of sites that are dedicated to music theft.

This also places an undue burden on the literally hundreds of licensed sites in the United States. These services have acknowledged the moral and legal responsibility to pay for music yet they, like the copyright owners, are forced to compete with illicit businesses offering stolen versions for “free.”

The submitting parties, representing a vast cross-section of authors and owners of music, believe the IPEC can play a positive role in promoting reform of the enforcement mechanism of the DMCA and other aspects of the Copyright Act. It can also do much to advance the proposition that reducing the availability of infringing content online should be the shared goal of all legitimate businesses that operate online, as well as of consumers and the U.S. government. Whether by facilitating legislative reform, or helping to develop voluntary industry-wide best practices, the IPEC can help restore the rights of those who have been profoundly harmed as the scope and volume of the online infringement problem has rushed far beyond the ability of the DMCA framework to scale.

II. Current Trends in the Music Industry

A. Strong Public Demand for Music Fuels the Success of the Internet and the Consumer Electronics Industry

Demand for music online is higher than ever, with many sites directly dependent upon professionally produced, copyrighted music for their success. Over 65% of Americans ages 13+ agree that music is important to their lifestyle.⁴ American consumers spend, on average, more than 24 hours per week listening to music and, in a typical week, 75% of U.S. consumers listen to music online.⁵ Twelve of the top 20 most followed people on Twitter are from the Music Community.⁶ Fifteen of the top 20 celebrities on Facebook are musicians.⁷

³ For example, it took over five years of litigation for the record labels to prevail in their litigation against LimeWire, which had spent the better part of a decade inducing – and profiting from – peer-to-peer pirating of sound recordings. *See* Arista Records, LLC et al. v. Lime Group LLC, et al., 784 F. Supp. 2d 398 (S.D.N.Y. 2011).

⁴ Source: MusicWatch Inc., 2014 Annual Music Study.

⁵ *Music is Still the Soundtrack to our Lives*, Nielsen (Sept. 14, 2015), <http://www.nielsen.com/us/en/insights/news/2015/music-is-still-the-soundtrack-to-our-lives.html>.

⁶ Twitter Top 100 Most Followers, Twitter Counter, <http://twittercounter.com/pages/100> (last visited Oct. 2, 2015).

Since the last IPEC Joint Strategic Plan on Intellectual Property Enforcement, legitimate online services that enable people to listen to and interact with music have continued to proliferate and become more viable business models.⁸ Consumers have never had so many choices for experiencing music legitimately and instantaneously. However, for these services to have continued success, strong protection of copyright is required, as many unauthorized disseminators of music undermine the value of the legitimate sites.

In addition to physical formats for music, some of the exciting services available today include the following, with most offered on both wireline and mobile platforms:⁹

- Music is available for download through services like iTunes, AmazonMP3, eMusic, GhostTunes, 7digital, Google Play and several others, including in formats that allow consumers access across multiple devices for personal use without interoperability problems.
- Higher resolution music downloads, for greater fidelity, are available from services such as Pono, HD Tracks, Presto Classical and Pro Studio Masters.
- Interactive, on-demand music streaming services such as Rhapsody, Apple Music, Spotify, Deezer and Rdio offer unlimited listening – on computers or smart phones – for modest monthly fees. They also offer to subscribers the ability to listen off-line.
- Free ad-supported, audio-visual streaming sites, such as YouTube and Vevo, offer free streaming of music videos.
- Digital radio services, such as iHeartRadio, iTunes radio, and Sirius/XM, are available for free with limited advertising support or, in some cases, on a subscription basis.
- Over 750 different AM/FM stations are available as digital radio simulcasts.
- Licensed lyrics sites enable music lovers to access the lyrics to their favorite songs with the click of a mouse and to comment on those lyrics and learn about the songwriters and recording artists.
- Licensed apps like Flipagram enable consumers to interact with music like never before by creating photo and video stories set to music.

Due to all of this innovation, in the first half of 2015, digital dissemination accounted for 76% of the overall recorded music market by value, compared with 59% for 2012.¹⁰ In the U.S.,

⁹ See www.whymusicmatters.com for a variety of other licensed music services available in the United States, and www.pro-music.org for a worldwide listing.

digital subscription revenues increased in 2014, as sales of smartphones and tablets that promote use of streaming services increased streaming revenues sharply (in some cases, substituting for downloads).¹¹ In the first half of 2015, U.S. revenues from digital paid subscriptions were \$478 million, up 25% from the previous year.¹²

B. There is an Unacceptable Value Gap between the Demand for Music and the Revenue Returned to the Authors and Owners of that Music

Despite music being more popular than ever today, music industry revenues have been nearly flat since 2010, and are less than half what they were in 2000 (adjusted for inflation). Why is that?

The fact is that while the technology industry is benefitting from the increased availability of online music, and profiting from the unprecedented consumption and interest in music, the Music Community is facing a value gap. “When vinyl records, which peaked in the 1960s and ’70s, generate more revenue for the industry in 2014 than the billions of ad-supported on-demand streams on YouTube and similar services, something is fundamentally wrong with the market.”¹³ In short, music adds significant value to technologies and network access, but the Music Community is not receiving a fair share of the revenue.¹⁴

The broken state of the law, particularly the DMCA (discussed in more detail below), is playing a significant role in perpetuating this unfairness.¹⁵ The laws that “were designed to exempt passive intermediaries from liability,” the so-called safe-harbors, should never have been allowed to “exempt active digital music services from having to fairly negotiate” licenses with rights holders.¹⁶ Not only do certain actors take advantage of these safe harbors to profit from music without compensation to the authors and owners of that music, this situation unfairly

¹⁰ See Joshua P. Friedlander, *News and Notes on 2015 Mid-Year RIAA Shipment and Revenue Statistics 1* (Sept. 22, 2015), <http://riaa.com/media/238E8AC7-3810-A95C-44DC-B6DEB46A3C6E.pdf> [hereinafter *RIAA Shipment and Revenue Statistics*].

¹⁵ See Sherman, *supra* n. 8. The flawed U.S. music licensing regime also plays a factor in this value gap. See Israelite, *supra* n. 14.

¹⁶ See Frances Moore, *Artist and Record Companies need a Fair Digital Marketplace* (July 29, 2015), <http://www.ifpi.org/news/Artists-and-Record-Companies-Need-A-Fair-Digital-Marketplace>.

distorts the market value for music, creating below-market discounted rates that harm the entire music industry. It cannot be right, for example, that, by some accounts, YouTube has 40% of the music listening but only provides 4% of the revenue to the record labels.¹⁷ As the CEO of RIAA noted, the Music Community is faced with a “Hobson’s choice: Accept below-market deals or play that game of whack-a-mole. The notice and takedown system—intended as a reasonable enforcement mechanism—has instead been subverted into a discount licensing system where copyright owners and artists are paid far less than their creativity is worth.”¹⁸

To turn the digital transformation of the music industry into sustainable long-term growth, this value gap must be addressed. A successful Music Community that invests in music and rewards creators needs a balanced digital marketplace in which to negotiate terms for the use of its music. And, as further discussed below, it needs a balanced and fair legal enforcement system in which to operate to do so.

III. Online Theft Persists Via an Ever-Evolving Variety of Platforms

A. Music Theft Online Continues to Persist and Harm the Music Community and the U.S. Economy

Though there are more legitimate options than ever for downloading, streaming and interacting with music, online piracy remains a large threat to the Music Community. Since the last IPEC submission, RIAA has monitored 2,159 sites, and noticed 48,391,597 infringements directly to sites. This is in addition to millions of notices sent to ISPs hosting those sites and the search engines indexing and directing traffic to those sites.

This piracy affects the U.S. labor market, and has led to a decline in the number of people employed by the music industry. “The music industry, while enormous in its economic, cultural and personal impact, is by business standards relatively small. So theft on this scale has a noticeable and devastating impact: employment at the major U.S. music companies has declined by thousands of workers, and artist rosters have been significantly cut back. The successful partnership between a music label and a global superstar – and the revenue generated – finances the investment in discovering, developing and promoting the next new artist. Without that revolving door of investment and revenue, the ability to bring the next generation of artists to the marketplace is diminished – as is the incentive for the aspiring artist to make music a full time professional career.”¹⁹ Such piracy hurts not only the large music companies or employees of

¹⁸ See Sherman, *supra* n. 9.

¹⁹ See *Piracy Online: Scope of the Problem*, RIAA, https://www.riaa.com/physicalpiracy.php?content_selector=piracy-online-scope-of-the-problem, (last visited Oct. 9, 2015) [hereinafter *Scope of the Problem*].

those companies – independent creators are harmed as well. The Nashville Songwriters Association International reports that, since 2000 (essentially, in the post-Napster era), the number of full-time songwriters in Nashville has declined by 80%.²⁰ In the end, consumers and legitimate technology companies also suffer, because incentives for music production decline, lawful services are forced to square off against unfair competition, and the drivers of the Internet’s success are threatened.

B. Current Forms of Music Theft Online

Three years ago, the creative industries highlighted in the 2012 IPEC Submission that online theft continued unabated. Although much has changed in the last three years, much has stayed the same. The same forms of piracy that existed three years ago, from unauthorized streaming and download sites, to cyberlockers, peer-to-peer networks, and mobile apps, continue to proliferate at unacceptable levels today.²¹ Others, such as stream-ripping, which existed three years ago, have gained increased popularity in the past year, as more and more users turn to this form of piracy to download music to their devices. In the last three years we have also seen escalating damage from the unauthorized dissemination of pre-release music, *i.e.*, albums slated for commercial release that have not yet been commercially released to the public.²²

Some of the piracy problems the Music Community is encountering include:

- **Mobile Applications:** Infringing mobile applications provide unauthorized streaming, downloading, stream-ripping, syncing to other videos or photographs, and/or distribution of music. Despite the industry’s efforts to have these infringing apps taken down from the leading mobile app storefronts,²³ they nonetheless continue to proliferate. For example, in 2014, “the most popular of these Android apps, Music Maniac, ha[d] been downloaded more than 10 million times – and afford[ed] free access to all 10 of the top songs listed on the current Billboard’s Hot 100 list.”²⁴ In addition, live video streaming

²⁰ See Nate Rau, *Nashville’s Musical Middle Class Collapses* (Jan. 28, 2015), <http://www.tennessean.com/story/entertainment/music/2015/01/04/nashville-musical-middle-class-collapses-new-dylans/21236245/>.

²¹ For a detailed overview of various forms of piracy, see 2012 IPEC Submission, *supra* n. 1. Websites for the sale of physical counterfeits also remain a problem.

²² For example, ShareBeast, a cyberlocker that caused significant damage to the industry, trafficked in pre-release music, and boasted millions of users, was recently shut down by the Department of Justice. Andre Yoskowitz, *FBI Takes Down Pre-Release Music Piracy Site Share Beast*, News By AfterDawn, (Sept. 16, 2015), <http://www.afterdawn.com/news/article.cfm/2015/09/16/fbi-takes-down-pre-release-music-piracy-site-sharebeast>.

²³ To date, RIAA has noticed over 5,700 mobile apps to the major mobile app storefronts.

²⁴ Dawn Chmielewski, *Music Piracy Goes Mobile*, Re/Code, Mar. 24, 2014, <http://recode.net/2014/03/24/music-piracy-goes-mobile/>. Though Music Maniac is no longer available through Google Play, it remains available through other websites.

apps owned by Twitter and Facebook have led to unauthorized streaming of concerts by new and leading artists. Unfortunately, even when the Music Community has some success in inhibiting the reach of an unlicensed, infringing app, a new one takes its place, or the app developers find new avenues to distribute the app. For example, in December 2014, Google removed from its Play Store several clearly infringing applications associated with the notorious Pirate Bay website.²⁵ However, the apps remain available elsewhere and usable with Android devices. Moreover, all the apps downloaded prior to the takedown of the app from the storefront continue to function.²⁶

- Unauthorized Streaming and Download Services, Including Sites that Cater to Pre-release Music: This class of digital sites and apps directly or indirectly offers unauthorized on-demand streaming and/or downloading of our members' music, including their most popular and valuable content. They often provide not just one link to a particular track, but instead several pages of links to the same track, and/or have several more "URLs" with the same track "at the ready" to post to their site when another URL to the same track is noticed.²⁷ Several of these sites go further, providing unauthorized downloading of pre-release music.²⁸ Some are so brazen as to publicly tout their infringing activity and seek crowd sourcing to fund their illegal efforts.²⁹ Such infringing activity clearly

²⁵ Angela Moscaritolo, *Pirate Bay Apps Yanked from Google Play*, PC Magazine (Dec. 8, 2014) <http://www.pcmag.com/article2/0,2817,2473253,00.asp>.

²⁶ For example, while the Pirate Bay Browser App was removed from the Google Play store in June 2013, nearly a year later, in May 2014, there were an estimated 500,000+ monthly U.S. users of the app. *Source*: RIAA analysis of Mobidia data.

²⁷ See *Capitol Records, LLC v. Escape Media Group, Inc.*, 2015 U.S. Dist. LEXIS 38007, *18-19 (S.D.N.Y. Mar. 25, 2015) (characterizing the infringing service Grooveshark as a "technological Pez dispenser" that required copyright owners to send "successive takedown notices" in order to remove a single song from the service).

²⁸ Leaks of pre-release music have long plagued the Music Community. See Stephen Witt, *The Man Who Broke the Music Business* (Apr. 27, 2015), <http://www.newyorker.com/magazine/2015/04/27/the-man-who-broke-the-music-business>. But with so many devices and unauthorized services at consumers' fingertips, unlawful releases of albums before they hit the legitimate marketplace can be devastating.

²⁹ A particularly egregious example is the new service Aurous, which allows users to search for, stream, and download pirated copies of popular music, and which is designed specifically to search for and retrieve copies from online sources notorious for offering pirated music. Aurous has promoted itself by linking to articles that call it "BitTorrent Music for Your Dad," and "Popcorn Time for Music"; in other words, as a site that makes it incredibly easy to find and stream or download pirated music. Aurous brazenly began a crowdfunding campaign for its mobile app, which it has since shut down. See Aurous, Twitter Posting (Sept. 17, 2015, 11:55am), <https://twitter.com/aurousapp/status/644585368440938496?lang=en> ("We need your help to bring Aurous to Iphone, Android and Windows phone! Please consider donating to our Indiegogo..."); Aurous, Twitter Posting (Sept. 19, 2015, 1:00pm), <https://twitter.com/aurousapp/status/645326516600086528?lang=en>. The RIAA, on behalf of its members, has brought suit against Aurous, seeking injunctive relief against this blatant infringer,

harms U.S. artists, songwriters, record labels and music publishers by disseminating their work without authorization and severely diminishing the commercial value of those works.

- Cyberlockers: While significant efforts have been invested in shutting down some of the worst actors in this space, such as Megaupload, ShareBeast, and RockDizFile, numerous websites still exist that are designed to encourage their users to post and disseminate infringing copies of music.³⁰ These sites become repositories for free access to professionally produced, copyrighted content.
- Peer-to-peer Networks: While 8.1 million people pay for streaming subscriptions in the United States, more than twice that many are still using peer-to-peer piracy sites for illegal downloads.³¹ And while use of peer-to-peer sites may not be rising as quickly during recent years as it once did, the harm that the availability of infringing copies on those networks presents remains devastating.
- Unauthorized Lyrics Sites: Sites that provide unauthorized access to reproduced song lyrics also present a real problem for music publishers and songwriters. There are so many of these websites, with associated applications, that National Music Publishers' Association (NMPA) was forced to initiate a litigation campaign to compel those sites that wanted to avoid injunctions and liability to obtain licenses.³² Although this approach had some success, myriad infringing sites and apps remain available, supported by advertising.
- Stream Ripping: Finally, some companies are profiting from enabling consumers to exceed their authorized access to lawful products, such as YouTube and audio-only streaming services, by creating "ripped" illegal copies of streams. This is particularly damaging because it prevents copyright owners from obtaining full value from licensors who offer purchases of permanent copies of works.

and the court granted a temporary restraining order against Aurous on October 15, 2015. *See* Atlantic Recording Corporation et al. v. Andrew Sampson, Case No. 1:15-cv-23810 (S.D. Fla., filed Oct. 13, 2015); Temporary Restraining Order, *id.* (Oct. 15, 2015).

³⁰ For examples of such cyberlockers, see the RIAA Notorious Market Submission Report (Oct. 5, 2015), <http://riaa.com/media/9F859538-E1E1-CC7E-A701-84F9FB3851BF.pdf> [*hereinafter* RIAA NMR Submission].

³² *See* Ed Christman, *NMPA Launches Suits Against Infringing Lyric Sites*, Billboardbiz (May 21, 2014), <http://www.billboard.com/biz/articles/news/publishing/6092270/nmpa-launches-suits-against-infringing-lyric-sites>; Ben Sisario, *In Music Piracy Battles, Lyrics Demand Respect Too*, New York Times (Nov. 11, 2013), http://www.nytimes.com/2013/11/12/business/media/in-music-piracy-battles-lyrics-demand-respect-too.html?_r=0.

A significant change from three years ago is the ability of rogue actors to engage in piratical activity across a variety of digital platforms, whether via computer software applications, web sites, plug-ins for Internet browsers, widgets for smart televisions, or mobile applications. Consider, for example, that before the infringing service GrooveShark was shuttered in light of a court order finding it liable for willful infringement, GrooveShark offered access to its service via a website, a mobile application, a browser plug-in, and was negotiating deals to have GrooveShark widgets on certain smart TVs.³³

In addition, it is now easier than ever for rogue operators to jump physical jurisdictions and digital domains, while obfuscating their path while they do so. The increasing ubiquity of high-bandwidth connectivity and technologically sophisticated hosting services in a growing number of offshore jurisdictions will make it increasingly easy for thieves to fully exploit the U.S. market while minimizing, for practical purposes, their exposure to U.S. copyright or criminal law. Another factor that will accelerate this disturbing trend in future years involves the domain name system. Beyond the existing framework of country code Top Level Domains (ccTLDs), the ongoing rollout of new generic Top Level Domain (gTLD) registries includes some based in jurisdictions more tolerant or even encouraging of theft of U.S. intellectual property. This gives pirates a wider range of havens to seek.

Consider that in 2014, rogue site Mp3Skull was at domain mp3skull.com, and hosted at a U.S. hosting company. Since then, Mp3Skull had moved to five different top level domains, with two changes in the last two weeks. As of October 11, 2015, Mp3Skull was located at mp3skull.wtf, and had moved its servers outside of the U.S.³⁴ It obfuscates its operators and location by using a privacy/proxy service to hide the operator and Cloudflare to hide its IP address.³⁵

This domain hopping, along with the steps such pirate sites take to obfuscate its identity and physical location, provide further obstacles to effective enforcement.

This highlights that as the landscape continues to shift under our feet at rapid speeds, it has become even harder to pin down where and how the next form of infringement will emerge, and what combination of jurisdictions – digital or physical – will be implicated.

³³ Consider also that rogue cyberlocker 4shared.com offers its service both via a website and a mobile application. See www.4shared.com, last visited October 11, 2015. Rogue stream-ripper FLVTO offers its infringing activity via a website and a computer application. See www.flvto.biz, last visited October 11, 2015.

³⁴ Another example, noted in the RIAA NMR Submission, is rogue site Viperial. Viperial, which was originally at viperial.com, then redirected to viperial.co, and now redirects to viperial.me. See also footnote 59 and Appendix B for further examples.

³⁵ See IP Tracker Lookup, “mp3skull.com”, <http://www.ip-tracker.org/locator/ip-lookup.php?ip=mp3skull.com>, last visited Oct. 12, 2015.

C. The Role of Third Parties in Supporting, Promoting, or Profiting from Copyright Theft

Numerous third parties, both legitimate actors and illegitimate, including some of those noted above, help to facilitate access to the infringing services discussed above, including domain name registrars and registries, search engines, app stores, hosting companies and content delivery networks (CDNs), advertisers, and payment processors. Regardless of whether the activities engaged in by such companies rise to the level of incurring liability under existing copyright laws, far more could and should be done by such third parties to help prevent and limit infringement.

Below is a brief description of the role some of these third parties play, and what efforts, if any, have been taken to curb infringement occurring or facilitated via their services.

- Registrars, Registries, and Privacy/Proxy Services: A domain name is often a key resource that enables sites dedicated to digital theft to be accessed by their customer base; and even though registrar, registry and privacy/proxy terms of service almost uniformly prohibit the use of domain name registrations for such activities, these provisions are rarely enforced. Cooperation of registrars, registries and privacy/proxy service providers with right holders often leaves much to be desired. This refusal to take action despite verifiable evidence of infringement, coupled with the unfettered expansion of new internet real estate for the infringers to use, further exacerbates the music infringement problem.
- Search Engines: Search engines continue to be a key driver for music discovery and a significant tool that leads traffic to infringing sites.³⁶ While recent efforts by search engines to demote sites for which they have received high volumes of infringement notices have made an impact,³⁷ over time these efforts are being shown to have limited

³⁶ In a survey of digital music listeners by consumer research firm MusicWatch, search engines were found to be one of the most common ways users discover sites to download music without paying. See Joshua P. Friedlander, *More Evidence Is In – Intermediaries Matter*, RIAA Music Notes Blog (Sept. 15, 2014), http://www.riaa.com/blog.php?content_selector=riaa-news-blog&blog_selector=Intermediaries-Matter&news_month_filter=9&news_year_filter=2014. Another study from Carnegie Mellon University, perhaps the most comprehensive study yet on the link between search engines and media piracy, confirmed what search engines have likely known all along: that more highly placed links do have an effect influencing consumer behavior. The study showed that even users looking for lawful content could be led astray by promoted links to pirated content. Liron Sivan, Michael D. Smith, and Rahul Telang, School of Information Systems and Management, Heinz College, Carnegie Mellon University, *Do Search Engines Influence Media Piracy?: Evidence from a Randomized Field Study* (Sept. 12, 2014), available at <http://ssrn.com/abstract=2495591>.

³⁷ See, e.g., Katherine Oyama, *Continued Progress on Fighting Piracy*, Google Public Policy Blog (Oct. 17, 2014), <http://googlepublicpolicy.blogspot.com/2014/10/continued-progress-on-fighting-piracy.html>.

utility. First, far too often search engine operators are slow to act, electing to allow infringement to continue unabated for too long before down-ranking a site. Second, as shown in Appendix B, sites that engage in domain hopping after being demoted quickly rise again in search results. Clearly, the system is broken when Google estimates it will receive around 350 million takedown notices this year,³⁸ including tens of millions from the Music Community, and the piracy problem continues to exist at its current levels. More effective tools are required to reduce the amount of traffic search engines send to known rogue operators.

- Hosting Companies, CDNs, and their ilk: Hosting Companies, CDNs, and companies that provide similar services vary in the levels of cooperation or obstacles they place in the face of evidence of infringement occurring on or via their systems. Some, like Cloudflare or WebZilla, refuse to terminate service with their customer despite receiving thousands of notices of infringement attributable to one of their subscribers' accounts. Other hosting companies appear to terminate service with their rogue customer after receiving repeated notices of infringement associated with that customer, but there is no consistency in the response to the rights holder or in the level of knowledge of repeat infringement that leads to termination or suspension of service.
- Advertisers and Ad Networks: Following pledges made in 2012,³⁹ many U.S. advertisers, ad agencies and ad networks have taken proactive steps to deter placing ads on sites that engage in copyright infringement. Many will also take action when notified that their ads or services were used to place ads on infringing sites. In addition, over the past several months, portions of this industry have created and adopted further programs to help improve the digital ecosystem, including the Trustworthy Accountability Group's Brand Integrity Program Against Piracy.⁴⁰ However, several other ad networks, both in the U.S. and abroad, continue to funnel ad dollars to infringing sites. Other advertisers, particularly those that advertise using pay-per-install potentially unwanted programs (PUPs), continue to prominently interact with infringing sites. Moreover, the rogue operators are getting more sophisticated, engaging in various forms of ad fraud, such as

³⁸ See Chris Castle, *What Is the Intention of Justice? Notice and Stay Down Is the Government's Responsibility*, Huffington Post (Oct. 1, 2015), http://www.huffingtonpost.com/chris-castle/what-is-the-intention-of-b_8208768.html.

⁴⁰ See *Advertising Industry Launches Initiative to Protect Brands Against Piracy Websites*, TAG (Feb. 10, 2015), <https://www.tagtoday.net/advertising-industry-launches-initiative-to-protect-brands-against-piracy-websites/>. Indeed, Group M, a leading global media investment management group, has announced that it will require all of its partners to be DAAP validated in 2016. *GroupM Requires Partners to use TAG-Certified Anti-Piracy Services*, TAG (Sept. 23, 2015), <https://www.tagtoday.net/groupm-requires-partners-to-use-tag-certified-anti-piracy-services/>.

pop-unders or re-directs to phony webpages, to channel advertising dollars their way. More needs to be done to address this fraudulent behavior.

- Payment Processors: In 2011, after significant assistance from the Office of the IPEC, payment processors and credit card companies implemented a set of best practices to investigate complaints and stop processing transactions for sites that distribute counterfeit and pirated goods. As implemented, these best practices have led to a significant reduction in the use of premier credit card services for not only sites that directly charge for unauthorized music downloads or streams, but also those that attempt to hide their efforts by charging indirectly for unauthorized access to music.⁴¹ While rogue sites continue to find alternative payment methods to profit from their illegal enterprises, the adoption and implementation of these best practices is an example of what is possible when industries agree to adopt reasonable approaches to exercise their responsibility to help ensure that Internet-based transactions are lawful.
- App Stores: Recently, some leading digital storefronts, such as iTunes and Google Play, have made increased efforts to address and remove from their digital storefronts apps that facilitate music infringement. Nonetheless, too often, digital storefronts, whether for mobile applications, browser plug-ins, or more traditional software applications, continue to offer applications that obviously facilitate piracy. This includes apps that clearly advertise the availability of unlicensed music. These platforms should do more to help lawful applications succeed by limiting piracy before the infringing apps ever make it on their storefront.

All of these third parties gain some financial benefit from their interactions with the rogue operators, whether in the form of information or dollars, and each has an ability to deter the use of its services for such illegal activity. As noted in the 2012 IPEC Submission, where commercially reasonable measures can be taken to address predictable and identifiable harms enabled by the services these businesses offer, those measures should be made. This not only helps address the infringement problem, it also helps create a safer, more robust digital ecosystem.⁴²

⁴¹ RogueBlock, the initiative that grew out of an agreement of the leading credit card companies and payment processors to develop best practices to deny sites that engage in copyright theft or counterfeiting the economically essential services they provide, has terminated over 5,000 individual counterfeiter's merchant accounts, impacting over 200,000 websites. *See RogueBlock*, IACC, <http://www.iacc.org/online-initiatives/rogueblock> (last visited Oct. 10, 2015).

⁴² *See, e.g.*, RIAA Comments to NTIA in Response to the Request for Public Comment on Stakeholder Engagement on Cybersecurity in the Digital Ecosystem (May 27, 2015), http://www.ntia.doc.gov/files/ntia/riia_5-27-15.pdf (noting the correlation between malware and other cybersecurity threats with online infringement).

IV. The Law is Inadequate to Address these Problems

As was noted in the 2012 IPEC Submission, the overarching challenge for copyright owners is to find meaningful ways to enforce their rights. Today, as then, there is not enough money in the world to fund litigation against every significant pirate, even if copyright owners could find courts that could exercise jurisdiction over all of them. And the statute that the U.S. enacted in 1998 to facilitate inter-industry cooperation in enforcement against infringement in the digital environment, the Digital Millennium Copyright Act (DMCA), has failed to achieve its purpose.

When the notice and takedown provisions of the DMCA were enacted, Congress intended to “preserve the strong incentives for service providers and copyright owners to detect and deal with copyright infringements that take place in the digital networked environment.”⁴³ The legislation was not “intended to discourage the service provider from monitoring its service for infringing material.”⁴⁴ However, given the increased availability of higher broadband speeds and low-cost server space, coupled with the continued misinterpretation of the DMCA by the courts and those that want to take advantage of its safe harbors,⁴⁵ the DMCA regime fails to accomplish the balance sought by Congress.

As a consequence of these judicial decisions, rather than providing incentives for cooperation, the DMCA has provided incentives for Internet businesses to turn a blind eye to infringement, or even to build willful blindness into their business models.⁴⁶ In fact, the DMCA,

Universal Music Corp.*, No. 13-16106, 2015 U.S. App. LEXIS 16308 (9th Cir. Sept. 14, 2015).

⁴⁶ See Terry Hart, *Grooveshark is Done*, Copyhype (Oct. 1, 2014), <http://www.copyhype.com/2014/10/grooveshark-is-done/>. (Grooveshark instructed its employees to create user accounts and to upload infringing files to the site, knowing that the business “depended on the use of infringing content); see also William Hensley, *Copyright Infringement Pushin’: Google, YouTube, and Viacom Fight for Supremacy in the Neighborhood that may be Controlled by the DMCA’s Safe Harbor Provision*, 51 IDEA 607, 626 (2011) (“YouTube’s business model was designed to maximize the number of site viewers in order to increase advertising revenue to attract a buyer. To increase the number of viewers, they needed infringing material.”). The DMCA’s current provision providing that monitoring is not required was intended to apply to innocent ISPs who otherwise meet the statutory eligibility tests for the safe harbors – not to shield ISPs operating with full awareness of the widespread presence of infringing content and indeed active inducement of posting of such content.

as interpreted by some, creates a perverse incentive for Internet business to take actions to deter the appearance of monitoring, contrary to the diligence expected in nearly any other business environment.

Even while removing individual infringing links identified in takedown notices, services based on infringement can thrive financially and expect to enjoy near-complete immunity from liability. More and more rogue operators appear to specifically design and engineer their systems and processes to make the DMCA, as they interpret it, irrelevant and ineffective to their ongoing infringement. Essentially, these rogue operators have learned the weaknesses of the DMCA as it has been interpreted and implement their services to exploit those weaknesses. In short, the problems with the DMCA identified in the 2012 IPEC Submission continue unbounded. The time is now for action to address this continued inequity.

V. Recommendations

Much can be done to curb the problems identified above so that legitimate music offerings succeed, more new music is produced than ever before, and the Internet marketplace delivers to consumers the types of exciting new services they are flocking to in large numbers. Improvements can be made through voluntary initiatives, legislatively, and through continued enforcement efforts.

A. Voluntary Best Practices

In addition to legislative, enforcement, and regulatory approaches to address intellectual property enforcement (discussed below), the Office of the IPEC and the government should continue to encourage the development and implementation of voluntary best practices to help move toward a piracy-free, robust and innovative online ecosystem.

It is important that online intermediaries, not just right holders, fully engage in the fight against digital theft, because often the service providers possess information that rights holders cannot obtain or have difficulty locating. For example, YouTube's Content ID system now enables rights holders to limit infringing files, which are technologically matched via fingerprint-based content recognition technology, from being made available via YouTube.⁴⁷ Facebook also will be testing a matching technology that will allow creators to identify matches of their videos on Facebook across the site, allowing for easier removal of unauthorized repeat content.⁴⁸ These systems rely on information collected from right holders to allow the services to identify and block infringing files before the public gains access to them. Only the sites themselves can enable such preventative measures, because only they have instantaneous access to information regarding what is being uploaded to their services. If other services that allow user-posted content (such as distribution hub sites) adopted similarly robust tools, a large amount of unauthorized content could be automatically removed or blocked from the web.

⁴⁷ See *How Content ID Works*, YouTube Help, <https://support.google.com/youtube/answer/2797370?hl=en>, last visited Oct. 14, 2015.

⁴⁸ See *An Update on Video Management on Facebook*, Facebook Media (Aug. 27, 2015), <https://media.fb.com/2015/08/27/an-update-on-video-management-on-facebook/>.

Effective private-sector action is not only possible, it is in the best interest of all legitimate businesses and consumers. The Music Community firmly believes that reducing the availability of infringing content online should be the shared goal of all legitimate businesses that operate online, as well as of consumers and the U.S. government. If the U.S.-based Music Community is thriving and producing compelling content, Internet usage will increase, consumers will eagerly embrace new services, more advertisements will be viewed, more searches will be conducted, more consumers will have the opportunity to enjoy their favorite content at affordable prices, and more good-paying jobs will be created and preserved. As discussed above, many of today's most popular and profitable Internet services and consumer electronics devices are tied to the availability of professionally-produced music. If the Music Community continues to lose revenue to piracy, the cultural products that keep consumers interested in going online may decrease in number and quality. Thus, legitimate service providers throughout the Internet ecosystem should be self-interested in decreasing infringement.

The Music Community commends the IPEC for encouraging industry players involved in e-commerce to work together, both within their sector and across sectoral lines, to craft and implement "best practices" that will assist in the fight against online copyright theft. As noted in RIAA's comments in response to the USPTO's Request for Comments in its Voluntary Best Practices Study, voluntary initiatives promote a growing recognition among all responsible stakeholders in the Internet ecosystem that they have an important role in promoting a legitimate online environment.⁴⁹ And, as previously discussed, several such initiatives have been implemented to date with positive results.

In addition, several foreign countries have also promoted voluntary best practices, which may provide significant guidance for possibilities within the U.S. For example, the Government of France in May 2014 published *Operational Tools to Prevent and Combat Online Infringement*,⁵⁰ which highlighted and recommended important voluntary initiatives for reducing online piracy, including (1) the signature of sector charters involving the stakeholders in advertising and on-line payment (Visa, MasterCard, PayPal); (2) creation by a public authority of a list of massively infringing sites, which would be used to inform all the technical and financial intermediaries of the sites at issue; (3) the creation of an order for prolonged removal, targeting specific counterfeit content; and (4) creating monitoring arrangements of legal decisions regarding massively infringing websites to combat the reappearance of pirated content and to make sure that legal decisions were not circumvented.

Going forward, there are challenges in two areas: first, to meaningfully and constructively implement the commitments and undertakings embodied in these important initiatives; and second, to expand this trend into other areas where clear statements of industry best practices, and inter-industry cooperation to fight online copyright theft, are sorely needed. The first dimension will require follow-up and monitoring of the agreements already reached, to

⁴⁹ Comments of RIAA, USPTO's Request for Comments in its Voluntary Best Practices Study (Aug. 19, 2013), <http://www.uspto.gov/ip/officechiefecon/PTO-C-2013-0036.pdf#page=15>.

⁵⁰ *Outils opérationnels de prévention et de lutte contre la contrefaçon en ligne, Rapport à la ministre de la culture et de la communication*, May 12, 2014, English Language summary available at <http://merlin.obs.coe.int/iris/2014/6/article18.en.html>.

ensure that they produce concrete results that do, in fact, help to cut off the revenue streams now flowing to online pirates. The IPEC is well situated to conduct this follow-up; to coordinate the activities of other federal agencies that have a role to play; to report on the results, as appropriate; and to encourage the parties involved to move forward on the constructive paths on which they have embarked.

Some areas where new or more refined voluntary best practices are needed include the following:

- Registrars/Registries: The Internet Corporation for Assigned Names and Numbers (“ICANN”) must play a central role to encourage increased cooperation among copyright and trademark holders and domain name registration businesses, in order to have an impact on limiting infringement. In the current transition context, ICANN needs to demonstrate publicly its stated commitment to accountability and the rule of law. Beyond encouraging voluntary initiatives and discussions, there should be explicit statements that confirm as part of ICANN’s core mission its authority to negotiate and enforce its contracts with registrars and registries – including contractual provisions targeting abusive uses of domain names. In 2013, revision of the Registrar Accreditation Agreement (“RAA”) resulted in domain name registrars taking on important new obligations to respond to complaints that domain names they sponsor are being used for copyright or trademark infringement, or other illegal activities. But registrars are not properly responding, and to date ICANN is not taking action to clarify and enforce these RAA provisions. We anticipate the same may be true in connection with rogue sites on new gTLDs. In addition, the 2013 RAA also set in motion long-overdue steps toward developing standards for the widespread phenomenon of proxy registration services. Further progress will be critical if the role of the Whois database in advancing online accountability and transparency is to be saved.

The Music Community urges the Office of the IPEC to stay actively involved in convincing ICANN, registries, registrars and privacy/proxy services that protecting copyrights and trademarks is in the best interest of the entire Internet ecosystem.

- Hosting and CDN Companies: Companies that provide such services should come to the table to discuss ways to continue delivering quality products while also respecting the property of others. We need greater certainty in the responses in the face of notices of widespread infringement, and additional efforts to ensure that a takedown notice is effective. We also need to develop a common sense approach to implementing a repeat infringer policy.
- App Stores: Far more could be done by the providers of digital storefronts where consumers locate and obtain/purchase applications for mobile devices, browser plug-ins, or software applications. Given that real world stores have to avoid distributing infringing content, there is no reason why digital storefronts cannot do more as well. While we appreciate that notice programs have been developed to address infringing apps that are available on some mobile app storefronts, we need to address how to increase the diligence so that infringing apps are more likely to be rejected before making it into the

storefront in the first place, and better tools to avoid repeat infringing apps, whether by the same developer under a different name, or a copycat app that provides substantially the same infringing service under a substantially similar name.

- Search Engines: Search engines continue to provide a critical link between online copyright theft sites and the audiences they seek to serve, including U.S. consumers. While demotion efforts have made a difference, without greater cooperation by the major search engines with right holders, online theft sites will continue to benefit from the substantial traffic sent to them by the search engines. These critical players in the e-commerce environment must be encouraged to work toward an agreed-upon framework for delisting from search results those sites that are clearly dedicated to, and predominantly used for, infringement. They also should refine their “suggested searches” functionality, so as not to drive innocent users to infringing versions of content. A strong and comprehensive set of best practices in the search engine area, similar to the principles adopted by a number of user-generated content services,⁵¹ could deliver enormous benefits to all Internet players whose interests are undermined by the prevalence of online theft, and could reduce pressure for legislative or regulatory initiatives that seek the same goal.
- Making the Standard Technical Measures Condition to the DMCA Meaningful: Reasonably priced, commercially available technologies exist today to identify and protect copyrighted works. While some service providers have implemented such measures, many others feel no compulsion to do so. The IPEC should call together service providers and copyright owners to discuss these technologies and develop “standard technical measures” around them as contemplated in 17 USC § 512(i).

B. Legislative Recommendations

The Music Community urges the IPEC to consider supporting several legislative reforms of the Copyright Act and laws impacting enforcement of the copyright laws. The areas that require the most immediate attention include: (i) the “notice and takedown” provisions of 17 U.S.C. § 512; and (ii) resolving issues related to websites located outside of the U.S.

1. Fix the DMCA

The Music Community recommends that the IPEC support revision of the notice and takedown system to update it to address the current technological environment.

- (a) Clarify that Inducers and Willfully Blind Operators have Red Flag Knowledge

The statute strips service providers who have “red flag” knowledge of infringement on their websites of safe harbor protection unless they take action to prevent or limit the

⁵¹ See Principles for User Generated Content Services, <http://www.ugcprinciples.com/>, last visited Oct. 12, 2015.

infringement. 17 U.S.C. § 512(c)(1)(A)(ii); Report of the Senate Committee on the Judiciary on S. 2037, the Digital Millennium Copyright Act, S. Rep. No. 105-190 (1998) (the “intended objective” of the “red flag” knowledge standard was “to exclude sophisticated ‘pirate’ directories—which refer Internet users to other selected Internet sites where pirate software, books, movies, and music can be downloaded or transmitted—from the safe harbor”). The statute also allows copyright owners who learn of the presence of infringing material on a website to notify the service provider of a “representative list” of infringed works and thereby cause the service provider to remove other clearly infringing material. 17 U.S.C. § 512(c)(3)(A)(ii). However, current case law has been read to allow service providers to willfully blind themselves to infringing activity while intentionally raking in profits attributable to it. Thus, many service providers refuse to respond to representative lists and ignore all infringing content until they receive particularized notices of each individual infringement from copyright owners. Even after receipt of such notices, they refuse to be proactive in any way – instead, they only remove one link to an infringed work while others remain, and allow new links to the exact same content to be added minutes later. Some social media sites invoke the safe harbors while enabling their users to shield their content from public searching – further impeding the enforcement of copyright rights. This is simply not a system that Congress ever would have designed.

Given that the statute was intended to encourage “innocent” Internet service providers to prevent or limit infringement that may arise unintentionally from their normal activities,⁵² the liability limitations should be expressly unavailable to any service provider who intentionally induces or encourages infringement, or is willfully blind to it – even if they are not aware of specific individual instances of infringement through notices from rights holders. It should clarify that red flag knowledge does not require notices of particular infringing URLs when other indicators of that infringement are apparent. Moreover, the statute should define the term “representative list,” and clarify that copyright owners can put service providers on notice of widespread and actionable infringement on their sites, thereby shifting the burden to the service providers to properly safeguard their properties.

(b) Address Repeat Infringements, Not Just Repeat Infringers

The DMCA conditions the liability limitations on the adoption and reasonable implementation of a policy to terminate the access of “repeat infringers” in “appropriate circumstances.” 17 U.S.C. § 512(i)(1)(A). However, as important as addressing repeat infringers is to address *repeat infringement*. Copyright owners should not be required to engage in the constant game of sending repeat takedown notices for the same song (or other work), simply because it appears at a marginally different URL than the first time. The current standard of “URL by URL” takedown doesn’t make sense in a world where there is an infinite supply of URLs. Technologies exist to identify content that is reposted after it is removed and they should be deployed as a standard industry practice.

⁵² *ALS Scan, Inc. v. RemarQ Communities, Inc.* 239 F. 3d 619 (4th Cir. 2001).

2. Consider an Alternative or Additional “Duty of Care” Standard

As implemented, many believe that currently, the DMCA places the burden exclusively on creators alone to police for infringing activity. Given the marketplace changes that have taken place since the DMCA was enacted, reasonable reform should attempt to balance the burden so that services seeking safe harbor protection have a heightened duty of care to establish reasonable measures to prevent infringing activity from appearing on their sites *ex ante* when it is reasonably foreseeable that such infringing activity would occur or is occurring. This could work as an alternative scheme to the DMCA or in conjunction with an improved notice and takedown (and stay down) system. Prominent scholars have advocated this recalibrated approach, which represents a return to more traditional tort principles.⁵³

3. Legislative Reform to Address Ex-U.S. Sites

The difficulty and complexity of pursuing services and sites dedicated to online theft increases when those services are hosted outside the U.S., operated by individuals or entities located outside the U.S., and/or when they rely upon domain names registered in ccTLD registries overseas or new gTLDs operated outside of the U.S. These problems can be expected to intensify. As noted above, online copyright thieves have become increasingly peripatetic and can shift their bases with increasing velocity. They are adept at jumping across borders and assuming alternate identities to evade the long arm of the law.⁵⁴

As the Obama Administration has forthrightly stated, “online piracy is a real problem that harms the American economy, threatens jobs for significant numbers of middle class workers and hurts some of our nation’s most creative and innovative companies and entrepreneurs,” and “online piracy by foreign websites is a serious problem that requires a serious legislative response.”⁵⁵ Further concerns raised with other proposed options to address this serious problem

⁵³ See Peter S. Menell and David Nimmer, *Legal Realism in Action: Indirect Copyright Liability’s Continuing Tort Framework and Sony’s DeFacto Demise*, 55 UCLA L. Rev. 1 (2007).

⁵⁴ The Pirate Bay remains a classic example. Its operators initially set it up in Sweden. After criminal and civil decisions against the operators, the Pirate Bay began changing ISPs and temporarily moved its services to the Netherlands and Germany before returning to Sweden. The Pirate Bay also registered the domain names depiraatbaai.be and baiedespirates.be, allowing Belgian users to access the site again, without using alternative DNS providers. Moreover, The Pirate Bay now has dozens of active proxies, mirrors, and clones, *e.g.*, thepiratebay.tn; thepiratebay.lv; mythepiratebay.org. See *All Pirate Bay Mirrors*, Tech Toy (Jan. 16, 2014), <http://techttoy.co.uk/pirate-bay-mirrors/>. This multiplies the number of takedown notices required to remove a single work that previously would have been hosted at only one URL.

⁵⁵ Victoria Espinel, Aneesh Chopra, and Howard Schmidt, *Combatting Online Piracy While Protecting an Open and Innovative Internet*, Jan. 14, 2012, <http://www.whitehouse.gov/blog/2012/01/14/obama-administration-responds-we-people-petitions-sopa-and-online-piracy>.

have proved to be unfounded.⁵⁶ Any updated IPEC strategy should include a review of the approaches taken by other countries to address this issue in considering how best to address this evolving problem.

C. Enforcement Recommendations

The Music Community commends federal law enforcement agencies for their vigorous and persistent efforts to use available legal tools to crack down on online copyright theft, including their recent enforcement activities in connection with the criminally infringing sites RockDizFile and ShareBeast.

However, more funding is required to sustain and enhance such efforts. Further, brazen copyright infringement must remain an enforcement priority. The economic harm, loss of livelihoods, and damage to our creative culture from these activities must not be underappreciated. We urge federal law enforcement agencies to redouble their efforts towards cracking down on online infringement, and increase cooperation with their overseas law enforcement counterparts in other countries. The increasingly trans-national character of the organized enterprises that dominate the world of online copyright theft requires this.

D. Regulatory Guidance

The Music Community urges the IPEC to consider incorporating the Copyright Office's views on the problems with the DMCA and, as applicable, requesting further guidance from the Copyright Office on the proper statutory construction of the DMCA.⁵⁷

The IPEC should also consider requesting the Federal Trade Commission to investigate and issue a report on the evolving relationship between sites/services that engage in infringement, those that support or profit from such sites/services, and cybersecurity threats posed by such sites/services.⁵⁸

IV. Conclusion

Pirates do not make copyrighted music available for free online as a public service. They make money from it: lots of money relative to the level of effort involved to engage in this behavior. They sell advertising on their services, and rake in huge profits from their illicit activity. Yet, it causes exponentially more harm to the Music Community. Unlike legitimate companies, these services have no interest in actually removing infringing files or links; their

⁵⁶ See Daniel Castro, *Oops. DNS Blocking Did Not Break the Internet* (October 12, 2015) <http://thehill.com/blogs/pundits-blog/technology/256635-oops-dns-blocking-did-not-break-the-internet>.

⁵⁷ See, e.g., *The Register's View on Copyright Review: Hearing Before the H. Comm. on the Judiciary*, 114th Cong. 1 (2015) (statement of Maria A. Pallante, Register of Copyrights and Dir., U.S. Copyright Office), http://judiciary.house.gov/_cache/files/9855f607-e28b-4ff9-b2f6-7a1106d4ce48/114-22-94408.pdf.

⁵⁸ See *supra* n. 42 for literature noting the ties between sites that engage in infringing activity and the creation of other cybersecurity risks, including malware and identity theft.

incentive is exactly the opposite – to ensure that users can access as much illegal content as possible, so that advertising revenues can continue to flow.

The important takeaway is that these services are not responsible entities who, when given notice of infringement, actually try to do something about it. These pirate services have an economic interest in ensuring that access to pirate copies remains uninterrupted, and they use technology to make that happen, regardless of how many takedown notices they get. The underlying assumption of the DMCA takedown process – that responsible entities will do the right thing and remove or disable infringing files and will not control or profit from the infringing activity – is simply not accurate with respect to these pirate operators. And the cost, complexity, broken legal framework, and resources involved with civil or criminal litigation against such operators limit the utility of those tools.

Thus, we must also look to those service providers who do represent the responsible parties envisioned by the DMCA and who provide visibility and viability to these bad online actors. And changes in the law are required to further incentivize these companies to fully engage in fighting online theft, and to discourage rogue entities from attempting to use our antiquated laws as a sword to continue their illegal activities. Although much is being done, it is far too little and is often done far too slowly. Because the success of creative industries, like the Music Community, is vital to making the Internet marketplace as successful as possible and ensuring that the rising digital tide actually lifts all boats, we ask the IPEC to consider the proposals made herein for legislative and regulatory action as well as for instigation of private cooperative efforts.

APPENDIX A

DESCRIPTIONS OF MUSIC COMMUNITY ORGANIZATIONS

American Federation of Musicians

American Federation of Musicians (AFM) is the largest organization in the world representing the interests of professional musicians. Whether negotiating fair agreements, protecting ownership of recorded music, securing benefits such as health care and pension, or lobbying our legislators, the AFM is committed to raising industry standards and placing the professional musician in the foreground of the cultural landscape.

Americana Music Association

The Americana Music Association is a professional non-profit trade organization whose mission is to advocate for the authentic voice of American Roots Music around the world. The Association curates events throughout the year including the annual Americana Music Festival and Conference in Nashville, the acclaimed Americana Honors & Awards program (and PBS special) and “Americana NYC” in partnership with Lincoln Center, New York City.

Church Music Publishers Association

The Church Music Publishers Association (CMPA), Nashville, TN, is an organization of North American and international publishers of Christian and other religious music that promotes worldwide copyright information, education, and protection. Founded in 1926, CMPA represents 56 member publishers.

Gospel Music Association

Founded in 1964, the Gospel Music Association’s purpose is to foster interest among the general public in gospel and Christian music, to build community and cooperation among industry leadership in order to address mutual business issues to maximize sales of Christian music and to promote public awareness of Christian music in our culture.

Music Managers Forum – United States

The Music Managers Forum (MMF-UF) provides a platform to connect, enhance, and reinforce the expertise and professionalism of music managers. Our goal is to further the interests of managers and their artists in all fields of the music industry, including live performance, recording and music publishing matters.

While many up and coming managers cannot easily have their voices heard or their views recognized, the MMF-US has a vital role to play in ensuring that the industry evolves fairly and profitably for all who work in the management industry and their clients. It is the goal of the MMF-US to make sure managers voices are heard. As the industry continues to evolve, the MMF-US endeavors to help its members to stay ahead of the curve.

National Music Publishers' Association

Founded in 1917, the National Music Publishers' Association (NMPA) is the largest music publishing trade association in the United States and the voice of music publishers and their songwriter partners. Its mission is to protect, promote, and advance the interests of music's creators on the legislative, judicial, and regulatory fronts.

Nashville Songwriters Association International

The Nashville Songwriters Association International (NSAI) is the world's largest not-for-profit songwriters trade association. Established in 1967, the membership of more than 5,000 active and professional members spans the United States and seven other countries. NSAI is dedicated to protecting the rights of and serving aspiring and professional songwriters in all genres of music.

Performing Rights Organizations (BMI, ASCAP, and SESAC)

BMI, ASCAP, and SESAC are the three U.S. music performing rights licensing organizations ("PROs") that collectively represent hundreds of thousands of songwriter, composer, and publisher members and combined repertoires consisting of millions of copyrighted musical works. The PROs each license the non-dramatic public performance rights in musical works to their respective repertoires on a non-exclusive basis to a wide range of users, including diverse digital broadcasting entities such as radio, television, cable, satellite and Internet services. BMI and ASCAP operate as not-for-profit businesses and return all license fees collected, less operating expenses, as royalties to their respective affiliated members whose works are publicly performed. The vast majority of BMI, ASCAP, and SESAC member songwriters and music publishers are small business men and women who depend on the PROs for collecting performing right royalties on their behalf, which constitute a major portion of their income.

Recording Industry Association of America

The Recording Industry Association of America (RIAA) is the trade organization that supports and promotes the creative and financial vitality of the major music companies. Its members are the music labels that comprise the most vibrant record industry in the world. RIAA members create, manufacture and/or distribute approximately 85% of all legitimate recorded music produced and sold in the United States.

Rhythm & Blues Foundation

The Rhythm & Blues Foundation is the pre-eminent non-profit organization dedicated to the historical and cultural preservation of Rhythm & Blues music. It provides financial and medical assistance, educational outreach, performance opportunities and archival activities to Rhythm & Blues artists and their fans.

Screen Actors Guild – American Federation of Television and Radio Artists

Screen Actors Guild – American Federation of Television and Radio Artists (SAG-AFTRA) represents approximately 160,000 actors, announcers, broadcast journalists, dancers, DJs, news writers, news editors, program hosts, puppeteers, recording artists, singers, stunt performers, voiceover artists and other media professionals. SAG-AFTRA members are the faces and voices that entertain and inform America and the world. With national offices in Los Angeles and New York, and local offices nationwide, SAG-AFTRA members work together to secure the strongest protections for media artists into the 21st century and beyond.

The Recording Academy

Established in 1957, The Recording Academy is an organization of musicians, songwriters, producers, engineers and recording professionals that is dedicated to improving the cultural condition and quality of life for music and its makers. Internationally known for the GRAMMY Awards® — the preeminent peer-recognized award for musical excellence and the most credible brand in music — The Recording Academy is responsible for groundbreaking professional development, cultural enrichment, advocacy, education and human services programs. The Academy continues to focus on its mission of recognizing musical excellence, advocating for the well-being of music makers and ensuring music remains an indelible part of our culture.

APPENDIX B

Apparent Impact of Domain Hopping on Search Results

The chart below shows the progress in search results of the infringing site MP3fil. This site first featured in searches for music content in January 2015 on the domain **mp3fil.com**. Over time, search results featured the site on more occasions and by 19th February 2015, the domain was listed on the first page of search results for 100 common music queries and as the first result for 12 queries. Using data that calculates typical clickthrough rates produced an estimate that 4.8% of traffic from Google searches for music content led to the Mp3fil.com domain.

During the weeks that this domain had been featured in search, the music industry had sent over 120,000 delist requests to Google for the mp3fil.com domain and a few days after 19th February, the mp3fil.com domain was demoted. However, by 5th March the site had moved to the domain **mp3fil.info** – showing exactly the same appearance and structure and with the mp3fil.com domain redirecting to the new domain. By 26th March, this domain was listed on the first page of search results for 52 out of 100 music related search queries and as the first result for 10 queries. A few weeks later, after 115,000 delist requests had been received by Google for the domain, the site was again demoted. Yet the pattern repeated once more, with the site

reappearing in search results two weeks later on 26th April on the domain **mp3fil.biz**, with the same look and feel and with both previous domains redirecting to the new destination.⁵⁹

⁵⁹ The same circumvention behavior has been observed in other sites as well. Source: Analysis by IFPI.

ESL Music Letter

March 28, 2016

Maria Pallante
Register of Copyright
Copyright Office
101 Independence Ave. S.E.
Washington, D.C. 20559-6000

Re: Copyright Office Study of Sec. 512 (DMCA)

Dear Register Pallante:

We are the founders and owners of the band Thievery Corporation, and the record label and music publisher ESL Music. We founded Thievery Corporation, a group specializing in a unique brand of eclectic electronic music over 20 years ago in Washington, D.C. In addition to releasing Thievery Corporation product, we also signed well over a dozen artists to our label ESL Music.

While we distributed physical product, we also sold and streamed Thievery and ESL Artist releases online, and licensed our music for worldwide advertising campaigns and for use in movies and television shows. We also achieved a good level of success touring, having performed in some of the most prestigious venues in the world, including The Hollywood Bowl, Red Rocks, and the 9:30 Club.

Unlike other artists and labels, much of our success was due to focusing on Internet distribution and promotion, working closely with our Internet aggregator/distributor INgrooves. And we did this without major radio airplay. Instead, the Internet was our primary delivery and promotional platform of choice. And we not only used the Internet to distribute our music, we used it as a means of communicating with our incredibly strong and faithful fan base.

About 12 or so years ago we started to recognize that sales were decreasing and piracy was on the rise, even as our fan base continued to increase. We knew about the increase in piracy because at times our fans actually notified us about websites offering our music for free or selling our music for almost nothing. Our fans thought this was awful and so did we. We then learned about a law that provided us with a means to stop the unauthorized use of our music. It was called the Digital Millennium Copyright Act. Essentially, all we had to do was to send “takedown notices” and the offending parties would stop. Or at least that was the promise. What actually happened was totally different.

We worked with our attorney to learn how to send takedown notices and we used our own employees to send the notices. We knew where to send many of the takedown notices because our employees were technologically savvy.

We had high hopes of stopping this unconscionable theft of our music and the music of ESL artists. But instead of stopping the piracy and unauthorized use of our music, we were met with

a different reality. Most of the takedown notices were ignored. And if our music was taken down, it would almost immediately return on another site or even the same site. We were spending more and more resources on the takedown notices, and we were consistently getting less and less in return. Eventually, we decided to stop sending the notices altogether. It was simply an exercise of throwing good money after bad.

So time and again, we released product realizing more and more that we had no real way to stop its unauthorized use and the erosion of its commercial viability. One day we recognized an awful truth. We had no real legal remedy to stop the theft of our property - period. When we release music, our control is gone. Any sales and use of our music is essentially an act of charity. If our fans or some companies want to pay, they will. But if they don't want to pay, they don't. And there is nothing we can do about it.

And for those companies wanting to pay, we now realize they will pay less and less, rationalizing the payment of low royalties by claiming getting paid micro-pennies is better than not getting paid at all. We have been told that the DMCA was supposed to place some responsibility on behalf of these companies to help address piracy, and yet we find out that the Courts have essentially interpreted the DMCA in a way that places no responsibility on those services like Google to proactively enforce our rights. With these types of laws, why would they pay us anything but micro-pennies, if that?

Even more infuriating, we were told that the ISPs had filtering technology that could be used to identify those using our music without authority. But because they are conditioned to ignore the existence of the problem, and the Courts placed no responsibility on them to pro-actively engage in anti-piracy efforts, they refused to use the technology unless you signed a deal with them. Without a strong legal deterrent mandating the use of filtering, the ISPs have no incentive to change the status quo.

Quite simply, the DMCA has failed us. And not only can we not protect our music, we cannot protect the fantastic music of other ESL artists like Federico Aubele, Natalia Clavier, Thunderball, and Nickodemus. Essentially, when we signed those artists we became the caretakers of their copyrights. And now we realize we do not have the tools to do that anymore. Partly because of this, we are releasing our artists from our label. While there are other economic and business reasons for this decision, a major one is the failure of the DMCA to provide us with a means to protect their property and to pay them what they deserve for the use of their music. Thievery Corporation will continue – and we hope to thrive – but ESL Music for other artists is no more.

We understand the Copyright Office has started a study of the DMCA and we believe it is very important for your office to understand our experience. It is gut wrenching to us that the DMCA does not provide in fact, what it promised, and you need to help Congress reform the law so that other songwriters, artists and indie labels coming after us have the proper tools to protect their music.

What most people don't understand is that this is not only a legal problem – it is a cultural catastrophe. Without properly protecting the rights of songwriters and artists, we will have less quality art and fewer quality artists. The Internet, using technology we love, should be the friend of the artist, not its enemy. The Internet is not going anywhere, but the DMCA can be changed for the better. If it is not, the Internet will not be the fantastic distribution system that everyone wants it to be. It will be nothing less than a digital tip jar. If you want to pay you can – but if you don't want to, you don't have to. What kind of copyright law allows that? The DMCA must be reformed.

Sincerely,

Eric Hilton and Rob Garza

RE: Section 512 Study: Notice and Request for Public Comment

Thank you for this opportunity to submit my comments regarding the United States Copyright Office's evaluation of the impact and effectiveness of the Digital Millennium Copyright Act ("DMCA") safe harbor provisions contained in 17 U.S.C. 512 (the "Safe Harbor Provisions"). I am writing this paper to urge that, as the Copyright Office considers revisions to the Safe Harbor Provisions, it keeps the goal of providing fair and effective copyright protection for music creators at the forefront of its mind.

I. Introduction

My name is Dina LaPolt and I am the owner of LaPolt Law, P.C., a boutique transactional entertainment law firm that specializes in representing music creators, including songwriters, recording artists, producers, and musicians. Over the past several years, I have actively participated in legislative reform efforts relating to copyright and licensing laws in Washington, D.C. on behalf of my clients and the broader music creator community. In 2014, I submitted two comment papers to your office in connection with your music licensing study and participated in the Los Angeles roundtable discussions in connection with same. I am well qualified to discuss the DMCA Safe Harbor Provisions since our office frequently submits takedown notices on behalf of our clients.

I am submitting this paper to represent the music creator's perspective on this topic. Music creators are the driving force behind the music industry and their interests must be taken into consideration when evaluating the efficiency of the current Safe Harbor Provisions.

Due to the increasing amount of content online, the Safe Harbor Provisions have become increasingly burdensome for music creators. Accordingly, Section 512 of the DMCA is in dire need of revision in order to properly address the proliferation of online infringement.

II. The Section 512 Safe Harbors Do Not Effectively Address the Concerns of Content Creators and Must Be Modified to Reflect the Modern Digital Age

When the Safe Harbor Provisions were enacted as part of the DMCA in 1998, the landscape of the digital world was completely different.¹ Thanks to technological innovations since then, music creators' content can now be accessed and experienced through an ever-evolving array of platforms and services. Ongoing technological innovation has drastically changed the music industry to a point where content has never been more accessible and easier to share. Digital technology has made it simple and inexpensive to copy and distribute content to millions.

However, the result of this has not be completely positive for music creators. Despite the widespread availability and distribution of affordable lawful content, music creators are still left with significant challenges in regard to online piracy. Due to the sheer volume of infringing content on the Internet, changes need to be made to the Copyright Act to help curtail the prevalence of online piracy. Section 512 has provided Internet Service Providers ("ISPs") with unintended loopholes, which have essentially left music creators without an effective recourse to shut down known instances of infringing activity. The Safe Harbor Provisions must be revised in order to ensure our copyright system is appropriately handling the proliferation of content online.

A. The Section 512 Safe Harbors Are Not Working as Congress Intended

In enacting the DMCA, Congress highlighted "two important priorities: the continued growth and development of electronic commerce; and protecting intellectual property rights."² Even in 1998, Congress recognized that that a thriving online marketplace would provide endless opportunities for creators to have their works distributed online.³ These same technological advances would, however, also facilitate the prevalence of online piracy. Congress never

¹ See *Internet Users*, Internet Live Stats, December 1, 2015, <http://www.internetlvestats.com/internet-users/#trend> (In 1998 there were only 188 million internet users; there are over 3.25 billion internet users today).

² Report of the House Commerce Committee on H.R. 2281, the Digital Millennium Copyright Act, H.R. Rep No. 105-51, pt 2., 23 (1998), <https://www.congress.gov/105/crpt/hrpt551/CRPT-105hrpt551-pt2.pdf>.

³ *Id.*

proposed to dissuade ISPs from monitoring their services for infringing activity.⁴ Instead, this legislation was intended to promote the cooperation between ISPs and copyright owners “to detect and deal with copyright infringements that take place in the digital networked environment.”⁵

Although Congress clearly understood the importance of addressing online infringement as technology continued to advance, it never could have anticipated the online marketplace as we know it today. Each day millions of unauthorized copyrighted works are uploaded by Internet users. The Safe Harbor Provisions were written to prevent isolated infringement by third parties through the use of ISPs and the notice-and-takedown provisions would have alone been an efficient alternative to legal proceedings if the Internet landscape had remained relatively same as it was in 1998.

However, today, music creators are faced with the overwhelming burden of detecting these instances of infringement and notifying the service provider every single time a user posts and re-posts the work. Unfortunately, changes in the marketplace have presented the music community with the insurmountable burden of notifying ISPs for millions of instances of infringements which occur by the posting of links on thousands of unauthorized sources. After 18 years of changes in the marketplace, the balance of burdens placed on ISPs and creators to monitor for copyright infringement has greatly tipped in favor of the service providers.

The language of the Safe Harbor Provisions is outdated and must be adapted to meet music creators’ needs in the digital distribution era. The music industry has always done its best to monitor for infringing activity and prevent the availability of unauthorized works online. However, ISPs, which are able to use the Safe Harbor Provisions as a defense, must bear more responsibility when infringing material of which they have already been notified reappears online. This would coincide with Congress’s initial intent to foster cooperation between copyright owners and ISPs. If the Safe Harbor Provisions remain unchanged, they will ultimately serve as an impediment to copyright enforcement and the music community will continue to be harmed by the infringing activity the DMCA was created to prevent.

B. The Limitations on Liability Afforded to Internet Service Providers under Section 512 Do Not Adequately Protect the Rights of Copyright Owners

The Safe Harbor Provisions were enacted because Congress was concerned about the liability imposed on ISPs from the infringing activities of third parties on their services.⁶ Congress never

⁴ See Conference Report on H.R. 2281, the Digital Millennium Copyright Act, H.R. Rep. No 105-796,73 (1998), <https://www.congress.gov/105/crpt/hrpt796/CRPT-105hrpt796.pdf>.

⁶ See S. Rep. No. 105-190, 19 (1998).

anticipated the creation of online services which were created solely or primarily for the distribution of infringing content. Therefore, while these services end up profiting from the advertising revenue which increases as the unprecedented amount of free illegal content available online material grows, the music creators are left with an insurmountable value gap for their works.

Although music adds value to all types of online services, even when the music is properly licensed, music creators are not receiving their fair share for their works because legitimate services realize they have the leverage to create discounted licensing systems. Legitimate online services, who pay for music licenses, must also compete with services which are offering all of their content, stolen or not, for free. Services such as SoundCloud and YouTube, which distribute and monetize music uploaded by their users, are taking advantage of the liability limitations that the Safe Harbor Provisions afford them.⁷ The Safe Harbor Provisions, which were enacted to limit the liability of passive intermediaries should not an exemption for active digital music services from having to fairly negotiate licenses with rights holders.⁸ Online music distributors further exploit this situation by offering music creators lower royalty rates, which music creators are left to accept if they want their music to be available to consumers online legally.

The Safe Harbor Provisions end up imposing an unfair burden on music creators while simultaneously providing a means for services such as YouTube to host infringing content under the guise of DMCA compliance. Although music creators can notify these services when their content is illegally posted, users often repost the same content almost instantly, making it impossible for creators to prevent the unauthorized distribution of their work. Creators are stuck using their own resources to police these numerous and repeated postings instead of using the time to work on their craft and business. Then, despite even their best efforts, music creators are ultimately unable to control whether or not the infringing content gets removed (many sites do not even acknowledge or process DMCA takedown requests), and they are left bearing the costs of litigation if the service does not comply. To make matters worse, even if music creators are able to secure a judgment against rogue sites like MP3Skull, the infringing actor responsible for hosting the site may be impossible to locate, which again leaves the music creator without any remedy.⁹

The Safe Harbor Provisions have essentially left music creators without an effective way to permanently remove their works from services which consistently host infringing content. This

has caused a distortion in the market where streaming services are not paying the rates they should be because they know music creators are limited in ways they can now monetize their music. As such, revisions must be made to the Safe Harbor Provisions in order to curtail the negative impact these services will continue to have on the future earnings of music creators.

III. The Notice-And-Takedown Process Must Be Modified

The notice-and-takedown process was supposed to be used as a mechanism for copyright owners to prevent known infringing activity which was taking place through the use of innocent ISPs. As technology continues to advance and online activity continues to increase, the Safe Harbor Provision must scale to fit the current marketplace. The notice-and-takedown process, as is, provides an unreasonable enforcement mechanism for music creators while simultaneously creating a discounted licensing system for music streaming services. In order to keep music industry growing and maintain the balance intended by Congress, this Safe Harbor Provision must be changed to a notice-and-*staydown* policy.

A. Section 512's Notice-And-Takedown Process Does Not Sufficiently Address the Reappearance of Infringing Material

After a music creator notifies an ISP of infringing material, Sections 512(c) and (d) direct the ISP to “expeditiously” remove this content. Although allegedly infringing materials are routinely removed from websites after receipt of such notices, this prompt method for obtaining the removal of infringing material does not work when there are increased instances of infringing material being reposted by the same service that removed the initial link.

Rightsholders often equate the DMCA takedown system to “Whac-A-Mole”, the classic arcade game where, just as the player hits a motorized rodent with a mallet, identical rodents pop up elsewhere. For music creators, this Whac-a-Mole game has grown to be increasingly frustrating and demonstrates that the current notice-and-takedown provision is untenable. To present an idea of the scope of the daunting task at hand for music creators, a 2013 report revealed that *every month*, copyright holders were sending takedown notices for over 6.5 million infringing files, which were available on more than 30,000 websites.¹⁰ This Whac-a-Mole problem defies the central purpose of providing ISPs with a safe harbor. Many of these unauthorized postings occur on legitimate online platforms, which claim to want to be in compliance with the Safe Harbor Provisions but are no way obligated, under the current law, to improve this problem.

¹⁰ See Bruce Boyden, *The Failure of the DMCA Notice and Takedown System: A Twentieth Century Solution to a Twenty-First Century Problem*, Center For Protection of Intellectual Property, December 2013, <http://cpip.gmu.edu/wp-content/uploads/2013/08/Bruce-Boyden-The-Failure-of-the-DMCA-Notice-and-Takedown-System1.pdf>.

ISPs currently have an unreasonable economic advantage when it comes to exploiting the content of music creators—content which does not belong to them. They are not incentivized to prevent the reposting of infringing content which they have already been notified about because this content increases the service’s popularity, which in turn translates into more ad revenue. These services must be required to take proactive steps against repeated postings of the same unauthorized work.

Furthermore, ISPs are now being used by torrent and pirate websites as a tool to locate content which has already been taken down. Torrent sites have used Google’s own service to identify and “bring back to life” content which was taken down as a result of DMCA notices.¹¹ The advancement of technology has gotten to a point where services can manipulate publically available copyright notices to repost infringing content. This technology must be considered when revising the Safe Harbor Provisions.

Technological advances caused the implementation of the Safe Harbor Provisions and technology must therefore be used, and ISPs held accountable, for curtailing the infringement that has taken place since. The deterrence of rampant infringement is necessary to maintain a sustainable entertainment industry and the Safe Harbor Provisions must be revised so that the burdens are balanced *equally* between all parties who are benefitting from the online distribution of content.

B. The Notice-And-Takedown Policy for Addressing Online Infringement Is Not be a Workable Solution for Content Creators and Must Be Changed to a Notice-And-Staydown Policy

A “staydown” clause must be added to the Safe Harbor Provisions to effectively address the concerns of music creators. Switching to a notice-and-staydown policy would make this system more balanced and hold ISPs accountable for preventing already identified infringing content from resurfacing. Specifically, once a music creator identifies an infringing work and submits a DMCA notice, the notified service should then remove all other unauthorized links that contain the same identification information. Subsequently, it becomes the responsibility of the service to delete or block new postings matching the identification information already submitted by the music creator. Unless this sort of system is implemented, services will continue to host reposted infringing content without facing any legal ramifications.

Notice-and-staydown is a necessary step to put an end to the Whac-a-Mole problem and actually give music creators the ability to control the dissemination of their work online. The Safe Harbor Provisions should not be available to ISPs who choose to continue linking to an

¹¹ Andy, *Torrent Site Uses Google To Resurrect Taken Down Content*, Torrent Freak, October 28, 2014, <https://torrentfreak.com/torrent-site-uses-google-to-resurrect-taken-down-content-141028/>.

infringing work after being notified of its identity by the copyright owner. Once copyright owners have notified ISPs of a specific infringing work, the burden of monitoring the work should be shifted to the ISPs.

The key point to takeaway is that ISPs are able to hide behind the Safe Harbor Provisions after music creators notify them of infringing content. Even though Google and other ISPs have the means to keep their services mostly free of pirated content, the Safe Harbor Provisions allow these services to profit from increased tractions they receive when their services are used for the distribution of infringing content.¹²

It is readily apparent that the cost for copyright owners to defend their works, in terms of time and labor, is significant and reduces the amount of money and time music creators have available to create new content. Individual copyright owners and small companies do not have the resources available to send notices each time an unauthorized copy of their work appears online, let alone, enough to keep sending notices for re-postings of the same work. Music creators should be spending their time honing their craft instead of sending the same takedown notices to the same ISPs to protect the same work.

Further, the current DMCA notice and takedown system is highly inefficient and burdensome to music creators and their representatives. Music creators must currently submit their notices manually even though ISPs like Google have the resources to create systems which can efficiently respond to the increasing number of takedown notices they receive. Copyright owners, on the other hand, lack access to the third-party services and resources, which could help them monitor for infringing uses.

Recently, our client Joel Zimmerman, publicly known as “deadmau5”, brought a YouTube user to my attention who used the deadmau5 trademark in his or her username and posted nearly 400 videos containing deadmau5’s copyrighted material. We reached out to YouTube to request the removal of all the user’s videos or deletion of the user’s entire account since he or she was all but impersonating our client. YouTube responded that we must provide URLs for each individual infringing video, despite the fact that the user’s entire YouTube channel consisted of infringing videos. Thus, an attorney at my firm spent nearly four hours compiling a list of URLs, a task that could have easily been avoided if YouTube had a more efficient way to address large-scale infringement by a user.

Such a scenario puts a music creator in a lose-lose situation. A creator who wants to issue notices for a large number of infringing uses, even by a single infringer, must choose between

¹² See Cory Doctorow, *The pirates of YouTube*, The Guardian, December 12, 2011, <http://www.theguardian.com/technology/2011/dec/12/pirates-of-youtube-cory-doctorow> (“Rights holders upload copies of their copyrighted works to YouTube and identify themselves as the proprietors of those works, and YouTube scours its files for videos or audio that appear to be connected with those copyrights.”).

two undesirable options. First, the creator can solicit the help of an attorney, and potentially spend thousands of dollars for the attorney's services. This also impacts the creator, and the attorney's other clients, by taking up the attorney's time that could be best spent on more important tasks. Alternately, the creator can waste hours of his or her own time issuing notices through YouTube's cumbersome online form, distracting them from their music and their careers (not to mention, because creators are not usually educated in sophisticated copyright issues, they might issue incorrect notices, wasting YouTube's time and their own).

This impacts us all—when creators cannot devote their full attention to their craft, they cannot effectively produce their art for the benefit of our culture. Creators should not have to devote substantial time to enforcement procedures; we must improve the DMCA's efficiency so that creators can focus on what is important: making art. Ultimately, music creators are unable to make any real impact on Internet piracy without changes to the Safe Harbor Provisions, which rebalance the burden of policing infringing between creators and ISPs.

C. Internet Services Providers are Not Utilizing Existing Technology, Which Would Improve Both the Efficiency and Effectiveness of the Notice-and-Takedown Process

In order to qualify for safe harbor protection, ISPs should be using content identification technologies to block the unauthorized distribution of copyrighted works by third parties. Technology already exists which can identify and filter pirated material. This technology is available at a reasonable cost and the use of this technology must be considered when determining whether an ISP falls under the Safe Harbor Provisions.

Google and YouTube currently use "Content ID" technology, which uses metadata submitted by the copyright holder to identify and monetize matching videos that are uploaded onto YouTube. Currently YouTube users must "apply for Content ID" on the service's website.¹³ The Content ID technology utilizes "Digital Fingerprinting," which transforms audio and video files into its own unique code.¹⁴ In 2013 a digital fingerprinting company called Digimarc invented software that embedded a work's copyright identification information into "a unique ID."¹⁵ With this technology any user viewing the work can determine its copyright information regardless of where the work ends up online.¹⁶ Additionally, other content distributors like Facebook and

¹⁶ *Id.*

SoundCloud use technology by Audible Magic, which can recognize audio and video files across all streaming and broadcast platforms.

Clearly, antipiracy technology exists. This technology, however, must be made mandatory for all ISPs which they want to reap the benefits of the Safe Harbor Provision. ISPs must be using this technology on all of the platforms they use to distribute content, unlike Google who only uses this for its YouTube platform. Technology allowed for the explosion of the piracy market and therefore technology must be responsible for keeping piracy in check.

IV. The Repeat Infringer Policies in Section 512 (i)(A) Do Not Provide Sufficient Protection for Content Creators

Under the Safe Harbor Provisions, ISPs must “adopt and reasonably implement” procedures to terminate “repeat infringers” in appropriate circumstances.¹⁷ Since this language has not been more clearly defined by Congress, it has been left up to the interpretation of the courts. This provision must be revised to provide ISPs with more specific requirements to ensure they are using a repeat infringer procedure that is actually working. If ISPs are not obligated to be transparent about their repeat infringer policies and without more clarification in the law, copyright holders and ISPs will be unable to cooperate in reducing piracy as Congress intended.¹⁸

A. The Repeat Infringer Policies are Ineffective and Fail to Discourage or Prevent Infringement

The Safe Harbor Provisions already include limitations on the monitoring requirements for ISPs. Since ISPs bear no policing duty, an ISP that has never terminated a user’s access can still meet section 512(i)’s requirements if the copyright holder has not informed the service that such user is a repeat infringer. The burden is unreasonably on copyright holders even though ISPs are in a better position to detect infringement on their own networks.

Additionally, ISPs must be more transparent about the procedures they put in place to terminate repeat infringers. Under the current state of the law, ISPs attempt to undermine the Safe Harbor Provisions by placing roadblocks and loopholes which make it difficult for copyright owners to file a legitimate complaint.¹⁹ Without transparency, copyright holders who decide to pursue litigation have no idea of knowing how the service terminates its repeat infringers, which causes

¹⁷ 17 U.S.C. 512(i)(1)(A).

¹⁸ See H.R. Rep No. 105-51, pt 2. at 49-50.

¹⁹ See Stephen Carlisle, *14 Strikes and You’re Out! (Maybe): How Cox Communications Lost its DMCA Safe Harbor*, Nova Southeastern University, December 10, 2015, <http://copyright.nova.edu/cox-communications/> (Cox will review a user’s account and consider termination after the fourteenth notice it receives)

large delays in discovery and increases the cost for copyright holders. As section 512(i)(A) is written, even ISPs who are notorious for hosting infringing content are able to survive legal battles for years before ultimately being shut down because of mechanisms they use to actively prevent copyright holders from participating in the notice-and-takedown process.²⁰

Instead of providing an incentive for ISPs and copyright holders to cooperate, Section 512(i)(A) discourages ISPs from actively helping with policing for infringing activity. This places copyright holders in the unfair position of sending repeat takedown notices in an environment where there is an infinite supply of users and ISPs waiting to exploit their works the moment they appear on the Internet. Instead, the Safe Harbor Provisions' threshold requirements must encourage companies to adapt to the digital marketplace. ISPs benefit from keeping as much content as they can online while the costs and risks of pursuing legal protection falls on copyright owners. The only way to effectively mitigate the reappearance of infringing actors online is to revise Section 512(i)(A) and mandate the use of existing content identification technology to block repeat infringers.

B. Section 512(i)(A) Lacks Sufficient Clarity as to What Constitutes a Valid Repeat Infringer Policy for Safe Harbor Protection

Section 512(i)(A) lacks sufficient clarity as to what constitutes a sufficient repeat infringer policy. The Safe Harbor Provisions apply only where an ISP “upon notification of claimed infringement . . . responds expeditiously to remove . . . material that is claimed to be infringing.”²¹ The policy implemented by ISPs must terminate its users who are “repeat infringers” in “appropriate circumstances.”²² The ambiguities are endless. How fast must an ISP respond to a repeat infringer notification for it to qualify as expeditious? When do circumstances qualify as “appropriate”?

Due to the vague language of section 512(i)(A), its interpretation has been left to the court system, but courts have further been unable to specify the necessary steps ISPs must take to satisfy section 512(i). This has left a grey area where ISPs can take advantage of the Safe Harbor Provisions without actually removing any repeat infringers from its service. If a copyright holder is not able to successfully notify the ISP of users who are repeat infringers, an ISP can there still have “reasonably implemented” a section 512(i) procedure without ever terminating a repeat infringers access. Leaving the interpretation of this provision to the courts has proven to be an inefficient solution and the law must be changed in order to provide a

²⁰ Glenn Peoples, *Grooveshark Loses in Court Again, EMI Wins Summary Judgment in Copyright Case*, Billboard, April 2, 2015, <http://www.billboard.com/articles/business/6523936/grooveshark-loses-again-emi-summary-judgment-copyright-infringement>

²¹ 17 U.S.C. 512 (c)(1)(C).

²² 17 U.S.C. 512 (i)(1)(A).

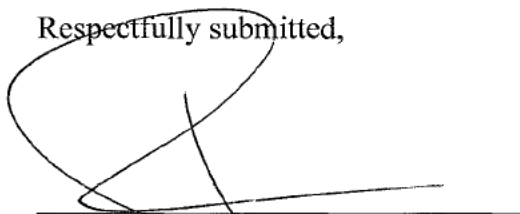

uniform standard that all ISPs are responsible for adhering to. It is beneficial to both ISPs and copyright holders that these laws be revised to expedite the process of removing repeat infringers and avoid costly litigation.

V. Conclusion

The Copyright Act was designed to encourage the creation of new works and ensure that creators' rights are protected. Accordingly, the DMCA must be revised in order for the law to continue to work effectively and provide meaningful protection against widespread online piracy. Although the Safe Harbor Provisions were created to protect innocent ISPs from liability, these protections should be afforded only to the extent the services utilize the technologies that are available and *cooperate with copyright owners* to combat Internet piracy.

Thank you for your time and consideration.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Dina LaPolt', is written over a horizontal line. The signature is somewhat stylized and loops back.

SECTION 512 STUDY:
NOTICE AND REQUEST FOR PUBLIC COMMENT
DOCKET No. 2015-7**

Comments Provided by the Contents Creators Coalition

Submitted by Melvin Gibbs, President, and
Jeffrey Boxer, Executive Director & General Counsel

I. INTRODUCTION

This position statement is submitted by the Content Creators Coalition (the “c3”), an artist-run non-profit advocacy group representing music creators in the digital landscape. c3 represents musicians, songwriters, composers, recording artists, studio professionals, and others, all who rely in whole or part on copyright to make a living.

In no small measure attributable to the Digital Millennium Copyright Act (“DMCA”) at Section 512,¹ the economic benefits of the new music business is distorted by the digital marketplace. YouTube, Spotify, as well as a myriad of Internet service/access providers are well suited to exploit the weaknesses in Section 512, often to their great financial benefit.

Yet the people who make the “product” -- musicians, songwriters, composers, recording artists, and studio professionals (not to mention music publishers, record labels, and other creators and content owners), do not share in the gains. Section 512 has proved particularly problematic for music creators. Section 512 was outdated almost instantly upon its issuance, and it has failed in its Congressionally intended purpose of balancing the interests of music creators and digital distributors.

¹ Title II of the DMCA, the Online Copyright Infringement Liability Limitation Act, which amended Section 512 to Title 17, U.S. Code.

In 1998, the same year that DMCA passed through Congress, a new advertising company based on a search algorithm named Google was launched in Silicon Valley. It is hard to imagine a world where music wasn't "demonetized" by piracy, search and YouTube (a later Google acquisition, which advances this problem one step further by serving as the platform for music distribution and encourages rampant uploading of materials to sell advertising over) If the technological changes wrought by the digital distribution of music were not foreseen in 1998, nor could anyone have anticipated the breakdown in the American social contract between the people who make things for a living and the companies that bring it to the public.

Congress never intended in Section 512 to undermine musicians (or anyone any other person who relies on his or her creative talent, persistence and notoriety to make a living) from benefiting from their work because a third party appropriated it. Nor was it Congress' intent in Section 512 for music being sold for third party advertising and data scrapping. And that advertising revenue is worth a pittance of what was market value before Section 512 was exploited to provide digital music distributors immunity from their own ruinous business practices.

Likewise, many courts have been distracted if not bamboozled by the "gold-rush" level of excitement that the Internet created. But like so many gold rushes past, what is found after the rush is over is the ruins of what was there before. In this case, that is the legacy of American music and musicians whose careers have been trampled along with their rights and ability to make a living from their art. That was not what Congress set out to do, and the DMCA requires reformation to restore the balance that Congress intended.

c3 stands in support of the U.S. Copyright Office's review of DMCA, Section 512 as an integral part of a return to protecting the rights of music creators, but this time throughout the digital domain.

II. SUMMARY OF POSITIONS

THE PROBLEM ISN'T THE TECHNOLOGY - IT'S THE TECH BUSINESS PRACTICES

The Internet Service Providers and Online Service Providers (ISPs and OSPs) are now in unpaid or cut rate content business, something unforeseen by DMCA drafters.

Now the safe harbor insulates digital music distributors from claims against abuses to copyright claims that is caused by their business models and practices.

SECTION 512 IS OUTMODED AND NOTICE AND TAKEDOWN ARE IMPOSSIBLE WHEN INFRINGEMENTS ARE MEASURED IN MULTIMILLIONS

We have long transcended the pop and screech dial up Internet of prodigy and AOL that Section 512 was designed to regulate. No longer are the neutral digital providers running the Internet, and many of the worst offenders of copyright infringement are both in the business of content distribution and are OSPs and ISPs.

To be sure, this is the beginning of the problem: many service providers" that now distribute music, and often use music to drive their businesses, which profit from unprecedented data mining and advertising.

THE NOTICE AND TAKEDOWN SYSTEM HAS DEFEATED CONGRESS' OBJECTIVES

Although YouTube did not yet exist when the DMCA was put into place, the reality of YouTube demonstrates why the notice and takedown system has failed. YouTube uses the same euphemism of "User Generated Content" for uploaded content that is legitimately provided by a creator (or copyright holder) and purloined content (whether knowingly or unknowingly). YouTube refuses to differentiate between the lawful and unlawful at the point of upload, yet enjoys Safe Harbor protection, and sells advertisements over lawful and unlawful content alike.

The notice and takedown system requires creators and copyright holders to police millions of infringements. This year, Google believes they will receive over 1 billion takedown notices. Notice and takedown today barely staunches illegal content, and music removed is uploaded again immediately after it is taken down. This process foists huge costs on creators, yet with no effect in stopping infringement.

MUSIC CREATORS CANNOT POLICE THE INTERNET

The notice and takedown system places the entire burden on the creator or copyright owner to monitor the Internet for infringements and issue takedown notices.

The scope of this obligation given the behemoth size and growth of digital sales, advertising and piracy is simply impossible.

Many artists focus only top problem sites, or forego use of DMCA notices altogether, in many instances to avoid offending their fans in cases of "user generated content." Some ISPs or OSPs limit the number of takedown notices it will accept.

Sites delay their takedown of infringing uploads, and music often is infringed again immediately after it is taken down. Congress must take aggressive action to share the burden of policing the Internet.

MUSIC CREATORS OF LESSER MEANS ARE MOST IMPACTED BY NOTICE AND TAKEDOWN FLAWS

Many recording artists and songwriters, as well as independent record labels and music publishers, have stopped sending Takedown Notices because of the cost and the marginal prospects for success. This is the reality for the artist as small business owner. These are our members.

SAFE HARBOR HAS MADE INTERNET COMPANIES BILLIONS THAT SHOULD BE SHARED, IF NOT PASSED THROUGH, TO MUSIC CREATORS

Giant multi-billion-dollar global Internet companies that have built a business on content distribution misuse the DMCA to distort the free market and obtain lower rates for content.

As Zoe Keating found out - and c3 supported her in our "We Believe the Cellist" campaign -- YouTube has threatened music creators by telling them if they don't accept bargain basement rates to license their work, they will take refuge in the safe harbor and force the creator to use the broken notice and takedown system, with mass piracy or vastly undervalued licensing arrangements as the result.

THE SAFE HARBOR IS A DE FACTO GOVERNMENT SUBSIDY DISTORTING THE MARKET VALUE FOR MUSIC.

The Notice and Takedown system is now effectively a government subsidy to giant Internet companies, allowing them to distort the market and enrich themselves at the expense of creators.

Creators can license their content to corporations for much less than it's worth, or have it stolen, with the broken Notice and Takedown system as the only recourse. Hence the predictable arguments from the Internet leaders (such as Google and its YouTube) that support the DMCA, and the market leverage it provides them.

THE COUNTER-NOTICE SYSTEM IS BROKEN AND IS USED TO FURTHER ERODE MUSIC CREATOR RIGHTS

There is an incredibly small window to either ignore the notice (causing re-upload) or to file a lawsuit. They are unworkable with huge volume of notices and service-provider encouragement of counter-notices. Limited means musicians cannot participate effectively.

III. GENERAL EFFECTIVENESS OF THE NOTICE AND TAKEDOWN

1. ARE THE SECTION 512 SAFE HARBORS WORKING AS CONGRESS INTENDED?

The Section 512 safe harbors are not working as Congress intended, and in many instances incentivize digital distribution business models that are causing significant harm to musicians and other creators.

CONGRESS' INTENT, SAFE HARBOR & PROTECTING UNFAIR BUSINESS PRACTICES

The Section 512 Safe Harbor framework was Congress' attempt to encourage development of the internet at a time when it was new and uncertain technological advance for disseminating copyrighted works. Limiting the liability of Internet Service Providers (ISPs) for the conduct of internet users was seen as necessary to encouraging the internet's development. What Congress did not intend to allow or encourage was the action of ISPs and other types of digital distributors as purveyors of purloined creative works. Nor did Congress intend to incentivize the creation of digital distribution business models that depend upon displacing copyright creators' rights in their own work.

The result is that certain internet companies have disproportionately benefitted at the expense of America's creative communities. It is virtually inversely proportional: As Safe Harbor under Section 512 allowed infringement to grow without effective legal recourse, the bottom fell out of the earnings and copyright protection for musicians and others who depend upon copyright for their living.

Congress did not intend to relegate copyright owners to the notice and takedown process alone. Congress also foresaw industry discussion leading to the development of standard technical measures that would reduce infringement.

Congress qualified the right of an ISP provider to avoid such monitoring where standard technical measures were available to prevent or limit infringement.

Termination of access to internet locations was a reasonable method of deterring repeated copyright violations from persons who flagrantly refuse to follow the law. The importance of this remedy by requiring all service providers to implement such methods if they wished to benefit from any of the four statutory safe harbors.

Congress was wrong that service providers “know infringement when they see it.” Although Congress was aware of arguments, presented by litigants and by service providers who lobbied for liability limitations, positing that it is too difficult for service providers to determine whether content transmitted by users qualifies as infringing, Congress concluded that where internet users post copies of recognizable works with recognizable copyright owners or aggregate infringing material and label it as such (e.g., pirate.com) service providers have a responsibility to separate themselves from such conduct or risk liability.

The Internet of the late-1990s was different from the Internet of today, or even from the Internet of the 2000s. At the time of the passage of the DMCA, internet access was slow; online material was difficult to locate; consumers in many countries lacked widespread access to the internet; internet businesses (including access providers, hosts, and website operators) largely earned income from subscription or use-based pricing; and computing devices were expensive and stationary. Although music was available online (often via piracy),² video was not.

These circumstances led Congress to underestimate how rapidly the internet would spread; how dramatically access speeds would increase and the costs of electronic storage would decrease; how difficult it would be for

² See *UMG Recordings, Inc. v. MP3.com, Inc.*, 92 F. Supp. 2d 349 (S.D.N.Y. 2000) (discussing the “mymp3.com” service, which debuted in 1996); *Arista Records Inc. v. MP3Board, Inc.*, No. 00 CIV 4660, 2002 U.S. Dist. LEXIS 16165 (S.D.N.Y. Aug. 29, 2002) (describing a service that assisted users in locating unlawful music files online). One court stated the following: “Beginning in the early 1990s, copyright owners began suing individuals who unlawfully disseminated copyrighted music, photographs, and software. Such litigation targeted BBSs operated from home computers. Advances in technology, however, including the use of MP3 format (a compressed digital format) facilitated the piracy, and by 1998 approximately three million sound recordings were believed to be downloaded from the internet daily.” *In re Charter Communications, Inc.*, 393 F. 3d 771, 773 (8th Cir. 2005).

copyright owners to monitor for infringement; how easy it would become to earn revenue from advertising (which is often served to websites by third-party providers), as opposed to subscription or use-based fees; how often technologies would be designed to exploit legal loopholes; and how much money could be earned from inducing or turning a blind eye to infringement.

RELIGIOUS TECH. CENTER V. NETCOM ON-LINE COMM.

Congress did not intend to absolve internet service providers of all liability so long as they respond to notices from copyright owners that identify specific infringing items. Instead: (i) preserves direct liability for service providers who actively engage in volitional infringing conduct, such as selectively choosing which user uploads to repackage and make publicly available; (ii) preserves contributory liability for service providers who substantially contribute to infringement while possessing knowledge of facts from which a reasonable person would deduce that infringement is occurring unless the service provider takes steps to stop the infringement upon obtaining such knowledge; and (iii) preserves vicarious liability for service providers who use infringing content to attract or retain users to their websites or networks (*i.e.*, where the value of the product is derived from access to infringing content) or charge users specific fees associated with infringing content. The DMCA's approach also preserves secondary liability for service providers who intentionally induce their users to engage in infringement because it creates safe harbors only for "innocent" actors.³

Religious Tech. Center v. Netcom On-Line Communications,⁴ in the Northern District of California. In this decision, the court concluded that the Copyright Act did not impose direct liability on a person who did not engage in a volitional act that violated one of the exclusive rights provided to copyright owners in 17 U.S.C. § 106.

The court expressly disagreed with *Playboy Enterprises v. Frena*⁵ and *Sega v. MAPHIA*⁶ on this point of law. The court stated: "Where the infringing

³ *ALS Scan v. RemarQ Communities, Inc.*, 239 F. 3d 619 (4th Cir. 2001).

⁴ *Religious Tech. Center v. Netcom On-Line Comm.*, 907 F. Supp. 1361 (N.D. Cal. 1995).

⁵ *Playboy Enterprises, Inc. v. Frena*, 839 F. Supp. 1552, 1554 (M.D. Fla. 1993).

subscriber is clearly directly liable for the same act, it does not make sense to adopt a rule that could lead to the liability of countless parties whose role in the infringement is nothing more than setting up and operating a system that is necessary for the functioning of the Internet.”

In sum, *Netcom*’s holdings may be stated as follows: An internet service provider does not commit direct infringement by routing transmissions or temporarily storing content at the direction of a user because no volition is involved in such conduct.

Contributory liability may be imposed where an internet service provider is provided with notice of infringement on its system but fails to properly investigate and put a stop to infringement of the relevant works or by the user at issue.

Vicarious liability may be imposed where an internet service provider is capable of implementing technological methods of identifying infringing conduct and terminating the access and use privileges of specific users but fails to do so while financially benefitting either from payments directly related to accessing or posting specific infringing content or by using infringing content to attract users.

Post-*Netcom* BBS cases also applied approaches to secondary liability in a manner similar to *Netcom*. For example, in *Marobie v. National Association of Fire Equipment Distributors*,⁷ the court acknowledged that hosting a website could lead to contributory liability. The court declined to grant summary judgment for the defendant because, based on the evidence presented, it was unclear whether Northwest knew that any material on the website was copyrighted and, “if it did know, when it knew.”

⁶ *Sega Enterprises Ltd. v. MAPHIA*, 857 F. Supp. 679, 683 (N.D. Cal. 1994).

⁷ 983 F. Supp. 1167 (N.D. Ill. 1997). *Playboy Enterprises v. Webbworld*; *Playboy Enterprises v. Russ Hardenburgh*,

TECHNOLOGY

The DMCA was written to address a different technological landscape in the scope and volume of infringement.

Attracting advertising to a website or service also required greater effort. Now ad servers like Google run targeted ads on millions of websites through embedded links, in the late 1990's, a website who wanted to generate funds from infringing conduct had to charge subscription prices or actually solicit advertisers. Similarly, a user who wanted to find infringing content would not see ads for such content displayed alongside search results after Googling for a recording artist by name. Today, according to our research, users are connected to infringing content through search engines more so than through any other means.⁸

Peer-to-peer file sharing (which now accounts for roughly 10% of all internet traffic, down from a peak of roughly 30%) did not yet exist, at least in a manner accessible to most people. This is likely caused by two factors: (1) many people now understand that this is illegal; and (2) when presented with a "legal" alternative, people will use it.

In fact, many of the services that possess large market share online now, were in their infancy or did not yet exist at the time the DMCA was enacted. For example, Facebook, Instagram, Twitter, iTunes, Spotify, YouTube, PayPal and Skype did not exist. eBay, Amazon, Google, and Yahoo! were all less than 5 years old.

THE SAFE HARBORS HAVE FAILED TO KEEP UP WITH TECHNOLOGY OR THE ISPs BUSINESS PRACTICES ARE NOT WORKING AS CONGRESS INTENDED

The DMCA was primarily designed to prevent isolated infringement by third parties on specific online sites when connection speeds were slower than today and storage space was limited. In that environment, these third parties

⁸ Liron Sivan, Michael D. Smith, and Rahul Telang, School of Information Systems and Management, Heinz College, Carnegie Mellon University, Do Search Engines Influence Media Piracy?: Evidence from a Randomized Field Study (Sept. 12, 2014), available at <http://ssrn.com/abstract=2495591>.

were not able to infringe on the massive scale that they do today, and the “takedown notice” provisions were thought to provide an alternative to lengthy and expensive legal proceedings. However, it has had the exact opposite effect, leaving artists with little recourse if a legitimate takedown notice is denied. Legal representation is expensive and Section 512 does not allow for damages in all but the most egregious circumstances.

The qualification standards for the safe harbor eligibility were thought to be available only to innocently infringing ISPs with no connection to the third party content they hosted, linked to or otherwise transmitted. The notice and take down process was intended as a safeguard to provide a mechanism for copyright owners to prevent infringement by even innocent ISPs.

In the transformed Internet environment of today, as online speeds have dramatically increased while the cost of storage space has dramatically decreased, the DMCA’s failure to scale has rendered it increasingly obsolete and futile from an enforcement standpoint. Large, sophisticated entertainment-oriented websites have developed, and they premise their business models on being shielded from responsibility by the safe harbors.

Instead of sending a relatively small number of “take-down” notices to prevent isolated infringement in a manner that ensures the material doesn’t reappear, musicians are instead faced with the unprecedented burden of attempting to “take-down” literally billions of infringing copies of music and associated links from thousands of unauthorized sources in an environment where infringers feel free to simply continuously repost links to the infringing content. This mismatch between the amount of infringement and the burden of enforcement has increasingly led to the devaluation of music and the perception that there is no effective remedy against unauthorized infringement. Once a song is available, authorized or not, the law provides no means to effectively protect the musicians’ property.

Adding insult to injury, some ISPs have complained about “abusive DMCA notices” - they seek to curtail one of the only remedies left for copyright owners.

The safe harbors can no longer be said to balance the burdens of policing copyright infringement between the ISPs and the owners. Consider that since 2012, the Recording Industry Association of America (RIAA) has sent over 128 million infringement notices in the aggregate to web site operators, their underlying hosting providers, and search engines. Unfortunately, all too often, when a work is “taken-down” on a particular site or in a search engine index, it immediately re-appears someplace else on that site, or on mirror sites. Congress never intended for things to work in this way. The extent of this “whack-a-mole” problem was not anticipated and, unfortunately, this DMCA loophole has been embraced as a way to continually use and profit from unauthorized use of music, and still arguably maintain the “safe-harbor” protections built into the DMCA, at least until a costly and time-consuming lawsuit is filed and won.⁹

2. HAVE COURTS PROPERLY CONSTRUED THE ENTITIES AND ACTIVITIES COVERED BY THE 512 SAFE HARBORS

The courts have largely failed to properly construe the entities and activities covered by the Section 512 safe harbors.

Courts have construed the definition of “service provider” too broadly. Parties that are nothing like the passive, neutral service providers like AOL that Congress had in mind when drafting and enacting the DMCA now take advantage of the safe harbors unfairly. The safe harbors are now relied upon by companies that attract visitors by hosting content, that benefit from increased usership by mining data and selling advertisements, but who can “negotiate” with content providers for licensing fees at below market rates (if at all), because the content owners’ only other option is a notice and takedown regime that simply does not work to keep infringing content off any given service.

⁹ See *Section 512 of Title 17: Hearing Before the Subcomm. on Courts, Intell. Prop. and the Internet of the H. Comm on the Judiciary*, 113th Cong. 57 (2014) (statement of Maria Schneider).

Decisions are such that there is no daylight at this point between the safe harbors and clear cases of infringement, and hyper-technical readings of the statute have read out its clear meaning and congressional intent.¹⁰

These more recent decisions ignore how the technological tools available to service providers to prevent or limit systematic infringement have advanced. Companies that are in the content distribution business or use music to drive their online business model should be obligated to take meaningful steps to deter dissemination of unlicensed, copyrighted music, such as through the use of content matching and action technologies.

It is important that online intermediaries, not just right holders, fully engage in the fight against digital theft, because often the service providers possess information that rights holders cannot obtain or have difficulty locating.

For example, YouTube's Content ID system now enables rights holders to limit infringing files, which are technologically matched via fingerprint-based content recognition technology, from being made available via YouTube.¹¹ Facebook also will be testing a matching technology that will allow creators to identify matches of their videos on Facebook across the site, allowing for easier removal of unauthorized repeat content.¹²

These systems rely on information collected from right holders to allow the services to identify and block infringing files before the public gains access to them. Only the sites themselves can enable such preventative measures, because only they have instantaneous access to information regarding what is being uploaded to their services. If other services that allow user-posted

content (such as distribution hub sites) adopted similarly robust tools, a large amount of unauthorized content could be automatically removed or blocked from the web.

In *Viacom Int'l, Inc. v. YouTube, Inc.*, 940 F. Supp. 2d 110, 120 (S.D.N.Y. 2013), the court found YouTube qualified for the § 512 safe harbors even though it had and used “digital fingerprinting software, which automatically blocks submissions matching ‘reference databases of fingerprints of copyrighted works’ prior to their becoming available for public view,” but used this software only to filter videos for those “content owners who had agreed to licensing and revenue sharing deals with YouTube.” There was no requirement that YouTube use this software to attempt to stop, for example, repeat postings of a video that has already been identified as infringing through a notice and takedown procedure.

3. HOW HAVE SECTION 512’S LIMITATIONS ON LIABILITY FOR ONLINE SERVICE PROVIDERS IMPACTED THE GROWTH AND DEVELOPMENT OF ONLINE SERVICES?

Section 512 limitations have incentivized and encouraged the growth of online service providers (OSPs) by shielding the OSPs from liability, even as the business practices of the OSPs, such as YouTube, required scrutiny. The tremendous market growth of OSPs has come at the expense of the music creators.

The laws that “were designed to exempt passive intermediaries from liability,” the so-called safe-harbors, should never have been allowed to “exempt active digital music services from having to fairly negotiate” licenses with rights holders.¹³

Not only do certain actors take advantage of these safe harbors to profit from music without compensation to the authors and owners of that music, this situation unfairly distorts the market value for music, creating below-market discounted rates that harm the entire music industry. It cannot be right, for

¹³ See Frances Moore, *Artist and Record Companies need a Fair Digital Marketplace* (July 29, 2015), <http://www.ifpi.org/news/Artists-and-Record-Companies-Need-A-Fair-Digital-Marketplace>.

example, that, by some accounts, YouTube has 40% of the online music listening market, but only provides 4% of the revenue to the record labels.¹⁴

Musicians are faced with a “Hobson’s choice: Accept below-market deals or play that game of whack-a-mole. The notice and takedown system—intended as a reasonable enforcement mechanism—has instead been subverted into a discount licensing system where copyright owners and artists are paid far less than their creativity is worth.”¹⁵

There is a growth of players that claim safe harbor when they are judgment-proof to gain audience and then after they have an audience they start seeking licenses--development of an environment in which services employ a “use first, ask permission later” modus operandi rather than encouraging a healthy marketplace for licensing content.¹⁶

When the notice and takedown provisions of the DMCA were enacted, Congress intended to “preserve the strong incentives for service providers and copyright owners to detect and deal with copyright infringements that take place in the digital networked environment.”¹⁷ The legislation was not “intended to discourage the service provider from monitoring its service for infringing material.”¹⁸

However, given the increased availability of higher broadband speeds and low-cost server space, coupled with the continued misinterpretation of the DMCA by the courts and those that want to take advantage of its safe harbors, the DMCA regime fails to accomplish the balance sought by Congress.

¹⁷ Report of House Commerce Committee on H.R. 2281, the Digital Millennium Copyright Act, H.R. Rep. No. 105-51, pt. 2, 49 (1998).

¹⁸ Conference Report on H.R. 2281, the Digital Millennium Copyright Act, H.R. Rep. No. 105-796, 73 (1998).

The DMCA has provided incentives for Internet businesses to turn a blind eye to infringement, or even to build willful blindness into their business models.

Even while removing individual infringing links identified in takedown notices, services based on infringement can thrive financially and expect to enjoy near-complete immunity from liability. More and more rogue operators appear to specifically design and engineer their systems and processes to make the DMCA, as they interpret it, irrelevant and ineffective to stopping their ongoing infringement. Essentially, these rogue operators have learned the weaknesses of the DMCA as it has been interpreted and implement their services to exploit those weaknesses.

4. HOW HAVE SECTION 512'S LIMITATIONS ON LIABILITY FOR ONLINE SERVICE PROVIDERS IMPACTED THE PROTECTION AND VALUE OF COPYRIGHTED WORKS, INCLUDING LICENSING MARKETS FOR SUCH WORKS?

Section 512's limitations on liability for online service providers have negatively impacted the protection and value of copyrighted works, including licensing markets for such works.

Despite music being more popular than ever today,¹⁹ music industry revenues have been nearly flat since 2010, and are less than half what they were in 2000 (adjusted for inflation).

While the technology industry is benefitting from the increased availability of online music, and profiting from the unprecedented consumption and interest in music, musicians are receiving less and less. Consumers have never had so many choices for experiencing music legitimately and instantaneously.

¹⁹ "Demand for music online is higher than ever, with many sites directly dependent upon professionally produced, copyrighted music for their success. Over 65% of Americans ages 13+ agree that music is important to their lifestyle.4 American consumers spend, on average, more than 24 hours per week listening to music and, in a typical week, 75% of U.S. consumers listen to music online. Twelve of the top 20 most followed people on Twitter are from the c3. Fifteen of the top 20 celebrities on Facebook are musicians." IPEC submission.

In the first half of 2015, digital dissemination accounted for 76% of the overall recorded music market by value, compared with 59% for 2012.²⁰ But “[w]hen vinyl records, which peaked in the 1960s and ‘70s, generate more revenue for the industry in 2014 than the billions of ad-supported on-demand streams on YouTube and similar services, something is fundamentally wrong with the market.”²¹

Music adds significant value to technologies and network access, but musicians are not receiving a fair share of this added value.²² As noted above, the broken state of the DMCA is playing a significant role in perpetuating this unfairness.

The problem with diminishing returns must be addressed. A successful artist that invests in music needs a balanced digital marketplace in which to negotiate terms for the use of its music. And, as further discussed below, it needs a balanced and fair legal enforcement system in which to operate to do so.

YouTube is perhaps the most popular “music service”. An Ipsos survey in January 2015 found that 79% of people who had used YouTube have done so to find music.²³ DMCA safe harbors have contributed a culture that devalues copyright works and a generation of young Americans who believe they have a right to access all music for free. Even as the streaming services try to grow and obtain the appropriate licenses they have hit a ceiling on how much they can charge due to the prevalence of free content online.

DMCA stacks the deck unfairly against content owners, suppressing the legitimate market for their copyrighted works. Rogue actors may host infringing content and claim DMCA compliance for years whether or not they actually follow the letter of the law. The burden falls on copyright owners, not

²⁰ IPEC submission

²³ IFPI EU submission

only to police, but to diligently follow notice procedure, and if faced with noncompliance, bear the cost and inevitable uncertainty of litigation.

Overcoming a DMCA defense is but a first step; copyright owners must go the further length of showing both the ownership of copyrights at issue (a complex task in the case of older works) and their copying on an alleged infringing service, all the while such infringing service may stay in operation during the length of a litigation. Even if the copyright owner prevails, an infringing service may not have means or intent to satisfy a monetary judgment, placing burden on the copyright owner to bring suit under DMCA regime solely to protect market integrity, which, considering legal fees, is impracticable for many copyright owners.

Pirates. A significant recent development is the ability of rogue actors to engage in piratical activity across a variety of digital platforms, whether via computer software applications, web sites, plug-ins for Internet browsers, widgets for smart televisions, or mobile applications. Consider, for example, that before the infringing service GrooveShark was shuttered in light of a court order finding it liable for willful infringement, GrooveShark offered access to its service via a website, a mobile application, a browser plug-in, and was negotiating deals to have GrooveShark widgets on certain smart TVs.

More Pirates: In addition, it is now easier than ever for rogue operators to jump physical jurisdictions and digital domains, obfuscating their path while they do so. The increasing ubiquity of high-bandwidth connectivity and technologically sophisticated hosting services in a growing number of offshore jurisdictions make it increasingly easy for thieves to fully exploit the U.S. market while minimizing, for practical purposes, their exposure to U.S. copyright or criminal law. Another factor that will accelerate this disturbing trend in future years involves the domain name system. Beyond the existing framework of country code Top Level Domains (ccTLDs), the ongoing rollout of new generic Top Level Domain (gTLD) registries includes some based in jurisdictions more tolerant or even encouraging of theft of U.S. intellectual property. This gives pirates a wider range of havens to seek.

Certain service providers are emboldened by the safe harbors and are specifically designed to use the safe harbors to allow their infringing behavior.

5. DO THE SECTION 512 SAFE HARBORS STRIKE THE CORRECT BALANCE BETWEEN COPYRIGHT OWNERS AND ONLINE SERVICE PROVIDERS?

The DMCA Section 512 safe harbors do not strike the balance intended between copyright owners and online service providers. The DMCA, Section 512, is the product of a time where download and upload capacity was tiny compared to today. Any law intended to protect creators and copyright holders as part of its mandate must make significant inroads into stopping the use of misappropriated content on its current massive scale. Current technology makes it relatively easy to keep infringing content off OSPs sites, yet the largest sites have resisted such copyright protection practices.

Court decisions have wrongly interpreted the law and eliminated the “red flag” knowledge requirement. This has resulted in foisting the obligation on creators to identify infringement of their work. This is largely to liking of the enormous digital distributors, like YouTube. This is the playing field that must be leveled if American music is to return to financial health.

IV. NOTICE AND TAKEDOWN PROCESS

6. HOW EFFECTIVE IS SECTION 512'S NOTICE AND TAKEDOWN PROCESS FOR ADDRESSING ONLINE INFRINGEMENT?

Section 512's notice-and-takedown process defeats copyright protection. A widely used analogy for the notice and takedown process in the music community is “whack-a-mole.” In other words, as one infringing copy is taken down, myriad infringing copies appear. Yet no matter how diligent a creator is, the burden of policing the many digital distribution services falls to the creator, the person least likely to be able to police infringement.

The DMCA conditions the liability limitations on the adoption and reasonable implementation of a policy to terminate the access of “repeat infringers” in “appropriate circumstances.” 17 U.S.C. § 512(i)(1)(A). However, as important as addressing repeat infringers is to address *repeat infringement*. Copyright owners should not be required to engage in the constant game of sending repeat takedown notices for the same song (or other work), simply

because it appears at a marginally different URL than the first time. The current standard of “URL by URL” takedown doesn’t make sense in a world where there is an infinite supply of URLs. Technologies exist to identify content that is reposted after it is removed and they should be deployed as a standard industry practice.

As implemented, many believe that currently, the DMCA places the burden exclusively on creators alone to police for infringing activity.²⁴ The statute requires service providers relying on certain liability limitations to remove infringing content “expeditiously.” *E.g.*, 17 U.S.C. § 512(c)(1)(A)(ii). The term is undefined and many service providers delay action in a manner that intensifies the harm to copyright owners. The term should be defined to require removal within a specified time unless exceptional circumstances are present. Over the last three years we have also seen escalating damage from the unauthorized dissemination of pre-release music, *i.e.*, albums slated for commercial release that have not yet been commercially released to the public.^{25 26}

This on-demand class of digital sites and apps directly or indirectly offers unauthorized on-demand streaming and/or downloading of our members’ music, including their most popular and valuable content. They often provide not just one link to a particular track, but instead several pages of links to the same track, and/or have several more “URLs” with the same track “at the ready” to post to their site when another URL to the same track is noticed.²⁷ Some are

so brazen as to publicly tout their infringing activity and seek crowd sourcing to fund their illegal efforts.²⁸

7. HOW EFFICIENT OR BURDENSOME IS SECTION 512'S NOTICE-AND-TAKEDOWN PROCESS FOR ADDRESSING ONLINE INFRINGEMENT? IS IT A WORKABLE SOLUTION OVER THE LONG RUN?

Section 512's notice and takedown system does not provide a workable solution in the present or long-term for addressing online infringement. The notice and takedown system is unduly burdensome because of the whack-a-mole nature of the problem (discussed above).

Individual creators and their representative cannot shoulder the burden to monitor the overwhelming amount of infringement on just YouTube, let alone all the other ISPs and OSPs.

Even large scale content owners with a large back office cannot effectively police in this way and, even if they could, it's unfair and contrary to law and order principles to require the owner, alone, to undertake the financial burden to do so. Between August 2012 and September 2012, the RIAA monitored 2,159 websites and recorded 48,391,597 instances of infringements directly on those sites, not even including the *millions* of notices the RIAA sent to ISPs hosting such sites and search engines trafficking to them. In 2015, IFPI issued 15,680,520 take down requests for unique URLs and over 800 million search engine delist requests.

Part of the problem is that there is only one (or a few) content owner(s) responsible for protecting each copyrighted work, as compared to millions of

²⁸ See Aurous, Twitter Posting (Sept. 17, 2015, 11:55am), <https://twitter.com/aurousapp/status/644585368440938496?lang=en> (“We need your help to bring Aurous to Iphone, Android and Windows phone! Please consider donating to our Indiegogo...”); Aurous, Twitter Posting (Sept. 19, 2015, 1:00pm), <https://twitter.com/aurousapp/status/645326516600086528?lang=en>. See Also *Atlantic Recording Corporation et al. v. Andrew Sampson*, Case No. 1:15-cv-23810 (S.D. Fla., filed Oct. 13, 2015); Temporary Restraining Order, *id.* (Oct. 15, 2015).

Internet users who can post, re-post, re-post, and re-post that work exponentially faster than the single content owner can monitor.

8. IN WHAT WAYS DOES THE PROCESS WORK DIFFERENTLY FOR INDIVIDUALS, SMALL-SCALE ENTITIES, AND/OR LARGE SCALE ENTITIES THAT ARE SENDING AND/OR RECEIVING TAKEDOWN NOTICES?

The process doesn't work for large-scale entities, and the problem is infinitely worse for small-scale entities and individual creators. For a larger-scale entity, consider the statistics set forth in response in 7(a) above. Now consider the problem for an individual artist, operating on their own.

What is expensive and difficult for large copyright owners is an impossible challenge for small copyright owners seeking to protect the value of their works from indiscriminate sharing online. As Maria Schneider, a three-time GRAMMY winning jazz and classical composer, bandleader and conductor noted in describing the frustration with the DMCA, "[t]he DMCA makes it my responsibility to police the entire Internet on a daily basis. As fast as I take my music down, it reappears again on the same site—an endless whack-a-mole game."²⁹ Schneider notes that her most recent album has been available, for free and without her authorization, on numerous file sharing websites, and proposes that in the case of unauthorized verbatim copies, which cannot possibly be fair use, content ID and filtering systems be used to *prevent* infringement *before* it occurs, rather than identify infringement after it occurs.

9. PLEASE ADDRESS THE ROLE OF BOTH "HUMAN" AND AUTOMATED NOTICE-AND-TAKEDOWN PROCESSES UNDER SECTION 512, INCLUDING THEIR RESPECTIVE FEASIBILITY, BENEFITS, AND LIMITATIONS.

In today's environment, automated takedown processes are vital to deal with crowd sourced and automated, un-curated, unscreened upload/indexing processes. The often abused notice and takedown structure of the DMCA

²⁹ See Section 512 of Title 17: Hearing Before the Subcomm. on Courts, Intell. Prop. and the Internet of the H. Comm on the Judiciary, 113th Cong. 57 (2014) (statement of Maria Schneider).

forces content holders to keep apace with new and constantly emerging digital business models, which content owners may not always be in the best position to do. Current structure of the DMCA has given rise to a market for third party intermediaries who may be better equipped than content owners themselves to gather often automated data and send takedown notices pertaining to large scale infringing activity. Such services have played a valuable role in policing copyrights and under the current framework the role for such third party intermediaries is arguably a necessity. Query, however, whether it was intent of DMCA to create and sustain a market for such third parties in the relationship between copyright owners and service providers.]

10. DOES THE NOTICE-AND-TAKEDOWN PROCESS SUFFICIENTLY ADDRESS THE REAPPEARANCE OF INFRINGING MATERIAL PREVIOUSLY REMOVED BY A SERVICE PROVIDER IN RESPONSE TO A NOTICE? IF NOT, WHAT SHOULD BE DONE TO ADDRESS THIS CONCERN?

The notice-and-takedown process does not sufficiently address the reappearance of infringing material previously removed by a service provider in response to a notice.

The statute allows copyright owners who learn of the presence of infringing material on a website to notify the service provider of a “representative list” of infringed works and thereby cause the service provider to remove other clearly infringing material. 17 U.S.C. § 512(c)(3)(A)(ii). However, current case law has been read to allow service providers to willfully blind themselves to infringing activity while intentionally raking in profits attributable to it.

The DMCA did not take into consideration the possibility of “mirroring” when it was enacted, and as a result when an infringing service provider is punished under Section 512 with an injunction, users of said service provider or even the service provider itself will often create clone/copy/replica websites simply by uploading the source code of the website under another Uniform Resource Locator (“URL” or “web address”), and often more than once, resulting in a Herculean-Hydra effect (cut off the head and thirty more spring

up in its place).³⁰ Mirroring was developed to create copies of websites so as to allow its users to more quickly download files from websites by placing copies on servers in various geographic locations, preserve historical content, and more recently it is used to duplicate data in the interest of freedom of information.³¹ A simple Google search results in hundreds of websites, software, and video with information on how to backup and re upload or Mirror websites, and as a result such legitimate and law-abiding technology has created a way for service providers to circumvent the system despite judicial sanctions.³²

11. ARE THERE TECHNOLOGIES OR PROCESSES THAT WOULD IMPROVE THE EFFICIENCY AND/OR EFFECTIVENESS OF THE NOTICE-AND-TAKEDOWN PROCESS?

Technologies exist today, and others can be readily adapted, to improve the efficacy of the notice and takedown process. Digital distributors of all types should be required to adopt a standard protocol for communicating about take down notices that can be automated and operated at scale. Furthermore, all should use content identification technologies to screen and take action to prohibit the unauthorized distribution/performance of third party copyrighted commercial works. The cost of such technologies is reasonable, and it has been implemented by both large and small entities.³³

It is important that online intermediaries, not just right holders, fully engage in the fight against digital theft, because often the service providers possess information that rights holders cannot obtain or have difficulty locating. For example, YouTube’s Content ID system now enables rights

³⁰ Vangie Beal, *TERM mirror site*, webopedia (last visited Mar. 20, 2016), http://www.webopedia.com/TERM/M/mirror_site.html.

³² Google search for “website mirroring”, Google (last visited. Mar. 20, 2016), <https://www.google.com/search?q=website+mirroring&ie=utf-8&oe=utf-8#q=website+mirroring&start=10>.

³³ New technologies are emerging. For example, Blockchain technology would allow for accurate accounting of who sent notice-and-takedown requests to which online service provider and for what reasons, and this would help prevent abuse as it creates a permanent and nearly un-hack-able ledger.

holders to limit infringing files, which are technologically matched via fingerprint-based content recognition technology, from being made available via YouTube.³⁴ Facebook also will be testing a matching technology that will allow creators to identify matches of their videos on Facebook across the site, allowing for easier removal of unauthorized repeat content.³⁵ These systems rely on information collected from right holders to allow the services to identify and block infringing files before the public gains access to them. Only the sites themselves can enable such preventative measures, because only they have instantaneous access to information regarding what is being uploaded to their services. If other services that allow user-posted content (such as distribution hub sites) adopted similarly robust tools, a large amount of unauthorized content could be automatically removed or blocked from the web.

12. DOES THE NOTICE-AND-TAKEDOWN PROCESS SUFFICIENTLY PROTECT AGAINST FRAUDULENT, ABUSIVE, OR UNFOUNDED NOTICES? IF NOT, WHAT SHOULD BE DONE TO ADDRESS THIS CONCERN?

The protections that exist today not only protect against unfounded notices, goes too far in trying to protect the up-loader.

Section 512 (c)(3) provides many necessary elements for an effective takedown notification, including a statement “that the complaining party has a good faith belief that use of the material in the manner complained of is not authorized by the copyright owner, its agent, or the law.” This limits the number of fraudulent or abusive notices sent, and importantly, there is little evidence that fraudulent notices are a significant problem. b. Counter notice procedures pursuant to Section 512(g) are readily available and many service providers provide their users with information on how to access such procedures-sometimes at the same time the user is notified that a takedown notice has been issued against a work the user posted. This is more than adequate to address any fears of misuse.

³⁴ See *How Content ID Works*, YouTube Help, <https://support.google.com/youtube/answer/2797370?hl=en>, last visited Oct. 14, 2015.

³⁵ See *An Update on Video Management on Facebook*, Facebook Media (Aug. 27, 2015), <http://media.fb.com/2015/08/27/an-update-on-video-management-on-facebook/>.

If anything, there is a strong disincentive for senders to submit fraudulent notices. Google has recently announced its creation of a team dedicating to “minimizing mistakes” and “improving the quality” of takedown and copyright policy. YouTube is also planning to “roll out some initiatives in the coming months that will help strengthen communications between creators and YouTube support.”

Ellen Seidler asks “why does Google make it so damn difficult to send a DMCA notice?” She provides a step by step guide on takedown notices, with all the pitfalls and roadblocks set up by Google [and writes] ‘Google has designed cutting edge online tech, but its DMCA procedures are something out of the Dark Ages. That’s no accident.’”

13. HAS SECTION 512(D), WHICH ADDRESSES “INFORMATION LOCATION TOOLS” BEEN A USEFUL MECHANISM TO ADDRESS INFRINGEMENT THAT OCCURS AS A RESULT OF A SERVICE PROVIDER’S REFERRING OR LINKING TO INFRINGING CONTENT? IF NOT, WHAT SHOULD BE DONE TO ADDRESS THIS CONCERN?

c3 will address this question, if necessary, in its response to comments submitted by other organizations or individuals.

14. HAVE COURTS PROPERLY INTERPRETED THE MEANING OF “REPRESENTATIVE LIST” UNDER SECTION 512(C)(3)(A)(II)? IF NOT, WHAT SHOULD BE DONE TO ADDRESS THIS CONCERN?

The courts have not properly interpreted the meaning of “representative list” under section 512(c)(3)(A)(ii).

The statute allows copyright owners who learn of the presence of infringing material on a website to notify the service provider of a “representative list” of infringed works and thereby cause the service provider to remove other clearly infringing material. 17 U.S.C. § 512(c)(3)(A)(ii).

However, current case law has been read to allow service providers to willfully blind themselves to infringing activity while intentionally raking in profits attributable to it. Thus, many service providers refuse to respond to representative lists and ignore all infringing content until they receive particularized notices of each individual infringement from copyright owners.

In *UMG Recordings v. Veoh*,³⁶ the district judge concluded that the liability limitations applied in the face of evidence that RIAA informed the service that any videos on Veoh by a list of musical artists were infringing, and that Veoh did nothing to remove infringing videos including those artists unless RIAA specifically identified the exact video to be removed. The *Veoh* decision was affirmed by the Ninth Circuit, and then, after reconsideration in light of the Second Circuit *YouTube* decision, affirmed yet again.³⁷

The scope of infringements in today's environment makes the "representative lists" provision of DMCA more necessary than ever. As the statute is reformed, the term should be more clearly defined, to allow copyright owners to use this method to put service providers effectively on notice of widespread and actionable infringement.

15. PLEASE DESCRIBE, AND ASSESS THE EFFECTIVENESS OR INEFFECTIVENESS OF, VOLUNTARY MEASURES AND BEST PRACTICES - INCLUDING FINANCIAL MEASURES, CONTENT "FILTERING" AND TAKEDOWN PROCEDURES - THAT HAVE BEEN UNDERTAKEN BY INTERESTED PARTIES TO SUPPLEMENT OR IMPROVE THE EFFICACY OF SECTION 512'S NOTICE-AND-TAKEDOWN PROCESS.

Voluntary measures are a useful tool to address infringement when both parties are willing to take practical steps to address the problem. They are not as effective as having practical, effective and balanced laws to protect copyright. Ultimately, voluntary compliance will not remedy the massive scale of infringement without an effective regime for enforcing ownership and licensing rights.

YouTube's Content ID system now enables rights holders to limit infringing files and Facebook will be testing equivalent technology. Only the sites themselves can enable such preventative measures, because only they have instantaneous access to information regarding what is being uploaded to their services. If other services that allow user-posted content (such as

³⁶ *UMG II*, 665 F. Supp. 2d 1099.

³⁷ *UMG Recordings, Inc. v. Shelter Capital Partners LLC*, 667 F.3d 1022 (9th Cir. 2011) (UMG III"); *UMG Recordings, Inc. v. Shelter Capital Partners LLC*, 718 F.3d 1006, 1014 (9th Cir. 2013) ("UMG IV").

distribution hub sites) adopted similarly robust tools, a large amount of unauthorized content could be automatically removed or blocked from the web.

Arguably, when dealing with a safe harbor there is no such thing as “voluntary,” because there is nothing compelling a service provider to comply with the law.³⁸ There is a consensus in the creator community that Section 512 does not achieve the goals the DMCA set out to achieve.³⁹ Paul Doda suggested to the House Judiciary Subcommittee on Courts, Intellectual Property, and the Internet, “that Congress ‘direct that there be a broadly inclusive, multi-stakeholder, standards-setting process to recommend voluntary technical measures that can reduce online infringements [...]’” The idea is that the significant tech companies (Google, Microsoft, Apple, Verizon, AT&T, plus all the major publishers and distributors of legitimate copyrightable works) should collaborate to create ways for service providers to continue being immune from damages by making section 512 easier to comply with, while also making creating new and innovative “voluntary” ways to stop copyright infringement that are not required by whatever replaces the current section 512.⁴⁰

Unsurprisingly, Google’s Senior Copyright Counsel Katherine Oyama believes the system is working just fine as it is.⁴¹ Oyama praises the DMCA as it has allowed companies like eBay, Amazon, YouTube, Facebook, Twitter, and Google to exist and prosper. The DMCA has indeed allowed for companies like Alphabet to exist and flourish, and as a result of section 512 Alphabet has a market cap of five hundred and thirteen point five billion dollars (\$513,480,000,000.00) and a price to earnings ratio of 31.92 (P.E ratio:

31.92).⁴² The technologies that service providers develop such as “Content ID” should and must be provided to all creators and companies as a form of open source software to combat online piracy and massive uploading infringement.

Following pledges made in 2012,⁴³ many U.S. advertisers, ad agencies and ad networks have taken proactive steps to deter placing ads on sites that engage in copyright infringement. Many will also take action when notified that their ads or services were used to place ads on infringing sites. In addition, over the past several months, portions of this industry have created and adopted further programs to help improve the digital ecosystem, including the Trustworthy Accountability Group’s Brand Integrity Program Against Piracy.⁴⁴

However, several other ad networks, both in the U.S. and abroad, continue to funnel ad dollars to infringing sites. Other advertisers, particularly those that advertise using pay-per-install potentially unwanted programs (PUPs), continue to prominently interact with infringing sites. Moreover, the rogue operators are getting more sophisticated, engaging in various forms of ad fraud, such as pop-unders or re-directs to phony webpages, to channel advertising dollars their way. More needs to be done to address this fraudulent behavior.

In 2011, after significant assistance from the Office of the IPEC, payment processors and credit card companies implemented a set of best practices to investigate complaints and stop processing transactions for sites that distribute counterfeit and pirated goods.

While rogue sites continue to find alternative payment methods to profit from their illegal enterprises, the adoption and implementation of these best

⁴² Google search for “Market Cap of Alphabet Inc.” (last viewed Mar. 15, 2016), <https://www.google.com/search?q=alphabet+market+cap&ie=utf-8&oe=utf-8>.

practices is an example of what is possible when industries agree to adopt reasonable approaches to exercise their responsibility to help ensure that Internet-based transactions are lawful.

After the conclusion of its DMCA Multistakeholder Forum, the Department of Commerce published a list of bad notice and takedown practices it had learned were occurring, including service providers engaging in the following:

“1. Intentionally obfuscating the procedure for submitting DMCA notices or counter-notices, such as hiding contact information for submission of take down notices or counter-notices, or placing web forms or DMCA agent’s email address behind multiple click-through advertisements.

2. Requiring notice and counter-notice submitters to watch advertising, or provide anything of value as a pre-condition to submitting a notice or counter-notice.

3. Using stigmatizing or intimidating language in connection with any DMCA notice mechanism that is intended to chill submission of legitimate notices or counter-notices.

4. For service providers that host the file associated with a link identified to the service provider in a valid DMCA notice, creating multiple links to the file with the intent of frustrating the DMCA takedown process.”⁴⁵

While voluntary measures should be encouraged and service providers incentivized to implement them, as long as such measures are only voluntary and not mandated, the effects of such measures are suboptimal. To adequately protect content creators, a revision of the law is needed.

⁴⁵ Department of Commerce DMCA Multistakeholder Forum DMCA Notice-and-Takedown Processes: List of Good, Bad, and Situational Practices, http://www.uspto.gov/sites/default/files/documents/DMCA_Good_Bad_and_Situational_Practices_Document-FINAL.pdf, last visited February 29, 2016

V. COUNTER NOTIFICATIONS

16. HOW EFFECTIVE IS THE COUNTER-NOTIFICATION PROCESS FOR ADDRESSING FALSE AND MISTAKEN ASSERTIONS OF INFRINGEMENT?

17. HOW EFFICIENT OR BURDENSOME IS THE COUNTER-NOTIFICATION PROCESS FOR USERS AND SERVICE PROVIDERS? IS IT A WORKABLE SOLUTION OVER THE LONG RUN?

18. IN WHAT WAY DOES THE PROCESS WORK DIFFERENTLY FOR INDIVIDUALS, SMALL-SCALE ENTITIES, AND/OR LARGE SCALE ENTITIES THAT ARE SENDING AND/OR RECEIVING COUNTER NOTIFICATIONS?

Questions 16, 17 & 18 are answered together here. The Counter-Notification process has not worked for music creators to defend their copyrights in the digital domain.

Section 512(g)(2)(B) states in part “upon receipt of a counter notification described in paragraph (3), promptly provides the person who provided the notification under section (c)(1)(C) with a copy of the counter notification...”⁴⁶

The inherent problem with compliance towards Section 512(g) is that the counter-notification system need not be strictly complied with, and companies such as YouTube have entered into contractual agreements, which are used to automatically reject counter notifications sent by their users.⁴⁷ This policy runs

⁴⁶ (3) Contents of counter notification, -- To be effective under this subsection, a counter notification must be a written communication provided to the service provider’s designated agent that includes substantially the following: (A) A physical or electronic signature of the subscriber[;] (B) Identification of the material that has been removed or to which access has been disabled and the location at which the material appeared before it was removed or access to it was disabled[;] (C) A statement under penalty of perjury that the subscriber has a good faith belief that the material was removed or disabled as a result of mistake or misidentification of the material to be removed or disabled[;] D The subscriber’s name, address, and telephone number, and a statement that the subscriber consents to the jurisdiction of Federal District Court for the judicial district in which the address is located, or if the subscriber’s address is outside of the United States, for any judicial district in which the service provider may be found, and that the subscriber will accept service of process from the person who provided notification under section (c)(1)(C) or an agent of such person. 17 U.S.C.A. § 512(g)(3)(A), (B), (C) (West. 2010).

⁴⁷ Patrick McKay, *YouTube Refuses to Honor DMCA Counter-Notices*, Fair Use Tube (Apr. 4, 2013 at 1:24 PM), <http://fairusetube.org/articles/27-youtube-refuses-counter-notices>; *see*

counter to the intent of the DMCA which was to create a quick, efficient, and inexpensive notice and takedown procedure of copyrighted materials.⁴⁸ This policy is offensive and in direct circumvention of section 512(g), and due to its allowance, millions of copyright holders have zero recourse against YouTube's "contractual obligations" considering their inability to retain counsel to sue YouTube and the alleged copyright holder for violation of section 512.⁴⁹

The counter-notification process results in too many fraudulent or mistaken claims of false or mistaken assertions of infringement. It is a relic of an earlier age and doesn't fit today's world. There is an urgent need to innovate and consider new processes. Under Section 512(g)(2), the service provider is not liable for disabling access to the material(s) subject to notice and takedown procedures so long as it reasonably and promptly notifies the "allegedly infringing" subscriber of its Section 512(g)(3) counter notification procedure.⁵⁰ It is then the subscriber's duty to send a written counter notification to the service provider's designated agent, and the notification must substantially comply with: (1) A physical or electronic signature of the subscriber (e.g., /s/ Name), (2) identification of the material and location of said material subject of the takedown notice and the location of where to use it (e.g., name of file & the link to the file), (3) subscriber's name, address, phone number, consent to the jurisdiction of the subscriber's local Federal District Court, and if outside the United States, consent to the jurisdiction of the service provider's local Federal District Court, and acceptance of service of process from the person who sent the takedown notification.⁵¹

⁵² *Automattic Inc. v. Steiner*, 82 F.Supp.3d 1011, 1017 (N.D. Cal. 2015).

blogger interviewed the “Press Officer” of a LGBTI movement and posted the answer on his blog, and the interview negatively discussed the “straight pride” movement as hateful, then immediately following the posting, the “Straight Forward Project” (“SFP”) sent a takedown notice in response to the article.⁵³ Automattic then sent notice to the blogger and advised him of his counter notification / suit duties.⁵⁴ After receiving takedown notice, defendant posted another blog about the original article, and SFP followed with two more takedown notices for the new blog, to which Automattic replied that it both (1) is not an arbitrator of disputes, and (2) that the notices were incomplete and that they needed to be amended.⁵⁵

In *Lenz v. Universal Music Corp*, the Ninth Circuit held that the DMCA’s notice and takedown procedure requires copyright holders to consider fair use before sending a takedown notification, and that failure to do so raises a triable issue as to whether the copyright holder formed a subjective good faith belief that the use was not authorized by law.⁵⁶ This holding has significant and negative aspects for creators seeking to apply the notice and takedown regime, especially for the individual musician.

Lenz posted a 29 second video of two children dancing to a song by Prince on YouTube.⁵⁷ Universal Music was in charge of administration and enforcement of Prince’s copyrights, and it had an employee monitor YouTube for violations of its copyrights under general guidelines that pointed towards the “infringing” works making significant use of the Prince composition, “specifically if the song was recognizable, was in a significant portion of the video or was the focus of the video,” and to exclude works that exhibited nominal use/ or less than a second of a copyrighted song.⁵⁸⁵⁹

⁵⁹ *Id* at 1130.

Taken together, the counter-notification process has further thwarted the ability of musicians and creators from using the notice and takedown system to protect their copyrights.

VI. REPEAT INFRINGERS

22. DESCRIBE AND ADDRESS THE EFFECTIVENESS OF REPEAT INFRINGER POLICIES AS REFERENCED IN SECTION 512(I)(A).

Too often, repeat infringer policies are only paid lip service, and not implemented with any rigor, effectively reducing their utility to deter infringement.

The repeat infringer policy condition is a lynchpin to ensuring piracy does not get out of control. The DMCA condition eligibility for all the safe harbors on the adoption and reasonable implementation of a policy to terminate the access of “repeat infringers” in “appropriate circumstances.” 17 U.S.C. § 512(i)(1)(A). If repeat infringer policies are implemented with rigor, they have the potential to significantly impact infringement. Too often, provider enforcement policies only offer acknowledgement of repeat infringement, and its significant cost to creators.

There is no transparency into individual companies or organizations repeat infringer policies. Prospectively, pre-litigation, content owners may have little understanding of how a service may or may not be implementing a repeat infringer policy. Even once suit is brought, establishing whether or not a service’s repeat infringer policy is complaint usually requires sifting through massive volumes of discovery, building expert reports and soliciting testimony to deconstruct just that one service's repeat infringer policy. The entire cost and risk of such an endeavor falls on copyright owners even though result may be obvious (i.e. the service’s repeat infringer policy is not being followed because the content owner’s works reappear incessantly from the same source).

Services claiming safe harbor protection actively undermine it by permitting users to supply weak or no user identification, or sometimes even purging data to avoid having to track repeat infringers.

The cases interpreting the requirement to reasonably implement a repeat infringer policy have too often required quite little from the service provider to “implement” a repeat infringer policy: a “working notification system,” a procedure for dealing with notifications, and the provider must “not actively prevent copyright owners from collecting information needed to issue such notifications.” This approach conflates the repeat infringer requirement with the notice and takedown process itself, while Congress clearly intended the former as a condition precedent on reliance on the latter for safe harbor protection.

23. IS THERE SUFFICIENT CLARITY IN THE LAW AS TO WHAT CONSTITUTES A REPEAT INFRINGER POLICY FOR PURPOSES OF SECTION 512’S SAFE HARBORS? IF NOT, WHAT SHOULD BE DONE TO ADDRESS THIS CONCERN?

Section 512 does not precisely define the term “repeat infringer.”⁶⁰ Sawicki attempted to define the term by describing a repeat infringer as an creator-infringer (someone who creates a derivative work from a copyrightable form of expression), distributor-infringer (someone who makes copies of copyrightable works and distributes them), and/or consumer-infringer (someone who purchases an unauthorized copy of an expressive work) who has been identified as an infringer at least twice.⁶¹ This we believe is the appropriate definition for repeat infringer, and it should be codified in the next revision of section 512.

⁶⁰ Sawicki, Andres, *Repeat Infringement in the Digital Millennium Copyright Act*, 73 U.CHI. L.REV. 1455 (2006), available at: <http://chicagounbound.uchicago.edu/uclrev/vol73/iss4/7>.

⁶¹ *Id* at 1479 – 1483.

VII. STANDARD TECHNICAL MEASURES

24. DOES SECTION 512(i) CONCERNING SERVICE PROVIDERS' ACCOMMODATION OF "STANDARD TECHNICAL MEASURES" (INCLUDING THE DEFINITION OF SUCH MEASURES SET FORTH IN SECTION 512(i)(2)) ENCOURAGE OR DISCOURAGE THE USE OF TECHNOLOGIES TO ADDRESS ONLINE INFRINGEMENT?

Section 512(i) concerning service providers' accommodation of "standard technical measures" has had the negative impact of discouraging the use of technologies to address online infringement. Because section 512(i) limits safe harbor protection, service providers have a perverse disincentive to participate.

The reason such STMs have failed is that they were never created. Section 512(i) of the DMCA calls for industry stakeholders – hosting platforms and copyright holders -- to come together to propagate Standard Technical Measures (STMs) by which the industry could bring technical capacities into alignment with the broad goals of the DMCA (to protect copyright in the digital domain).

The fact that hosting platforms are reaping huge profits from the sale of ads placed on infringing works while insulated from liability for such activities by safe harbor protections has provided a strong financial disincentive for these service providers to participate in the "open, fair, voluntary, multi-industry standards process" called for in section DMCA 512(i)(2)(A).

After almost two decades, such disincentives have thwarted the intentions of Congress as expressed in section 512(i). c3 seeks a process in which "a broad consensus of copyright owners and service providers" are requested to engage in "an open, fair, voluntary, multi-industry standards process..." for the purpose of developing "standard technical measures" to permit "copyright owners to identify or protect copyrighted works," and to oversee the process to successful completion on those STM's.

The statute conditions liability limitations on accommodation of "standard technical measures" used by copyright owners to identify or protect copyrighted works if such measures (i) are developed pursuant to a board

consensus of copyright owners and service providers, (ii) are available on reasonable and nondiscriminatory terms, and (iii) do not impose substantial costs or burdens on service providers.⁶² However, no such measures have ever been identified by a court. Other, more streamlined paths should be provided for identifying “best available technologies” that service providers would be encouraged to employ in order to buttress safe harbor status.

Service providers need more incentives to adopt standard technical measures. This can be achieved by allowing more flexibility in how those can be adopted and understanding that some STMs may work for some industries and service providers of some sizes and level of sophistication, but not others.

While courts have not gone so far as requiring service providers to utilize filtering to reduce infringement, *Mavrix Photographs LLC v. Livejournal, Inc.*,⁶³ implied that Livejournal’s “anti-spam” system,” which it employed voluntarily to block posts with the keyword of plaintiff’s website, would be a type of “technological measure” that could be required by an injunction issued under § 512(j)(1)(A)(iii). For websites where infringement is occurring on a large scale, it would be valuable to have forward looking injunctions requiring screening of uploads based on artists’ names and titles, for example. This could be difficult to obtain; service providers will surely complain that many files could reference artists and titles without being infringing. But it might be possible to shift the burden to service providers to screen, review and then post harmless content, rather than the other way around.

A qualifying service provider must accommodate “standard technical measures” that are “used by copyright owners to identify or protect copyrighted works.”⁶⁴

⁶² 17 U.S.C. § 512(i)(1)(B).

⁶³ 2014 U.S. Dist. LEXIS 160324, *27-28 (C.D. Cal. Sept. 19, 2014).

⁶⁴ “Standard technical measures” refers to technical measures that copyright owners use to identify or to protect copyrighted works and: (1) have been developed pursuant to a broad consensus of copyright owners and service providers in an open, fair, voluntary, multi-industry standards process; (2) are available to any person on reasonable and nondiscriminatory terms; and (3) do not impose substantial costs on service providers or substantial burdens on their systems or networks. 17 U.S.C.A. § 512(i)(1)(B), (i)(2) (West. 2010).

In *Viacom*, YouTube an online video streaming platform had copyrightable materials uploaded and available for viewing on its service without the owners' permissions, and it had its own "standard technical measures" in place to combat copyright infringement in compliance with section 512's safe-harbors.⁶⁵ The second circuit stated that, "the safe harbor expressly disclaims any affirmative monitoring requirement - except to the extent that such monitoring comprises a "standard technical measure" within the meaning of [section] 512(i). Refusing to accommodate or implement a "standard technical measure" exposes a service provider to liability; refusing to provide access to mechanisms by which a service provider affirmatively monitors its own network has no such result."⁶⁶ Further, in *Vimeo*, the district court said that privacy settings do not constitute interference with standard technical measures, further reaffirming that on demand access to the standard technical measures is not required by section 512(i).⁶⁷

Attorney Lauren G. Gallo believes that "standard technical measures" as it is defined in section 512 is nearly impossible to comply with due to its "'open, fair, voluntary' agreement between copyright owners and services providers to police infringement" description.⁶⁸ One such standard technical measure which is used everywhere is "fingerprinting technology," a process in which users, creators, and websites encode unique identifying data about the copyrighted works such as tempo, tone, pitch, and color (think DNA of a video or song) that can then be compared to every other video or song within a database full of other fingerprinted works.⁶⁹ Further, Gallo said that Web2.0 poses a problem as Congress, when it drafted the DMCA in 1998 only envisioned the internet of yore, when 56 kilobits per second modems were the norm, Peer 2 Peer file sharing services such as Napster, on-demand music and video streaming services such as YouTube, Netflix, or Spotify, Bit Torrent

⁶⁵ *Viacom Intern. Inc., v. YouTube Inc*, 676 F.3d 19, 41 (2nd Cir. 2012).

⁶⁶ *Id* at 26.

⁶⁸ Lauren G. Gallo, *The (IM)possibility of "Standard Technical Measures" for UGC Websites*, 34 COLUM.J.L. & Arts 283 (2011), available at: <http://hdl.handle.net/10022/AC:P:13765>.

⁶⁹ Gallo, at 284-5.

websites like The Pirate Bay, and electronic sell through services such as iTunes or Amazon even existed.⁷⁰

Once created, the STMs called for in section 512(i) would provide a clear and effective encouragement for the use of technologies to address online infringement.

The need for such Standard Technical Measures is now greater than ever. In a digital environment in which a single artist's work may be subject to many thousands of repeated infringements, across multiple URLs, and multiple platforms, there can be no real discussion of a viable take-down process without "Technical Measures." Such technical measures must, as congress understood in creating section 512i, be adopted as STM's, and made standard within the industry in order to be effective.

25. ARE THERE ANY EXISTING OR EMERGING "STANDARD TECHNICAL MEASURES" THAT COULD OR SHOULD APPLY TO OBTAIN THE BENEFITS OF SECTION 512'S SAFE HARBORS?

Yes. technical means already exist, and are already in widespread use in the industry. YouTube makes Content ID Software is available to select users willing to grant certain licenses. Audible Magic type technology, is widely used on University systems to prevent exchange of infringing files on research P2P networks.

There are practices that are used by significant amounts of the industry that should be considered, or used as a model for developing, "standard technical measures."

In *Viacom Int'l, Inc. v. YouTube, Inc.*, 940 F. Supp. 2d 110, 120 (S.D.N.Y. 2013), the court found YouTube qualified for the § 512 safe harbors even though it had and used "digital fingerprinting software, which automatically blocks submissions matching 'reference databases of fingerprints of copyrighted works' prior to their becoming available for public view," but used this software only to filter videos for those "content owners who had agreed to licensing and revenue sharing deals with YouTube." There was no

⁷⁰ See Gallo, at 292-3.

requirement that YouTube use this software to attempt to stop, for example, repeat postings of a video that has already been identified as infringing through a notice and takedown procedure.

VIII. REMEDIES

26. IS SECTION 512(G)(2)(C), WHICH REQUIRES A COPYRIGHT OWNER TO BRING A FEDERAL LAWSUIT WITHIN TEN BUSINESS DAYS TO KEEP ALLEGEDLY INFRINGING CONTENT OFFLINE -- AND A COUNTER-NOTIFYING PARTY TO DEFEND ANY SUCH LAWSUIT--A REASONABLE AND EFFECTIVE PROVISION? IF NOT, HOW MIGHT IT BE IMPROVED?

The time limits within Section 512(g)(2)(C) are an unreasonable threshold for an individual musician or group to meet. Section 512(g)(2)(C) requires a copyright owner to file a federal lawsuit within ten business days. This alone is a threshold that prohibits any individual rights holder from relief. Furthermore, the impact of the counternotice allows the infringing conduct to continue, including revenue generating ads sold over the infringing upload.

In the case of YouTube, this reinforces their business model of not only make the content available again, they also reinstate any ads that had been running along with the content.. Thus, copyright infringers are able to continue exploiting the copyrighted work *and* collecting ad revenue tied to that exploitation.⁷¹

Consider the costs of a lawsuit for an individual musician. For example, in Central District of California, the filing fee alone is four hundred dollars (\$400.00) and upwards of two hundred dollars (\$200.00) to professionally serve a defendant.⁷² This is before paying an attorney to handle the claim. As

⁷¹ For a typical language from Google’s bulletin board concerning AdSense “Google can restore ad-serving to the affected URLs upon receipt of a proper counter notification pursuant to sections 512(g)(2) and 3) of the DMCA.”

“To expedite our ability to process your counter notice, please use our online form at https://www.google.com/adsense/support/bin/request.py?contact_type=dmca_counter. Submitting a notice online ensures the quickest handling and processing of your request.”

⁷² See *Schedule of Fees*, United States District Court Central District of California (last visited Mar. 10, 2016), <https://www.cacd.uscourts.gov/court-procedures/filing-procedures/schedule->

a majority of the cases are subject to section 512(j) injunctive relief, there is no incentive for an attorney to enter into a contingency fee arrangement with an artist in almost all cases. It is contrary to Congressional intent to functionally lock musicians out of protecting their creations under Section 512. A less expensive and burdensome method is required for addressing contested claims.

27. IS THE LIMITED INJUNCTIVE RELIEF AVAILABLE UNDER SECTION 512(J) A SUFFICIENT AND EFFECTIVE REMEDY TO ADDRESS THE POSTING OF INFRINGING MATERIAL?

The limited injunctive relief available under section 512(j) is not a sufficient and effective remedy to address the posting of infringing material.

There are four safe harbors in Section 512. (1) under section 512(a) for transitory communications; (2) under section 512(b) for system caches; (3) under section 512(c) storage of information on systems or networks controlled by service providers at the direction of users; and (4) under section 512(d) information location tools, and failure to qualify for one safe harbor has no effect on qualifying for another.⁷³ Service providers that qualify for protection under the safe harbors are immune to monetary relief, and probably even from injunctive relief under section 512(j)(1)(B).⁷⁴

Section 512(j) is not a sufficient remedy to address the posting of infringing material. Many of the most blatant and deliberate infringing service providers reside in countries outside of the United States, which despite law

fees; *Schedule of Fees*, Skipnservice (last visited Mar. 10, 2016), <http://www.skipnservice.com/work-order/>.

⁷³ § 512(a), (b), (c), (d).

⁷⁴ If the service provider qualifies for the limitation on remedies described in subsection (a), the court may only grant injunctive relief in one or both of the following forms: (1) [a]n order restraining the service provider from providing access to a subscriber or account holder of the service provider's system or network who is using the provider's service to engage in infringing activity and is identified in that order, by terminating the accounts of the subscriber or account holder that are specified in the order; and/or (2) [a]n order restraining the service provider from providing access, by taking reasonable steps specified in the order to block access, to a specific, identified, online location outside the United States. 17 U.S.C.A. § 512(j)(1)(B) (West. 2010).

suits, fees, injunctions, and jail sentencing, just will not go away; with the most infamous website being The Pirate Bay.⁷⁵ Since its inception in 2003 the website has been shut down several times by various governments,⁷⁶ its leaders have been sent to prison,⁷⁷ twice the offices were raided and the servers seized,⁷⁸ numerous injunctions have been upheld against the site,⁷⁹ the site has been hacked,⁸⁰ and the site has been subject to millions in fines. Despite all of that, the website now boasts over five million (5,000,000) active users, it leaks classified documents, it still shares copyrighted music, movies, television shows, documentaries, books, and more.

This provision was intended to provide additional remedies to address infringement online, both domestically and from sources abroad that target the US market.

There are very few cases applying the standards in 512(j), and those that do state that an injunction would be moot because the service provider had already removed the infringing material and/or terminated the accounts of the infringers.⁸¹ These cases seem to assume that subsections (i) and (ii) are coextensive with the requirements for safe harbor regarding takedown and removal of repeat infringers. The third subsection of section (j)(1)(A), which provides for "such other relief as the court may consider necessary," with

further limitations, is a potential area for expansion, but as of yet does not appear to have been used to issue any injunctions.

28. ARE THE REMEDIES FOR MISREPRESENTATION SET FORTH IN SECTION 512(F) SUFFICIENT TO DETER AND ADDRESS FRAUDULENT OR ABUSIVE NOTICES AND COUNTER NOTIFICATIONS?

c3 will address this question, if necessary, in its response to comments submitted by other organizations or individuals.

IX. OTHER ISSUES

29. PLEASE PROVIDE ANY STATISTICAL OR ECONOMIC REPORTS OR STUDIES THAT DEMONSTRATE THE EFFECTIVENESS, INEFFECTIVENESS, AND/OR IMPACT OF SECTION 512'S SAFE HARBORS.

c3 will address this question, if necessary, in its response to comments submitted by other organizations or individuals.

30. PLEASE IDENTIFY AND DESCRIBE ANY PERTINENT ISSUES NOT REFERENCED ABOVE THAT THE COPYRIGHT OFFICE SHOULD CONSIDER IN CONDUCTING ITS STUDY.

c3 will address this question, if necessary, in its response to comments submitted by other organizations or individuals.

CONCLUSION

The Content Creators Coalition was created with projects like this USCO study on Section 512 in mind. Our members range from everyday performers and songwriters to featured artists that are household names. What they have in common is that no matter how well known they are, they struggle with the impediments within the notice-and-takedown system within Section 512 of the DMCA.

The safe harbor provisions of the DMCA have disproportionately disadvantaged music creators. As argued throughout our submission, it is unfortunate that the DMCA Section 512 has provided sanctuary from liability

for the same entities within the technology and Internet industries that now treat music as a loss leader for selling advertisements and further opportunities to scrape data from an unsuspecting public. These companies, such as YouTube, are not really in the music business, they are in the data scraping and advertising business. Under normal conditions, this itself would be an affront to the great tradition of American music. Due to the perverse incentives under safe harbor, and the failure of notice-and -takedown, it is instead an existential threat to the creation of music.

It is our sincere hope that the result of this study is that Congressional action is taken to remedy the many wrongs of the DMCA, and act affirmatively to rebalance American copyright law for the purpose of allowing American musicians to fairly benefit from their amazing creations.

Section 512 Study

Docket No. 2015-7

COMMENTS OF THE COPYRIGHT ALLIANCE

Introduction

The Copyright Alliance appreciates the opportunity to respond to the Notice of Inquiry that seeks input on the Section 512 study.

The Copyright Alliance is the unified voice of the copyright community, representing the interests of thousands of individuals and organizations across the spectrum of copyright disciplines.¹ The Copyright Alliance is dedicated to advocating policies that promote and preserve the value of copyright, and to protecting the rights of creators and innovators. The individual creators and organizations that we represent rely on copyright law to protect their creativity, efforts, and investments in the creation and distribution of new copyrighted works for the public to enjoy.

The Digital Millennium Copyright Act (DMCA) was enacted at a time when the Internet

¹ The Copyright Alliance is a non-profit, public interest and educational organization that counts as its members over 15,000 individual creators and organizations across the spectrum of copyright disciplines. The Copyright Alliance represents the interests of authors, photographers, performers, artists, software developers, musicians, journalists, directors, songwriters, game designers and many other individual creators. The Copyright Alliance also represents the interests of book publishers, motion picture studios, software companies, music publishers, sound recording companies, sports leagues, broadcasters, guilds, unions, newspaper and magazine publishers, and many more organizations.

was in its infancy. In passing the notice and takedown provisions in Section 512 of the Act, Congress intended to encourage copyright owners and online service providers (OSPs) to work together to combat existing and future forms of online infringement.² This approach was designed to remedy hardships faced not only by large copyright owners and OSPs, but also individual creators who undeniably lack meaningful tools to fight online infringement. At the outset, Section 512 seemed to have achieved Congress's purpose; but court rulings and other unanticipated changes in the online environment have rendered these provisions less effective, creating an ecosystem where mass copyright infringements are an unfortunate and regular occurrence. While Section 512 remains a workable legal framework, it is evident that the statute is under strain and that additional stakeholder collaboration is needed in order for the statute to live up to its potential as imagined by Congress.

Eighteen years have now passed since the DMCA was enacted, and the interconnectivity provided by the Internet has fundamentally changed commerce, communication, and the way the public experiences copyrighted works. Consumers can access and enjoy all sorts of copyrighted works where and when they want, and creators benefit from new platforms that reach new audiences. But at the same time, online infringement is now rampant, causing widespread harm to the economic and creative vibrancy of the copyright community. Lisa Hammer is a musician and filmmaker who had to abandon her music career because of piracy, and now her film career is approaching a similar fate. She made only about \$100 off of her latest feature film, because free illegal copies of the work are so widely available on the Internet. "I used to make money through distribution on tapes and DVDs, and even a few VOD," she said.³ "But now, as soon as I release a film through an online distributor, or submit it to a film festival, I see [illegal] links to the film." A most unfortunate result for a creator who spent "thousands of hours and dollars studying filmmaking, music, and acting."

Congress struck a balance with the DMCA. In exchange for taking down infringing

² See H.R. Rep. No. 105-796, at 72 (1998).

³ Lisa Hammer, *Stand Creative Series*, CREATIVEFUTURE (Feb. 22, 2016).

content, an OSP who is not responsible for the infringement receives a safe harbor from monetary liability—but only if they comply with additional obligations, including: implementing a repeat infringer policy; registering an agent with the Copyright Office; and responding to infringements “expeditiously” once they have actual or apparent knowledge of them. Without these additional obligations, copyright owners (especially individual creators) stand little chance against advanced online infringement.

The voluntary adoption of technologies have helped address many of the logistical hurdles of locating infringements, and sending and processing hundreds of millions of takedown notices per year; however, it is essential that these technologies continue to be improved in order to keep pace with new technologies and new types of online infringement. In addition, more needs to be done to ensure that individual creators, who are the lifeblood of the creative community, are not left behind in a world where human review alone is no longer practical. Finally, the courts need to ensure that bad actor OSPs do not continue to operate under the protection of the Section 512 safe harbors. The courts should also ensure that the underlying goals of the DMCA and the intent of Congress are effectuated by, for instance, enforcing Section 512’s statutorily-required repeat infringer policies; properly applying the red flag knowledge standard; and recognizing the flexibility provided in the “representative list” language.

The copyright community stands ready to work with the Copyright Office, the Administration, and other stakeholders to ensure that Section 512 is an effective and meaningful statutory scheme to combat online infringement in the digital world. We seek to revitalize the spirit of cooperation between the copyright community and OSPs that Congress intended when it drafted and passed the DMCA. Congress recognized that cooperation would lead to the most beneficial, effective enforcement of the law. It is time for stakeholders to take voluntary action, and for the courts to effectuate Congress’s intention that copyright affords “effective—not merely symbolic—protection.”⁴

⁴ Sony Corp. of America v. University City Studios, 464 U.S. 417, 442 (1984).

We thank the Copyright Office for initiating this study to address the concerns of copyright owners and users.

I. General Effectiveness of Safe Harbors (NOI Questions 1–5)

1. The Problem of Repeat Infringers

The number of takedown notices sent is staggering, and this number is steadily increasing.⁵ As observed by Professor Bruce Boyden,⁶

Even for the largest media companies with the most resources at their disposal, attempting to purge a site of even a fraction of the highest-value content is like trying to bail out an oil tanker with a thimble. . . . The expenses of locating, identifying, and then sending a notice for that many files is so significant that even large companies must limit their efforts.⁷

No one in the notice and takedown ecosystem likes spending time and money to process and respond to millions of takedown notices, when they could be innovating and creating instead. Congress clearly did not intend such outcomes when it passed the DMCA—Section 512 was designed to protect copyrights, to protect non-culpable OSPs from liability when users uploaded infringing files, and to maintain many of the traditional contours of secondary liability in the digital environment.⁸ Congress understood that Internet enforcement

⁵ RIAA alone has noticed 55+ million instances of infringements to websites and 71+ million instances of infringements to search engines. RIAA, *THE DMCA IN 2016: IS IT WORKING?* (2016).

⁶ Professor Bruce Boyden is a Professor at Marquette University Law School and a member of the Copyright Alliance Academic Advisory Board.

⁷ For data on the quantity of notices sent by the Motion Picture Association of America, see Bruce Boyden, *The Failure of the DMCA Notice and Takedown System: A Twentieth Century Solution for a Twenty-First Century Problem*, CENTER FOR PROTECTION OF INTELL. PROP. (Dec. 5, 2013).

⁸ *Columbia Pictures Indus. v. Fung*, 710 F.3d 1020, 1039–40 (9th Cir. 2013) (noting that “the DMCA’s legislative history confirms that Congress intended to provide protection for at least some vicarious and contributory infringement,” and explaining that inquiries into contributory copyright infringement and the prerequisites for one or more of the DMCA safe harbors should be conducted independently); *Playboy Enters., Inc. v. Frena*, 839 F. Supp. 1552 (M.D. Fla. 1993); S. Rep. No. 105-190 at 19, 20 (1998); Boyden, *supra* note 7.

could not be solved unilaterally through government regulations. As noted by Professor Boyden, Congress hoped the law would bring together OSPs and copyright owners to “cooperate to detect and deal with’ infringing sites before content was distributed too widely.”⁹

The safe harbor that Section 512 provides was meant to be a limitation on monetary liability, not an exception to copyright infringement.¹⁰ OSPs were concerned about being party to lawsuits over isolated acts of infringement by their users, even if they were otherwise cooperative in remedying the infringement as soon as they were put on notice.¹¹ In exchange for OSPs’ cooperation, Congress created “safe harbors” to minimize the possibility that fear of liability would inhibit technological innovation. The bill sought to protect OSPs who work with the copyright community to mitigate and combat online infringement. The inclusion of these safe harbors, along with the other provisions in the bill, allowed the DMCA to “provide greater certainty to service providers concerning their legal exposure for infringements that may occur in the course of their activities.”¹² Indeed, a review of the legislative history reveals that the intent of the safe harbors was to afford reasonable immunity to reasonable actors; not to create a mechanism by which OSPs could disregard copyright law.¹³

⁹ Boyden, *supra* note 7, at 2.

¹⁰ See *Ellison v. Robertson*, 357 F.3d 1072 (9th Cir. 2004) *citing* S. Rep. 105–190, at 19 (“Congress provided that ‘limitations of liability apply if the provider is found to be liable under existing principles of law.’”); S. Rep. 105–190 (“The [safe harbor] limitations ... protect qualifying service providers from liability for all *monetary* relief for direct, vicarious and contributory infringement. Monetary relief is defined in subsection [(k)(2)] as encompassing damages, costs, attorneys’ fees, and any other form of monetary payment. These subsections also limit injunctive relief against qualifying service providers to the extent specified in subsection (j).”).

¹¹ See S. Rep. No. 105-190.

¹² S. Rep. No. 105-190, at 20; H.R. Rep. No. 105-551, pt. 2, at 49-50.

¹³ See H.R. Rep. No. 105-551.

Today not only are stakeholders grappling with tens of millions of notices a year,¹⁴ but even worse, the business models employed by certain bad actors actually take advantage of judicial interpretations of this statutory scheme. As a result, uploaders repost infringing content within seconds, and these bad actors profit from having millions of infringing content shuffle off and on of their website. After all, an OSP can obtain revenues even when copyrighted content stays up only for a brief time. If copyrighted content receives just one viewing or download before being taken down, in the aggregate of millions of works, that adds up to millions of ad revenue-producing views for the OSP.¹⁵ Congress did not envision this type of abuse when it enacted the DMCA; such abuse needs to be addressed.

2. New Technologies

In 1998, the intent of the notice and takedown process was to give copyright owners a faster alternative to filing for a temporary restraining order in court, mostly so they could keep prevent copies distributed legally on physical goods (DVDs, CDs) from being illegally distributed on the Internet for people to download. Today vastly increased download speeds and instant streaming capabilities have left copyright owners virtually no opportunity to prevent mass unauthorized copying, distribution and performance. Accordingly, automated technologies have become more critical than ever.

Automated technologies can intervene during the upload process, and can simplify the takedown process to effectively shorten the time that infringing content remains available for consumption. While these automated technologies may not work for all service providers, we remain optimistic that investment in new technologies and collaborative agreements are essential to a healthy online ecosystem. Proper interpretation of all of the Section 512 provisions will also incentivize OSPs to invest in automated technologies for copyright owners and their users.

¹⁴ Boyden, *supra* note 7.

¹⁵ David Newhoff, THE ILLUSION OF MORE, *Copyright Office to Review Safe Harbor in DMCA* (Jan. 6, 2016), <http://illusionofmore.com/copyright-office-to-review-safe-harbor-in-dmca/>.

3. Judicial Interpretation of Section 512

The statutory scheme established by Section 512 goes well beyond the notice and takedown provisions. Courts need to better ensure the requirements set forth in the statute are met: requiring that OSPs have repeat infringer policies; rejecting safe harbor protection for OSPs who directly infringe, or actively encourage or benefit from infringement; and disqualifying OSPs from the safe-harbor immunities when they willfully ignore known infringing content on their websites. OSPs differ greatly in the degree of care they extend to the safe harbor requirements—certain torrent sites, for example, do the bare minimum or disregard the DMCA altogether.

As the Fourth Circuit observed in *ALS Scan. v. RemarQ Comm.*, “[t]he DMCA was enacted both to preserve copyright enforcement on the Internet and to provide immunity to service providers from copyright infringement liability for ‘passive,’ ‘automatic’ actions in which a service provider’s system engaged through a technological process initiated by another without the knowledge of the service provider.”¹⁶ On the other hand, where an OSP has knowledge of, benefits from, or engages in infringement, the safe harbor is not and should not be available; because their involvement is no longer passive and automatic.

We need to ensure copyright owners—not bad faith OSPs and infringers—are rewarded for their labors and continue to create and disseminate works to the benefit of the public. As such Section 512 requires much more cooperation from OSPs than simply responding to takedown notices.

II. Notice and Takedown Process (NOI Questions 6-14)

The DMCA notice and takedown process provides a workable legal framework for OSPs and copyright owners to protect against infringement of copyrighted content on the Internet;

¹⁶ 239 F.3d 619 (4th Cir. 2001) *citing* H.R. Conf. Rep. No. 105–796, at 72 (1998), *reprinted in* 1998 U.S.C.C.A.N. 649 (“The DMCA’s protection of an innocent service provider disappears at the moment the service provider loses its innocence, i.e. at the moment it becomes aware that a third party is using its system to infringe.”).

however, implementation of the process needs to be improved to better respond to highly advanced online infringement tactics and the limited resources of smaller creators and OSPs. Because of the explosion of infringing content online, such improvements should, to the extent reasonable, include the use of automated technologies, even though the occasional so-called “bad notice” may slip through. The vast majority of notices issued by reputable rights owners are legitimate, and the benefits of automated services far outweigh the rare cases of “bad notices.” Also, many larger entities already integrate human review into their automated takedown procedures. But as already articulated, individual creators (who typically have been provided little information and lack meaningful resources) are left to rely on manual web searches, reverse image searches, Google alerts, or word of mouth to discover infringements of their work.

1. Individual Creators

We reached out to our individual creator membership to hear their experiences with Section 512’s notice and takedown process. We received 219 responses from creators working in a variety of disciplines.¹⁷ The responses show that (1) many creators do not know how to file a takedown notice or even what the notice and takedown process is; and (2) even if they have participated in the process, they lack access to the technologies necessary to actually keep infringing content from reappearing.¹⁸

Sixty-eight percent of the creators we surveyed have never filed a takedown notice before because (1) they have either never heard of it; (2) it would take too much effort; (3) the process is too difficult to navigate; or (4) they are skeptical it would do anything to stop online infringement.¹⁹ These are valid concerns, and illustrate a need for easily accessible educational

¹⁷ See *infra* Appendix.

¹⁸ *Id.*

¹⁹ *Id.*

resources to help creators better understand and avail themselves of the notice and takedown process. These educational offerings will also serve OSPs; better informed copyright owners will ultimately cut down on the number of inappropriate or incomplete notices filed.

Individual creators who file notices lack the resources of larger copyright owners to make a meaningful impact. Eighty-five percent of those we surveyed said they issue takedown notices all by themselves, taking time away from their creative pursuits, which pushes many to give up enforcement efforts all together. These creators are defenseless against the volume and reach of online infringement, especially in light of how easy it is to re-post something nowadays. For example, Keith, a writer from Austin, has never personally posted his work on social media sites, but still spent four hours on Tumblr trying to locate 50 of the 2000+ URLs that contained re-postings of his work: “I can’t afford the time to find the full 2000 [that Tumblr asked for],” he said. He has also found his work on Twitter, Imgur, Reddit, Facebook, Instagram, Pikore, MySpace, Xanga, Nexopia, and more.²⁰

And online infringement does not just stop at loss of compensation or control; it also can damage the professional integrity of creators. For example, Melissa, a photographer from California, was horrified to learn that her Victoria Secret style bridal photos were stolen and used on porn sites. “This has been horrible!” she said. “I’ve been in business for 32 years. Married for 35 years and would never create anything for porn!”²¹

Individual creators would benefit from greater access to automated technologies to ease the burden of filing takedown notices. The biggest hurdle is cost: many automated technologies are not yet affordable for the average individual creator, but further discussions of the interested parties could reveal at least some solutions to the problem. Sixty-seven percent of those surveyed still use basic web searching to find instances of infringement and 36% rely, at least partially, on

²⁰ *Id.*

²¹ *Id.*

word of mouth. Our survey revealed that the only advanced automated technologies at these creators' disposal are reverse image or text searching tools and Google Alerts. More over, the courts can alleviate some of the burden felt by individual creators by properly adhering to the knowledge standards and repeat infringer policies laid out in Section 512. Generally, OSPs (at least the larger entities) are better equipped to implement and extend access to automated technologies than individual creators. Further, as we are already seeing, there is a real incentive to voluntarily provide these tools since doing so simplifies the OSP's existing obligations.

The consensus from our individual creator membership is that online infringement has reached a point where content can be posted on hundreds of online infringement sites within days, and where individual creators—without access to effective tools—are unable to make any real impact in protecting their work. Online infringement has become so commonplace that it destroys once legitimate markets for creators' works. For example, Susan, an audio producer from California, was told by a radio station that they saw no point in paying her for her work because they could “get it for free.”²²

The impact of online infringement on a creator's livelihood has been thoroughly documented in testimony, news articles, and blog posts over the past few years. Here are just a few of the many stories told by creators:

- Maria Schneider, a Grammy award winning composer, testified before the House Judiciary Committee that she invested \$200,000 of her own money into a new album to only discover her song had quickly been pirated all over the Internet.²³ “The resulting loss of income, combined with the cost of monitoring the Internet and sending takedown notices, threatens her ability to continue creating her award-winning music.”²⁴

²² *Id.*

²³ *Section 512 of Title 17: Hearing Before the Subcomm. of Courts, Intell. Prop., and the Internet of the Comm. on the Judiciary* (2014) (statement of Maria Schneider).

²⁴ *Id.*

- Kathy Wolfe, the owner of the independent film company Wolfe Video, lost \$3 million in revenue in 2012 from the excessive pirating of her top 15 film titles.²⁵ She “found more than 903,000 links to unauthorized versions of her film” in a single year, spending “over \$30,000 a year—about half of her profits— just to send out takedown notices.”²⁶ With losses this large, she has been forced to cut her marketing budget in half, cut employees’ pay, and discontinue her own salary.²⁷ Making art is often expensive, and most artists already sacrifice paying themselves to keep the art going; this should not be exacerbated by online infringement.
- Tor Hanson, co-founder of YepRoc Records/Redeye Distribution, testified in 2013 at the House Judiciary Committee hearing on *Innovation in America: The Role of Copyrights* on this very point: “[We] have limited budgets and whatever revenue and profits [we] can eke out are directed toward [our] primary goals, music creation by [our] music label’s artists and then the marketing and promotion of this music to the American public so they are able to continue this creative process.”²⁸

2. New technologies and voluntary measures

OSPs and copyright owners alike have voluntarily introduced new technologies that address some of the volume and logistical concerns arising from the notice and takedown process. The documented success of these automated technologies suggest that continued cooperation amongst stakeholders will likely solve many of the other, more complicated problems with administering the law.²⁹ Partnerships in the technology and copyright sectors will

²⁷ *Id.*

²⁸ *Innovation in America: The Role of Copyrights: Hearing Before the Subcomm. on Intellectual Property, Competition, and the Internet of the H. Comm. on the Judiciary*, 113th Cong., 6 (2013) (statement of Tor Hansen, Co-President/Co-Founder YepRoc Records/Redeye Distribution).

²⁹ *Section 512 of Title 17: Hearing Before the Subcomm. of Courts, Intell. Prop., and the Internet of the Comm. on the Judiciary* 75 (2014) (testimony of Katherine Oyama, Sr. Copyright Policy Counsel, Google, Inc.)

lead to smarter, faster, and more efficient automated tools to better identify infringing material without sacrificing user privacy and legitimate fair uses. These partnerships are not only desired, they are critical.

Partnerships will also assist in making automated technologies more accessible. As noted by the composer Maria Schneider, the major concern with these technologies is one of access:

[E]very artist should be entitled to [these] services, to register their music once and for all. Just like the successful ‘do not call list,’ creators should be able to say ‘do not upload.’ If filtering technology can be used to monetize content, it can also be used to protect it ... if you didn’t have Content ID [or similar technologies] for those big companies, I can’t even imagine how big ... takedown numbers would be. They would be insane. So imagine if [automated technologies] worked for everybody.”³⁰

This technology may also be useful in identifying works that have previously been taken down to prevent repeat infringements.³¹

a. Content Matching Technologies

The Google Content ID program, for example, offers qualifying³² copyright owners access to a fingerprinting program that actively notifies owners of user uploads that contain their material. Google requires a copy of the content in order to place it inside of a database that

(“[I]ncentivizing [these] kinds of business partnerships and collaborations so that everyone can kind of grow this pie together and get more content out there with users is the right way to go.”).

³² *See generally* YOUTUBE, Qualifying for Content ID, <https://support.google.com/youtube/answer/1311402> (last visited Feb. 9, 2016).

generates a unique fingerprint. Once the fingerprint has been generated, every time a new video is uploaded to YouTube, it will be compared against all the 15 million+³³ fingerprints in its database.³⁴ Some content owners have chosen to block infringing content, while others have chosen to monetize the content in favor of the copyright owner. The technology underlying the Content ID program is able to identify whether the new upload is an exact or partial copy, and whether the new upload is of lower quality than the original copy (suggesting online infringement).³⁵ Before participating in the program, copyright owners must prove that they are the lawful and *exclusive* owner of the reference material. Once ownership is established, copyright owners are able to respond to infringing content by either having the content tracked, monetized,³⁶ muted, or removed. 8,000+ groups have already signed on to the Content ID program, and have claimed over 400 million videos.³⁷

Google has also established the Content Verification Program for larger content holders who establish an “ongoing need to have content removed from YouTube” to have advanced searching capabilities.³⁸ Tools like this are vital to copyright owners who are responsible for large catalogs of works or high-value individual works.

b. AudibleMagic

Similar to Content ID, Audible Magic's automatic content recognition technology compares registered content with any attempted video and audio uploads.³⁹ Embedded into the registered content is the owner's information and any express wishes for how content is to be used.⁴⁰ Platforms can then apply this information in conjunction with their own content policies in order to make a timely decision on whether to post the content.⁴¹ At times, the service also leads to direct licensing agreements between copyright owners and platforms.⁴² Each month, 250,000 new copyrighted titles are added to the voluminous database of registered content.⁴³

c. Dropbox Hashtags

Cloud storage provider Dropbox has developed hashtag technologies (attaching a unique identifier to content) to permit the company to de-duplicate files. According to an article published by TechCrunch, Dropbox stores just one copy of a specific file that can be accessed by any user who has uploaded a copy of that file, saving significant space on Dropbox's server.⁴⁴ This same technology is used to save copyright owners the undue burden of having to submit numerous DMCA takedown notices when other parties try to make public the exact same infringing file.

d. NexGuard Watermarking

AMC Networks, along with other video content owners, has adopted Civolution's NexGuard watermarking technology to deter online infringement of popular TV shows, such as *The Walking Dead*. NexGuard uses session-based watermarking technologies to elevate traditional digital rights management to become more relevant and useful in an international, online environment.⁴⁵ A digital watermark is attached to video files, allowing copyright owners to know if any distribution partners leak content before a critical release date.⁴⁶ Individual studios have been successful with watermarking to even track individual infringers (by way of set-top boxes), but this technology is largely inaccessible to cable companies, because they would need to "deploy watermark-embedding systems with each pay-TV provider affiliate."⁴⁷ Other services providing watermarking technologies for these purposes include Friend MTS and MarkAny.

e. Private Sector Voluntary Agreements

In addition to developing new technologies, stakeholders from the Internet ecosystem have developed voluntary agreements to further mutual objectives. Some examples include:

- The TAG initiative, launched in February 2015 validates tools and services that take measures to prevent advertisements from running on pirate sites.⁴⁸ According to the Digital Citizens Alliance, ad-

Press Release, Advertising Industry Launches Initiative to Protect Brands Against Piracy Websites, Trustworthy

supported pirate sites can be extraordinarily profitable, with many displaying ads from “blue chip premium brands.”⁴⁹

- The Center for Copyright Information’s (CCI) Copyright Alert System, launched in February 2013, is a partnership between motion picture studios and record labels and five major ISPs to implement a graduated response scheme that uses both educational messaging and mitigating measures to change consumer behavior on transferring illegal files. In the first ten months of operation, 1.3 million alerts were sent, and a CCI study found that 57% of users would stop infringing immediately if they received an alert.⁵⁰
- In 2007, various stakeholders agreed upon the Principles for User Generated Content to eliminate infringing content, while still taking into account fair use considerations. This informal understanding at least illustrates a willingness of OSPs and copyright owners to agree on a middle ground.⁵¹
- And finally, collaboration between copyright owners and payment processors like Visa, Mastercard, and Paypal—encouraged by the Intellectual Property Enforcement Coordinator—has led to a process that prevents known infringing sites from access to payment networks. This helps cut off the revenues that such sites rely on to operate.

Private-sector voluntary agreements are a critical tool for addressing online infringement.

⁵¹ The agreement was made by CBS, Disney, YouTube, and other copyright owners and OSP entities.

3. DMCA Provisions Interpreted Contrary to Congressional Intent

a. Registered Agent Requirement

A basic requirement of an OSP receiving the Section 512(c) safe harbor is designating an agent with the U.S. Copyright Office to receive notifications of infringement. This requirement also mandates that an OSP list the agent's contact information on their website, and that they set up email forwarding to ensure notifications are not being sent to outdated email addresses.⁵² The importance of this requirement was evident in the Ninth Circuit decision *Ellison v. Roberts*, in which the court denied AOL the benefits of the Section 512(a) safe harbor after it failed to direct communications to a proper registered agent. AOL did not forward emails from its old email address to its new one.⁵³ This essentially created a "vacuum" for notices of infringement to fall into and be ignored.

Our membership has experienced numerous instances of absent or inaccurate information regarding an OSP's designated agent, making enforcement difficult or impossible to follow through on. For these reasons, OSPs seeking the safe harbors must keep accurate their registered agent information. This problem could be rectified in part with a modernized Copyright Office. For example, an improved IT system might allow the Office to test the accuracy of the contact information listed in its designated agent directory, and to put in place a simpler system for OSPs to update their contact information.

b. Representative List

The DMCA notice and takedown process, as often interpreted by the courts, has largely placed the burden on copyright owners to list every instances of infringement on an OSP's

⁵² 17 U.S.C § 512(c)(3) (2012).

⁵³ 357 F.3d at 1080 (9th Cir. 2004) (noting that while AOL did update its address with the Copyright Office, its failure to forward emails left some takedown notices fully ignored).

website. The “representative list” requirement in provision 512(c)(3)(A)(ii) specifies that a takedown notice must identify the “copyrighted work claimed to be infringed, or, if multiple copyrighted works at a single online site are covered by a single notification, a *representative list* of such works at that site.” This is paramount, given the volume of online infringement, because creators too often lack the time, money, and resources to list with specificity every single URL containing infringing copies of their work. Notwithstanding this language, the courts have recently begun placing the sole burden of tracking, identifying, and “adequately documenting” infringements squarely on the copyright owner, which makes little sense in practice and discourages individual creators from enforcing their rights.⁵⁴

Congress did not intend this high degree of specificity for notices. As noted in the legislative history, the “representative list” requirement is satisfied,

[f]or example, where a party is operating an unauthorized Internet jukebox from a particular site, it is not necessary that the notification list every musical composition or sound recording that has been, may have been, or could be infringed at that site. Instead it is sufficient for the copyright owner to provide the service provider with a *representative list* of those compositions or recordings in order that the service provider can understand the nature and scope of the infringement being claimed.⁵⁵

c. Information Location Tools

This NOI asks whether Section 512(d), covering “information location tools” such as search engines, appropriately addresses OSPs that link or refer to infringing content. When the DMCA was drafted, search engines already played a significant role in the Internet ecosystem. In the years following its enactment, that role grew exponentially. Today when someone is looking for something on the Internet, the first place they go to is a search engine. While search engines

⁵⁴ See *Perfect 10 v. CCBill*, 488 F.3d 1102, 1113 (2007); *Viacom Int’l v. YouTube, Inc.*, 940 F.Supp. 2d 110, 115 (S.D.N.Y. 2013).

⁵⁵ H.R. Report No. 105–551 (emphasis added).

often direct people to lawful sources of content, too often they also direct users to illegal content. It is imperative that OSPs who provide information location tools and copyright owners find ways to work together to effectively address these infringement problems.

While the copyright community appreciates many of the additional steps these OSPs have taken, it is important that the steps be effective and not just symbolic. For example, Google has implemented a policy whereby it demotes sites based on the number of takedown notices that Google receives in conjunction with other factors. Unfortunately, the demotion policies, and other policies, have largely been ineffective because infringing content still shows up near the top of search results. One solution would be for search engines to place less weight on the infringing site's traffic and more weight on the number of takedown notices the site receives. Another solution would be for OSPs and copyright owners to jointly enlist the support of independent third parties to evaluate the effectiveness of particular measures, develop ways to improve their efficiency and effectiveness, and to highlight best practices.

4. Human Review and Bad Faith Notices

The vast majority of notices are sent in good faith. In the rare circumstance where a copyright owner sends a notice in "bad faith," the counter notification procedure offers an adequate remedy.⁵⁶ Additionally, as stated by Professor Sean O'Connor, even many of the notices sent are simply repeats of previously taken down content:

The highest volume of notices seem to be for reposted works, i.e., ones that have already been taken down on notice, yet reappear within hours often on the same site. Further, many of these do not even purport to be transformative or non-infringing. They are not mash-ups, remixes, covers, etc. They are simply the original work reposted repeatedly by an unauthorized person. That the posters do not seem to believe they have any real rights to the works seems

⁵⁶ See 17 U.S.C. § 512(g) (2012).

supported by the surprisingly low number of counter notices submitted (relative to the enormous number of takedown notices).⁵⁷

Our members are ardent supporters of fair use. As creators, our members often rely on fair use in their own work. The automated tools mentioned previously typically only remove infringing content that is between a 90–100% match of the reference file submitted by the copyright owner.⁵⁸ As one observer noted, “Targeting these egregious cases makes sense given that the continuous re-posting of blatantly (really, inarguably) infringing wholesale copies accounts for the vast majority of takedown notices.”⁵⁹ Creators are overwhelmed by how much clearly infringing content is available on the Internet. Generally creators tend to only issue takedown notices for the most egregious cases. It is unlikely that a takedown notice would be issued for a use that may be reasonably construed as fair.

III. Counter Notices (NOI Questions 15-18)

The counter notification process ensures that users uploading content have a mechanism for responding to notices sent by mistake or in bad faith. The challenge, however, lies in the range of options available to a copyright owner in those circumstances where a counter notice is filed improperly. The Act provides that the copyright owner has only ten days to bring suit against the alleged infringer, otherwise the infringing material or link is re-posted.⁶⁰ Bringing a federal lawsuit is a significant burden, especially for individual creators; and the ten-day requirement is, as a practical matter, virtually impossible to satisfy for even the larger, more

⁵⁷ *Section 512 of Title 17 Hearing Before the Subcomm. Of Courts, Intell. Prop., and the Internet of the Comm. on the Judiciary* 14 (2014) (testimony of Sean O’Connor).

⁵⁸ Even Electronic Frontier Foundation has supported certain automated technologies. *Fair Use Principles for User Generated Video Content*, ELECTRONIC FRONTIER FOUNDATION (“[f]iltering mechanism is able to verify that the content has previously been removed pursuant to an undisputed DMCA takedown notice or that there are ‘three strikes’ against it ... [including] nearly the entirety (e.g. 90% or more) of the challenged content is comprised of a single copyrighted work.”).

⁵⁹ Tjoe, *supra* note 31.

⁶⁰ 17 U.S.C. § 512(g)(2)(C).

sophisticated copyright owners. Making matters worse, in some circuits a copyright owner must first receive a copyright registration certificate (as opposed to simply registering their work) in order to bring an infringement case; this adds to the burden on smaller copyright owners.⁶¹ If the copyright owner has not registered the work before sending the takedown notice, there is no way they could meet the ten-day requirement—even if they apply for expedited registration.⁶²

Although many OSPs have attempted to educate their users about the counter notification process, very few counter notices are ever filed; the content targeted by most takedown requests is almost always clearly infringing, or is posted by users who do not wish to reveal their identity or location. A number of OSPs have developed educational material to make the counter notice process easier for their users to understand.

IV. Legal Standards (NOI Questions 19–21)

In a world where online infringement is so routine and pervasive, the courts must stop condoning improper OSP takedown policies.

1. The Red Flag Standard

An OSP will lose safe harbor protection by failing to act when confronted with actual or apparent knowledge. Copyright owners can provide the OSP with actual knowledge by sending a notice, or they can prove the OSP has apparent knowledge⁶³ of infringement under the “red flag

⁶¹ See, e.g., *La Resolana Architects, PA v. Clay Realtors Angel Fire*, 416 F.3d 1195, 1202-07 (10th Cir. 2005), *abrogated on other grounds by Reed Elsevier v. Muchnick*, 559 U.S. 154 (2010); *M.G.B. Homes, Inc. v. Ameron Homes, Inc.*, 903 F.2d 1486, 1488-89 (11th Cir. 1990), *abrogated on other grounds by Reed Elsevier*, 559 U.S. 154 (2010).

⁶² Due to staffing and other resource challenges, the Office’s current pendency times for applications now exceed a year for certain registrations. See *F.A.Q.*, COPYRIGHT OFFICE, <http://copyright.gov/help/faq/faq-what.html#certificate> (noting that paper applications can take up to 13 months; electronic applications up to eight).

⁶³ 17 U.S.C. § 512(c)(1)(A)(ii) (“red flag knowledge”).

knowledge” standard.⁶⁴ Once aware, the OSP is required to “act expeditiously to remove, or disable access to, the material” to remain safe harbor protections.⁶⁵

Under the red flag knowledge standard, a copyright owner can prove an OSP has knowledge by showing it was aware of facts or circumstances that make infringement apparent. The court asks whether (1) the OSP was aware of the circumstances of infringement (the so-called “subjective prong”); and (2) the “infringing activity would have been apparent to a reasonable person operating under the same or similar circumstances” (the so-called “objective prong”).⁶⁶ However, the Second Circuit in *Viacom v. YouTube*⁶⁷ and the Ninth Circuit in *UMG Recordings v. Shelter Capital Partners*⁶⁸ arguably made the OSPs only responsible for responding to the infringement explicitly identified in takedown notices.⁶⁹ These courts’ interpretation of the red flag standard is so restrictive that it has basically eliminated the carefully balanced burden allocation that Congress intended. It would be helpful if the Copyright Office would offer guidance to courts to help them more accurately interpret the provision going forward.

2. Willful Blindness

Additionally, some courts have incorrectly applied the concept of willful blindness in the safe harbor context. Knowledge of infringing activity will be imputed to an OSP who has consciously avoided obtaining actual knowledge under a theory of willful blindness.⁷⁰ In *Viacom*

⁶⁴ H.R. Rep. No. 105–551 (II), pt. 2, at 58 (1998).

⁶⁵ 17 U.S.C. 512(e)(1)(A)(iii).

⁶⁶ H.R. Rep. 105–551, pt. 2, 61 (1998).

⁶⁷ 676 F.3d 19 (2d Cir. 2012).

⁶⁸ 106 U.S.P.Q.2d 1253 (9th Cir. 2013).

⁶⁹ See Boyden, *supra* note 7.

⁷⁰ *Viacom*, 676 F.3d at 35 (quoting *Tiffany (NJ) Inc. v. eBay Inc.*, 600 F.3d 93, 109 (2d Cir. 2010)).

v. YouTube, the Second Circuit correctly articulated that willful blindness is triggered when the OSP is “aware of a high probability of the fact [of infringement] and consciously avoid[s] confirming that fact.”⁷¹ The willful blindness doctrine provides courts with additional guidance and effectuates Congress's intent to “discourage today’s common ‘do not look’ policy,”⁷² and to encourage the sorts of advanced “trust and safety” departments that are implemented by groups like eBay.⁷³ But in *Capitol Records v. Vimeo*, the court shielded the OSP from liability despite a record that showed the OSP and its employees turned a blind eye to infringement. The court determined that any conscious avoidance by the OSP needs to be “tailored” to the “specific infringing content at issue in the litigation,” and that the knowledge demonstrated in the record “did not relate to the Videos-in-Suit.”⁷⁴ However, the hallmark of a willfully blind defendant is that the defendant has affirmatively avoided acquiring specific knowledge about infringing material or activity on its system. By definition, then, a service provider that is willfully blind to infringing activity on its system has ensured that it will not have knowledge that is “tailored to” the “specific infringing content at issue,” because that is the very knowledge the service provider has consciously avoided.

As a practical matter, if improper lower court decisions like these continue to proliferate, OSPs will effectively have no affirmative obligations. Congress envisioned the DMCA as creating a regime of joint responsibility, in which OSPs would act reasonably and proactively in the face of actual or apparent knowledge. Coupled with the existing practical limitations of the notice and takedown process, copyright owners would have little meaningful protection against

⁷¹ 676 F.3d 19 (2d Cir. 2012).

⁷² Tjoe, *supra* note 31.

⁷³ eBay voluntarily spent as much \$20 million per year to promote trust and safety on its website; set up a “trust and safety” department with 4000 employees, over 200 of which were dedicated solely to deterring infringement; implemented a “fraud engine” as early as 2002 in order to ferret out illegal listings; and canceled certain transactions. *Tiffany Inc.*, 600 F.3d 93.

⁷⁴ *Vimeo*, 972 F. Supp. 2d at 524–25.

online infringement. When there is no meaningful “red flag” knowledge requirement, the result is a toothless statute. The Copyright Office should articulate to the courts that many of these decisions are misinterpreting the knowledge standards, and by doing so, are disregarding the legislative intent behind drafting them in the first place.

V. Repeat Infringers (NOI Questions 22–23)

To be eligible for the safe harbor, an OSP must design and implement a sufficient repeat infringer policy. OSPs are not required to police their sites for infringements, so long as they have reasonably⁷⁵ implemented a repeat infringer policy; however, the courts will decline to protect an OSP under the safe harbor provisions when they have actual knowledge of a user’s “blatant, repeat infringement of a willful and commercial nature.”⁷⁶ Congress wanted to ensure that infringers “who repeatedly or flagrantly abuse their access to the Internet through disrespect for the intellectual property rights of others should know that there is a realistic threat of losing that access.”⁷⁷

We want to be clear that repeat infringer policies are “fundamental safeguard[s] for copyright owners ... essential to maintain[ing] the strong incentives for [OSP]s to prevent their services from becoming safe havens or conduits for known repeat copyright infringers.”⁷⁸

⁷⁵ *BMG Rights Mgmt, LLC v. Cox Communication*, 2015 U.S. Dist. LEXIS 161091 (V.E.D.C. 2015) (citing *CCBill LLC*, 488 F.3d at 1109); *Capital Records, LLC v. Escape Media Grp., Inc.*, No. 12-cv-6646, 2015 U.S. Dist. LEXIS 38007, 2015 WL 1402049, at *9 (S.D.N.Y. March 25, 2015) (“For example, a service provider must have a ‘working notification system’ and a ‘a procedure for dealing with DMCA-compliant notifications,’ and the provider must ‘not actively prevent copyright owners from collecting information needed to issue such notifications’... Additionally, the penalty imposed for repeat infringers (when appropriate circumstances exist) must be termination and not some lesser consequence.”).

⁷⁶ *Corbis v. Amazon*, 351 F. Supp.2d at 1104; *CCBill*, 488 F.3d at 1102.

⁷⁷ H.R. Rep. 105–551, pt. 2, 61 (1998).

⁷⁸ *Capitol Records, Inc v. MP3Tunes, LLC*, 821 F.Supp.2d 627, 637 (S.D.N.Y. 2011).

The problem is not in the legal framework drafted by Congress, but instead in how OSPs choose to implement policies. As illustrated in *Capitol Records v. Escape*, some OSPs are fully capable of identifying works and tracking repeat infringers, but instead choose to craft a repeat infringer policy in a way that makes enforcement nonexistent.⁷⁹ As the court found, the online music service provider Grooveshark, owned by Escape, had two policies for removing content: One Strike and DMCA Lite.⁸⁰ Under the One Strike policy, content would be removed and the user would be banned from re-posting content.⁸¹ On the other hand, under the DMCA Lite policy—which made up 94% of all Grooveshark takedowns—any takedown notice that Grooveshark decided did not perfectly comply with the DMCA’s requirements would only result in the content being removed, the user’s account would remain active.⁸² In denying Grooveshark immunity under the safe harbor, the court noted that “[a]dopting a repeat infringer policy and then purposely eviscerating any hope that such a policy could ever be carried out is not an ‘implementation’ as required by § 512(i).”⁸³ Yet because Grooveshark publicly claimed it complied with the DMCA (even though it did not) it was able to operate for 8 years.⁸⁴ For nearly a decade, Grooveshark profited from massive copyright infringement, misled users into thinking that they were a legitimate music service, and competed unfairly with other legitimate and licensed music services.

⁷⁹ Copy L. Rep. (CCH) P30, 744 (S.D.N.Y. 2015).

⁸¹ *Id.*

⁸² *Id.*

⁸³ *Id.*

⁸⁴ Letter from Paul Geller, Grooveshark’s Executive Vice President (“There does appear to be some confusion about whether Grooveshark is a legal service. So let’s set the record straight: there is nothing illegal about what Grooveshark offers to consumers. . . . First, there is a distinction between legal and licensed. Laws from Congress. Licenses come from businesses. Grooveshark is completely legal because we comply with the laws passed by Congress, but we are not licensed by every label (yet). We are a technology company, and we operate within the boundaries of the Digital Millennium Copyright Act of 1998.”) Digital Music News has since removed the open letter from their website.

Through cooperation, OSP should be able to adopt more acceptable repeat infringer policies. Some progress has already been made in this regard by multi-stakeholder groups such as the Center for Copyright Information with its Copyright Alert System program. The Department of Commerce’s Internet Policy Task Force has voiced support for this graduated alert system; which tracks a subscriber’s frequency of infringing activity, and imposes elevating consequences for continued activity.⁸⁵ Such efforts should be expanded to include other stakeholders and additional categories of creative works.

VI. Standard Technical Measures (NOI Questions 24–25)

As new automated technologies advance and receive the approval of relevant stakeholders, these groups should work together to ensure these technologies meet the requirements of “standard technical measures” (STMs) under provision 512(i). This is a statutory device made even more important in light of provision 512(m), which states that an OSP has no duty to monitor for infringements “except to the extent consistent with a standard technical measure complying with the provisions of subsection (i).”⁸⁶ So, failing to accommodate an STM would disqualify an OSP for the safe harbor, thereby subjecting them to liability.⁸⁷

Utilizing this entirely un-utilized statutory device would permit parties to enter into voluntary agreements without need for new enforcement provisions in the Act itself. After all, Congress strongly “urge[d] all of the affected parties expeditiously to commence voluntary, inter-industry discussions to agree upon and implement the best technological solutions available to achieve these goals.”⁸⁸

⁸⁵ INTERNET POLICY TASK FORCE, COPYRIGHT POLICY, CREATIVITY, AND INNOVATION IN THE DIGITAL ECONOMY 2 (2010).

⁸⁶ 17 U.S.C. § 512(m)(1).

⁸⁷ *Viacom*, 676 F.3d at 41.

As written, there is enormous potential for the STM provision to incentivize new technologies and encourage stakeholder collaboration. However, to satisfy the requirements of the statute, stakeholders would need to come together “in an open, fair, voluntary, multi-industry standards process.”⁸⁹ Further, any agreements should make applicable STMs also available to individual creators, and in a way that does not overly burden OSPs. It seems whatever obstacles may exist do not relate to finding entities willing to voluntarily create automated technologies—that is already happening—but rather, the extent to which stakeholders can come together in a timely process to make those tools publicly available. The Administration’s Intellectual Property Enforcement Coordinator and the Copyright Office could look at the experience of the Department of Commerce’s Internet Policy Task Force’s DMCA multi-stakeholder process to inform its own approach to these issues.

VII. Remedies (NOI Questions 26–28)

1. Misrepresentation

Provision 512(f) applies misrepresentation claims under a subjective standard, placing the burden on the alleged infringer to show that the copyright holder believed that the content subject to its takedown notice was non-infringing. In *Rossi v. Motion Picture Ass’n of America*, the Ninth Circuit articulated,

[w]hen enacting the DMCA, Congress could have easily incorporated an objective standard of reasonableness. The fact that it did not do so indicates an intent to adhere to the subjective standard traditionally associated with a good faith requirement ... Congress included an expressly limited cause of action for improper infringement notifications, imposing liability only if the copyright owner’s notification is a “knowing misrepresentation. A copyright owner cannot be liable simply because an unknowing mistake is made, even if the copyright owner acted unreasonably in making the mistake. Rather, there must be a demonstration of some

⁸⁹ 17 U.S.C. § 512(i)(2)(A).

actual knowledge of misrepresentation on the part of the copyright owner.⁹⁰

Copyright owners already bear the burden for enforcing their copyrights on the Internet, so if there were legislative changes to expand 512(f), it would potentially open these owners up to “limitless lawsuits just [for] policing [their] copyrighted material on the Internet.”⁹¹ The Copyright Office should confirm that misrepresentation claims should be analyzed under the subjective good faith standard. As discussed previously, the overwhelming majority of takedown notices are legitimate; lowering the threshold for what is considered an illegitimate notice, or increasing penalties would severely undermine the statutory scheme with little positive benefit. To the extent that provision 512(f) does not do enough to address abusive takedown notices, voluntary best practices are the most appropriate vehicle for improvement.

Conclusion

The Copyright Alliance and its members embrace technologies that give creators new platforms to disseminate their work; however, these users of these technologies should also respect creators’ exclusive rights. The notice and takedown process was meant to provide an efficient mechanism for addressing online infringement, but it can only be effective if the other interrelated requirements of Section 512 remain meaningful and effective. Stakeholders must come together, as Congress intended, to sculpt lasting principles that establish boundaries that creators, innovators, and OSPs should all respect.

Appendix

The Copyright Alliance Survey

Individual Creators Thoughts on the DMCA Notice and Takedown Process

- The DMCA takedown process affects all kinds of creators, but most of our feedback came from visual artists; such as photographers and illustrators.

Figure 1 Who Participated in Our Survey

- 126 (59%) of the 213 participants have been directly harmed by online piracy, and many offered concrete examples of how piracy has cost them money, time, and business:
 - “Piracy has ruined the music industry and everyone’s career who has anything to do with it. In addition to losing work, I can’t get a proper recording contract, because labels no longer have development capital for unknown artists.” – John, Musician, San Francisco, CA
 - “People scan my photos from old books & magazines and post them online. There is a huge amount of time involved in fighting this piracy.” – Charlyn, Photographer, New York City, NY

- “About 10% of my content has been stolen, repackaged, and re-sold by third parties on the Internet” – James, Filmmaker, Carlsbad, CA
- “I have lost tens of thousands of dollars to online piracy” – Romeo, Filmmaker, South Pasadena, CA
- “A stolen image is later stolen by another website, and another, creating a long steam of infringements. Each usage should have a fair fee. Issuing a takedown notice would be fine, but it’s at a volume for photographers that it would take not only days but weeks. None of the infringements I’ve experienced would have merited a formal lawsuit, as the groups taking my work are small-scale entities. I do not want a lawsuit, I do want fair payment for each use.” – Hillary, Photographer, Oshkosh, WI
- “I am a freelancer and I rely on selling each story to make money. A local radio station takes my stories out of a statewide show and uses it as though I did the story for them. They refuse to take freelance stories from me, because they say they can “get it for free.” – Susan, Audio Producer/Reporter, Lomita, CA
- “My last film was pirated almost immediately after it’s digital release, and within days was available on over 100 piracy sites.” – Tom, Filmmaker, Oak Park, CA
- “I have no way of knowing how many pirated copies of my books have been downloaded. I used to spend hours sending DMCA notices, but after I noticed that oftentimes the books were re-loaded, I gave up. It’s not possible to estimate what I’ve lost.” – Carol, Writer, Wellesley, MA
- “My work has been pirated numerous times, and DMCA’s are not always effective. Even if the sites take the content down, usually it’s back up again in a few days. Some sites make it so difficult to find the way to contact them to send a DMCA in the first place that it’s next to impossible. Some require so much personal information, which is then used to harass the content creator, that it’s safer to not contact them at all.” My sales are very low anyway, and it hurts knowing that my work is out there for free, with little recourse to do anything about it.” – Michele, Writer, Olympia, WA

- “I sent Tumblr a takedown notice with a URL and some text, and asked them to take down the URL and all the 2000+ re-blogs that accompanied that post. After 4 hours, I had URLs for 50 of them. I can’t afford the time to find the full 2000. I have never posted on any social media site, but my work has been posted unlawfully on Twitter, Tumblr, Imgur, Reddit, Facebook, Instagram, Pikore, MySpace, Xanga, Nexopia, and many more.” – Keith, Writer, Austin, TX
 - “We used to be able to make a living from music production and album sales. This has almost completely disappeared. The day our latest album was released it was immediately available on various pirate sites. Google searches ranked those pirate download links first, at the top of the first page of search results, above our own web site and legitimate stores.” – Zenon, Musician, New York
 - “Someone stole photos from a private link to a client and posted them on a porn site. This is an ongoing problem now. I had taken glamor/bridal boudoir photos of my bride to give her new husband as a gift. The photos were Victoria Secret type. Not X rated. However, it came to my knowledge that the link to the photos was shared by the hacker. This has been horrible! I’ve been in business for 32 years. Married for 35 years and would never create anything for porn! Not to mention my client’s privacy being breached.” – Melissa, Photographer, Santa Barbara, CA
- When asked, 68% (a significant majority) of creators surveyed said they have never filed a DMCA takedown notice.

Figure 2 Do Creators File DMCA Takedown Notices?

- Of those who have never filed a DMCA takedown notice:
 - **42%** said they've never heard of the process before;
 - **14%** said it was too much effort to try to understand;
 - **12%** said the process was too difficult to navigate;
 - **20%** they were too skeptical a notice would do anything; and
 - **22%** of those surveyed said they've never had their work infringed on the Internet.
- For those creators who have filed a DMCA takedown notice, they found the notice and takedown process ineffective, because it:

- When asked who files notices on the creator's behalf, **85%** responded that they file the notice themselves, without the help of staff, an attorney, a third-party service.
- When asked what tools or methods do creators use to discover infringing content on the Internet:
 - **67%** said they conduct manual web searches;
 - **36%** said they find out from word of mouth;
 - **31.75%** said they use reverse image services like TinEye or Pixsy; and
 - **11.12%** said they use at least one of the following methods: name, title or text tracking, watermarking, or the Google Alert service

- As evidenced by our survey responses, not every notice sent resulted in a response from the OSP that the content had been taken down. Creators were free to select as many answers that applied to their experiences. **61.9%** of creators who answered this question said they had at least one instance of not receiving a response from the OSP and the content itself just staying up. This question does not even touch on the fact that even if content is initially taken down, it often goes right back up again.

- For those **28.5%** creators who choose “other,” the stories were most unfortunate. Creators received:
 - Hostile comments or online bullying;
 - Threatening messages that argued the OSP was legally justified in keeping content up;
 - Runarounds where the OSP claimed the notice was not specific enough, or that the creator had to prove their identity; or
 - Bounce emails or error messages that the notice did not process.

Notice of Inquiry

Section 512 Study: Notice and Request for
Public Comment

Docket No. 2015-7

COMMENTS OF UNIVERSAL MUSIC GROUP

Jeffrey Harleston
General Counsel and EVP, Business & Legal Affairs
Alasdair McMullan
Head of Litigation and SVP, Business and Legal Affairs
Universal Music Group
2220 Colorado Avenue
Santa Monica, California 90404

David Kokakis
Executive Vice President, Head of Business & Legal
Affairs, Business Development and Digital
Universal Music Publishing Group
2100 Colorado Avenue
Santa Monica, California 90404

Universal Music Group (“UMG”) respectfully submits these comments in response to the Copyright Office’s Notice of Inquiry (“NOI”) respecting the safe harbors contained in Section 512 of the Copyright Act, 17 U.S.C. § 512. *See* Section 512 Study: Notice and Request for Public Comment, 80 Fed. Reg. 81862 (Dec. 31, 2015).

UMG is the world’s leading music company. Among its record labels are such iconic names as Blue Note, Capitol, Def Jam, Deutsche Grammophon, Interscope, Island, Motown, Republic, UMG Nashville, Universal Music Latin Entertainment, and Virgin; indeed, UMG owns the most extensive catalog of recordings in the industry, covering the last hundred years of many of the world’s most popular artists. UMG’s businesses also include Universal Music Publishing Group (“UMPG”), one of the industry’s premier music publishing operations.

As the owner of a vast array of copyrighted content, and as a company that is committed to providing its artists and songwriters with rightful value for the content they create, the interpretation, application, and impact of the Section 512 safe harbors is an issue of critical importance to UMG. While UMG recognizes and embraces the need for a dynamic online marketplace – including for purposes of the distribution of music – the reality is that the balance that Congress attempted to strike in drafting Section 512 has not been realized. Instead, the protections of Section 512, as interpreted by the courts, have overwhelmingly favored online service providers, imposed enormous burdens on copyright owners such as UMG, and fundamentally skewed the marketplace for music content.

UMG appreciates the efforts of the Copyright Office in studying the impact and effectiveness of Section 512. UMG hopes that its comments will aid the Copyright Office in understanding how the application of Section 512, as written and as interpreted by the courts, has affected the stakeholders that are subject to its provisions.

General Effectiveness of Safe Harbors

1. Are the section 512 safe harbors working as Congress intended?

The answer is “no.” When Congress passed the Digital Millennium Copyright Act (“DMCA”) in 1998, it intended to strike a balance between two interests:

- (1) protecting intellectual property rights in an increasingly digital environment; and
- (2) promoting the continued growth and development of online technology and commerce.

See, e.g., H.R. Rep. No. 105-551, pt. 2, at 23 (1998) (“A thriving electronic marketplace provides new and powerful ways for the creators of intellectual property to make their works available to legitimate consumers in the digital environment. And a plentiful supply of intellectual property -- whether in the form of software, music, movies, literature, or other works -- drives the demand for a more flexible and efficient electronic marketplace.”); S. Rep. No. 105-190, at 8 (1998) (“Due to the ease with which digital works can be copied and distributed worldwide virtually instantaneously, copyright owners will hesitate to make their works readily available on the Internet without reasonable assurance that they will be protected against massive piracy.”).

Congress also expected that copyright owners and service providers would work together to share the burden of identifying and preventing infringement. H.R. Rep. No. 105-551, pt. 2, at 49 (1998) (noting that the Act “preserves strong incentives for service providers and copyright owners to cooperate to detect and deal with copyright infringements that take place in the digital networked environment”).

However, this balance between copyright owners and service providers has not occurred. To be sure, online technology and commerce has developed – indeed, it has developed far beyond anything Congress likely imagined in 1998. Internet speeds have increased by a factor of 200 or more. Video files that took an hour to upload in 1998 now take mere seconds to upload.

In 1998 there were a few hundred thousand websites on the Internet; now there are over *one billion*. Cyberlockers, peer-to-peer networks, and sites populated with unlicensed, user-uploaded videos did not yet exist. And recorded music, which in 1998 was distributed almost exclusively in physical format, is now widely available in digital form online.

Protection for intellectual property rights, on the other hand, has not remotely kept up with these breakneck advances in technology. Instead, online infringement has proliferated, and the burden to police and address it has fallen almost exclusively on copyright owners. This fact is largely due to the manner in which courts have interpreted and applied the safe harbors of Section 512, in the face of technology companies that have welcomed, and even encouraged, infringement. Although the legislative history of Section 512 makes clear that Congress never intended the safe harbors to apply to sites “where sound recordings, software, movies or books were available for unauthorized downloading, public performance or public display,” S. Rep. No. 105-190, at 48 (1998), that is precisely what has happened.

Companies whose businesses are based entirely on the intellectual property of others – *i.e.*, “where sound recordings...[are] available for unauthorized downloading, public performance or public display” – have routinely been granted the protection of Section 512’s safe harbors. *See, e.g., UMG Recordings, Inc. v. Veoh Networks Inc.*, 665 F. Supp. 2d 1099, 1111 (C.D. Cal. 2009) (“*Veoh I*”) (rejecting argument that service provider was ineligible for safe harbor even if “its founders, employees, and investors knew that widespread infringement was occurring on the Veoh system”), *aff’d sub nom UMG Recordings, Inc. v. Shelter Capital Partners LLC*, 718 F.3d 1006 (9th Cir. 2013) (“*Veoh II*”); *Capitol Records, LLC v. Vimeo, LLC*, 972 F. Supp. 2d 500, 524 (S.D.N.Y. 2013) (notwithstanding “disconcerting” evidence that service provider’s executives and employees were aware of widespread infringement on the

service, service provider was generally entitled to safe harbor where evidence did not demonstrate awareness of “specific instances of infringement” of videos-in-suit); *see also* *Viacom Int’l, Inc. v. YouTube, Inc.*, 676 F.3d 19, 33 (2d Cir. 2012) (“*Viacom II*”) (holding that evidence that “YouTube employees conducted website surveys and estimated that 75-80% of all YouTube streams contained copyrighted material” was insufficient to deprive YouTube of Section 512’s safe harbor).

Perversely, the impact of these decisions has been to shift an insurmountable burden for preventing and addressing online infringement from the technology companies exploiting this infringing content for their own profit onto the shoulders of aggrieved copyright owners whose intellectual property rights are being violated. Like many other copyright owners, UMG has been compelled to devote extraordinary resources in an effort to address this burden. It employs dozens of people and has incurred costs of millions of dollars – including personnel expense, investments in computer hardware and software, third-party vendor expenses, and substantial contributions to trade associations – specifically and solely to protect its interests, and those of its recording artists and songwriters, against online infringement. However, notwithstanding this investment and dedication by UMG, the extent of online infringement and the rate at which it is continuing to grow, coupled with the imbalance of burdens between copyright owners and service providers under the current legal system, have rendered it impossible to fully address the massive violations of UMG’s intellectual property rights.

UMG is the home to hundreds of active recording artists (and thousands more who are no longer recording), and hundreds of active songwriters. It owns or controls the copyright for millions of recordings and several million more compositions, and released more than one thousand new albums in 2015. Under the current legal regime, and the burdens it has imposed,

UMG is simply unable to protect its entire catalog and the wealth of intellectual property that it represents.

UMG knows this because of its experience devoting extraordinary effort and resources to protect its artists' content. For purposes of illustration, we describe here one recent effort to *partially* protect just one album, from just one artist, for just a short period of time. UMG is the distributor of the Taylor Swift album "1989," which was released by her label, Big Machine Records. Prior to the release of the album in October 2014, Ms. Swift raised concerns respecting compensation paid to artists by advertising-supported online streaming services. In light of Ms. Swift's position, UMG and Big Machine Records dedicated additional resources to addressing online infringement of the album.

Like Big Machine Records, UMG was already engaged in substantial efforts to prevent such infringement, including sending takedown notices to cyberlockers, pirate sites, and search engines (both directly and working through the Recording Industry Association of America ("RIAA") and IFPI, an international recording industry trade association); however, the magnitude of the online infringement of "1989" was massive and required significant additional steps. First, UMG adopted a policy of actively searching for and blocking the album and all but one of its tracks on YouTube, rather than monetizing that content on the YouTube platform.¹ And second, UMG devoted additional efforts to taking the recordings down from two other sites – SoundCloud and Tumblr – which paid no royalty at all at the time, and which responded relatively quickly to takedown notices.

¹ The exception was "Shake It Off," which had been released as a single months earlier and was already widely available on YouTube, and which UMG continued to monetize. The response to No. 15 below provides a further description of the options available to UMG with respect to UMG content that is available on YouTube.

These efforts came at a considerable cost to both UMG and Big Machine Records. A staff of UMG employees devoted essentially 100% of their time between November 2014 and February 2015 to manually search for infringements of “1989” and its tracks on YouTube and other sites, so that these unlawful uses could be blocked or taken down. These efforts were supplemented by approximately a dozen employees working for IFPI who devoted a significant portion of their work days to the same task.

Since the release of the album and through March 11, 2016, UMG or its agents have had to send over *66,000* DMCA takedown notices to online sites hosting copies of “1989” or its tracks. This is in addition to nearly *114,000* blocks that were automatically put in place through YouTube’s Content ID system (described in response to No. 15 below), and nearly *30,000* additional blocks or takedowns that UMG or its agents manually placed through online interfaces that YouTube and SoundCloud make available to copyright owners. In addition, trade associations working on UMG’s behalf, including RIAA and IFPI, identified over *half a million* URLs that link to infringements of “1989” since the album was released, and requested that search engines delist those URLs. *See* 17 U.S.C. § 512(d).

On the positive side, these massive efforts bore some fruit. Almost immediately, UMG and Big Machine Records began seeing evidence that consumers looking for unlicensed online copies of “1989” were unable to find them, and were thus being driven to purchase the album. Tweets from the time reflect the success of UMG’s and Big Machine’s efforts:

I’m addicted to half the songs from Taylor Swifts 198[9] album. #FML I can’t find any of her songs on youtube. Guess I’ll have to get the cd. (@ShaelynnR, December 14, 2014)

all i want to do right now is illegally download taylor swift’s album but i can’t find it anywhere.. life (@oklindsay, December 17, 2014)

Ok @taylorswift13 you win I had to buy ‘wildest dreams’ bc I can’t listen to it free ANYWHERE (@ginaxgaga, December 20, 2014)

Taylor swift has done an incredible job of preventing her album leaking like srsly I can't even find a download link so imma have to buy it (@50shadesofconor, December 24, 2014)

it's easier to get Ebola then to download Taylor Swifts new album haha (@samvwilkinson, December 26, 2014)

Can't illegally download 1989 anywhere...ugh. TSwift is really about to make me buy this damn album...well played T...well played (@aREAL_GEM, December 29, 2014)

Finally caved and bought @taylorswift13 #1989 as I can't find it anywhere else. Fair play Taylor, if you're gonna do copyright do it well (@inunrelatednews, January 9, 2015)

why the hell can't my mp3 downloader download 1989 i've been dying to listen to bad blood f! (@bmbstmntx, January 21, 2015)

you win, taylor swift. officially had to buy your album so i could actually listen to it (@paigecwilliams, January 22, 2015)

update: i had to buy taylor swift music from itunes since i couldn't find it anywhere else ☹ (@amandawiss3, February 1, 2015)

On the other hand, UMG was not able to eliminate all infringement of “1989” online – far from it. For example, data available to UMG reflects that the “1989” album was illegally downloaded nearly *1.4 million* times from bittorrent sites. Accordingly, notwithstanding UMG’s and Big Machine’s considerable efforts, infringement was still accomplished on a massive scale.

More fundamentally, it would be impossible for UMG or Big Machine (or any other music company) to replicate this approach more broadly. While not every album attracts the same attention as “1989,” the effort to locate online infringements of recordings of UMG’s many hundreds of active artists would be several orders of magnitude above the substantial effort reflected above, and all but impossible as a practical matter.

However, that is precisely the burden that courts interpreting Section 512 and service providers that have taken advantage of those rulings have placed on copyright owners – namely, to monitor the entire Internet to find infringing content, and then to affirmatively identify and

take down that content. Whatever its original intent, Congress simply could not have contemplated either the massive scope or the diverse methods of online infringement when it passed Section 512 in 1998, much less the disproportionate impact such infringement would have on copyright owners. To be sure, the availability and use of content identification processes by some service providers, such as YouTube’s Content ID system, helps to address a fraction of these issues. But the vast majority of service providers – including companies that were built on making infringing content available to users – do not use such technology. It is for these reasons that reform of Section 512 is desperately needed.

2. Have courts properly construed the entities and activities covered by the section 512 safe harbors?

The answer here is also “no.” As discussed in response to No. 1 above, courts have construed the *entities* covered by the Section 512 safe harbors far too broadly, encompassing not only neutral conduits for Internet traffic and passive repositories of content, but websites that were specifically designed and promoted for the sharing and distribution of infringing content.

For example, in *Viacom Int’l Inc. v. YouTube, Inc.*, 718 F. Supp. 2d 514 (S.D.N.Y. 2010)

(“*Viacom I*”), *aff’d in part and remanded*, 676 F.3d 19 (2d Cir. 2012), the court noted that

a jury could find that the defendants not only were generally aware of, but welcomed, copyright-infringing material being placed on their website. Such material was attractive to users, whose increased usage enhanced defendants’ income from advertisements displayed on certain pages of the website, with no discrimination between infringing and non-infringing content.

Id. at 518. The court nonetheless ultimately concluded – as a matter of law – that defendants were entitled to the safe harbors of Section 512. *Viacom Int’l Inc. v. YouTube, Inc.*, 940 F. Supp. 2d 110 (S.D.N.Y. 2013) (“*Viacom III*”).

The courts have also construed the *activities* covered by the Section 512 safe harbors beyond what is appropriate. For example, in *Veoh I* and *Veoh II*, the courts held that a service

provider's safe harbor from infringement "by reason of the storage at the direction of a user of material," 17 U.S.C. § 512(c)(1), applied not only to the *storage* of content, but to *all* "access-facilitating processes that automatically occur when a user" uploads, streams or downloads infringing material. *Veoh II*, 718 F.3d at 1016. As a result, not only was Veoh's *storage* of infringing content insulated from liability, so too were its functionalities that made multiple copies of each uploaded video, and then allowed users to *share*, *stream*, and *download* that infringing content. Indeed, Veoh allowed *any* user to watch *any* video on its site (*i.e.*, users could watch a video uploaded by another user), and then to download that video for free through use of a "download" button. *See id.* at 1011 (noting that "Veoh allows people to share video content over the Internet"); *see also Vimeo*, 972 F. Supp. 2d at 519 (although acknowledging the "challenges that copyright holders face in the digital age in which their works may be downloaded with ease to users' devices," concluding that "storage" in Section 512(c) included technology that permitted any user to download content saved on the service provider's site). Interpretations such as this are eviscerating the effectiveness of the DMCA.

3. How have section 512's limitations on liability for online service providers impacted the growth and development of online services?

Section 512's limitations on liability have had at least two significant impacts on the growth and development of online services. First, contrary to the law's original intent, by facilitating the provision of copyright content to consumers without consent from, or compensation to, copyright owners, Section 512's limitations have actually *adversely* impacted the growth and development of legitimate, licensed online music services. Those services have been forced to develop business models where users either do not pay anything for use of the music (*e.g.*, ad-supported services), or where users pay very low prices because the services are competing with free, unlicensed services.

Second, Section 512's limitations on liability have *facilitated* the formation and growth of *multi-billion dollar* corporations that are based almost entirely on the intellectual property of others, and yet the compensation those companies have paid – if any – to the owners of that intellectual property pales in comparison to the established value of the intellectual property. Astonishingly, in 2015, sales of *vinyl* record albums generated more revenues for copyright owners than the billions upon billions of free on-demand streams offered by services that rely upon Section 512 safe harbors.

Both of these outcomes are possible only because courts have interpreted Section 512 in a manner that effectively insulates companies whose founders, employees, and investors know that widespread infringement is occurring on their platforms, so long as they remain ignorant of specific instances of infringement. And in both instances, the copyright owners – including, but not limited to, artists and songwriters – lose. As discussed further in response to No. 4 below, copyright owners lose with respect to the service providers that are protected by Section 512, because they are either uncompensated for their content or compensated at heavily depressed levels, and they lose with respect to licensed music services because the market rate for music royalties is pulled down by the availability of music through the Section 512 service providers. This cannot be the outcome that Congress intended.

4. How have section 512's limitations on liability for online service providers impacted the protection and value of copyrighted works, including licensing markets for such works?

Section 512's limitations on liability have dramatically affected the ability of copyright owners to protect their works. As discussed throughout these comments, the imbalance between service providers and copyright owners resulting from the interpretation and application of Section 512, and the practical inability of copyright owners to shoulder the enormous burden that

courts have placed almost exclusively upon them, means that most copyrighted works go unprotected online.

This reality has also had a direct financial impact on copyright owners and artists. Before the advent of YouTube, when legitimate online music services were in their infancy, those services would typically pay approximately 1¢ for each play of a sound recording online. That figure has dropped dramatically. YouTube, which is the world's largest online music platform (albeit built on the back of copyright owners, through the unauthorized uploading and posting of copyrighted content), has almost single-handedly driven the per-play rate down by as much as 90%. In negotiations with copyright owners, YouTube (like other online music services) is able to point to the vast quantity of unlicensed music that remains available for free online – and which copyright owners have been powerless to stop given the application of the DMCA – as justification for ever-lower compensation rates to copyright owners. And YouTube also has the leverage that it could stop paying entirely, decline to renew a cooperative agreement with copyright owners, and then claim that it can rely on the DMCA to insulate itself from any liability. While UMG would vigorously dispute such a claim, the risk is manifest. As a result, as long as Section 512 (and courts' interpretations of it, and service providers' misuse of it) remains unchanged, copyright owners like UMG are faced with a Hobson's choice in dealing with companies that claim its protections: either agree to bottom-of-the-barrel rates, or refuse and face the prospect of protracted litigation with Internet giants, while single-handedly patrolling billions of hours of content for infringements and sending out millions of takedown notices to users.

Nor is the impact on rates limited to YouTube. Literally every licensed online music service invokes YouTube's below-market rates when negotiating with UMG, as a justification for reducing the royalty rate the service pays. It is therefore unsurprising, if disheartening, that

although music is more popular and accessible than ever – with consumption literally at an all-time high – music industry revenues are only half the size they were in 2000.

In addition, the misalignment of burdens toward copyright owners in the interpretation of Section 512 has forced UMG to shift significant resources that could otherwise be used to invest in the creation of new content (including the discovery and development of artists) toward the protection of existing content. In this way, the effect of Section 512 is fundamentally at odds with the incentive structure of the Copyright Clause in the Constitution: at some point, a rational economic actor could decide to retrench and focus most or all of its efforts on protecting its existing catalog with proven sales viability, rather than risk substantial additional capital on unknown content that may simply be consumed without any compensation.

In short, Section 512's limitations on liability have fundamentally skewed the marketplace, enabling billion-dollar corporations to profit at the expense of copyright owners. Instead, in order to foster an environment that rewards the creation of and investment in music, it is critical that the legal structure governing that environment operate in a reasonable and balanced manner. Only then will a rational marketplace exist in which copyright owners can negotiate a fair return for the use of their music.

5. Do the section 512 safe harbors strike the correct balance between copyright owners and online service providers?

As described throughout these responses, the Section 512 safe harbors, as interpreted and applied by the courts, do not strike the correct balance between copyright owners and online service providers. Copyright owners currently shoulder virtually the entire burden of policing the Internet for infringements of their works, while service providers have been incentivized to turn a blind eye to rampant infringement occurring on their sites. These issues, and possible

solutions to at least some of them, are discussed in greater detail in the remainder of these responses.

Notice-and-Takedown Process

6. How effective is section 512's notice-and-takedown process for addressing online infringement?

Section 512's notice-and-takedown process is extraordinarily ineffective. It suffers from multiple problems and limitations, including the following:

(a) It is a system that cannot handle, and was not designed to handle, the sheer volume of online activity and infringement that occurs in today's digital environment. *See* the response to Nos. 1, 9, 10, 15, 16, and 22.

(b) It does nothing to address the so-called "whack-a-mole" problem, in which content that is taken down in response to Section 512 takedown notice is almost immediately reposted on the same site. *See* the response to No. 10.

(c) It fails to impose clear or strict limits on how quickly a service provider must act in response to a takedown notice, resulting in lengthy and prejudicial delays in removing infringing content. Section 512(c)(1)(A)(iii) requires a service provider to "act[] *expeditiously* to remove, or disable access to, the material" upon obtaining knowledge or awareness of infringement. 17 U.S.C. § 512(c)(1)(A)(iii) (emphasis added). In UMG's experience, some online providers take twenty-four hours or longer to actually take down content upon receipt of a notice (for example, some providers appear not to process notices over the weekend).

Given the speed at which files can be downloaded, streamed, shared, or transferred, such delayed action in responding to takedown notices results in dramatically increased infringement of copyrighted works. Even if UMG immediately identifies infringing content and sends a takedown notice, a delay of minutes – let alone hours or days – before content is taken

down can result in hundreds or thousands or millions of unauthorized streams or copies of that content. Each of these unauthorized streams or copies represents a loss of potential revenue to UMG – typically to the detriment of artists and songwriters – and an unjustified windfall to the service provider, which benefits from the widespread existence of copyrighted material on its site.

These delays present a particularly acute problem with respect to pre-releases and newly-released albums. Given the number of hands that touch physical product before a new CD reaches store shelves, it is very difficult to prevent leaks. When unauthorized copies of those recordings are uploaded to online sites before they are commercially available, or even simultaneously with their authorized release, UMG effectively loses control of the content, and loses the benefit of its intellectual property, at the time that it is at its most valuable.

The problems described above exist largely because Section 512 provides no guidance as to what is meant by “expeditiously.” However, there is no reason that the time to take *down* infringing content should materially exceed the time it requires to *upload* infringing content (*i.e.*, nearly instantaneously). One reasonable approach would be to require service providers to provide an online interface that permits a copyright owner to submit takedown notices, and that processes those notices in an automated fashion. As long as the notice is completed through the electronic interface, and as long as the copyright owner specifies the location of the infringing content on the service provider’s site, the content should come down immediately. Certain service providers, such as YouTube and SoundCloud, already make such automated systems available, and there is no reason that such systems should not likewise be mandatory on all service provider sites. At a minimum, however, Section 512 should be amended to provide a

maximum time – and an extremely short time – within which content must be taken down for a service provider to get the benefit of a safe harbor.

(d) Section 512 also provides little or no guidance as to the proper interpretation of many of its other terms and provisions. As a result, courts are effectively left to “legislate” in this area, and the courts have routinely “interpreted” the language of Section 512’s notice-and-takedown procedures in a manner that advantages service providers to the detriment of copyright owners. This includes Section 512’s provisions respecting a “representative list” of infringed works (*see* the response to No. 14) and “repeat infringer” policies (*see* the response to Nos. 22 and 23).

(e) There is no transparency regarding most service providers’ experience under the DMCA; in many cases, it is only through time-consuming and costly litigation that copyright owners (or the public) can obtain any access into the full extent of infringement on a service provider’s site and the nature, frequency, and treatment of takedown notices that the service provider receives. One possible remedy of this lack of transparency is to require each party claiming the benefit of a Section 512 safe harbor to periodically (*e.g.*, quarterly or annually) publicly disclose the number of takedown notices it has received from copyright owners, and the number of counternotices that it has received in response to those takedown notices. Failure to provide such public disclosure should preclude the service provider from relying on Section 512.

(f) To the extent that courts conclude that manual, human review of each infringement is required prior to sending a takedown notice (*e.g.*, to evaluate a potential fair use defense), such a determination would be devastating to operation of a system that is already highly dysfunctional. *See* the response to No. 9 below.

7. How efficient or burdensome is section 512's notice-and-takedown process for addressing online infringement? Is it a workable solution over the long run?

As described throughout these responses, Section 512's notice-and-takedown process is not a workable solution over the long run. It places too much burden on copyright owners, largely absolves service providers of any responsibility, and is woefully inadequate to address the massive scale of online copyright infringement. Moreover, the problem is only likely to get worse – Internet availability, use, content, and speed are increasing at an exponential rate. These facts make reform of Section 512 especially critical; without meaningful reform, copyright owners will suffer ever-increasing online infringement of their works that they are effectively powerless to stop or contain. For further discussion, see the responses to Nos. 1, 6, 9, 10, 15, 16, and 22.

8. In what ways does the process work differently for individuals, small-scale entities, and/or large-scale entities that are sending and/or receiving takedown notices?

As illustrated throughout these responses, endeavoring to address the massive scale of online infringement is critical to protect the value of music, but it is at best a Sisyphean task for entities of all sizes.

UMG is a large-scale entity. Because it believes in the value of its content and because its efforts are a competitive benefit that it can provide to its artists and songwriters, UMG devotes extraordinary sums of money and employee time to attempt to protect that content. It has approximately two dozen dedicated employees in its content protection department alone, and will soon substantially increase that number. These employees are aided by countless others throughout the company who perform related tasks, including review and claiming of content on YouTube.

Although individuals and small-scale entities may have fewer copyrights to police, the universe of potential infringements they face is no smaller than the one that confronts UMG. At

the same time, these entities may not have the wherewithal to devote substantial resources to content protection, including the identification and remediation of online infringement.

Modifications and recalibrations of Section 512 must therefore work equally for all copyright owners, from the smallest to the largest. UMG's proposals in these responses are designed with that goal in mind.

9. Please address the role of both “human” and automated notice-and-takedown processes under section 512, including their respective feasibility, benefits, and limitations.

Given the volume of infringements that copyright owners encounter on a daily basis, automated notice-and-takedown processes are essential. No company would be able to identify and address even a fraction of the infringements that UMG currently handles (which in turn are only a fraction of the infringements in the marketplace) without utilizing automated processes. Such processes also benefit the service providers by reducing the manpower required to address infringement claims; moreover, as described above in response to No. 6, they can also facilitate service providers' efforts to meet the statutory requirement that they “expeditiously” take down infringing content.

In contrast, interpreting Section 512 to affirmatively *require* use of “human” involvement – at least at the initial notice-and-takedown phase – would eviscerate these benefits. However, one recent decision threatens to do just that. In *Lenz v. Universal Music Corp.*, -- F.3d --, Case No. 13-16106, 2016 WL 1056082 (9th Cir. Mar. 17, 2016) (“*Lenz II*”), the Ninth Circuit held that a copyright owner must consider fair use *before* sending a takedown notice. *Id.* at *6. Taken at face value, that statement could be interpreted (albeit wrongly) to require individualized, human evaluation of *every potential takedown*. Such a burden, if it were imposed, would be simply impossible to discharge. As discussed further in response to No. 15, it is estimated that users upload 500 hours of video content to YouTube *every minute*, containing

approximately 100,000 individual uses of UMG’s copyrighted content *every day*. And that is the volume on just one service provider. Any proposition that UMG (or any other copyright owner) must manually review every one of those uses prior to initiating a Section 512 takedown process would render the takedown process illusory – no copyright owner could comply with such a requirement.²

A prior version of the opinion offered a glimmer of hope. The court’s original opinion noted that the court was “mindful of the pressing crush of voluminous infringing content that copyright holders face in a digital age,” and that “the implementation of computer algorithms appears to be a valid and good faith middle ground for processing a plethora of content while still meeting the DMCA’s requirement to somehow consider fair use.” *Lenz v. Universal Music Corp.*, 801 F.3d 1126, 1135 (9th Cir. 2015) (“*Lenz I*”).

Admittedly, this glimmer of hope was a faint one at best. The court suggested that an algorithm could properly

automatically identify for takedown notifications content where: (1) the video track matches the video track of a copyrighted work submitted by a content owner; (2) the audio track matches the audio track of that same copyrighted work; and (3) nearly the entirety is comprised of a single copyrighted work.

Id. (internal quotations, ellipses, and citation omitted). But this statement assumes that the copyright owner always has a *video* that is infringed, as opposed to simply an audio track.

Because that is frequently not the case for record companies such as UMG (and appears to ignore
