Appendix A：CGP Repertoire

Intersection of MSR-1 and CDNC 2014

```
<?xml version="1.0" encoding="utf-8"?>
<lgr xmlns="http://www.iana.org/lgr/0.1">
   <meta>
      <version comment="MSR-1">1</version>
      <date>2014-06-06</date>
      <language>und-Hani</language>
      <scope type="domain">.</scope>
      <unicode-version>6.3.0</unicode-version>
      <description type="text/html"><![CDATA[
            <h1>Maximal Starting Repertoire - MSR-1</h1>
            <h2>Repertoire and Default WLE Rules</h2>
            <p>This file specifies version 1 of the Maximal Starting Repertoire (MSR-1) as defined
by the Integration Panel, for use in the development of the Root Zone LGR. For details on how to
use this file as well as its status, or the methodology used in creating it, see the document named:
"Maximal Starting Repertoire - MSR-1: Overview and Rationale" and documents cited
therein.</p>
            <h2>Repertoire</h2>
            <p>The "ref" attribute for each code point or range contains the Unicode version for
which the corresponding code points were first encoded (for example, ref="4" means a character
was first encoded in Unicode Version 3.1).
            It also includes ZH and JP originated from the respective Chinese and Japanese IDN
tables for the second level, and IIC for IICORE originated ideographs.</p>
            <p>The "tag" attribute for each code point or range indicates the script or scripts that
the code point is used with, using Unicode script identifiers, preceded by "sc:".</p>
            <h2>Default Whole Label Evaluation Rules</h2>
            <p>The default WLE rules apply to any LGR and must be copied into the LGR's XML file.
Additional rules may be added by a GP.</p>
            <h2>Chinese Repertoire </h2>
            <p> This file specifies the initialized version of the Chinese Repertoire as defined by the
Chinese Generation Panel, for use in a part of the Root Zone LGR. The character may be revised
with JGP and KGP. And the additional rules will be added by CGP. </p>
